Answer. Cumulative FHA losses from its inception to November 30, 1949, have amounted to approximately three one-hundredths of 1 percent of the face amount of mortgages insured. The one-fourth percent per year reserve against mortgage loans is thus eight times as great per year as the cumulative FHA loss over a 15-year period. While it is true that the FHA experience has covered a favorable economic period, the one-fourth percent per year provision is believed reasonable, in combination with additional reserve requirements which the Cooperative Housing Commissioner may impose if needed and with cumulative stock investments in the Corporation which borrowers are required to make, equal to 10 percent of their borrowings.

One further comparison between the Corporation and FHA is of interest. In the FHA system, insurance reserves are built up by the collection of annual mortgage insurance premiums. Under this title, a similar type of protection against loss would result from the requirement for a special loss reserve, to be built up at the minimum rate of one-fourth percent per annum of outstanding loans, plus the additional reserves which the Commissioner may require. Of the amounts received by FHA from premiums, it is estimated that an amount equal to one-fourth percent of insured loans has had to be allocated for administrative and operating expenses in connection with the mortgage insurance programs, leaving about one-fourth percent for reserves for losses. Finally, in the case of the Corporation, there would also be the additional protection resulting from the required stock investment by borrowers, which is analogous both to premium assessments in FHA and down payment requirements on FHA insured mortgages.

38. Question. What is the expected interest rate on the debentures to be issued by this new Corporation?

Answer. About 2½ percent at the present time, in view of the fact that the debentures of the Corporation would be guaranteed by the Federal Government. The current rate for long-term Federal obligations is now about 2¼ percent.

39. Question. If the Corporation can obtain the investment of private funds in its guaranteed obligations at about 2½ percent interest, why is it necessary for VA and FHA-guaranteed or insured mortgages to have an interest rate of 4 or 4½ percent?

Answer. The 2½ percent interest rate and the 4 or 4½ percent interest rate are rates charged on basically different kinds of investments. The 4 or 4½ percent rate is the gross rate charged to the mortgagor, from which must be deducted the costs of acquiring the loans, of servicing, of losses, and of operating a mortgage loan portfolio. On the basis of the published experience of four insurance companies, these costs bring the gross rate down to a net rate of slightly above 3 percent for 4½ percent loans and slightly above 2½ percent for 4 percent loans of average size. These costs, it should be noted, are different among different lenders, depending upon the size of the lender and the scale of its mortgage lending, tending to be lower for larger volume and also for larger size loans. Therefore, insurance companies studied had the advantage of geographical distribution, and probably better balanced portfolios in terms of type and size of mortgages than many small local lenders. Those lenders would have an even smaller net return on mortgage loans. The return on debentures to be issued by the Corporation will involve no such costs as are involved in mortgage loans. It is therefore comparable to the net rate on mortgage loans, rather than the gross rate. Also the Corporation's debentures will have greater liquidity.

40. Question. Why is provision made for the Government to guarantee the obligations of the Corporation?

Answer. The obligations of the Corporation would be unconditionally guaranteed by the United States (as are those issued by the FHA to mortgagees in case of foreclosures under the insured mortgage system). This guaranty serves to reduce the cost to the Corporation of borrowing money and thereby permits the Corporation to make lower interest charges to the cooperative and other nonprofit corporations which borrow from the Corporation. The guaranty is justified on at least two principal grounds. First, this program is designed to operate in such a way that soundly conceived cooperative-housing projects will be able to attain the low-cost financing essential to reduced monthly charges, and the benefits and savings thereby achieved are, in a cooperative or nonprofit operation, automatically translated into direct benefits to consumers in the form of reduced monthly charges. In other words, in an operation of this type, there can be no diversion into speculative profits of the financing economies made possible by the guaranty.

The second justification for the application of a guaranty to the obligations of the Corporation may be illustrated by analogy to the FHA insured mortgage system. Through that system the Federal Government has for almost 16 years underwritten mortgage loans which met certain predetermined standards and objectives. So far the Federal Government has not been called upon to make good the guaranty of those mortgage loans, since the system operates on a fully self-supporting and self-sufficient basis from the premiums and other income which the FHA receives. Nonetheless, the Government has assumed a contingent liability in that program under which there is no question that it would have to make good in the unlikely event that defaults exhausted insurance reserves. Thus, the Government guaranty has thereby effectively protected the private lender from any loss of principal or interest on his insured loans. A large share of the credit for the heavy current production of housing by the building industry, and the proportion of its for-sale product within the reach of moderate-income families in many parts of the country is due to this effective aid by a self-supporting governmental activity.

This title contemplates a program, largely new in actual operation but based on sound financing experience, in which housing projects of cooperatives and other nonprofit organizations can be financed through reliance on Government-guaranteed obligations. But if the projects are soundly conceived and soundly operated, there is no more reason why the income from interest charges, the investment of private stock in the corporation (as explained in the answer to question No. 27 and the build-up of reserves for losses (as explained in the answer to question No. 36) should not enable this financing operation to pay its way than is the case in the FHA insured mortgage operation.

It is true that under this title the contingent liability of the Government will be fixed in terms of a guaranty of the Corporation's debentures, rather than in the underwriting of the mortgages backing those debentures. Since, upon default on an insured mortgage, the FHA issues to the mortgagee its debentures which are fully and unconditionally guaranteed by the United States, the principle involved is the same, and the result, insofar as Government risk is concerned, should be as good. In the case of the FHA insured mortgage system, the contingent liability to the Government is, in the final analysis, protected by the value inherent in the properties underlying insured mortgages. Under this title the contingent liability of the Government in terms of its guaranty of the debentures of the Corporation is also protected, in the final analysis, by the value inherent in the properties securing the mortgage loans which the Corporation makes.

41. Question. What interest rate will be paid to the Corporation on mortgage loans made by it?

Answer. No specific interest rate on the mortgage loans is set forth in the bill. It is provided that the rate would be determined by taking into account the following factors: first, the cost of money to the Corporation; second, an amount adequate to defray the operating expenses of the Corporation; and third, an amount equal at least to one-fourth of 1 percent of the loans which is to be specifically set aside as a reserve for losses on mortgage loans plus such other reserves as the Cooperative Housing Commissioner may deem necessary. At the present time, it is estimated that this would mean mortgage loans (so far as initial loans are concerned) written at the approximate rate of 3½ percent. However, if this estimate should prove too conservative, the Corporation would, of course, be authorized to charge a higher interest rate. It should be noted that the presently contemplated differential between the cost of money to the Corporation and the interest rate charged by it is consistent with the loss and expense experience gained by larger insurance companies in their mortgage lending activities.

42. Question. Are the obligations issued by the corporation exempt from Federal taxes?

Answer. No. The title itself does not purport to exempt such obligations from Federal taxation and there is no other statute or principle of law which would exempt them. Actually, interest on or gain from the sale of obligations issued by the Corporation would be subject to Federal taxation under section 4 (a) of the Public Debt Act of 1941.

43. Question. Are obligations issued by the Corporation exempt from State and local taxes?

Answer. Yes. Obligations of the Corporation (as well as the Corporation's franchise

and intangible assets) would be exempt from State and local taxes. The title expressly provides that the Corporation and its obligations shall be exempt from taxes (except surtaxes, estate, inheritance, and gift taxes) by any State or local taxing authority. This is fully consistent with the law as applied to other mixed ownership corporations. For example obligations of the Federal home loan banks are similarly exempted by express provisions of law.

44. Question. Is real property or tangible personal property of the Corporation exempt from State and local taxes?

Answer. No. Such property is expressly made subject to State and local taxation and assessments to the same extent as other similar property.

45. Question. Would the housing of the cooperative and other nonprofit corporations aided by the title be exempt from local taxation and special assessments for local improvements?

Answer. There is nothing in this title that would in any way exempt housing provided under its provisions from State and local taxation or special assessments for local improvements. Neither is it true that buildings provided under the provisions of this title would be exempt from real estate taxes under the laws of the States in which they would be built.

Existing consumers' cooperative laws of the various States do not exempt real estate of cooperatives from taxation. In the absence of express exemption provisions, the general taxing laws apply to the real property of cooperatives in the same manner that they apply to real property owned by other private corporations. Even the property of rural electric cooperatives is subject to taxes in the majority of the States that have enacted special laws in regard to such cooperatives.

It may be noted in connection with this question that several States have adopted limited dividend housing corporation laws to encourage the provision of housing for persons of moderate income. It may be that some housing cooperatives aided under this title would be created in such a manner as to come within the provisions of some of these laws. These State statutes extend certain benefits, but only three States (New York, New Jersey, and Delaware) purport to grant partial tax exemption from normal real estate taxes. In each of these three States, of course, the partial exemption is designed to carry out specific policies which the State itself, acting through its legislature, has adopted.

46. Question. Are housing cooperatives un-American or socialistic?

Answer. No. Our earliest settlers used the cooperative device for their mutual defense, for building their homes, and in agriculture. Even in recent times, "barn raisings" and "house raisings" have been common in rural areas in this country.

Private enterprise has long used the cooperative device for accomplishing its purpose. It exists in many fields of business endeavor. The Associated Press is a cooperative. Savings and loan associations are mutual organizations, as are many life insurance companies. Independent retail merchants frequently unite in cooperative associations for buying, advertising, and other purposes, and farmers frequently unite in production or marketing cooperatives. Cooperatives are themselves a form of private enterprise. They are formed for the economic advantage of their members. The benefits of a cooperative accrue to its members, while in a commercial enterprise they accrue to those who have invested their money in the business. In the case of consumers' cooperatives, the benefits take the form of cost reductions in consumer goods or services.

Both Mr. William A. Reckman, representing the American Bankers Association, and Mr. William A. Clarke, representing the Mortgage Bankers Association of America, made it clear in their testimoney on this title that their opposition to the title was not based on opposition to the cooperative form of organization for the construction or operation of housing.

47. Question. Is this title inflationary and will it tend to increase housing construction costs?

Answer. No. By stimulating an increased production of housing within the reach of middle-income families, the program should help to reduce the inflationary pressures on the price of both new and used homes and on rents. These pressures have arisen because of unmet housing needs which have accumulated over a period of years. A portion of these needs will be met by housing produced under this title.

The title would provide about 250,000 dwelling units over a period of several years. The peak volume in any 1 year could hardly equal 75,000 units. In the light of the 1949 production level of over 1,000,000 housing units, and in the light of an ample supply of construction materials and sufficient construction labor to attain a very much higher level of production, it is clear that this title is not inflationary from a housing viewpoint. This is particularly true now that a major share of the backlog of demand for higher priced homes and apartments has been met. The market which has been served by section 608 rental housing designed to rent at between $80 and $125 per month, to choose but one example, is about exhausted, and should be replaced by other markets if last year's volume of residential construction is to be maintained.

With respect to the availability of construction labor and materials the following is of interest. At the Senate hearings on middle-income housing, Senator BRICKER asked:

"Is there plenty of labor, plenty of material, plenty of ability in the country to build a million and a half units as well as a million units a year?"

Mr. John C. Thompson, representing the National Association of Real Estate Boards, answered that there was. Senator SPARKMAN later questioned Mr. Thompson as follows:

"Senator SPARKMAN. Let me review it a little bit. You did say, did you not, that money was available, and labor and material were available?

"Mr. THOMPSON. Yes.

"Senator SPARKMAN. To build a million and a half units a year?

"Mr. THOMPSON. Precisely."

Neither is the title inflationary from a credit viewpoint. The guaranteed obligations of the National Mortgage Corporation for Housing Cooperatives would be sold over a period of years. The contingent liability of the Government on account of these obligations is no different in principle than that under the FHA mortgage insurance program, and the cushion against such liability would be even greater than in the case of the FHA program. Under this title, the cushion against ultimate liability on the part of the Government consists of the Corporation's required reserves and the borrowers' required purchases of stock in the Corporation. Added safety features result from the type of housing projects which are the ultimate security for the obligations of the Corporation. These projects will benefit from careful planning and supervision, from ownership characteristics of the cooperative housing, and from the fact that the housing will serve a much more stable market than higher priced housing.

Finally it should be noted that cutbacks in all housing programs are provided for when economic conditions make such cutbacks desirable, by the provisions of section 301 of the bill. That section would permit the President to reduce the maximum authorized principal amounts of any housing loans made, insured, or guaranteed by any Government agency or mixed ownership corporation, wnere such action is necessary or desirable in the light of general economic conditions.

48. Question. Would this title provide an unfair advantage to particular groups?

Answer. No. This program supplements a number of other Federal housing programs and should be viewed in the context of all existing Federal housing legislation. Thus, aids for public-low-rent housing to serve the lowest income groups, for farm housing, and for slum clearance were enacted during the last session. Existing programs of the Home Loan Bank Board and of the Federal Housing Administration have succeeded in producing adequate housing (both sales and rental) to serve the upper-income third of our families as well as many families, particularly in some regions, who fall within the middle-income third of our population. However, some middle-income families in all regions and a large range of such families in higher cost areas are not now being served by any of these programs. They can neither find existing housing nor afford new housing adequate for their needs.

This title (along with other provisions of the bill) are designed to aid such middle-income families in obtaining housing which they can afford and which is large enough for families with children. The cooperative or nonprofit organization is aided under this title because it is the only form of private enterprise through which the savings achieved in financing, in construction, and in management are automatically translated into direct benefits to the consumer in the form of corresponding reductions in the monthly costs which he must pay for his housing. Thus, the title is a supplementary means of serving additional middle-income families and will fill a gap which now exists in our present housing programs. The title gives no discriminatory advantage to any group. On the contrary, discrimination against middle-income families would result if the gap which now exists in our housing legislation were to be left unfilled.

Finally, it should be noted that any middle-income family is eligible to join with other such families in forming a housing cooperative which will receive the assistance proposed by this title.

49. Question. Will the program under this title deter other forms of private enterprise from building?

Answer. There is no justification for the apprehension that enactment of this title will deter other forms of private enterprise from building. It is clear that only a relatively small segment of the approximately 8,000,000 middle-income families will need or desire to take advantage of the cooperative housing formula. Rather, this title is designed to add one additional string to our bow. It is to be just one additional incentive and aid to private enterprise to capture another segment of the market which it would otherwise be unable to do. This program will increase the total market for private housing rather than take any part of the market away from established builders and lenders. Housing is so important a factor in family living that we cannot overlook any device which can facilitate the provision of houses for those in need of it. In the future, as in the past, by far the bulk of the housing being built in this country will be provided by private enterprise using the conventional types of ownership and financing arrangements.

50. Question. Will the program under this title hurt builders?

Answer. No. This program will provide additional building activity since it will serve a market not now being reached. Many private builders will participate in this program as general contractors for cooperative and other nonprofit corporations. Indeed, a healthy cooperative housing movement will

aid the entire building industry to operate at a higher level of activity and will act as a cushion against depression in that industry when the present temporary market for high-priced housing has come to an end. In this connection it should be noted that during periods of lessened economic activity the building industry is one of the first to be affected adversely and is traditionally the hardest hit. The program under this title would help reverse that trend.

51. Question. Will this title hurt the private-lending industry?

Answer. Mr. William A. Clarke, representing the Mortgage Bankers Association, testified in opposition to this title. He stated:

"I am perfectly willing to admit that we are now taking a selfish interest in connection with this matter. That comes about in this way: The life-insurance companies, the savings banks, the building and loan associations of the country are geared up and are now handling the mortgage loans of the so-called middle-income families. We feel they are doing a very competent job of it. This legislation, we believe, will remove from the market that type of mortgage for the so-called legitimate investor in mortgage loans. He is interested in the purchase of mortgages. Every one of them now has a portfolio that is almost too full of Government bonds. What is proposed here would be a Government bond. We feel that this is class legislation which gives a chance for a rate of interest which will take away from us the opportunities to invest money in mortgages, which in turn will have its effect on the dividends paid by life-insurance companies, dividends paid by savings banks, building and loan associations, and others."

Mr. Clarke's statement involves two errors. First, the mortgage loans to be made in connection with housing aided by this title will not, as he believes, take away from lenders the opportunities to invest money in mortgages. This error made by Mr. Clarke results from the failure to realize that the housing aided under this title will reach a segment of the middle-income market which is not now being reached at all.

The second error involves the failure to recognize that the Government-guaranteed obligations of the Mortgage Corporation for Housing Cooperatives will in fact be a desirable investment for insurance companies, banks, and other lenders. The interest paid on such obligations will constitute a net return to investors fully as high as the net return on mortgage loans since the higher interest rate on a mortgage loan must cover the cost of acquiring the loan, of servicing it, and of losses. This also explains why Business Week, in its January 14 issue, stated, in referring to this title:

"If the plan goes through, it will offer a new top-grade outlet for the big-time investor, such as insurance companies."

52. Question. Does this title involve a Federal subsidy?

Answer. No. On the contrary this title has been carefully prepared to avoid any Federal subsidy. Interest charges for mortgage loans to cooperatives and nonprofit corporations must be sufficient to pay all costs of the National Mortgage Corporation for Housing Cooperatives. This includes the cost of the money which the Corporation borrows from the public, administrative expenses of the Corporation, special reserves sufficient to cover losses, and any general reserves which the Cooperative Housing Commissioner may require (question 41). The danger of any ultimate loss by the Federal Government is further reduced by required subscription to the Corporation's capital stock by borrowing cooperatives, as previously explained (questions 27 and 29). The specific reserves for losses of one-quarter of 1 percent (questions 36 and 37) and the private, capital-stock subscription by borrowers will build up an ample cushion against any possible future losses.

The basic security for any mortgage loan, of course, is the value of the property on which it is made and the economic stability of the borrower. Because of the required adherence to sound planning and construction standards by the coperatives and the elimination of speculative profits in construction and management of their projects, the inherent value of these projects will offer much better mortgage security than is now found in many rental projects built and operated for profit. The income from coperative projects also is likely to be more stable over the years because rents or monthly charges will be lower than otherwise available and the occupants will own the projects and thus have every incentive to keep them in first-class condition.

All of the administrative expenses of the National Mortgage Corporation for Housing Cooperatives will be met from the interest and fees charged borrowers. The interest charged must be high enough to cover the general administrative costs of the Corporation, and the costs for special services, such as inspections, will be met from fees paid by the borrowing cooperatives (question 35).

The initial stock investment in the Corporation to be made by the Government would be limited to $100,000,000; would bear cumulative dividends; would be preferred as to dividends and assets; and would be replaced over a period of time by stock investment made by private borrowers (questions 23 through 29).

The title authorizes the Cooperative Housing Commissioner to assist in the organization of housing cooperatives and in the planning, construction, and operation of their projects. Although this assistance naturally involves certain administrative expenses by the Federal Government, it is not a subsidy in any accepted meaning of the term. Rather, it is a public service comparable to many others furnished by the Federal Government. It is also designed to benefit the Government by protecting against losses on the mortgage loans to cooperatives. Many of those who oppose certain other features of the title agree that a program of technical assistance by the Government to housing cooperatives would serve a laudable public purpose and would be entirely justified (question 13). There are numerous precedents for such technical aid by the Government (question 14).

It should be noted, too, that the title would direct the cooperative Housing Commissioner to administer the program in such a manner that the cooperatives themselves, acting individually or through joint undertakings, would, as soon as feasible, supply their own technical advice and assistance and thereby gradually reduce and terminate such technical advice and assistance by the Commissioner.

The Cooperative Housing Commissioner would also be authorized to make preliminary advances to cooperatives to assist them in making plans for housing projects which are eligible for mortgage loans from the National Mortgage Corporation for Housing Cooperatives. This would in no sense be a subsidy program. The preliminary advances would have to be repaid out of the mortgage loans and the borrower would have to pay interest on the advances equal to the cost of money to the Treasury, plus one-half of 1 percent per annum. The sound initial guidance furnished through technical advice and assistance under the title would materially reduce the chance of losses on the advances. Before any advances could be made, the Cooperative Housing Commissioner would have to determine that the borrower is a bona fide cooperative or nonprofit corporation whose methods of operation are such as will avoid the use of funds for any speculative purpose or the payment of excessive fees, salaries, or charges (questions 16 through 20).

Dorothy Kenyon's Associations—She Is Judged by the Company She Keeps

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, a wise man once said that what we say is not important but it is what we do that really counts. When Senator McCARTHY called attention to the organizations she has joined in the past and charged that she was keeping such bad company that she was disqualified from being a United States delegate to the United Nations, Miss Kenyon was incensed and said that the Senator was a liar. But in view of her record the Senator was absolutely correct.

Mr. George Sokolsky has rendered a real public service by setting forth a bill of particulars showing the groups to which Miss Kenyon was identified. His article appeared in the Washington Times-Herald for Sunday March 19, 1950:

THESE DAYS

(By George Sokolsky)

Guilt by association is an ugly doctrine. Among some primitive peoples, if one member of a family were accused of a crime, every member of the family is held accountable. In some schools, teachers still hold an entire class responsible for the conduct of one pupil, which is a form of socializing guilt repugnant to our way of life which is based on individual responsibility.

However, the term, "guilt by association," as it is currently being used, is something quite different. What we do is to follow the old adage, "Birds of a feather flock together."

We go back to the proved sociological postulate that where there is a community of kind, there is likely to be an association of those who have similar tastes. When, therefore a person appears on a large number of Communist or Communist-front activities, the assumption must be that that person has made a voluntary choice to associate with such people and their activities.

Take, for instance, the case of Dorothy Kenyon. The lady says that she is not a Communist and has never been one. We must take her word for that. But how shall this record be explained?

1. The American Committee for Democracy and Intellectual Freedom petitioned to discontinue the Dies committee. This organization existed to defend Communists from investigation; Dorothy Kenyon appears among the signatories.

2. American Committee for Protection of the Foreign Born has been officially declared subversive. This organization was established by the Communist Party and has been closely linked to the International Labor Defense (also listed as subversive); Dorothy Kenyon's name appeared there.

3. In 1944 a number of American women of distinction sent greetings to the women of Soviet Russia. (We were then Allies in war.) Dorothy Kenyon's name appeared there.

4. From 1934 to 1941, one of the principal transmission belts of communism in this country was the American Youth Congress. Dorothy Kenyon's name appeared there.

5. Earl Browder, testifying before the House Committee on un-American activities in September, 1939, described the Consumers

National Federation as a Communist transmission belt. Dorothy Kenyon's name appeared there.

6. The coordinating committee to lift the embargo was a Communist front organized to aid Soviet Russia's efforts in the Spanish civil war. Dorothy Kenyon's name appeared there.

7. The Council for Pan American Democracy was organized and supported publicly by the Communist parties of the United States, Canada, Mexico, Chile, Cuba, and Venezuela. Dorothy Kenyon's name appeared there.

8. The Descendants of the American Revolution was designed to be a left-wing organization to compete with and ridicule the Sons and Daughters of the American Revolution. Dorothy Kenyon's name appeared there.

9. A group of organizations came into being to bring pressures on the motion-picture producers to produce pro-Russian and pro-Communist films. The most active was Film Audiences for Democracy. Dorothy Kenyon appeared on the advisory board.

10. Simon W. Gerson, an active and admitted Communist, was given public office by the borough president of Manhattan in New York City. This led to an active protest. A committee was formed to defend Gerson. Dorothy Kenyon appeared on that committee as representing the consumers' unions.

11. The Lawyers Committee on American Relations With Spain was on the Communist side of the Spanish Revolution. Dorothy Kenyon's name appeared there.

12. League of Women Shoppers has been declared a Communist-front by the House Committee on Un-American Activities after prolonged investigation. Dorothy Kenyon's name appeared there.

13. The National Council of American-Soviet Friendship, successor to Friends of the Soviet Union, has been officially declared subversive. Dorothy Kenyon's name appeared there.

14. For many years Tom Mooney's imprisonment was used to raise money for the Communist Party. Dorothy Kenyon's name appeared on the New York Tom Mooney Committee.

15. Political Prisoners Bail Fund Committee was organized to aid arrested Communists and left-wingers. Dorothy Kenyon's name appeared there.

16. Morris U. Schappes, an admitted Communist, was tried in a court for perjury and convicted. The Schappes Defense Committee was organized for him. Dorothy Kenyon's name appeared there.

I have cited these examples to show a pattern of activity. This pattern does not necessarily make Miss Kenyon a Communist, but it does, in my opinion, open to question her judgment and her associations. In the present war between this country and Soviet Russia the constant association, for whatever reason, must stimulate concern.

The Best Recipe for Bean Soup

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. WHITE of Idaho. Mr. Speaker, when I was a boy working in the timber camps of the Northwest, where the men were hearty eaters and the food was substantial, bean soup was a staple. In discussing the camp fare the loggers were prone to quote the French lumberjack's maxim, "The little white bean makes the best pea soup."

Bean soup has become an epicurean delight in the repasts of our Nation's lawmakers and is regularly served in both the House and Senate restaurants, thanks to the legislative forethought of Idaho's past great senatorial leader, Fred T. Dubois.

The cooking class in the home economics department of Idaho State University, like education throughout our country, is advancing and has brought out a new recipe for making better bean soup, included in a press release recently received, which is respectfully submitted to the culinary department of the House and Senate restaurants:

UNIVERSITY OF IDAHO, Moscow, March 18.—When Author Kenneth Crawford recently criticized in the Saturday Evening Post the bean soup that has been served in the Senate restaurant at Washington since 1891 he really started things stirring in the home-economics department at the University of Idaho.

Crawford should have known better, for no one criticizes a bean—or potato—dish without causing a rattling of pots and pans by the Idaho home economists. Crawford innocently, however, said of the soup introduced to senatorial gourmets more than a half century ago by Senator Fred Dubois, of Idaho:

"Through all the years that I have covered the Senate, I have sustained myself in large part on this soup. It has got neither better nor worse, and still isn't too good, but will, as my continued existence proves, sustain a thin spark of life."

In Idaho, those were fighting words. Prof. Adah Lewis and her foods students, considered them not only a reflection on a former outstanding citizen of the State, but on beans, which are an important product of Idaho. Miss Lewis had her class first prepare soup according to the famed Dubois recipe, and then soups with variations. She reported today:

"Mr. Crawford's comments were unjustified. The Dubois recipe as given in the Post makes a fine soup. After sampling, we can understand why it has been served so long in the Senate restaurant. It is a heavy type of soup with high seasonings. Probably most of the Congressmen enjoy smoking, and, as this is inclined to dull the sense of taste, the high flavor of the Dubois recipe would be most acceptable.

"The majority of the class, however, felt that it was unfortunate that the excellent flavor of beans—particularly Idaho beans—is submerged in the Dubois recipe. A new recipe developed in the class by Margaret Weber, of Moscow, and Bernadean Reese, of Boise, keeps the bean flavor intact, and was voted superior even to the Dubois recipe which has stood the test of time."

In 1907, when the Dubois soup was dropped briefly from the Senate restaurant's menu, the Senate Rules Committee specifically ordered the restaurant manager to put it back quick. Now Miss Lewis would like the committee to order at least a trial of the new soup developed by the university students, which has been called Idaho bean soup.

The recipe (for 2 quarts): 2½ quarts of water, 5 ounces sliced ham hock or chunk of bacon or a mixture of the two, 1½ cups washed navy soup beans, 3 tablespoons diced onion, 1 cup mashed potatoes, 1 teaspoon chopped parsley, 2 tablespoons celery, 3 tablespoons butter, 1 teaspoon salt, pepper if desired. Braise onions in butter. Mix all ingredients in a heavy saucepan. Cover and simmer slowly for 2½ hours.

Mr. Truman Demagogues

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I include an editorial that appeared in the Washington Times-Herald on Sunday, March 19, 1950:

THE DAY OF THE DEMAGOGUE

Mr. Truman took off for another vacation the other day, saying "I never felt better in my life or had less."

How he feels, we wouldn't know. But the other half of his crack is pure demagogic fraud.

Here is an exfarmer, a busted haberdashery dealer and ex-county judge, who came to Washington as a Senator in effect by appointment of a crook who was finally jailed for political criminality.

By a fluke Truman happened to be made chairman of a special committee on war contracts, which brought on a lot of publicity he could never in life have anticipated.

By another fluke, he was again in effect appointed to the Vice Presidency by the dying Roosevelt, who used Truman and his war made publicity status to duck a row between the Communists who wanted Henry Wallace again for Vice President in term IV of the Roosevelt dynasty, and the southern Democrats who wanted James Byrnes.

By yet another fluke, Truman succeeded to the Presidency of the United States just as the American Nation was winning the biggest and most expensive and most inexcusable war in history. The people promptly showed what they thought of him by electing an overwhelmingly opposition Congress.

That Eightieth Congress did a magnificent job of pulling things together out of chaos. Then, the Republican party laid down and took for granted that it could take over the Presidency in 1948 with less than nothing.

So still another fluke elected Truman to the Presidency. His campaign was a racketyrax, disjointed, quarrelsome show. But it did at least have the juice of life, and that tells why he won against the Republican nonentity.

POWER BY ACCIDENT

Never had less? Today, this little man of little force is the most powerful individual in civilization. He gets a salary of staggering size. On top of that, he gets a whopping, tax-free expense account. He gets his rent free in the biggest house in town, the most famous in the Republic.

He gets to ride around, all still free, in airplanes, yachts, trains and automobiles furnished him by the taxpayers of this country. Generals and admirals bow and scrape before him. Senators grovel for his nod.

Human nature being what it is, this little man has ballooned to think he is a genius. He pounds the desk with his fist and demands of the taxpayers a whole galaxy of socialistic undertakings.

We are all supposed to permit destruction of this country's health and growth, just to keep feeding this two-bit Caesar with the meat that makes him think he's great.

For, in spite of all his present power, Truman is greedy for more. He would put the Federal Government in full command of farming, education, housing, medicine, banking, mining, manufacturing, and in the final analysis, even the local selling and use of goods.

He asks taxation that is confiscatory, discriminates against one citizen in favor of

another, and so weakens the practice of business that private enterprise fears every day for its life.

Then, to deceive and conceal his actual arrogant abuse of office, this typical demagogue of our day pretends a humility and low estate with "I never had less."

Would you like to understand the condition of affairs that made Truman and also makes it basic to the life of this Republic that all his kind be driven out of power?

Well, we can think of no quicker, simpler, easier outline of the whole story than you will find in a little book called the Revolt of the Masses, now some 20 years old, but as fresh and timely as tomorrow.

THE TALE OF OUR TIMES

The author is one Jose Ortega y Gasset, a Spaniard. You can get an excellent translation in English, 204 pages, for $3. As you read it, a philosopher's tract of 1930, you see forecast all the fierce demagogues of our day, Hitler, Stalin, Roosevelt, Musolini—and finally Truman.

What they are, why they are, how they came and how they can go. Revolt is filled with wise words everybody knows to be true. For instance:

"This is the gravest danger that today threatens civilization: State intervention; the absorption of all spontaneous historical action, which in the long run sustains, nourishes and impels human destinies.

"Society will have to live for the State, man for the governmental machine. And as, after all, it is only a machine whose existence and maintenance depend on the vital supports around it, the State, after sucking out the very marrow of society, will be left bloodless, a skeleton, dead with that rusty death of machinery, more gruesome than the death of a living organism."

So wrote a witty, shrewd little Spaniard 20 years ago, as he charted in advance the rise of fascism and communism, damned them both and warned against the demagogue in command of total power, wherever found.

Well, the Spaniard is still alive and around. What does he see for us, now? The United States of America, once the freest and most independent Republic in the history of the world, has suffered the infliction of two demagogues in 20 years. How much more can we take, and live?

It is not the demagogue, Truman, who never had less. It is the United States of America.

Salaries of Postmasters and Postal Supervisors

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1950

Mr. MULTER. Mr. Speaker, the following is a statement I have submitted to the House Committee on Post Office and Civil Service in support of bills H. R. 4678 and H. R. 4757, which are intended to correct certain inequities in Public Law 134 by a proper and more equitable modification of salaries of postmasters and postal supervisors:

STATEMENT TO HOUSE POST OFFICE AND CIVIL SERVICE SUBCOMMITTEE CONSIDERING H. R. 4678 AND H. R. 4757

Mr. Chairman, allow me to thank you and the members of your committee for granting me the opportunity to present my statement.

I am here today in support of H. R. 4678 and H. R. 4757, which are intended to correct certain inequities in Public Law 134 by a proper and more equitable modification of salaries of postmasters and postal supervisors. It is my earnest conviction that these postal officials, who are directly responsible for the proper functioning of our postal service, are grossly underpaid in relationship to their responsibilities and the duties they perform.

I happen to be quite well acquainted with the postal set-up in New York City, my home city, which has the largest postal service employing many thousands of people and serving the world's largest manufacturing and industrial area. It requires men of great experience and long years of devoted service to plan and direct this important phase of New York's economic activity. Can you picture for a moment the paralyzing effect on this great industrial center if the mail service should suddenly or for any length of time become disrupted because of inadequacy or inexperience?

The bills which your committee is now considering are in no way to be regarded as a new effort toward a salary increase for one group of officials over another. I prefer to regard these measures merely as an overdue adjustment of salaries, or putting them in balance to make them commensurate with the duties and the responsibilities we have entrusted to these officials in the postal service.

We have heard it said so often that the Government is losing so many of its ablest and trusted officials because it is not according them decent salaries. Private industry has long ago realized the importance of paying its officials and employees in a manner commensurate with their responsibilities, and the result has been that many of our most loyal and capable men have been attracted to private industry. Today, we all know that it is poor economy on the part of the Government to refuse to make the necessary adjustments, in order to retain those who have served so faithfully and from whose knowledge and vast experience we all benefit.

Here we have an excellent oportunity to correct an injustice by placing the salaries of postmasters and postal supervisors on a par with salaries paid to people who hold positions of high responsibility in other Government services or in private industry. In my estimation, these overdue adjustments are quite modest.

I regard these bills, H. R. 4678 and H. R. 4757, as meritorious legislation and strongly urge you to act favorably on them.

Relations Between Western Germany and Europe at Lowest Point Since War

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dorothy Thompson from the Washington Evening Star of March 16, 1950:

ON THE RECORD—RELATIONS BETWEEN WESTERN GERMANY AND EUROPE AT LOWEST POINT SINCE WAR

(By Dorothy Thompson)

A dispatch from Germany states "United States observers in Bonn and elsewhere in western Germany are surprised and, in some cases, alarmed at the bitterness that has been aroused" by the agreement concluded between the French Government and the Saar territory.

It is not the bitterness which is astonishing. It is the astonishment of the allied observers which astonishes. Weeks ago this column warned that the Saar proposals would shake the whole west European structure. This has now happened. Relations between western Germany and Europe are at the lowest point since the war.

This deterioration comes in a critical moment. Unemployment in western Germany has reached 2,000,000—and this figure does not include the large number of the partly employed. Popular discontent is rising, the continued dismantling of industries furnishing an additional focus of discontent, especially among workers.

CRISIS AIDS COMMUNISTS

The Communists are taking advantage of the triple crisis: Saar, dismantling, unemployment. The currency reform produced a boom, as it brought to a famished market long-hoarded goods and opened employment. But the economic structure is basically undermined by the vast augmentation to the population of penniless expellees from that part of Germany annexed by Poland and from the satellite states. These number 9,000,000, including a disproportionate number of women, children and aged who must be sustained by the labor of others.

Among displaced workers unemployment is far higher than in the indigenous population. Now in this threefold crisis, Communist Poland has decided to expel those Germans who survived the earlier purges. This will add another 200,000 to 400,000 unemployed, and further complicate the disastrous housing situation.

Although the Allies are protesting in Warsaw and have said they won't take more than 25,000, it is impossible to throw them back, or to refuse Germans asylum in their own country.

The Franco-Saar agreement can be understood from the viewpoint of the Saarlanders, who, under it, are much more prosperous than other Germans. But the repercussions in Germany are inevitable. The Saar becomes, for 50 years, a colony of France. It leases France its coal mines for that period; integrates its railway system with the French; and puts its foreign affairs, customs, monetary, and economic policies under French control.

GERMANY DISMEMBERED

The irony is that there is no limit to which the Adenauer government would not go to achieve economic and political integration of the whole of western Germany with France. But what no German government could accept—and remain in office—is further dismemberment of the gravely mutilated country. Neither will any truth-loving person swallow the argument that the disposition of the Saar is still left to the "peace treaty." The disposition of eastern Germany was "left to the peace treaty" in the Potsdam agreement—while the expulsion of its population was agreed to. Germany has been dismembered by faits accompli and no one will believe that the British and Americans have permitted France to take an action they intend later to reverse.

Thus, the most pro-western and pro-French government Germany is ever likely to have, has been slapped in the face and, in the dynamics of democracy, has suffered defeat.

Last week, Secretary of State Acheson said America must mobilize the whole of her diplomacy. At the same time, it was announced that we are bringing pressure on the French to give more freedom to the Bao Dai Government of Indio-China. Now, what sort of diplomacy is it that permits the French to make a colony in Europe—and to take from an extremely friendly German Government what they had granted Adolf Hitler?

The repeated warnings of the rebirth of German nationalism are really silly. For the German has only three political choices: To become a good European, go Communist, or revive nationalism. And while the Communists are uniting communism with nationalism, the western allies are systematically frustrating Europeanism.

Furthermore, it is a very weak France which is thus cutting ties with a friendly German Government with the consent of the British and Secretary Acheson. Communist east Germany has an army on its feet which is stronger now than the French—five fully equipped divisions to the French's two—and while French Communists are preventing the landing of American munitions in French ports.

One only can say that whom the gods would destroy, they first make feeble and then feeble-minded.

National Uniform System of Automobile Registration

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. MULTER. Mr. Speaker, today I introduced a bill in the House of Representatives which will require Congress to take the initial step in encouraging the development of a nationally uniform system of automobile registration.

The bill was prompted by the fact that there is a wide variance among the laws of many of our States concerning automobile registration which often leads to injustice and uncertainty in commercial transactions involving automobiles, particularly in transactions which involve the movement of automobiles from one State to another.

According to the bill, the Director of the Administrative Office of the United States courts is to be entrusted with the task of establishing a uniform procedure and appropriate fees for the registration of automobiles by clerks of the United States district courts. Automobiles are to be registered in the district where the owners reside or have their principal place of business.

As defined by my bill, the term automobile applies to all motor vehicles, including trucks, trailers, and motorcycles.

Registration forms will be supplied by United States district court clerks. Owners will have to enter their name and address; a description of the automobile, including manufacturer, type and model of vehicle, serial number and motor number; a statement of all prior transfers of title; and a statement of any liens against the automobile.

The bill prescribes a fine of not more than $1,000 or imprisonment for not more than 1 year, or both, for false statements knowingly and willfully made.

The clerk's certificate will be conclusive evidence of ownership of the vehicle but only presumptive evidence of the existence or nonexistence of liens.

If enacted into law it will be the first time a Federal law established a uniform system of registration of title of property.

It is hoped that because the law is permissive and not mandatory in term, it will be held constitutional if attacked in the courts.

It should be most effective, however, because of simplicity of the method established for proving ownership.

It is deserving of early consideration and speedy enactment.

Mr. Smith Locks a Barn Door

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. HARRISON. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the following editorial appearing in the Richmond News-Leader of Thursday, March 16, 1950:

MR. SMITH LOCKS A BARN DOOR

Every now and then we see in the press that some prophet of the political New Jerusalem is wagging a sorrowful head, full of the miseries that so many misguided sinners haven't found the true religion. The temptation, on reading these weep-easies, is to throw the newspaper at the cat and go for a long walk. Such a mood is upon us now, after reading Marquis Childs' lament at the Smith amendment to the National Science Foundation Act. Mr. Childs views this amendment heavily as a "chipping away of our freedoms," and he says lugubriously that it will "give the FBI the authority of a Gestapo and destroy a large area of academic freedom and the right of free inquiry."

What is the Smith amendment? It is a paragraph inserted in the Science Foundation Act by Virginia's Congressman HOWARD W. SMITH, and it reads, in full:

"No person shall be employed by the Foundation and no scholarship shall be awarded to any person by the Foundation unless and until the Federal Bureau of Investigation shall have investigated the loyalty of such person and reported to the Foundation such person is loyal to the United States, believes in our system of government, and is not and has not at any time been a member of any organization declared subversive by the Attorney-General or (of) any organization that teaches or advocates the overthrow of our Government by force and violence."

The prohibition against paying out tax funds to any person who at any time may have been a member of an organization now declared subversive is perhaps a little sweeping. Mr. SMITH himself confessed that "I feel I have gone pretty far," but viewing the amendment as a whole he regarded it—and so do we—as squarely in the public interest. What it means is that employees of the national foundation, privy to the gravest secrets of our national defense—the secrets on which the very survival of this Nation may depend—must not have soft spots in their loyalty to our way of life.

Is that a chipping away of freedoms, or is it a reasonable shoring up of those freedoms? Mr. SMITH said his idea was to lock the barn door, and reflecting upon the treachery of the eminent Dr. Fuchs, we can't think offhand of a better idea. The foundation's appropriations are limited to $500,000 at the moment, with an outside top of $15,000,000 per year; this is the barest drop in the bucket now being spent for scientific research. When Mr. Childs finds in this amendment the destruction of a large area of academic freedom and the right of free inquiry, he is finding spooks and bogeymen that simply are not there.

Perhaps it is worth observing again that this Nation's beloved rights and freedoms are not unlimited in their scope. They never have been, legally, traditionally, constitutionally, or any other way. The right of free speech gives no man the right to patrol a neighborhood's streets at midnight, shouting obscenities through a loud speaker. And the right of free inquiry and the freedom of academic research have similar proscriptions in the public interest. Mr. Childs may not see it that way, but to any man who views the Communists warily as so many rattlesnakes, the Smith amendment will seem a desirable safeguard of our national security.

How Bad Can United States Foreign Policy Get?

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. LOVRE. Mr. Speaker, under permission to extend my remarks, I should like to present to the Members of this body a thought-provoking editorial from the Huron (S. Dak.) Daily Plainsman for Sunday, March 19. Editor Robert D. Lusk has been critically interested in the foreign policy of this country and has devoted a good deal of time studying problems in international relations. I recommend this clear, concise editorial to all Americans who, like myself, wonder at times just where our present diplomatic policy is taking us.

The editorial follows:

HOW BAD CAN UNITED STATES FOREIGN POLICY GET?

One of the most ridiculous assertions to be made by an administration official recently was that made Friday by a State Department official, John S. Peurifoy, when he charged that the current Senate investigation of possible communistic influences in the State Department is hurting United States foreign policy.

Peurifoy said that charges by Senator JOSEPH MCCARTHY, of Wisconsin, against State Department workers have caused damage "both in terms of the day to day conduct of the foreign relations of the United States Government and in terms of human relations."

This would be a serious thing if it were an established fact that United States foreign policy was something definite and constructive, and that it has been a success and beneficial to the citizens of the United States.

But has United States foreign policy the past 5 years been anything that it would be criminal to disrupt or harm?

Consider Yalta and Potsdam. The United States negotiated terms at those places with the Russians which gave Manchuria away, and set up the Chinese disaster, which gave

Russia a chattel mortgage on the millions of people in central Europe, which committed an incredibly stupid blunder in putting the United States in Berlin to govern without any secure supply line to the city from the United States zone in Germany.

Consider the billions of dollars the United States had to spend on the Berlin airlift, a triumph of technology and airmanship made necessary by diplomatic stupidity.

Consider the Truman doctrine launched in February 1947, and how it took the United States away from the sincere support of the United Nations down the blind alley of unilateral action, with the United States trying to play Atlas and support the whole world single-handed. That doctrine put the United States into action in Greece and Turkey, destroyed its moral position of leadership, and marked an employment of force which the sad state of our armed forces converts into a bluff. It enabled Russia to employ force in Hungary, Czechoslovakia, and China without the United States being able to criticize effectively because of its precedent in Greece with military action aaginst Communist guerrillas.

Consider the Marshall plan. It performed the humanitarian miracle of feeding starved millions for 2 years but as a diplomatic weapon it has only perpetuated certain economic and political evils. Chief among them is the continuation of the illusion that France is a reliable western ally. Its only reason for existing now is to help western Europe integrate its economy and create the tools for its own sustenance. There is no amount of proof that it is so succeeding.

Remember the Palestine muddle and how President Truman changed his attitude of the United States towards Palestine partition—during a congressional election time when New York votes apparently had priority over peace in Palestine—not once, but three times. This vacillation disgusted the British and other nations to a great degree.

Finally, consider how Marshall came back from China's civil war recommending a do-nothing policy and Acheson, the next Secretary of State, continued a hands-off and let's let the dust settle policy. The result was an easy victory for Mao Tse-Tung and his Communist armies and China and 450,000,000 more people came under the control of the Kremlin in Moscow. This loss was a terrific one for the western nations. It gave not only all of China to Red Russian control but set up the way for communism to take over the Near East. Even Secretary of State Acheson now realizes that, for he said in his San Francisco speech March 15:

"We now face the prospect that the Communists may attempt to use China as a base for probing for other weak spots which they can move into and exploit."

Acheson's vision is remarkably clear after the fact. Almost as clear as the vision of many who saw and voiced inevitable consequences of United States do-nothing failure in China before the collapse.

In the face of that dismal succession of failures, caused and permitted by decisions by President Truman, the Secretary of State, and their advisers, how can a State Department official have the intestinal fortitude to say that criticism of State Department is hurting foreign policy?

A review of United States foreign policy failures such as the foregoing strengthens agreement with the remark made by nationally known commentator Dorothy Thompson in Chicago last month that:

"We have found that policies have been made which are incomprehensible unless we assume that there were persons actively engaged in making them who wished to serve other than American interests."

A Blitz Against the Forces of Inaction

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. KEATING. Mr. Speaker, it is gratifying to observe that the Massachusetts newspapers are alert to the outstanding service which our colleague, the Honorable JOHN W. HESELTON, is performing in his tenacious fight to see that surplus food commodities are distributed to those who need them rather than being destroyed. If newspapers throughout the country took up the cudgels in the same manner as the Holyoke Transcript and the North Adams Transcript, it might be possible to get action out of the Administration forces to bring about greater sanity in the handling of this program.

As one of the four Republican Members who first introduced bills on the subject, I am grateful to the gentleman from Massachusetts for his indefatigable efforts. When JOHN HESELTON tackles something, he never lets up so long as there remains a glimmer of hope for success. Although he has not received any satisfactory reply from the Secretary of Agriculture or from the President, vacationing in Key West, it is quite possible that the announcement by the Chairman of the Committee on Agriculture that he would hold hearings next Wednesday on our bills designed to assist in the distribution of food to the needy and hungry is inspired by the campaign without let-up which our capable and industrious colleague has waged.

Under leave to extend my remarks, I include the following recent editorials from the Holyoke Transcript and the North Adams Transcript:

[From the Holyoke Transcript of March 10, 1950]

Congressman HESELTON has hit the jackpot again with his probe of the $100-a-minute waste for charges of storing food commodities. Even President Truman can't snap out an answer for it, not even a wisecrack.

[From the North Adams Transcript of March 13, 1950]

JUST NOT INTERESTED

The Federal Government is spending millions of dollars for surplus potatoes, eggs, dried milk, and other foodstuffs. It is spending more millions to store what it is buying—and then is storing it so long that it is spoiling.

At the same time local communities are spending millions of dollars for food for welfare recipients—at full market prices.

Appalled at such a situation, Congressman JOHN W. HESELTON has put these two facts together and come up with a proposal that, instead of storing food and letting it rot, the Government see that as much as possible of it be diverted for local welfare use.

This would relieve the Federal Treasury of the terrific storage expense it is now carrying, would cut local welfare food bills, and would reduce the terrific loss represented by spoilage.

It would seem that such a simple and practical solution—one that would mean really important dollar savings both to the Federal Government and local welfare departments, and resultant savings on both Federal and local tax bills—would be welcomed and seized upon by those responsible for carrying out the agricultural policies of the Truman administration.

But such an assumption is wrong.

At first, when the potato scandal was hot, it looked as though Mr. HESELTON might be going to get somewhere. But Federal insistence that local communities would have to pay for the transportation, packaging, and storage of any surplus commodities distributed for welfare use discouraged most cities and towns from even applying for the food.

Accordingly, on February 2, Mr. HESELTON and three other Congressmen filed identical bills under which the Department of Agriculture would be permitted to assume these packing and storage costs, paying for them with funds that otherwise it would have to spend anyway for storing them until they rotted and had to be thrown away—a dead loss.

Up to now, absolutely nothing has been done toward getting this common-sense provision enacted. Mr. HESELTON has continued to bombard Secretary Brannan—and finally even President Truman—with demands for action. So far he hasn't even received an answer from either of them.

Since February 2, when the bills were filed, he estimates that the Federal Government has paid out approximately $2,160,000 in carrying charges on 16 food commodities—money that could have been used to pay transportation and other costs necessary to get these foodstuffs in the hands of needy people who could well use them.

And that $2,160,000 represents almost exactly the full tax payments of 40,000 taxpayers earning an average of $3,000 a year.

Meanwhile, these carrying costs continue to mount, more food continues to spoil, and local tax money continues to be spent to buy welfare food at top prices.

Mr. HESELTON'S last move was a last-minute telegram asking President Truman to intervene before he left on his Key West vacation.

He didn't even get an answer.

So the President has gone fishing. The appalling waste continues. And the bill is being paid by all those who have been struggling the last few days to get their income-tax returns in by March 15.

It seems incredible, but apparently Mr. Truman and his administration just aren't interested in anything which offers a sensible and desirable chance of saving the taxpayers a few dollars.

The Tragic Situation of Jews in Iron Curtain Countries

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. MULTER. Mr. Speaker, I have here an unusually interesting document which is highly revealing of the tragic

situation in which Jews find themselves in the countries behind the iron curtain. I want to recommend it to every Member of this House as "must" reading.

This document was prepared for the Labor Zionist Committee for Relief and Rehabilitation, whose main office is in New York. An emissary of this organization recently visited Europe, where he met with many people who had succeeded in coming out from behind the iron curtain through devious ways. For obvious reasons, names of certain individuals have been omitted.

Here is the true story about the treatment meted out to Jews in the so-called peoples' democracies of central and eastern Europe:

The information about the condition of Jews and of the campaign against Zionism and Israel in eastern Europe has been compiled from various sources, chiefly from discussions with tens of persons who have recently left those countries whom I saw in Paris, Zurich, and Vienna.

The situation in each country differs slightly. Yugoslavia generally is the exception to the rule because there is no antagonistic attitude toward Zionism and Israel in the main. The number of Jews who have remained there is small. There are about 5,000 Jews there. Bulgaria, too, is almost no problem. As you know, a sum of money had to be paid for each Jew who was taken out of the country. The other satellite countries follow, more or less, the "line" of Soviet Russia. Poland and Czechoslovakia are a bit more liberal, but Hungary and Rumania are as brutal as Soviet Russia itself.

Regarding Soviet Russia, we know from * * * that some time ago an elimination of Jews from all Government positions, the military, and diplomatic corps was started, the reasons for which are obvious. The campaign is not an open one, and the papers don't carry stories about it, but it is being conducted in systematic fashion. In the country, as well as outside the country, in one way or another way, all Jews are being recalled from their posts and in their places are assigned non-Jews. This is a result of the distrust that they have for Jews and their identification with communism and Soviet Russia is suspected.

They speak also of deportations of Jews from the large cities in central Russia to remote villages. This is also done with an excuse. The government which is the supplier of work for all citizens has started regulating the coincidence that actually for Jews who have lived their entire lives in Moscow and in other large cities, they find employment thousands of miles from any large center. This must have something to do with the secret war preparations of Soviet Russia generally. They do not want to have Jews in the centers of the country at a time of crisis.

From the aforementioned source, we also get the news that in Moscow there is now being prepared a large spectacle-trial, which will be a Jewish trial, although among the 120 accused—Jewish writers, poets, and composers—there will also be a number of non-Jews. The Jewish accused are guilty of causing the government embarrassment. For years they spoke, declared, and wrote that Jews identify themselves with the Soviet regime 100 percent and this has now been proven false, particularly after the recognition of the Jewish state. Those who have not yet paid dearly for this embarrassment will be punished legally. This will be a warning to all Jews on the one hand, and on the other, will be a quiet sort of justification for the present attitude of the government to Jews generally.

The situation is different in the satellite countries. In Poland there has started a dreadful campaign against Zionism and Israel and a wildfire is spreading against Jews who want to desert and become vassals of American imperialism. It is believed that those Jews who will not take steps immediately to leave this country, will meet more and more difficulty until the barriers will become entirely insurmountable and it will be too late.

Czechoslovakia which was, until recently, the most liberal country in eastern Europe as far as Jewish wanderers were concerned—and even for some time under the Communist rule—has also become unbearable. Escaped Jews from the neighboring countries are brutally returned and delivered into the hands of the special police from whose bestial hands the unfortunate victims can never twist themselves.

Generally, a certain amount of panic is quite evident in the Communist circles in all of the countries of eastern Europe. This is particularly true of Jewish Communist circles. Suspicion and insecurity have become an integral part of the mass psychology. Certainly there is not a single leading Communist in those countries who has the least bit of security and who does not constantly tremble in fear of the slightest mark on his record. This is also quite evident in the free countries where strong Communist Parties exist. In France, for example, the big name in Jewish Communist circles was Raisky, for years and years. He was also the editor of the daily New Press. During Gromyko's defense of the creation of a Jewish state in sessions of the United Nations, when all Communists understood the "go ahead" sign, Raisky excelled in editorials and impassioned speeches for the Jewish state and against Arab exploiters, former collaborationists of Hitler and Mussolini. Later, the "line" changed and Raisky had the misfortune not to follow it quickly enough and change to the new "line." Naturally, he spoke and wrote against Zionism and Israel, but not with the same conviction with which he had previously propagandized. So, a short while ago, he received orders from Poland to return with his family within 8 days. (Raisky, who came originally from Poland, had lived in France for more than 20 years). He begged for at least two more weeks so that he could sell his house and furniture. But a few days later, he received at his home the necessary funds for his house, furniture, and traveling expenses. He and his family left and it is already known (from Poland and France) that he and his family have disappeared.

The panic and the psychosis is even more pronounced in the satellite countries. Even in the highest positions in the regime there is great unrest and, consequently, political acrobatics are performed by everyone in order to be considered pure, even though this may often involve exposing another's impurity, may he be a relative or friend. (This last is the fashion these days.)

But all of this does not compare with the brutality and violence of these countries toward Zionism and Israel. Let us remember that even in Soviet Russia there existed Zionist mass organizations only a few years ago, and they carried on broad activities. Today there is no sign left of them. In both countries, Hungary and Rumania, Zionism and Zionists are terribly persecuted.

The Hungarian Government approved the departure of 3,000 Jews to Israel. But the price that they exacted is well known. The foreign exchange or its equivalent worth in goods is taken ostensibly for the construction of a hospital in Budapest for sick Jews. But everyone knows that this is no more than pretense. The 3,000 souls who will be permitted to leave are persons aged 55 years and children under 10 years. At the same time they must have relatives like brothers, sisters, parents, or children in Israel. No others will be permitted to leave even if they meet this expensive price. Naturally, no possessions can be taken with the eventual fortunate emigrants. The clothing of each one who leaves may not exceed in value the sum of $100. How long it will take before the 3,000 Jews will be able to leave Hungary, and generally if further changes for the worse will be made, no one knows.

The hate of the Communist Party and especially of the Jewish Communists against Zionism and Zionists is actually wild. The secret police and the entire security apparatus of the government betrays Zionists with the most bitter vengeance. This is especially true when they deal with Socialist-Zionists, Poale Zion. The previous trials against leading Poale Zionists were only a drop in the bucket in comparison with the administrative action and punitive measures which are enacted daily.

How the trials were conducted does not have to be detailed here. It is enough to say that some of the veterans and respected Poale Zionists confessed at the trials that they were guilty of everything of which they were accused and they even admitted that the Israeli consul in Hungary is an agent of the American Government. But, as previously stated, this is only a small example of the bitterness and vehemence of the administration toward Zionism. Hundreds of young labor Zionists are now in various labor camps and prisons and only because they are Zionist; 10 months, 1 year, 2 years—these sentences for Zionist activity are normal occurrences. At the same time, accusations and imputations are made without any basis and no proof is necessary. The verdict is always guilty and the sentence is always incarceration for a lengthy period.

Of the approximately 130,000 Jews in Hungary, certainly 90 percent would want to leave the country. Even for the great majority of the Jewish Communists this may be an answer to their dilemma about a way of life and not because of ideological conviction. In Hungary communism was always in the minority. At the last free elections (3 years ago), the Communist Party received only 20 percent of the vote. The entire so-called left bloc—Communists, Social Democrats, and other Socialist groups—received a total of 40 percent of the vote. But soon there started the offensive of unification on one side and of split on the other side—in accordance with the Communist tactics—until they started using terroristic methods and under the discreet arm of a few Russian battalions, the well-known secret election, with the privilege given to the masses to vote openly—and even after all that, when the Communist regime was already sitting securely in the saddle, the masses rushed to enlist in the ranks of the Communist Party.

The brutality of the police forces can be felt most strongly in Hungary and Rumania in the question of Jewish emigration. The Hungarian-Austrian border is guarded most carefully. The number of Jewish victims who were shot while trying to cross the border is not small at all. Only recently (about a month ago) two members of our youth organization Busliah were riddled by bullets when they were trying to cross the border. Jews who are caught and survive the tortures and incarceration, consider themselves fortunate. It is no secret that mines have been placed in various locations near the Hungarian-Austrian border, just as during the war they were used as protection against the enemy's invasion.

Just as bitter is the situation surrounding Jewish emigration in Rumania. What spirit prevails among the Jewish masses in both countries? (In Hungary, there are 130,000 Jews and in Rumania, 350,000.) The majority is filled with defeatism. The terrible poverty, particularly in Rumania, has no

equal. The desire to go to Israel, which seems to many of them like an impossible dream, is still unwaveringly strong. They are afraid to go to the offices of the Israel consulate. Nevertheless, they brave it in the hope of a miracle. A short time ago, a transport of Jews left Czechoslovakia for Israel. It was arranged that the transport should leave via the Rumanian port city of Constanta. The Rumanian Government issued the necessary permits for the transport, eager probably for the financial profit involved. Rumanian Jews soon learned of the trainload of Jewish emigrants headed for Israel which was traversing many large and small cities and they waited for the train at the stations and forcefully pushed themselves into the cars, in an effort to save themselves.

Later, when a few more transports were expected, the Rumanian Jews hit on a new plan. A number of them, who knew that the transport was scheduled to arrive in Constanta, hid the night before its arrival in empty casks which were standing on the docks and later smuggled themselves onto the ship which was leaving for Israel. Lately, a tragedy occurred with a woman who was found hiding in a trunk. The entire port was immediately surrounded by the military and several hundred persons were arrested.

Whenever it has been possible of late to reach the heads of the governments of both countries and raise the question of emigration for Israel, the answer has always been that the Jews are needed in the countries in which they are living. An important government leader in Hungary spoke of the "5-year plan" of Hungary as the reason for forbidding emigration. He stated further, according to the same sources, that if the first 2 years of the 5-year plan prove successful, Jews will be permitted to leave. Contrariwise, it is clear that the entire switch in the attitude toward Zionism and the campaign against it in these countries, is influenced by Soviet Russia. In these countries, no change of a political nature is made without instructions from Moscow. Two days before the vote on Jerusalem in the United Nations, someone had a talk with the foreign minister of Czechoslovakia in Prague. The latter gave assurances that his delegation would vote against internationalization of Jerusalem. At the close of the conversation, the minister remarked: "If before the vote nothing happens." The Czechoslovakian delegation voted with the entire Soviet block for internationalization. And when later, the same person met with the Czechoslovakian foreign minister, and asked him: "Why?" the minister answered: "I told you 'if nothing happens.'"

Bricha (escape) still continues but with the greatest difficulty and high cost. At a conference in Vienna, I heard detailed reports of what has been done in the last few months with our funds in these countries and in getting people out of these countries. Figures and totals need not be mentioned in this report now. But this has been a heroic work, full of enthusiasm which is incomparable. The greatest credit for this must go to * * *, who efficiently used our funds in the best way and at the best time. One of his accomplishments was to rescue at one time 20 souls from Kvutza Mahler in Budapest and bring them to Vienna. In addition, he succeeded recently in bringing out a number of leading people, particularly of the youth section.

At this same conference, most of the time was devoted to the problem of our declassed friends, especially in Rumania. "Declassed" in this case means those who are known for their active Zionist past. For them, all doors are shut. If they hide out anywhere, they can do so only as long as they have the means with which to live. In order to get work, they must report their personal life and employment for the past few years. This is naturally connected with great danger and they must avoid it at all costs. In Transylvania alone, there are more than 500 persons in this category. Without help, they are doomed to actual death by starvation. The regime knows of this category of declassed persons who, according to the tenets of the regime, must perish as a destructive element, enemies of the people's democracy and burdensome to the state.

One of their proposals connected with our relief was actually that we should help support these people. Twenty dollars a month will enable a man and his family to live. In order to care for 500 in Transylvania, it would cost us $10,000 monthly. We must remember the tremendous moral, political, and Zionist aspect of this phase of our relief work.

The Communist Tactic

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Journal American for March 19, 1950:

THE COMMUNIST TACTIC
(By E. F. Tompkins)

Senator MCCARTHY was entirely right in alleging that the State Department has been used as a nest of Communist espionage and treasonous intrigue.

If it were not so, Whittaker Chambers would not have had a bagful of stolen documents; Henry Julian Wadleigh would not have uttered his courtroom confession; and Alger Hiss would not have been convicted of perjury.

Yet, the New Deal's current investigation of itself can be easily distorted to discredit Senator MCCARTHY.

Travesties of this kind are made possible by common ignorance of the ramifications of Communist organization.

One thing that investigators of communism should understand is this—

Communism in this country is divided into two parts.

One part—the lesser of the two—is the Communist Party.

The larger part—and the more insidious one—is the Communist movement, which utilizes non-Communists as lackeys of the Communists.

The party does not have, and does not want, a great mass of dues-paying, card-holding members.

The party, in Nicolai Lenin's old language, exists and operates as the general staff of the Communist "class struggle"—as the cadre of the Communist revolution.

Hence the Communist Party is the hard core of the Communist movement, but the movement itself extends far beyond the party.

The Communists themselves establish fronts to obtain non-Communist support for Communist purposes.

They are trained to make use of respectable societies, such as church leagues and labor unions, to support their propaganda and to assist their "causes."

They know how to enroll the names of thousands of gullible or Marxist-minded educators, clergymen, and publicists to "endorse" their manifestos, to "sponsor" their rabble meetings, or to defend the "civil rights" of their agitators.

And they have the help of all kinds of fellow travelers.

By these means, literally millions of "joiners" are manipulated by the Communist Party, or by its accomplices, within the Communist movement.

One may thus be either a technical Communist, or a technical non-Communist; a "strategic nonmember" of the Party, or a genuinely deluded "innocent."

In these circumstances, when one's name appears upon an arrant piece of Communist propaganda, or as a supporter of a Communist enterprise, and one is called to a reckoning, one needs only to deny being a Communist, and may usually do so safely under oath.

If the outfit in question has been branded as subversive by the attorney general, one may simply plead ignorance or deception—and go right on posing as a humanitarian.

Take the case of Miss Dorothy Kenyon, who used to be a LaGuardia judge in New York and later had a State Department association.

Senator MCCARTHY said she had belonged to 28 Communist "fronts."

First Miss Kenyon called the Senator a "liar."

Then, on the witness stand confronted with the documents, she said she never was a Communist—but had been "a sucker."

This would seem to disqualify Miss Kenyon as a public leader.

For it is plain that the Communists have had the benefit of her "influence."

Granted that she was not a member of the Communist party—she was demonstrably a part of the Communist movement, whether she realized it or not.

The Insidious FEPC Bill

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. HARRISON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following series of articles from the Staunton News Leader, written by Maj. Gen. E. W. Opie:

The proposed FEPC law would declare it to be the policy of Congress to prevent "the practice of discriminating in employment against properly qualified persons because of their race, religion, color, national origin, or ancestry" because such discrimination is contrary to the American principles of liberty and equality of opportunity.

"The right to employment," says the bill's introductory, "without discrimination because of race, religion, color, national origin, or ancestry is hereby recognized as and declared to be a civil right of all the people of the United States."

When hearings were held on the bill, proponents were of the unanimous opinion that it proceeds upon a theory and philosophy which assure its effective administration. They argued for the bill on humanitarian grounds and declared it to be an essential step for strengthening our democracy. Donald R. Richberg, the noted constitutional lawyer, has declared, however, that the declaration of the right to employment without discrimination "is a declaration quite beyond the power of the Congress of the United States." * * *

"If the employer * * * is to be regarded as a mere instrument of state policy who can be required to employ anyone whom a Government bureaucrat finds to be 'qualified' for a particular job, why should not all employments be made through a Government agency?"

Bureaucratic judgment inevitably would be substituted for employer judgment under a law such as this, in the opinion of many who have studied it. As to its constitutionality, various authorities agree with Mr. Richberg. * * *

But clear unconstitutionality will not deter those who propose this legislation, nor will it be a protection when the Court test comes, as the present Supreme Court has too often looked upon the Constitution as a scrap of paper.

The bill would make it "an unlawful practice for an employer—

1. "To refuse to hire, to discharge, or otherwise to discriminate against any individual with respect to his terms, conditions, or privileges or employment, because of such individual's race, religion, color, national origin, or ancestry."

2. "To utilize in the hiring or recruitment of individuals for employment any employment agency, placement service, training school or center, labor organization, or any other source which discriminates against such individuals because of their race," etc.

It is also declared an unlawful practice for any labor organization to discriminate because of race, etc., or for an employer or labor organization "to discharge, expel, or otherwise discriminate against any person, because he has opposed any unlawful practice or has filed a charge, testified, participated, or assisted in any proceeding under this act."

Discrimination in employment on account of "race, religion, color, national origin, or ancestry" clearly involves a probing of an employer's mind and intentions, which in most cases likely to arise under legislation such as the FEPC bill would be impossible. In some cases, evidence of expressions of dislike or hate, and of determination not to employ persons of a certain race, etc., might be obtained to prove discrimination. Generally, any accused employer would deny discrimination. Conviction would nearly always have to be based on presumptive evidence: failure of the complainant to obtain the job he sought, though he proves the requisite qualifications; the absence of any persons of the complainant's color or creed in the employ of the accused, etc. It would be impossible for any commission to read the mind of an employer and seldom could intent, the mandatory element in American criminal prosecution, be established. The Commission would substitute its judgment as to a complainant's fitness for employment which was denied him for that of an accused employer, who would then have to obey the bureaucratic edict or face prosecution.

In placing upon employers the responsibility for determining whether or not an employment agency, placement service, training school or center, labor organization, or any other source of personnel discriminates because of race, creed, etc., the bill would impose the impossible. Again comes up the question of intent. Without close investigation, which would be burdensome and perhaps costly, how could an employer tell whether or not an agency was discriminating? If he listened to hearsay or the opinion of bureaucrats, he could do gross injustice to an employment agency or school. The Federal Commission and its underlings could put out of business almost any agency which happened to fall under their displeasure.

The opportunities for bureaucratic persecution under bill are legion, and those for extending its application through interpretation, rules, regulations, etc., are infinite. Under the wide-open interpretations of the commerce clause of the Constitution by the Supreme Court and by the National Labor Relations Board, the enforcement Commission could apply its powers everywhere. True, the bill exempts employers of 50 or fewer, but it would only be a question of time before this exemption was removed. No business, however small or local, would long be exempt from the officious attention of the horde of bureaucrats which would be necessary for enforcement.

The Federal Commission established by the bill would be empowered:

1. To investigate any written charge of discrimination in employment, either by a complainant or by a member of the Commission and to "endeavor to eliminate any such unlawful employment practice by informal methods of conference, conciliation, and persuasion."

2. To hold a formal hearing if persuasion fails.

3. To issue cease and desist orders including reinstatement or hiring of employees, with or without back pay.

4. To petition Federal courts to enforce its orders, the court petitioned being required to review the proceedings and issuing a decree enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part the order of the Commission. Court judgments and decrees would be final, except for review by a circuit court of appeals and the Supreme Court. Any person feeling aggrieved by a Commission order could appeal to a Federal court, but it would be a costly procedure.

In addition to penalties that might be imposed through appeal to the courts, there is a direct provision for fines of up to $500 and imprisonment up to 1 year for anyone who shall forcibly resist, oppose, impede, intimidate, or interfere with a member, agent, or employee of the Commission.

It is easily seen from these powers and the procedures contemplated that the Commission could be accuser, investigator, and judge, a triumvirate of powers which led to the grossest injustices under the old Wagner (National Labor Relations) Act and the National Labor Relations Board. This bill would repeat the mistake of investing such three-way authority in a single Commission.

It is equally clear that the army of agents which this Commission would create, like professional labor agitators, would have to justify their jobs manufacturing cases, and that they could and would indulge in the persecution of employers. Accused businesses would be put to tremendous expense and great trouble answering discrimination charges, either by disgruntled persons who failed to obtain the jobs they sought, or by Federal agents. This Commission and its regional bureaus and underlings would be a perfect set-up for political persecution of any employer who didn't favor the party in power. It could readily become a Federal gestapo which under some unscrupulous President could be as relentless and as cruel as the secret police of dictators.

At best, a commission and its agents possessing such powers as the above would be constantly snooping into the affairs of employers and worrying them with charges, which however unjustified, would be onerous to resist. Since the charge of discrimination because of race, creed, etc., concerns what is in an employer's mind and heart, the tendency would be to convict on presumptive evidence, often of trivial nature. Administration and enforcement of FEPC would create more injustice, confusion, and race hatred than it would correct or prevent.

Let's take a look at the sort of rules and regulations which have been promulgated by the bureaucrats of New York, whose law was the pattern for the FEPC bill and whose practice undoubtedly would be aped by any Federal set-up:

It is an unlawful practice (in New York) to inquire into the original name of an applicant for employment whose name has been changed.

To inquire into the birthplace of an applicant, or birthplace of his parents, spouse, or other close relatives.

To require a birth or baptismal certificate.

To inquire into the religious denomination of an applicant, his religious affiliations, his church, parish pastor, or religious holidays observed or whether or not he is an atheist.

An applicant may not be told: This is a (Catholic, Protestant, or Jewish) organization."

An applicant for employment may not be told: "The following holidays will be observed by this firm and no others (naming holidays, i. e., Decoration Day, July Fourth, etc.)."

An applicant for employment may not be told: "Employees are required to work Rosh Hashana and Yom Kippur."

Inquiry into the complexion of an applicant is forbidden.

A photograph may not be requested.

Inquiry may not be made as to whether an applicant is a naturalized or native-born citizen, the date applicant acquired citizenship, whether the applicant's parents or spouse are naturalized or native-born, or asked the date such parents or spouse acquired citizenship.

An applicant may not be required to produce his naturalization papers or first papers.

No inquiry may be made into the location (general) of places of business of relatives, nor inquiry into the places of residence of close relatives.

No inquiry may be made into the maiden name of the wife of a male applicant and/or the maiden name of the mother of an applicant.

Inquiry into the general military experience of an applicant is forbidden, into whereabouts during the First World War, or into organizations to which the applicant belongs.

Under the power of the President to write antidiscrimination rules and regulations into Government contracts, the contractor would have to obligate himself to waive a legal right of a free exercise of judgment in selection of his employees, points out one critic. Also such a contract might require a contractor to agree to compliance in all his operations although only a small force might be employed in fulfilling the Government contract.

In the hearings on the FEPC bill, Mr. Richberg offers this further argument against the bill: When a bill proposes to destroy the constitutional liberty essential to a free economy, and to provide Communists with a new and powerful leverage for disintegrating American industry, then any genuine liberal is obliged to say, "The alleged humanitarian and democratic purpose of this legislation is only a fraudulent cloak to conceal its communistic purposes—and its inevitable effect—to make a competitive system of private enterprise unworkable and to bring about industrial chaos and eventual collapse."

If the fair employment practice program had not been originally devised by Communist strategists they would have been ashamed of their stupidity. As a matter of fact it was a logical outgrowth of their orthodox plan. At the root of Communist ideology is the delusion of discrimination. At lot of people are miserable, they are told, not because of their own inherent or cultivated weaknesses, but because other men use their inherited or acquired power to oppress them. The remedy, they are told, is to have the State—a deceptive name for a tyrannical ruling class—control all power and divide up the proceeds of state enterprises without discrimination.

The program proceeds logically. The first step is to appeal to the least prosperous to fight discrimination. "Join the labor union and we will all fight the employers together and stop them from discriminating against anyone." But, the old-line unions were very discriminatory themselves. The craft unions aimed at giving a preferred earning power to skilled workmen—and at preserving monopolies of skilled employments.

The Communists naturally directed their efforts to the establishment of industrial unions. The early IWW and "one big union" movements were clearly communistic. In recent developments the industrial unions have cleverly adopted the slogan of democracy. They open their doors to the lowest paid, unskilled workers. They preach antidiscrimination and so appeal to every element of society that suffers any disadvantage because of racial or religious prejudice. But the ultimate object of the Communist strategy is not to create a democratic equality of opportunity through the exercise of individual liberty, but to create a uniform subservience to the political oligarchy that must rule the all-powerful government of a socialized society.

Every demand of organized labor for management control and every demand for legislation to substitute political regulation for managerial discretion will be supported by Communist agencies as an aid to weakening the power of private enterprise to meet its obligation to produce necessities and to provide employment and earnings through which the masses of the workers can retain the high standard of living which competitive capitalism under democratic government has achieved.

Every such demand is, of course, popularized by alleging that its objectives are a humanitarian improvement in the living conditions of the less fortunate and underprivileged members of society and a "democratic" elimination of all discriminations and special privileges that may give unjust advantages to anyone by accident of birth.

1. The proposed legislation is Communist-inspired and would have the effect of undermining the security of the country and of giving aid and comfort to its enemies.

2. The enactment of such legislation would hamper and impede the operation of established businesses by undermining the authority and efficiency of business management, by promoting discord among the workers, and by subjecting employers to burdensome litigation and hearings.

3. The enactment of the bill would seriously curtail the development of private enterprise generally by undermining the basic freedoms upon which the development of such enterprise depends.

4. If enacted, the proposed legislation would prove to be administratively unworkable because it would tend to undermine established social patterns based on law and custom, it would disrupt present progress in the field of race relations, and it would be impossible for the proposed commission to decide all cases on their individual merit.

5. The administrative history of the State antidiscrimination laws of New York, New Jersey, and Massachusetts, as well as that of the Federal Fair Employment Practices Commission, does not justify the enactment of Federal legislation in this field.

6. The proposed legislation is unconstitutional.

It is perfectly clear that enactment of so-called fair employment practices legislation would create more wrongs than it would correct. It would inspire widespread industrial troubles. It would cause racial dissention, undoing much of the progress that has been made in promoting good interracial relations. It would deny religious denominations the right to conduct schools and colleges for their own people or to give preference to employment of persons of their own faith in positions having to do with the propagation of that fight.

Such legislation would substitute the judgment of Government agents for the judgment of employers as to the fitness of an applicant for a job; it would deny American citizens the constitutional right of choosing their associates; it would create an immense Federal bureaucracy whose agents, in order to justify their jobs, would constantly stir up complaints, harassing employers on trivial charges, threatening them with prosecution, and placing upon them an intolerable burden of defense against charges which could generally be sustained only on presumptive, intangible evidence without establishing discriminatory intent.

The bill would place in the hands of an unscrupulous President a weapon for political persecution of any who dare to oppose him, his administration, or party. By disrupting private industry and playing into the hands of Communists, as shown in the article dealing with the Communist source of inspiration, this kind of legislation could easily become the basis of a Communist dictatorship, or of any other kind of dictatorship a power-hungry President desired.

It is idle to say that these dangers are figments of the imagination because nothing of the kind has resulted in New York, Massachusetts, or New Jersey. The governors of those States have not had the police power to enforce their antidiscrimination laws, and have been content with the gesture of enacting them to win the support of minorities. A President of the United States, however, would have the instrumentalities of the huge Federal enforcement agency which would be created, the FBI, and packed courts.

A good precept is to create no unrestricted power, however benevolent and American our Presidents have been, which could be used for tyranny, entrenchment, and absolutism.

Trygve Lie's Proposal To Accept Communists as Representatives of China Is Stab in Back for UN

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter appearing in the New York Times of March 14, 1950:

To the EDITOR OF THE NEW YORK TIMES:

Friends of the United Nations are deeply shocked at the suggestion of Trygve Lie, Secretary General of that body, that the authorized representatives of the lawful government of China be repudiated and replaced by the designees of a group which through fraud and force of arms has imposed its will for the moment upon a large part, but not all, of the Chinese people and Chinese territory.

International law and order cannot exist unless founded upon elementary morals. Nor can any instrumentality of international law and order long survive the negation of elementary morals. Counsels of expediency wrecked the League of Nations. Trygve Lie's proposal in the name of expediency is a stab in the back of the United Nations.

His argument is simple enough: The United Nations in order to function as intended requires the cooperation of the five great powers. One nation, Soviet Russia, refuses to cooperate unless the existing and lawful government of one of the five—namely, China—is repudiated and a self-constituted, usurping government is accepted in its place. Therefore, says Mr. Lie, repudiate the lawful government, notwithstanding its great contributions to the United Nations, and accept a government which has demonstrated itself to be the very antithesis of international peace and good will.

Entirely apart from bad morals which condemn the suggestion on its face, what does Mr. Lie hope to gain as a matter of expediency? Had Russia cooperated in furthering the aims of the United Nations before this issue was raised? Is there any reason to suppose that if the free nations yield despite the resulting injustice any genuine cooperation could be expected from Russia? Having yielded in this case, could the free nations consistently decline to refuse a similar demand when the next country in Asia or elsewhere is partially overrun by Communist aggression?

It would be an incalculable tragedy if the United Nations were to fail the hopes and prayers of the peace-hungry peoples of the world. If that failure should flow from Russian contumacy, Russia will inevitably answer sooner or later for that result. If failure should come because the free nations sacrifice justice and morals to Russian contumacy, the United Nations would still fail, though it might simulate continuance, but only as a symbol of universal cynicism and cruel mockery of mankind's noblest aspirations, and the free nations could not evade responsibility for that result. It was not Italy in Abyssinia or Japan in Manchuria which wrecked the League of Nations. It was the weak-kneed, spineless reluctance of the other powers to take a resolute stand upon the ground of manifest morals and justice.

The indication that the United States of America refrain from defining its opinion of Mr. Lie's proposal until a majority of the Security Council had expressed itself is unworthy of the position of leadership which events have accorded to America.

The issue is clear and calls for forthright policy.

There is a lawful, constitutional government of China. In the critical years when our own fate was in the balance that government faithfully, loyally, and successfully defended the bastion of Asia against our mortal enemy—and Russia's. With our allies we entered into a solemn obligation to defend the integrity of China against aggression.

We have done badly enough in fulfilling that obligation without participating in this final fatal betrayal suggested by Mr. Lie.

HAROLD RIEGELMAN.

NEW YORK, *March 13, 1950.*

Congressional Sounding Board

EXTENSION OF REMARKS
OF
HON. THOMAS H. WERDEL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. WERDEL. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the following editorial from the Bakersfield Press, Bakersfield, Calif., of Thursday, November 17, 1949:

CONGRESSIONAL SOUNDING BOARD

Officials of the National Farm Labor Union were extremely successful in using the recent Bakersfield hearing of the congressional Subcommittee on Labor and Education as a sounding board.

They got a lot of pretty irrelevant testimony into the RECORD designed to show that the so-called corporation farmer is responsible for the migratory agricultural labor problem.

This testimony was intended as explanation of the union's pretensions of having maintained a strike at Di Giorgio farms for nearly 2 years.

NFLU has maintained a picket line—in a spotty and dispirited sort of way. But a visit to Di Giorgio will show you that some 1,200 fairly-contented workers are crossing that picket line every day. So just whom does the NFLU represent? Certainly not Di Giorgio employees.

If you select a few Di Giorgio workers at random and talk to them, you'll soon discover they have little interest in NFLU. Matter of fact, they have things better than any NFLU member we have seen or heard tell of.

For instance, there is truck driver—he appears to be nearing 50—who came here from the Middle West in the the mid-thirties. He arrived in Bakersfield with 40 cents and a pregnant wife and went to work for Di Giorgio. He has been there ever since.

His two sons have graduated from high school and are working for Di Giorgio now. His daughter attends school in nearby Arvin. One son is married and lives with his wife in a cottage on the Di Giorgio ranch—a clean, nicely furnished bungalow with running water and modern sanitation facilities, excellent heating and an attractive well-kept garden. It is rent-free, and water and garbage disposal are provided by the Di Giorgios.

The father has bought, and paid for, his own home a few miles from the ranch.

During peak harvest seasons the wife and daughter help out in the packing shed. At such times the family nets nearly $1,000 a month in take-home pay.

Unmarried workers live in three large dormitories, where their quarters are furnished free. They eat in three equally huge dining halls, where they pay a total of $1.60 a day for three copious meals.

The ranch maintains recreation halls, tennis courts, and swimming pools for employees.

For normal off-season operation Di Giorgio employs some 1,200 permanent workers. At the peak of the harvest and the wine-making operation the pay roll soars as high as 2,500. But families of permanent employees make up nearly 1,100 of the additional helpers. It is seldom necessary for the farm to hire more than 200 migrant laborers.

So, how does the National Farm Labor Union figure that the Di Giorgios are contributing to the sorry lot of the migrant agricultural worker?

It would seem that the Di Giorgios are setting an example which NFLU might well use as a pattern of ideal conditions for farm workers.

Truman's Budget

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Story City Herald, Story City, Iowa:

FIGURE THIS OUT

There are 11,500,000 workers in factories in this country. They earn nearly $60 a week each. Yet, if they turned in all their wages to the National Government, President Truman wouldn't have much over half enough to meet his proposed expenditures the coming year.

Unification or Dictatorship

EXTENSION OF REMARKS
OF
HON. CHARLES H. ELSTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. ELSTON. Mr. Speaker, for the second time within recent weeks a high-ranking naval officer has been penalized because he dared to tell the truth as he saw it before a congressional committee. In reprisal against Rear Adm. Joel T. Boone for expressing an opinion contrary to that of his superiors in the Defense Establishment, a brilliant and distinguished officer has been summarily removed from his post as senior medical adviser to the Secretary of Defense.

This policy of reprisal on the part of the Secretary of Defense is an exceedingly dangerous. It witnesses before the Committee on Armed Services, or any other congressional committee, are to be punished for stating their honest opinions, Congress will be deprived of information essential in the interest of national defense.

In enacting the Unification Act, Congress did not intend to set up a military dictatorship in the Defense Establishment. The action taken in the cases of Admirals Denfeld and Boone would indicate, however, that such dictatorship has been assumed.

Under existing conditions officers in the military service must clear their opinions with the Secretary of Defense or risk their careers. This type of coercion is not only destructive of morale but threatens constitutional civilian control of the armed services. The security of the Nation is in jeopardy if Congress fails to meet this threat in time.

In this connection, Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Enquirer of March 14, 1950:

ANOTHER DENFELD CASE?

Rear Adm. Joel T. Boone, one of the most able and distinguished medical officers in the United States Navy, has been unceremoniously booted out of his post as the senior medical officer in the Department of Defense. This came to light just after Admiral Boone had testified before the House Armed Service Committee that certain cutbacks in military hospital were short-sighted.

It looks like the Denfeld case, all over again. And, significantly, it comes just a week after the House Committee blasted the Navy and Defense Department heads for the firing of Admiral Denfeld, describing his dismissal as a reprisal.

The evidence is piling up. It seems clear that Secretary Louis Johnson, while taking the maximum credit for his economies, is inexorably pursuing a policy of intimidating witnesses who venture to testify against his party line when they are called by the House Armed Services Committee.

It is not a question of Mr. Johnson's authority over the Navy Department and other military departments. It is a struggle between Mr. Johnson and a committee of Congress. Some military officers, if they are to give honest answers to Congress, have to criticize Mr. Johnson's policies. If they are to be punished for this and their careers broken, the time soon will come when no congressional committee can hope to get the true facts from its service witnesses.

That is the real issue. It is a grave one, because it involves the power of Congress to control the armed forces. Civilian control of the military, accepted for 150 years in America, is challenged by the policy of reprisal which the Defense Secretary and a very confused Navy Secretary are pursuing. Congress will have to see this battle through, or else risk the break-down of its history authority over those executive departments which spend one-third of our total budget.

Acheson Sounded Warning to Asiatics of Pitfalls of Soviet Imperialism

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Constantine Brown from the Washington Star. What a different picture we would face today in Asia if the State Department had adopted several years ago, or even 1 year ago, the general attitude and policies which the Secretary of State announced in San Francisco. Perhaps the situation can still be retrieved if the statement is implemented vigorously.

The article follows:

ACHESON SOUNDED WARNING TO ASIATICS OF PITFALLS OF SOVIET IMPERIALISM

(By Constantine Brown)

Secretary of State Acheson spoke firmly in San Francisco Wednesday, for the benefit of hundreds of millions of Asiatics.

He warned them of the pitfalls of the thinly disguised Soviet imperialism. He pointed out that all nations which join with the U. S. S. R. become enslaved, in the real meaning of that word. Finally he described the Russians as genuine warmongers because "anybody who would violate the United Nations Charter would violate the peace of the world."

Moreover, Mr. Acheson amplified a statement, made earlier this month in Washington, that in our effort to stem communism henceforth we will be moved by the realities of the situation in various threatened countries rather than by ideologies.

POLICY LAID DOWN

Mr. Acheson has announced that America is prepared to help any country which opposed the Kremlin dictators, regardless of the form of government in that country. According to this new policy, we are ready to assist Communists like Marshal Tito, dictators like General Franco, and even the remnants of the Chinese Nationalist regime in Formosa, which the State Department in the past has labeled a corrupt reactionary government, unworthy of our help.

Mr. Acheson promised Asiatic peoples who are willing to resist Moscow's penetration that they can count on "appropriate aid," which ranges from economic and cultural help to actual military assistance. He did not specify whether military assistance would

be given in the form of war materials or in actual physical intervention.

The Secretary of State unquestionably had in mind the situation in Indochina. The Russians and their Peiping satellite have pledged themselves to give full support to Ho Chi Minh, the leader of the Viet Nam Communists, against the newly established rule of former Emperor Bao Dai.

It is possible that some commitments may have been made by our Government to give other forms of active help besides arms and ammunition necessary for the French-Indochinese force of 150,000 men.

TASK FLEET VISITS PORTS

An American task fleet now is visiting Indochinese ports and it is possible that the presence of American men-of-war may put courage into the hearts of the forces which have been fighting the Communists for nearly 4 years.

The Secretary's speech is interpreted in Washington diplomatic circles as an indication that the United States no longer accepts passively Russian inroads in Asia.

In congressional quarters which have pleaded with the State Department—and even threatened it—since the fall of 1947 to consider the situation in China realistically rather than ideologically it is felt that Mr. Acheson is locking the stables after the horses have gone. If when Mr. Acheson took over as Secretary of State last year he had been as realistic as he is today, it is possible that the Russian-supported Chinese Communists might have been prevented from conquering the whole Chinese mainland.

If the State Department had sent military supplies to the Nationalists in keeping with appropriations voted by Congress, and if it had accepted the suggestions that we send some hard-headed military advisers to the Nationalist forces, we might have avoided the predicament in which we find ourselves today.

Twenty-eight Thousand Greek Children Victims of Communist Terrorism

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. MARTIN of Massachusetts. Mr. Speaker, the crimes committed by organized communism are so numerous that some of the worst ones go practically unnoticed in a world which has been shocked so much it sometimes seems to have become shock-proof. Very little has been heard about one of the most vicious mass crimes of all time. More notice should be taken of it, and I am wondering if our Government has done all it should have done about it.

I refer to the kidnaping of about 28,000 Greek children by Communist guerrilla forces. These children have been torn from their parents and forced into countries behind the iron curtain. They are the victims of a policy of communistic terrorism.

In perpetrating this crime against all civilized standards the guerrillas acted from three principal motives. In the first place, it is said these abductions are part of a campaign of terrorism, intended to swell the flood of refugees and so intensify the dislocations of Greek economic life. This, of course, would be designed to discredit and weaken the non-Communist Government of Greece.

In the second place, the abductions became an instrument of blackmail. The Communists hoped that by snatching these children away from their parents, they would be in a position to apply pressure upon the parents and persuade them to yield to the Communist demands. Finally, they regarded the abductions as a method of recruiting future cells for the Greek Communist Party. They hoped that by training these young minds in a strictly Communist environment they would have some active party adherents in the future. It is understood that the principal iron-curtain centers for the encampment of these children are Bulgaria, Rumania, and Hungary. But it is, of course, a part of the master plan of international communism; and some of the children may have been distributed elsewhere.

We are informed that the kidnaping procedure of the Communist guerrillas has been brutally simple. On entering a peasant village, the Communists would instruct the inhabitants to bring their children to the main square or to the well. The parents would then be told that by orders of the rebel government their children were to be taken away "for their own safety and to receive a democratic education." The resistance of the parents was beaten down by force, if necessary, and there have been reports that some parents who forcibly sought to prevent the abduction of their children were murdered.

It has been pointed out that the tragedy of the children is great, but that the tragedy of the parents is infinitely greater. While life is hard and rigorous in the peasant villages, the children have supplied the incentive and the courage to toil and fight on. Without the children, life becomes hopeless and a hollow mockery.

It is no wonder that the Greek Nation recently set aside a day of national mourning over this outrage against civilization. But does not such moral degradation call for international mourning? The abduction of these 28,000 children is much more than a tragedy for these children, their parents, and the Greek Nation. That such an outrage can happen and go unpunished is a blot upon the spiritual progress of mankind.

This crime brought forth the usual protests to the United Nations. We have been assured that the United States Government will continue to give utmost support to the efforts of the United Nations and the international Red Cross organizations to bring about the return of these thousands of children to Greece.

It is my concern, in bringing this matter to the attention of the House, that the perpetrators of this unprincipled and immoral action shall not be left with the impression that the protest of the United States is merely perfunctory. I hope they will not be deluded into the belief that this Nation regards this crime as no more than just another incident in a long list of Communist offenses, of no more importance than the rest. By any respectable international code of human ethics, the wrecking of homes and families is a crime of the first magnitude.

It warrants the full force of the moral influence of this great Nation and of all civilized peoples. Action already taken should be vigorously followed up by further strong protests, and notice should be served upon the guilty that this Nation considers they have committed a serious international crime for which they will be held in the contempt of the civilized world until they have purged themselves by returning these children safely to their homes and their parents.

I hope the Government of our country will assume an aggressive leadership in the use of every moral device within our command to right this despicable wrong.

Aid in Southeast Asia

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. MILLER of California. Mr. Speaker, the following editorial appeared in the New York Times, under date of March 11, 1950.

Will you please read it?

The concluding paragraph points up the necessity for prompt action.

The bill H. R. 7600 would extend the life of the Philippines Rehabilitation Commission and implement the procedure by which we can help a staunch and faithful ally:

AID IN SOUTHEAST ASIA

It seems to be agreed that if the United States is to make effective moves against the advance of communism in Asia some plans for stabilizing the situation in various countries must be initiated and adopted. Viet Nam wants military aid, at once, to meet the increased threat of the Communist-led forces of Ho Chi Minh. Burma has indicated a receptivity to American assistance, after having been somewhat fearful of foreign exploitation. Indonesia is seeking further rehabilitation loans. Discussions are in progress concerning the relation of American stock piling to Malaya's economy. A State Department mission is now in the field making a survey and a new Asiatic policy is predicted for sometime in the summer.

Meanwhile there is one danger point at which we can and should act without the need for further exploration. That is the Philippines. We have a direct military commitment and a strong moral commitment to the new republic's security and progress. It can be met, now, with concrete actions that will promote stability in the archipelago and at the same time give an earnest to the rest of Asia that we mean business. Here are some of the things that can be done:

1. The United States Congress should immediately make a further and final amendment to the War Damage Claims Act, appropriating the necessary $100,000,000 to bring the scale of payment up to the 75-percent level that was implicit in the original legislation. This is a matter of good faith, but it can be made also a matter of substantial economic gain for the Philippines by making some simple provisos. It can be stipulated, for example, that the additional payments to those whose claims have already been met in part must be used in projects designed to

further rehabilitation and economic improvement in the Philippines. This would assure the channeling of the funds into productive enterprises.

2. The United States should extend to the Philippines, now, a currency stabilization credit similar to that which was extended to Mexico. An amount of about $100,000,000 should be adequate. This is imperative, since adverse trade balances have drained away too much of the country's gold reserve. The peso is not now as stable as it should be and there is a black market.

3. The United States should dispatch, immediately, a small, really top-level and nongovernmental mission to examine and report on the possibility of private investment of the sort envisaged in the point 4 program. Such a mission, and it should be good enough to inspire complete confidence, should advise the Philippine Government on the steps necessary to encourage investment. It should also advise Americans as to where and how investment could be made profitably. There are opportunities in abundance. In this category could be placed certain public operations that could be funded with private capital, such as the rebuilding of the water supply for Manila and Baguio, the construction of some key roads, and the development of dam projects that would be a source of both irrigation and power.

4. The United States should quickly resolve any further dispute about our military commitments by strengthening its Philippine establishments. If we are to hold Clark Field there ought to be a ground force to defend it and its fuel sources should be made independent of the haul from Manila. If Subic Bay is to be our major naval station its fueling capacity should be made adequate. If we have other and wider programs for a solid establishment in the archipelago they should be started now.

The Philippines is at the moment in a shaky economic position. It is in a vulnerable military position. It can be turned into a bastion of great strength, economically, politically, and militarily, by prompt action. We and the Filipinos are in basic accord and we need not fear that we will be misinterpreted. We can act jointly. The important thing is to act now.

The President Should Not Appoint Professional Military Persons on the Atomic Energy Commission

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. HOLIFIELD. Mr. Speaker, I want to call your attention to H. R. 7601, a bill recently introduced that would require the appointment of one and, at the President's discretion, two professional military men to membership on the Atomic Energy Commission.

I feel strongly that this bill is ill-advised. I fear that it represents an attempt to attack, by indirection, the principle of civilian control over atomic energy, and that it seeks to create an entering wedge for military control.

Our problems will not be solved, our country will not be protected, and none of us will be relieved of responsibility simply by putting one man or two men in uniform upon the Atomic Energy Commission. This is an escapist path. This is a retreat from the philosophy which has always been the glory of our country—the philosophy that civilians must exercise basic direction and control of the great undertakings, military or otherwise, in our society.

We fought this battle 4 years ago when the McMahon bill for control of atomic energy was before us. At that time there were those who advocated military supremacy. But the public spoke up with a great voice and made it clear that America is still founded upon the civilian principle, and that civilians must direct our activities in the new and enormously threatening and enormously hopeful field of atomic energy.

Full provision is made in the law which we passed for consultation with the military. An unprecedented Military Liaison Committee was created to be composed of military people—and that committee was given the authority to appeal to the Secretary of Defense and, through him, to the President if any action or failure to act on the part of the commission is regarded as harmful to the responsibilities of the armed services.

This system has worked well. The Military Liaison Committee has not once felt obliged to exercise its special right of appeal to the Secretary of Defense and to the President. Former Secretary of Defense Forrestal expressed satisfaction, before his death, with the relationship existing between the Defense Department and the Atomic Energy Commission. Secretary Johnson has just issued his annual report for the fiscal year 1949, and in that report there is not a hint of criticism directed at the present arrangement. On Thursday, March 9, the President of the United States again indicated his approval of a civilian commission and civilian direction of atomic energy—subject to the advice and counsel and knowledge of the military exercised through the Military Liaison Committee.

I want to express my emphatic agreement with the President that putting a military man on the Commission would be a mistake. I think that it would reflect panic, that it would promise no easy panacea for our problems. I think that, on the contrary, we will be safer and stronger from every viewpoint if we hold steadfast to the glorious American tradition of civilian direction.

Thirteenth Annual National Wildlife Restoration Week

EXTENSION OF REMARKS
OF
HON. CHESTER C. GORSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. GORSKI. Mr. Speaker, in February 1936 the late President Roosevelt called a conference of conservationists representing Federal, State, and private organizations to consider ways and means to restore our vanishing wildlife. At that time President Roosevelt said:

> It has long been my feeling that there has been a lack of a full and complete realization of our wildlife plight, of the urgency of it, and of the many social and economic values that wildlife has to our people.

The North American Wildlife Conference of 1936 was thus the father of our present National Wildlife Federation.

The National Wildlife Federation has made great strides since that month in 1936. Through its active membership it has done much toward reawakening the American people to the violent and destructive story of what has been done to our forests, grasslands, wildlife, and water sources. It had been a story of human energy that was unthinking and uncontrolled.

We can thank the National Wildlife Federation for their unselfish personal interest and their love of our national resources for bringing to light the unpleasant story of the need for conservation.

Our timber reserves had been reduced by 40 percent. More than one-fourth of our grazing lands, farm pasture lands, and croplands had been ruined or severely impoverished. We were and still are drawing upon our water resources with such lavishness that in a growing number of regions the water problem is becoming more acute.

Through the efforts of the National Wildlife Federation we have made real advances in the protection of wildlife but they are still endeavoring to make our people realize that innumerable forms of animal life, including even small mammals and beneficent insects, play their part in nature's economy. They have been sucessful in their long battle to obtain Federal recognition of the pollution problem. May their coming years be as successful.

Freedom and St. Patrick—George Washington Gave First Official Recognition to St. Patrick's Day

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. PRICE. Mr. Speaker, it is not necessary for me to review the part the Irish have played in the building of the United States, and I am not taking the time of the House today to recount the glorious history of Americans of Irish ancestry. This record is too well known.

It is doubtful we would be an independent Nation today had it not been for the Irish. More than half of George Washington's Army which brought America's freedom from British rule was made up of Irishmen. Many of his most competent officers were Irish. The pages of American history are filled with the part of the Irish in establishing a great nation here.

The Irish fought to build our Nation; they fought to preserve it in 1861; and they fought for its preservation again in World War I and World War II. On the battlefield in defense of their adopted land they were never found wanting. And of equal importance was their contribution to the progress of American industry, transportation, communication, and professional institutions. In every field the Irish have done their share and have much cause to look with pride upon their contribution to America's greatness.

We think of these things as we observe St. Patrick's Day each year.

It was an order from George Washington in 1776 that gave official recognition to St. Patrick's Day for the first time in the United States.

Maj. Wes McPheron, defense reporter on the Air Force Hour, told the story so well on the Air Force orchestra's fine broadcast over the Mutual radio network this past St. Patrick's Day, that I ask leave to insert his remarks in the RECORD. Major McPheron's remarks follow:

Good evening, ladies and gentlemen, this is your defense reporter, Maj. Wes McPheron. Tonight I'd like to tell you a story which I think is a little on the unusual side. It has nothing to do with jet airplanes flying near the speed of sound, nor does it deal with monumental decisions regarding the state of the Nation. It's a simple story. Its theme—freedom and St. Patrick. Perhaps the linking of the two seems a little far-fetched. Actually it isn't.

Little is known of St. Patrick, the date and place of his birth, but we do know that in his youth he was a slave. In his confessions which he wrote in the latter part of his life, he attributed his liberation to a number of apparitions which God used to show him the way to freedom. After living in a monastery for a while, he was sent to Ireland to minister to the people there. He died on March 17, A. D. 493. That briefly is the story of St. Patrick—a slave who found freedom and then dedicated his life to freeing the minds, souls, and bodies of other men.

Here in America, recognition of March 17 as St. Patrick's Day came about in a strange way; strange, yes, yet quite appropriate. The year was 1776. The place, Boston, Mass. The fate of a nation was at stake. Thirteen young, struggling American Colonies had united in a fight for freedom. For 7 months General Washington had laid siege to the city. With an army composed of New England militia and southern riflemen, he seized and fortified Dorchester Heights, which the British had neglected after their dearly bought capture of Bunker Hill. On March 17 Washington decided it was time to finish up. As he placed his artillery in strategic positions and prepared to blast the enemy out of Boston, Gen. Sir William Howe suddenly decided to give up the city. With 11,000 troops he sailed out of Boston Harbor and Washington's men triumphantly marched into the city.

After Boston had been made secure, Washington issued several orders from his headquarters at Cambridge. One named an Irishman, General Sullivan, as brigadier of the day. Another authorized the countersign as "St. Patrick." Thus these orders officially recognized St. Patrick's Day for the first time in the United States. It was recognized in a moment of triumph, and freedom was just a little nearer. That freedom finally became a reality. It has endured through the years—often threatened, but never lost. And now on this St. Patrick's Day our pledge should be that that freedom never will be lost.

Rogers' Resolution

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. ROGERS of Florida. Mr. Speaker, several days ago I introduced H. Res. 450 to amend the rules of the House and providing "no bill or joint resolution of a public character making an appropriation shall be finally passed, and no amendment of the Senate to, or report of a committee of conference on, such a bill or resolution shall be agreed to, unless the vote of the House is determined by yeas and nays."

I have received from all over the Nation favorable comment on this resolution and a number of outstanding editors of the press have endorsed editorially the merits of this resolution. I was glad to have an editorial from my home paper, the Fort Lauderdale Daily News, and I am indeed grateful for the commendation contained in this editorial. I therefore am including the editorial as a part of my remarks. The editorial follows:

ROGERS' RESOLUTION

The people of this Nation were given another sorry example last week of the loose and shoddy voting procedure in Congress which permits vast sums of money to be spent without those voting for the spending being listed on the record.

Last Wednesday the House considered an appropriation bill which would increase the pay roll of the Post Office Department by some $163,000,000 annually. The bill was a rank discriminatory measure. It put war veterans on a special-privilege basis and set them apart from other post-office employees by giving them a pay increase up to $500 a year which other employees, of equal value and equal service to the Department, would not receive.

Proponents of this special-privilege measure conceded that on a roll-call vote their measure would not have passed. So the bill was maneuvered through the House by the standing-vote technique. A thumping majority of House Members, knowing they would not go on the record as approving such a bill, stood up and let the bill slide by. The result opened the window to let another $163,000,000 of public funds go flying away.

If this were an isolated case it might be pardoned. But it isn't an isolated case. It is standard practice whereby Congressmen can pay lip service to Government economy and then spend billions of dollars without any record being made of their vote.

In the first session of the Eighty-first Congress over $29,000,000,000 in appropriations were passed on in this manner. This tremendous amount of money was authorized to be spent without a record vote in either the House or the Senate.

It is a shameful and disgraceful commentary on our democratic system of government that such a system is tolerated by the people. Congressmen are elected by the people. They are supposed to represent the people. But most of them forget about the people and start representing a wasteful Government soon after the campaigns are over and they take their seats in Congress.

Only a few Congressmen have dared to question the propriety of the system whereby the elected representatives of the people can shirk their responsibility for spending the peoples' money. One of these Congressmen is our own DWIGHT L. ROGERS. Only recently he introduced a resolution in the House which would require a record vote on any spending bill coming before the House.

ROGERS' resolution makes sense. It would protect the people by making available to them the voting records of their Representatives on money bills. But the resolution is anathema to politicians who don't want to stand up and be counted. The standing vote system gives them a refuge and a shield from public censure. Under this shield and this refuge they can spend billions and billions and no one can determine how any individual Congressman did or did not vote.

Real government economy under this system is only a mirage. It is a catchword and a phrase which is useful for campaign purposes, but which can be conveniently dropped later on with nobody the wiser, excepting perhaps the "you scratch my back and I'll scratch yours" politicians who specialize in using the Public Treasury as a source of votes to stay in office.

Congressman ROGERS now seeks to force a change in this venal system. He seeks passage of a resolution which would make it compulsory for Congressmen to answer "yea" or "nay" and go on the record when voting on appropriations bills.

Congressman ROGERS isn't afraid to stand up and be counted because he believes in representing the people. It's a pity more of our elected Representatives do not share his viewpoint and his courage. If they did we would have a better government and an end to a system which sees billions of dollars of the people's money squandered away by politicians who can't be held answerable for their actions because there is no record of how they voted.

Greece Mourns for Her Children

EXTENSION OF REMARKS
OF
HON. CHRISTOPHER C. McGRATH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. McGRATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an editorial entitled "Greece Mourns for Her Children," which appeared in the New York Journal-American of March 8, 1950.

The editorial is as follows:

GREECE MOURNS FOR HER CHILDREN

(By Harry H. Schlacht)

Twenty-eight thousand innocent Greek children are held captive behind the iron curtain.

Twenty-eight thousand helpless Greek mothers are weeping for the return of their children.

Despite all appeals to the Communist satellites, not one child has been returned.

The Communists have flagrantly disregarded the two resolutions of the United Nations Assembly requesting the immediate repatriation of the Greek children.

The Communists scorn law and order.

They repudiate the authority of the UN.

They disregard every moral principle of justice.

The International Red Cross is currently in session in Geneva. It will seek to obliterate this stain upon modern civilization. It will seek to liberate these children from communistic bondage. It will seek to terminate this crime against mankind.

The forceful detention of these Greek children has aroused the bitter indignation of the people of every civilized nation.

For it violates every feeling of love. For it is tantamount to the horrible crime of genocide.

The monsters of Moscow have launched a new kind of warfare. They intend to train these children in the inhuman doctrines of communism. They intend to train these children as a fifth column in Greece. They intend to train these children with a hatred against their God, against their religion, against their country.

The Red devils will never succeed in converting the Greek children in their heathen, hellish ideology.

The mothers of Greece have always been faithful to the religion of the Nazarene and in the faith of their proud race.

They rocked their babes to sleep to the rhythm of patriotic songs.

They told their children the stories of the glories of Greece. They taught their children to defend with their lives their church and their country.

The church has always been the nation's ark.

We have witnessed the final sunset of such godless creatures as Hitler, Mussolini and their bloodthirsty followers. We will witness, in God's good time, the final sunset of Stalin and his fellow tyrants.

When a nation like Greece remains faithful to the ideals of freedom of the spirit, there is no final sunset for its people.

"The people of Greece and the Americans of Greek descent owe an eternal debt of gratitude to the Hearst newspapers for its crusade to free the 28,000 Greek children from communistic iniquity," declared former Senator Phelps Phelps, chairman of the American Committee for the Liberation of the Kidnaped Greek Children.

Let America take the lead. Let America heed the appeal of the mothers of Greece. Let America help to return these children to their mothers.

We shall not—we must not—we will not—let them down.

The Enthusiastic Irish Tribute to St. Patrick

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1950

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of my colleagues an editorial which appeared in the Brooklyn Eagle on March 17. Once again the Sons of Aaron join with the Sons of Erin in enthusiastically helping them to commemorate the birthday of their patron saint:

THE ENTHUSIASTIC IRISH TRIBUTE TO ST. PATRICK

Throughout a national history marked quite consistently by tragedy and suffering, Ireland has had the advantages of an unfailing source of spiritual sustenance. Devastating wars have swept the little island. Generations of its people have known political oppression and the sufferings of famine. Leaders in the struggle for freedom have died before a firing squad or on the gallows. There have been times when the people of Ireland have had little but their faith.

Today the Irish at home and those who are scattered throughout the earth's broad surface pay their tribute to St. Patrick, who left the people of Ireland when he died in 461 a heritage which they have cherished faithfully over the centuries. History records few men whose beneficent influence has been sustained so long. In fact, it has been extended as the sons of Ireland have been carried by their free and adventurous spirits to distant places.

It is a tribute to the character of the Irish people that their gratitude has been undying, that the passing of time does not dull the edge of their enthusiasm for the proper observance of a day which holds such a rich symbolism.

This Nation of ours is richer and stronger by reason of the liberal mingling of the Irish among its people. They have been among the very best of citizens and have made their own distinctive and generous contribution to the strength and the ideals of the Nation. The heritage given them by St. Patrick has helped to make them what they are. It is natural that they should honor his memory so unfailingly.

More About Potatoes

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1950

Mr. SAYLOR. Mr. Speaker, under leave to extend my remarks, I include an editorial which appeared in the Johnstown Tribune on March 15, 1950, entitled "More About Potatoes":

MORE ABOUT POTATOES

A conference committee working out differences between the Senate and the House on acreage controls for cotton and peanuts found time yesterday to work out a program for potatoes.

This plan would withhold price supports from the 1951 crop of potatoes unless potato growers accept rigid marketing quotas which prevent them from selling more than an allotted number of bushels. "Next year," said Senate Majority Leader LUCAS, "We will have marketing quotas, agreements, and orders on acreage, bushels, and bags. That," said Senator LUCAS, "will take care of potatoes."

The legislation the conference committee was discussing dealt with cotton and peanuts. Cotton planters have been bitter about the acreage allotments. Acreage was cut back from 27,000,000 acres last year to 21,000,000 acres this year, with the result that various "hardship cases" developed. The conference committee compromised that sharply political issue by adding 1,400,000 acres to the 21,000,000 which cotton producers have been allowed to plant.

In the matter of peanuts, the conference committee agreed to add 100,000 acres of peanuts to the allowed acreage for this crop in Texas and Alabama. However, if growers agree to devote their peanuts to the making of oil—which does not provide as great remuneration as selling peanuts for direct consumption—the conference committee agreed that all restrictions could be removed and the planters could grow as many peanuts as they desired. There is also to be a Government "peanut pool" to avoid shortages for candy makers.

In the name of Burbank, George Washington Carver, and all those other geniuses who devoted their lives to improving agricultural products and finding new uses for them, what goes on here?

Have we come to the time when a farmer must see his Senator, or at least his Congressman, in order to be permitted to plant and market the product of his labor? That seems to be the implication of this congressional addition of 1,400,000 acres to the land which may be devoted to cotton and 100,000 acres in two States to the land on which farmers may raise peanuts. By the way, the conference committee declined to add 4,500,000 acres to wheat land to take care of Colorado "hardship cases."

The principle of price supports to avert disastrous declines in the incomes of farmers has gradually been perverted to the point at which farmers must plead with Congress to be allowed to use their land economically. In some fields, notably tobacco, this business of acreage and marketing controls has reached the point where those who have "production records" have a virtual monopoly of the market, and few or no newcomers can put seed into the ground.

We begin to understand the Brannan plan more clearly. When the Government tells farmers what to plant and how much to sell, it is a short step to paying them out of the tax money and completing the subservience of this once, and we hope still, independent group of citizens. And so, a little at a time, independence vanishes and everything falls under the dominance of Washington.

An Honest Confession

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1950

Mr. SAYLOR. Mr. Speaker, under leave to extend my remarks, I include an editorial which appeared in the Johnstown Tribune on March 15, 1950, entitled "An Honest Confession":

AN HONEST CONFESSION

A year ago there was sharp opposition by administration forces in Congress to the home-rule provision in the rent-control bill, under which communities, acting through their official governing bodies, could have ordered the decontrol of rents within their borders.

Last week, Senator FRANCIS J. MYERS told his colleagues in the Senate: "I should like to say in connection with rent control generally that, although I opposed the local option provision in last year's Rent Control Act at that time, I now keenly appreciate the fact that this provision furnishes us today with the safest rule-of-thumb measure we have for the still existing need of rent controls."

In other words, last year's outcry that this provision would ruin the rent-control law was somewhat exaggerated. As a matter of fact, Senator MYERS said the permission given communities to decontrol rents has not been exercised "to any marked extent." We congratulate Senator MYERS for his confession that he was wrong last year. And we suggest again, as we have many time before, that local government which is close to the people and their needs will ordinarily function more effectively than government on the Washington level.

The only reason big government seems sometimes to operate more efficiently than small government is that its mistakes are easier to hide and harder to uncover.

Haym Salomon's Loan to the American Revolution Should Be Repaid to His Heirs

---

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. KLEIN. Mr. Speaker, it is shocking to those who cherish thoughts of national gratitude to realize that this great Nation, conceived in liberty and dedicated to human dignity, has never formally recognized the claim of the descendants of Haym Salomon to reimbursement for the expenditure of his fortune in the American Revolution.

It is my purpose, in the very near future, to introduce and to press to passage a private bill which would authorize the payment of the amount of the claim to Haym Salomon's lineal descendants.

I must remind the House, Mr. Speaker, although it has often been said before, that this great patriot sacrificed his fortune, his health, and eventually his life on the altar of American freedom; he left destitute, at his death, a young wife and four children.

In addition to the sums loaned directly to the Revolutionary Government, Haym Salomon loaned or gave outright considerable amounts to individuals, including Thomas Jefferson and James Madison; but in all the years during which some effort has been made looking to the recognition of the debt, his heirs have never suggested reimbursement for anything except the principal amount of the loan to the Government itself, calculated at $658,007.43. It has never been suggested that his family should be reimbursed for the private loans and gifts, nor that any interest should be paid.

CLEANSE NATIONAL CONSCIENCE

Time cannot dull the ache of the national conscience until this debt has been paid, however long it may have stood. There is no statute of limitations on a debt to freedom.

Every American is proud of Haym Salomon, and every Jew is proud of him and of his comrades in arms who created on this continent "a new Nation, conceived in liberty and dedicated to the proposition that all men are created equal."

The payment now of this long-standing debt cannot help the young widow and her four children who survived revolution and the patriot's death; but it can cleanse the national honor and conscience.

HAYM SALOMON STORY TOLD IN AMERICAN WEEKLY

Mr. Speaker, under leave I am inserting in the RECORD the story of Haym Salomon as it appeared in the western editions of the American Weekly a few weeks ago, and undoubtedly will appear soon in the East. The story carries the byline of Terry Gibbons, which is a nom de plume of Miss Frances Spatz, the Washington correspondent of the American Weekly.

I should like to add that my introduction of the bill is not the result of any solicitation by the living heirs, but is the result solely of my own interest. Miss Spatz informs me that she has talked to two of the living heirs who live in Washington, Mrs. Barnard—Faye Salomon—Green and Mrs. Louis—Natalie Salomon—Mulitz, who is the daughter of the late Gustave Bier Salomon.

There follows the text of the story by Miss Spatz as published in the American Weekly; the text of a part of the Drew Pearson column of Saturday, March 18, as it appeared in the Washington Post; and the text of the bill I propose to introduce.

[From the American Weekly of January 8, 1950]

SIX MILLION WITH INTEREST—THE DESCENDANTS OF AMOS PIATT WANT TO COLLECT FROM THE GOVERNMENT—AND MAY, TOO—BECAUSE HIS AUNT LOANED MONEY TO THE COLONISTS

(By Terry Gibbons)

"Goodness knows, we helped out the Government back in Revolutionary War days," Grandma Rhoda Ullom said. "We lent it money, didn't we? I mean the family did. Now all we want is the money back with interest. Six million dollars would come in quite handy."

Grandma Ullom, 78, was talking a while ago to her granddaughter, Mrs. Emerson O. Buchanan, of Bridgeport, Ohio, she told Mrs. Buchanan that a Buchanan ancestor named Amos Piatt once had written about the loan, which she said had been chipped in some time in 1775. Mrs. Buchanan began to hunt around for ways to prove it.

An old trunk in the home of one of her husband's relatives helped her. It yielded a yellowed manuscript which appeared to have been dictated by Amos Piatt, himself on his deathbed.

That manuscript is a leaf out of the past, a story of Indian massacre and colonists' endurance, and it is the basis of a formal claim, now, against the Government of today.

Amos Piatt's aunt, Marie Preh, loaned the money to the colonists, the ancient document says, and the sum was to be repaid to him or his children. Mrs. Buchanan's husband, a salesman, is a great-great-grandson of Amos.

"We all came to America from France in 1774," Amos wrote. "General Lafayette was a first cousin of my aunt, Marie Preh, who loaned the money.

"I never had any sisters. I had only one brother, Robert, and he was killed by Indians one day in an Indian massacre. They killed my little brother before my mother's eyes.

"They burned our home down and all our things and burned all our papers up that we had to prove our right to Aunt Marie Preh's money. There should be $6,000,000 principal and compound interest coming to me and you 11 children. Since all our papers were burned, we thought we could not get it, so we never tried."

It was time some one did try, Mrs. Buchanan decided, and she brought the claim to the attention of the Government's General Accounting Office, to the United States Archives and to her representative in Congress. A search of records was begun, too, in New Jersey, and there it was easy to find references to Maj. Daniel Piatt, Amos's father. One of them was an order from Gen. George Washington, directing Daniel to requisition 100 head of cattle near Morristown, N. J., and another was an order to associates to attend Daniel's funeral.

Proving the validity of the claim, which was said to amount to $6,000,000 back in 1848, when Amos died, is another matter.

It will take at least 6 months of intense research to determine the status of the claim, Mrs. Buchanan has learned, and the burden of proof and the expense of the inquiry rest with the claimant. The work will be handicapped by the fact that many revolutionary records were destroyed when the United States Capitol was burned by the British in the War of 1812 and others were lost later in a fire in the Treasury Department.

Eventually, if the claim should be deemed valid, a private bill would have to be introduced in Congress to authorize payment.

Nevertheless, it is possible today to collect such a claim. A bill providing for payment of $658,007.43 to heirs of another Revolutionary patriot, Haym Salomon, will be introduced in Congress soon.

Haym Salomon, colonist from Poland, spent his entire private fortune of nearly $1,000,000 in the cause of liberty, then died penniless in 1795, leaving a young wife and four children. He not only gave this financial aid, but also served as a spy and was imprisoned by the British when he was caught trying to sink a British ship. After his death, descendants sought to collect only the amount of the actual loans, $658,000, excluding all gifts to individuals, among whom were Thomas Jefferson and James Madison, and excluding any interest, which if compounded annually would bring the amount now to a total running into billions.

Previous bills in Congress, providing for payment, never came to a vote although committees of both Houses conceded the justice of the demands. Recently, Representative ARTHUR G. KLEIN, of New York, revived the matter and a private bill was prepared for the Eighty-first Congress, second session.

"Time cannot dull the ache of the national conscience until this debt is paid," KLEIN said. "I will press this bill for passage."

It is not only hard to get such a bill passed, but merely to bring up an old claim is not always feasible—as descendants of Robert Morris, one of the signers of the Declaration of Independence, recently found.

They asked a Congressman to look up the possibility that their illustrious ancestor had lent the Government money which had never been returned. The Congressman reported that it seemed to be the other way around. He said the Treasury Department long ago found that Morris owed it $93,312.63. The Department, however, gallantly concluded that "having no knowledge of the system of posting accounts or the reasons for certain ledger entries in those days, it is neither fair nor just to assume that the balance is really due to the Government."

Descendants of Francis Vigo, a merchant, had better luck. More than a 100 years after he lent $8,616 to the State of Virginia, they collected $51,539.10 from the Federal Government, which has assumed all State Revolutionary debts.

[From the Washington (D. C.) Post of March 18, 1950]

THE WASHINGTON MERRY-GO-ROUND—MONEY LENDER JOINS UNITED STATES HEROES

(By Drew Pearson)

A forgotten hero of the Revolutionary War, an unspectacular money lender, will soon be immortalized not far from Washington, Lincoln, and Jefferson. He was Haym Salomon, the little Jewish patriot who raised the money to fight the Revolution but died penniless without ever receiving a dime back from the Government whose freedom he financed.

Now after all these years, a memorial is about to be erected in Salomon's honor. This was authorized by Congress 12 years ago upon a motion by GUY GILLETTE, then Congressman but now Senator from Iowa.

It was left up to private citizens, however, to raise the subscriptions, so the project lay

dormant until this year. Now a Haym Salomon Memorial Society has been formed to raise the money, and the chief thing remaining is to have the Commission of Fine Arts approve a design.

Note.—At one time George Washington pulled Salomon out of a synagogue to scrape up the cash to meet the Army pay roll. Salomon also paid Jefferson's and Madison's board bills so they could attend the first Continental Congress.

The following is the text of private bill to be introduced:

Be it enacted, etc., That the Secretary of the Treasury is authorized and directed to pay out of any money in the Treasury not otherwise appropriated to the heirs of Haym Salomon the sum of $658,007.43, in full satisfaction of their claim for moneys loaned by Haym Salomon to the Government of the United States during the Revolutionary War.

Mississippi and Progress

EXTENSION OF REMARKS
OF

HON. WILLIAM M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1950

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered at the dedication of the Woolfolk State Office Building, Jackson, Miss., Thursday, March 16, 1950, to wit:

MISSISSIPPI AND PROGRESS

I am honored by the invitation that permits me to participate in the ceremonies of this auspicious occasion.

The State Office Building dedicated today is the majestic and lengthened shadow of a remarkable man whose name, by act of the legislature, it bears.

The people of Mississippi commended the members of the legislature who, on March 6, 1946, appropriated $3,000,000 with an additional appropriation of $870,000 by the legislature in 1948, for the construction of a much needed and adequate State office building.

The act providing for the building was passed under the leadership and during the administration of the late-lamented Governor Thomas L. Bailey.

The members of the State Building Commission, including the chairman, Gov. Fielding L. Wright, the able and capable ex-Gov. Hugh L. White, the Honorable Walter Sillers, speaker of the house of representatives, Senator John W. Kyle, and the Honorable W. A. Williams, a member of the house, are entitled to the gratitude of the people of Mississippi for the location, supervision, and construction of the most imposing and complete State office building in the South, if not in the United States.

The completion of the structure marks a high point in the outstanding administration of our distinguished Gov. Fielding L. Wright. It is a credit to the State of Mississippi.

ELLIS TRIGG WOOLFOLK

No one was more responsible for the State office building than the late Ellis Trigg Woolfolk, a Representative from Tunica County, and chairman of the Committee on Appropriations in the house of representatives at the time the original appropriation was made.

This modern and lofty office building was appropriately named for our dear and devoted friend, Ellis Trigg Woolfolk, familiarly known as "Scrap" Woolfolk, who served his county and his State long, faithfully, and efficiently. Among other offices held by him, he was sheriff, State senator, and State representative.

I am gratified that this building was named for a former member of the legislature. Attention is thereby focused upon the importance of the position. There is no public office where the opportunity for constructive service is greater than in the legislature.

Ellis T. Woolfolk was well born. He inherited a good name. He was always jealous to preserve and transmit to his sons the good name inherited from his father.

He possessed a good mind. He took an active part in the improvement and development of his city and of his county. He was a a leader among men.

He was a successful planter, banker, and manufacturing executive. He was successful in his business life before he undertook to manage the public business. He was thus better prepared because of his personal success for handling the affairs of the people.

He was a politician in the best sense of that term, and that means that he was a constructive statesman. He exerted a wide influence in the political affairs of his county and State.

He always took pride in the financial condition of his home county. He had much to do with the deserved reputation of Tunica County as being one of the best-managed counties in the State. It was his boast that Tunica County was substantially without debt or bonds. While progressive, he insisted that the city in which he lived and the county where he resided should live within their income. He knew the courthouse before he became an outstanding figure in the statehouse. He gave his best thought and his unselfish service for some 20 years in both branches of the State legislature. He was a master of county and State government.

He was a devoted husband and a fond and a generous father. He loved his home and his family.

He had many friends. He knew that the best way to have friends was to be a friend. He was slow to make promises, but his word was his bond. He was loyal to every friend, and he was faithful to every trust.

He loved his State. He lived, and wrought, and died in the Yazoo Delta, most fertile of valleys, by the mighty Mississippi, the greatest of rivers and the father of waters and of floods.

Scrap Woolfolk was not perfect. None of us is. The sun gives us light, but it has its dark spots. He was human, but he was courageous and dependable.

He was a man of convictions. He had the courage of his convictions. He never sought an easy place for safety nor a soft place for retreat. He measured up to the best standards of public office. He was able, honest, and faithful to the end. He "never sold the truth to serve the hour." He was a patriot of Mississippi mold. He exemplified in his public life the sentiment: "Destroy not the ancient landmarks that our fathers set."

While Scrap Woolfolk was qualified to fill almost any political office within the gift of the people, his claim to fame rests upon his service in the legislature. The building we dedicate today is a tribute to his memory and a just reward for the service he rendered the people of Mississippi.

GOOD GOVERNMENT

This office building is to accommodate and promote good government in Mississippi. The officials and employees who occupy the offices will take pride in the efficient handling of public affairs. Convenient offices promote good work. State officials and employees are the spokesmen of the State in dealing with the public. At its best, government is one of the most difficult and perplexing problems of man. Sometimes there is strife among neighbors. Often there is discord among States. Frequently there are rivalries among nations. It is often difficult for man to live happily with man. The people appreciate good work in State offices. I trust courtesy and efficiency that promote good government will always obtain in this stately office building of which all Mississippians are justly proud.

PROGRESS

This structure, costing approximately four times as much as the Capitol building, is typical of the progress of our State. We are proud today to be citizens of Mississippi. We are gratified that Mississippi is in step with the march of progress. Our agricultural and industrial resources are inviting home seekers and investors. Long well-known for cotton and lumber, for its fertile valleys and magnificent forests, Mississippi is now one of the great oil-producing States of the Union. Livestock and dairying are profitable. Manufacturing is encouraged. We have the climate. We have the soil, and we have the people. No State has made greater strides in the development of its natural resources in providing for solid industries and in promoting substantial agriculture than Mississippi. As we hear of the alluring, if not enchanting distant scenes and of green pastures far away, we frequently overlook the opportunities of our own State. I am familiar with the cities, with the farms, with the plains, the valleys, the coasts, and the mountains of all the other States in the Union that lie between the two great oceans and from the Great Lakes to the Gulf. My thoughts, after traveling elsewhere, always fondly turn to my native State, and I am never so happy as when my feet are on Mississippi soil. I know of no State that offers better privileges or finer opportunities for a full and satisfying life than Mississippi.

Progress is on the march and our eyes are turned toward the future as we plan for a greater State and for a better civilization. We know that mere change is not progress. We know that progress means growth. We know that progress means development. We believe that changes in both society and in government should be tested by sound principles and by the experiences that have promoted happiness and freedom through the centuries. We believe that change that involves experiments, before it is called progress, should be tried. It should be tested before that change becomes permanent, and before mere change is called progress. History shows that experiments, in the test tube of reason and analysis, will often eliminate mistakes from mere changes which are not progress.

We know, too, that change is the law of life, that ideas and ideals change from century to century, but we also know that while concepts change, fundamental principles are constant and continued. Habits and customs and the values of concepts change from generation to generation. The Declaration of Independence enlarged the freedom of Magna Carta. We believe in a progress that is sound and constructive. As we behold the towering structure appropriately located near the magnificent capitol and the attractive capitol grounds, we are proud of the progress that our State is making today and we are determined that that progress shall increase with the passing years.

BALANCED ECONOMY

We must not, however, close our eyes to the facts of our economy. We must be realistic. When we mention agriculture we think of cotton. We believe in land ownership. We encourage tenants to become land owners. We promote the family farm, but we do not destroy or penalize the plantation. We stand for justice to all farmers, large and small. There should be no discrimination among citizens, and legislation

should be just to all alike. We are profoundly concerned that the exports of cotton for 1948 were substantially the lowest since the War Between the States. While they increased in 1949, this increase was largely from the use of Marshall Plan funds. The domestic consumption of cotton had decreased in 1948, but the consumption of rayon increased. Cotton, also, now has the competition of nylon. The rayon production in 1948 was equivalent to approximately 2,645,000 bales of cotton. The production of plastics and other synthetics, including nylon, is rapidly increasing. Paper today is cotton's second greatest competitor. We cannot overlook our competition, including foreign cotton. We cannot continue to overproduce cotton. There is no single answer to the cotton problem. We must not only compete, but we must balance our economy. We must encourage industries, and I do not mean fly-by-night but I mean solid industries. We must promote manufacturing. We must encourage cattle raising and dairying. We must diversify on a sound and solid basis. We must, in a word, balance our economy.

TOLERANCE

We believe in tolerance. Mississippians have their convictions, but we are constantly reexamining ourselves, and we believe in enlarging our vision and in improving our convictions. An individual, like a State, must grow or he will die. Growth or death is the law of life. We must be careful not to deserve to be called intolerant. We must continue to practice without malice or prejudice the political and economic tolerance that we accord to others. We respect the rights and views of others. We ask that our rights and our views have the consideration that we accord to others who differ with us. The attitudes respecting race, color, or creed were not created by law, and they cannot be changed by law. Customs and habits should always be in keeping with the best concepts of good living, but the legislature rather than the Congress is better qualified to consider improvements in racial or social relations. Any legislation dealing with the habits and customs of the people should always be supported by the majority of the people. I believe in the democracy of Jefferson and of Jackson with majority rule in government. An intolerant people will never enjoy the abundant life. Tolerance promotes understanding and cooperation.

THE SOUTH

The record of Mississippi and of the South in World War I and World War II is outstanding. Without making comparisons, we assert the record shows that the South more nearly unitedly supported the two greatest of all wars than any other part of our common country. We mention this fact not to boast, but in proof of the devotion and loyalty of the South to our common country. We believe in preparedness. We stand for national defense. We support an adequate Army, Navy, and Air Force. We advocate better highways, improved rivers, progress in our schools, and the conservation of our soils. We are profoundly interested not only in growing but in selling our cotton and our cattle. We are interested not only in producing but in selling our oil and lumber. We are interested in cooperating in interstate and international commerce with the other States of the Union and with the other countries of the world. We believe in a strong America. We believe in the good neighbor policy. With us, partisanship stops at the waters' edge. I concur in the sentiment of the great English statesman of whom it was said: "In his fidelity to principle, he put to shame the brittle loyalties of party."

We are not selfish. We are interested in our own welfare. We have our convictions, but we accord to the citizens of other States with whom we like to cooperate, their convictions. We say to those who would like to change our habits or social relations and our way of life that unless it is to improve, and not impose: "Thou shalt not pass."

VETERANS

The United States and not the States wages wars. The Government and not the States supports the armies and navies. The Government calls to the colors. The aftermath of wars often is worse, if possible, than war itself. The disabled, the wounded, the widows, the dependents, and the orphans of those who made the supreme sacrifice, are entitled to a nation's bounty. Selfishness often supplants sacrifice, and greed is substituted for patriotism. Our veterans are determined that those who fought for their country shall have an opportunity to live for their country, and with them we are determined not only to maintain but to establish peace on earth.

REAL VOICE

The trend today is to listen to the voice from Washington, but progress in the States does not originate in Washington. Progress does not filter from the top down, but it results from fair opportunities and a good life for the people at the bottom. Real prosperity must grow from the bottom up. All must be treated alike. There is no place in our industrial life for selfish and greedy management, nor is there any place in our economy for the selfish labor leaders who are drunk with power. Regardless of what Washington thinks, the people in the States believe in justice to Capital and to Labor. They believe in collective bargaining, but they believe in the right to work. They oppose jurisdictional strikes. They oppose secondary boycotts. They assert that no man has a right to strike against his Government. The public welfare must be put above private welfare by both management and labor.

The true voice of America does not come from Washington, but the real voice of America comes from the farms, the factories, the schools and the churches. If we heed the voice of Washington, we become less self-reliant. We lose our initiative. We sacrifice our courage. We must not succumb to the voice from Washington for more spending and for an easy life.

It is not an accident that the United States is the most powerful nation in the world today. Those who founded America were sturdy and heroic souls. They had suffered persecution. They exchanged the tyranny of the Old World for the freedom of the New. They paid the price of freedom. Every generation must achieve its own liberty and freedom. We must rededicate ourselves to the old-fashioned virtues of self-reliance and initiative: "We must be guided by the stars and not by the lights of each passing ship."

STATES' RIGHTS

We believe in the rights of the States, and that all functions not delegated to the Congress in the Constitution are reserved to the States. We rely upon the Bill of Rights. We insist that the rights of the States be respected. For 50 years I have advocated the rights of the States. I have insisted that State functions should be respected. I speak frankly. Unfortunately many who advocate the rights of the States are among the loudest advocates of the Federal spending today that is undermining the Republic. They urge that the Federal Government appropriate for private and not public functions, and for functions that are primarily the functions of the States. When they do they are undermining the rights of the States. Whenever the Federal Government appropriates the Federal Government controls. Centralization and States' rights cannot exist together. I urge that the best way to promote States' rights is to promote State responsibility. That responsibility is for the discharge of obligations that are peculiarly the province of the State. Centralization, I repeat, in Washington carries with it control in Washington, and control in Washington impairs not only the local rights but the local responsibility. I assert that the best way to promote the real rights of the States is to support the local responsibility of the States.

Deficit spending today is a threat and a danger to the security of the United States. I maintain that a Government whose expenditures, in times of peace and in the period of the greatest prosperity that the Nation has ever known, exceed its revenues—whose spending exceeds its collecting—is in danger of destruction in the event of either war or unbridled inflation.

OPPORTUNITY

The United States with its great resources, with its unparalleled production, following victory in the greatest of all wars, has reached the highest pinnacle of power and majesty ever attained by any nation in civilized history. We have the greatest opportunity that ever came to any nation, if we conserve our natural resources, if we take advantage of our unsurpassed production in this atomic age, to make unprecedented progress in the United States in the next generation.

Progress, however, must be more than material. As Edith Cavell said: "I realize that patriotism is not enough. I must have no hatred for or bitterness toward anyone." The material must be accompanied by the intellectual and the spiritual. Science must be based upon morality. For Mississippians believe that science is the friend of man and that the greatest enemy of the human race is disobedience to moral law.

If we keep faith with the boys who went out in World War II, never to return, and if we put first things first, there will be a new era of progress in the United States. Our Government must be stable and our faith must be abiding—in man, country, and God. The material forces must be based upon moral forces, for moral forces have always determined the destiny of men and nations.

DANGERS

After the stress of war, there is always danger. The temptation is complacency. We think more and more of our rights and less and less of our responsibilities. We think more of security than sacrifices. We distort the meaning of public welfare. We overlook that there is a vast difference between public welfare and private welfare. The government is established to promote the public welfare, which involves doing for the people what they cannot do for themselves. I repeat, to emphasize, that the unbalanced budget is a danger today to stability and prosperity.

There are other dangers. The greed of organized minorities is a real danger. Measures to promote the public health are in order and hospitalization is to be promoted, but socialized medicine is a national danger. We believe in home owning and farm ownership, but we assert that socialized Federal housing will result in the socialistic, if not the communistic state advocated by those who first proposed public housing. Socialized farming will result in the regimentation of farmers and in the control of the food and farms of the Nation.

THE TREND

Following World War II, the trend was toward socialism, but the trend today is away from socialism and state control. In December 1949 New Zealand and Australia, where social democracy had advanced the furthest, turned away from socialism. In February 1950, the Socialists lost in Great Britain. Even though retained in power by a few votes, their tenure is uncertain. The moral in the trend is clear. Somebody has to

pay for the promises of socialism. Free medicine and free housing cannot be conjured out of the thin air. Somebody has got to pay for them. There is an end to the policy of robbing one citizen to pay another and of "robbing Peter to pay Paul".

I am sanguine enough and optimistic enough and patriotic enough to believe that the trend is also on the way out in Washington, and that Congress will repudiate the welfare state. There is no place in free America for subsidized agriculture and for socialized medicine.

STRONG AMERICA

We must be prepared for war, for there is still both chance and change in the world. Communism is on the march, but there is no occasion for fear of the destruction of the world in the event of another war.

The strength of America does not lie in the atom bomb or the hydrogen bomb or any other single weapon. The strength of America lies in the faith and spirit of the people.

It would be most unfortunate if America were dependent upon any weapon. We would relax and become soft. We would cease to be vigilant. We must profit by the examples of history. The French placed their confidence in the Maginot Line rather than in a strong and stable government. France lost. She was easily overrun and conquered in World War II.

I do not underestimate the effect of the atom bomb, but I recall that at the conclusion of the First World War, poisonous gasses were being brought into play and it was announced that their use in the next war would mean the destruction of civilization. But the scientists who compounded the poisonous gasses were confined to no one country. While at the beginning of World War II all nations had supplies of gasses, yet not one country made use of them.

Already the Russians have split the atom. I believe that in this atomic age the scientists who discovered the atom bomb can perfect a defense against the atom bomb. Atomic energy should be used to build, not destroy, civilization. The strength of America is in the tolerance and intelligence, the faith and the courage, of the people.

REHABILITATION

We are profoundly interested in the rehabilitation of our allies in Europe and in the rehabilitation of the destruction of war, but the Marshall Plan is burdensome to the taxpayers of America today. That plan must be followed by other plans. We know that taxes are at their peak today. They can only be increased by reducing standards of living. We are straining our production. The Marshall Plan must be followed by better plans. I believe that the best aid that we can render our former allies in World War II, and the oppressed peoples of the world today, is to exemplify that in the American way of life there is the only hope of freedom for the downtrodden of the earth. The best assistance that we can render in rehabilitating Europe and China is to set an example and demonstrate that in America there is the freedom to worship, to speak, and to work, with the highest standard of living and the best opportunity for a good life in all the world. The United States can help the undeveloped nations of the world and provide for improving the lands and the peoples of the smaller and less fortunate nations of the earth by furnishing to them the scientists and the science to enable them to help themselves. If our churches send missionaries to foreign lands, I know of no better way of making good our advocacy of the good neighbor policy than by sending to foreign countries some of the brightest graduates of our colleges and of our universities who will find in those countries an opportunity to help humanity and to aid undeveloped lands and peoples.

YOUTH AND FRONTIERS

As we think of Mississippi and of our progress we are thinking of the youth of our State, for they are the best of our assets. There may be, in the future progress and development of our country, no new territorial frontiers to conquer, but there are frontiers available to the ambitious youth today that are probably greater than the physical frontiers that were available to our forefathers. We must use, without destroying, our lands. They are essential to our freedom. We must not waste our natural resources, for the conflict between progress and poverty is as old as the Biblical conflict between light and darkness, and it is as new as atomic energy. Scientists believe that as a result of the continued scientific researches in connection with atomic energy discoveries may be made that will enable the oceans and the gulfs to be farmed and food to be produced to provide for the expanding populations not only of the United States, but of the world. Scientists are optimistic enough to believe that, as a result of an invention whereby distilled waters may be available to the passengers of airplanes that may be stranded on the sea, these invention for distilling ocean water may be perfected so that waters of the ocean may be distilled and transported across the mountains for irrigating the great western plans to supplement the stored waters of the rivers so that the American desert may be as productive as our fertile valleys.

BUILDERS

As we improve our natural resources we must build our civilization. We can only build that civilization by supplementing the material forces with the more important moral forces. I would like for our generation to be constructive. I would like for us to build. "It is better to light a candle than to curse the darkness."

I can express the thought I have in mind no better than by these words from John Ruskin:

"When we build, let us think that we build forever. Let it not be for present delight nor for present use alone. Let it be such work as our descendants will thank us for, and let us think, as we lay stone on stone, that a time is to come when those stones will be held sacred because our hands have touched them, and that men will say as they look upon the labor and wrought substance of them, 'See! This our Fathers did for us'."

I believe in progress, tolerance, intelligence, freedom, moral force, the dignity of the individual, science based on morality, and obedience to the laws of God and man. Therefor have I spoken.

I believe in adequate public buildings and in able public officials. People reflect their own image in the type of public buildings they construct and in the kind of men and women they elect to public office.

The greatness of any nation depends upon the character of its resources, the character of its institutions, and above all, upon the character of its people.

In the Middle Ages, great cathedrals were constructed with the gifts of the poor of Europe. They were more than architectural wonders. They were monuments to the ideals of the people who built toward the stars, as the lofty spires pointed to Heaven. They were symbolic of the faith and the hope of the great masses of the common people of Europe. From their foundations to their spires, they typified the dreams and the aspirations of the average man for a better life here and hereafter.

I recall that it is said that during the building of one of these cathedrals a visitor passed through the stoneyard and saw many masons at work hewing and shaping the granite blocks. He stopped and asked one of the men what he was doing. "I am shaping the face of this stone," was the reply. He asked another stonecutter the same question. The second man replied: "I am cutting the keystone of an arch." The third man was asked the same question. He replied, as he looked up with pride: "I am building a cathedral."

As we conserve our soils, as we construct our highways, as we build our cities, as we improve the countryside, as we build our levees along our rivers, as we construct our dams to prevent overflows and to protect the lives and property of the people, as we build schools and churches, as we erect structures to be the monuments of our civilization, we are building America. We are building the great cathedral of American freedom, not only for ourselves and our children, but for the hope of freedom to the oppressed peoples of all the world.

The danger of the United States today is not in any invading foreign foe. "We the people" are not only the first words of the Constitution of the United States, but "we the people" are its danger, its power, and its hope. Above all, "we the people" must preserve America.

Wartime Excise Taxes Should Be Repealed at This Session of Congress

EXTENSION OF REMARKS

OF

HON. JAMES S. GOLDEN

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1950

Mr. GOLDEN. Mr. Speaker, a great majority of the American people desire the immediate repeal of the wartime imposed excise taxes. It is my opinion that a substantial majority of the Members of Congress desire that this be done. These taxes were imposed as an emergency war measure. They were believed by everybody to be temporary. Part of the purpose for the enactment of this law on many commodities that bear this sales tax was to prevent too much material and too many man hours of labor going into the manufacture of articles that were not necessary for the prosecution of the war.

The impositior. of these taxes are very discriminatory. They have placed an undue burden upon certain of our American industries. The war has been over for several years. There is no longer a shortage of critical material and there is no longer a scarcity of labor. The unemployment rolls in America are now approaching 5,000,000. It has been definitely proven that the continuation of these excise taxes have been crippling to business; they have materially increased the cost of living, and they are constantly contributing to the increase in unemployment.

The amusement tax on the picture shows, which affords many American families the only recreation and amusement they have, has made it very burdensome and expensive upon the American people and has denied many people the opportunity to participate in this wholesome, educational, and uplifting recreation.

All tax measures, of course, must originate in the House of Representatives. The Ways and Means Committee of the

House of Representatives have, for the past several weeks, been holding hearings upon this subject. We are told that this great committee recently refused to vote out a straight bill calling for the repeal or the reduction of the excise taxes and that they are contemplating later on reporting a bill, including the repeal of some of these taxes and the reduction of others, but to be coupled with a tax bill in substance increasing the tax on some industries so as to have the tax measure in one package. It is my opinion that this is a mistake.

A bill should be brought before this session of Congress addressing itself solely and alone to the repeal of excise taxes. There has been much talk since the President's message to Congress that there would be an effort made to remove or decrease the depletion charges now allowed to the coal-mining industries and other mining industries including the oil industry.

While these things are being contemplated, you hear on every hand that the mining industry is a sick industry. We have recently had before this session of the Congress a bill which seeks in substance to grant subsidies to the mining industries. We do not believe that the present depletion charges allowed the mining and oil industries should be taken away from them. To do so will make sick and crippled industries in much worse condition.

Both the coal industry and the metal-mining industry as well as the oil industry are vital to the economic prosperity of the Nation. Many taxes are already imposed upon coal and oil and their products. They are bearing the full share of the tax load. To further discriminate against them and to adopt the theory contained in the excise-tax law that certain industries should be singled out from the American economy and unusual and unequal tax burdens placed upon them, is an unwise and unjust tax policy.

If the administration and this great committee that has the responsibility of writing a new tax bill undertakes to, in one package, repeal and reduce many of the war-imposed excise taxes, and at the same time single out the coal industry and oil industry for the equivalent of increasing taxes, the whole bill will be in danger and the much-needed relief that can be gained by repealing the excise taxes may be lost.

To take from either the coal industry or oil industry the depletion charges now allowed under the law will be the exact equivalent of imposing upon them a burdensome and new tax. To do so will put many companies out of business and will increase unemployment by many thousands. We hear on every hand that the Federal Government needs more taxes and more money. The remedy for this situation is for the Federal Government to stop passing new laws that spend so much money. Another remedy is to speedily enact several of the proposed bills and measures to reorganize the executive branch of the Government so that more economy and more efficiency can be obtained. There will be serious opposition to only a few of these plans to reorganize certain branches of the Federal Government.

These measures which will be sharply contested could be deferred for the time being and the vast majority of them will be supported and can be enacted almost immediately into law. By taking these two steps, to quit spending and to reduce the size of some of the departments of the executive branch of the Government and to eliminate waste, can and will meet the situation.

We could far better spend our time by repealing these excise taxes and thus greatly increase the business and employment over the United States thereby creating wealth and more wages to tax than we can by allowing this much-needed reform in our tax laws to become snarled up with an unjust attempt to impose new burdens upon coal and oil. We can again far better use our time to cut down the size of the Federal Government and curtail its spending than we would do if we sought to impose new and additional tax burdens upon the people and the people's business.

When it is considered that the American industries engaged in the manufacturing and production of jewelry, kodaks, luggage, some wearing apparel, and many other American businesses affected by this tax and the moving-picture industry already pays enormous income tax and indirect taxes, it is quite unfair to single them out and continue to impose a 20-percent excise tax which not only cripples their businesses but falls most directly upon the American public.

Depletion charges are allowed upon all manufacturing machinery and equipment and upon rental real estate, and there is no just reason why the basic industries producing oil and coal should not be allowed these depletion charges also.

When coal and oil is removed from the ground it is gone forever, and the owners of the property should certainly be allowed depletion charges. The present law allowing these deductions is realistic and fair and should not be disturbed insofar as oil and coal are concerned.

The drug stores of America sell many hundreds of articles used in the home by millions of people every day that bear this burdensome, unfair, nuisance tax.

On Saturdays, in America, the school children are out of school. Most of them look forward to going to a good picture show where they can enjoy wholesome recreation. Often the parents of these children go with them and take the whole family. To have an admission tax of 20 percent levied and collected upon the tickets of every member of the American family is quite unjust. While parents are having the expense of educating their children and putting them through school, along comes this tax that has been demanded and collected for more than 4 years after the war's end.

Competition is now keen. We have changed from a sellers' market to a buyers' market. Thousands of articles manufactured and produced in foreign lands are flowing into our country. These articles are produced by cheap labor; they have no excise tax on them and they are underselling our businessmen. These taxes have caused the closing of many American factories and businesses producing watches, jewelry, kodak supplies, furs, perfumes, toilet articles, and many other articles. As a result of this, business is beginning to dry up here in these industries and millions of men have been let off from work.

When anyone sends a telegram or puts through a long-distance call in the transaction of his business, or because of sickness or death in the family, the long, tax-gathering arm of Uncle Sam taps him on the shoulder for a 25-percent increase in the charges he pays for this service. When we travel by plane, train, or bus, the same thing occurs.

These excise taxes have a strangle hold on the American income and American business is crippled as a result.

The dam placed across the stream of American economy has made business stagnant and caused millions of men and women to become unemployed. We should open up the floodgates and allow a greater flow of work, money, and profit to reach our people. Then the increased earnings of business and working people will create a broader tax base and create more taxes that can be collected without discrimination, and this increased national income will produce as much, and possibly more, Federal taxes than to continue to hamper and strangle business with these excise taxes.

The same is true of coal and oil, that meet very strong competition, and some of it comes from abroad. These depletion charges should still be allowed so that these industries will not be discriminated against, and we should go along in the fair American way.

I sincerely hope that we may be able at the present session of Congress to bring out a bill and pass it, repealing the excise tax.

Grant Nonquota Status to Adopted Immigrant Children

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. MULTER. Mr. Speaker, on March 15, 1950, I introduced a bill which seeks to provide nonquota immigration status for adopted children of American citizens or for children coming to this country for legal adoption by Americans.

The bill provides that an unmarried alien under the age of 21, who is coming to this country to be legally adopted by an American citizen, is to be admitted as a nonquota immigrant for a period of 1 year, if he meets the health requirements of the immigration laws and if the citizen in the United States is financially able and willing to care for such alien.

If the legal adoption does not take place within the period for which the

alien was admitted, my bill prescribes that the alien is to leave the United States or may be deported, if he fails to do so.

United States citizens intending to adopt such alien children will have to furnish the Department of State with satisfactory evidence that they are legally and morally competent to adopt such children and financially able to care for them. They will also have to furnish to the Department of Justice and the immigration authorities a sufficient bond to assure that the alien child will not become a public charge.

The bill also provides for the entry on a nonquota basis of children adopted abroad by American citizens.

I hope the bill will receive early consideration and soon be enacted into law.

Arizona's Game of Tiddlywinks

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. POULSON. Mr. Speaker, I am inserting in the RECORD a very fine editorial from the Los Angeles Daily News, of March 10, 1950. The editorial speaks for itself:

ARIZONA'S GAME OF TIDDLYWINKS

(By Manchester Boddy, editor and publisher)

A little group of Arizona men are playing tiddlywinks these days with a lot of jobs, a lot of homes, and a lot of businesses. It is not a pastime likely to amuse the people of southern California, however, for the jobs and homes and businesses involved are theirs, and they face the prospect of having their livelihood sold down the river—the Colorado River.

For these busy Arizonans have managed to finagle through the Senate a bill that would take away from California 1,200,000 acre-feet of Colorado River water to which the people of this State are entitled by legal contracts with the Federal Government. If they are similarly successful in the Congress, these Arizonans will have managed to infect California with a virulent case of creeping paralysis, to have put a definite ceiling on this State's development. The stake of the game, then, is our future, since new jobs, new homes, new businesses are possible only in direct ratio to the amount of water we have available.

The Arizona gimmick is a project, estimated to cost $800,000,000, to irrigate land in that State's Central Valley. As Arizona's seaport and supplier of much of the manufactured goods bought in that State, California would ordinarily be happy to get behind any deal that would promote Arizona's welfare and increased purchasing power, but the project proposed is just about as sensible as putting a $500 paint job on a $50 jalopy.

For that $800,000,000 necessary to put up and run the project is a sum greater than the assessed valuation of every inch of land in the entire State of Arizona. Further, having got in the mood for asking, the people of Arizona apparently decided they might as well shoot the works, so they have suggested the Federal Government fork over the money. The daily economics of the Arizona scheme are of concern to taxpayers throughout the United States, but the proposition really hits home in California.

For any approval of the project incidentally means giving Arizona water to run it—water for which Californians have legal contracts. It means, in short, benefiting some 4,000 Arizona farm families at the expense of 5,000,000 persons in this State.

Spokesmen for Arizona don't think much of this argument. That's too bad, they say, adding that the Government should never have entered into those contracts in the first place and that, in any event, the water rightfully belongs to Arizona. Such an argument could go on forever, and has, in fact, continued for three decades, a fact which seems to appeal to members of the Arizona water lobby, who may be short on logic but are plentifully supplied with wind.

For the argument could be settled—impartially and finally. It could, as spokesmen for California have repeatedly said, be taken to the United States Supreme Court. This is the fair and just way, and perhaps for that very reason finds little support in Phoenix. The Arizonans insist they are right, but they think it boorish of anyone to suggest that they prove it.

Instead, they say, let's pry $800,000,000 out of the Federal Treasury, let's put up the project, let's divert the water and make sure those 4,000 families are taken care of, and after all this is done maybe we can start talking business.

One gets the impression that putting the cart in front of the horse is chronic in Arizona.

Coal Miners in Standing Up for Principles Dramatized in Effective Way Iniquity of Taft-Hartley Law—Congress Should Act Now To Repeal Antilabor Legislation

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. PRICE. Mr. Speaker, the creators of the Taft-Hartley Act carefully selected quotes from Abraham Lincoln as they harangued Lincoln Day audiences recently—so carefully that they passed up all of the many words uttered by the great Lincoln on the rights of the Nation's workingmen.

Lincoln, in his time, said:

All that harms labor is treason to America. If any man says he loves America, yet hates labor, he is a liar. There is no America without labor.

Today, too many forget labor's importance to America—too many are too quick to condemn labor. The Taft-Hartley law is concrete evidence of this. Born in vindictiveness, it is nothing more than punitive legislation concocted to destroy organized labor.

The coal miners of America, at a tremendous sacrifice to themselves, have performed a great service for labor—they withstood the attempt to break their union. If they had failed in their fight, the Taft-Hartley club would have been extended elsewhere and there would be a general drive to break other unions.

The coal miners have proven that genuine collective bargaining remains the best remedy for labor-management strife.

Congress should act now to repeal the Taft-Hartley law.

Under leave to do so, I include herewith an editorial from the March 15, 1950, issue of the Trainmen News, official weekly publication of the Brotherhood of Railroad Trainmen:

THEY WOULDN'T CRAWL

When rich and arrogant employers close their eyes to the human considerations of labor relations and instead seek to club workers into submission with weapons fashioned in offices of the National Association of Manufacturers, there's bound to be trouble.

That's what happened in the prolonged, bitter strike in our coal fields and it explains why so much money was needlessly wasted and why so many men, women and children suffered grievously.

The operators were determined to crush the United Mine Workers' union with tools provided by the Taft-Hartley Act and with propaganda distributed in newspapers only too anxious to help out, hoping that the miners' undoing would eventually result in the undoing of all organized labor.

It simply didn't work. And the reason it didn't work is that human consideration the operators overlooked. They were waiting for Taft-Hartley to settle the issues their way and for the miners to crawl back to work on their bellies, begging for their jobs back under any conditions.

That didn't happen and never will. Men who risk their lives every day in the bowels of the earth get very close to the basic requirements of life and the toughness of the coal veins runs into their own veins to give them moral fiber and strength to fight for the principles they believe in. The coal miner, with his native militancy, has provided the backbone for all organized labor.

During the long controversy, 7 months, the mine operators, like some railroad executives we know, sat back, looked out the windows and waited for the law to settle matters their way.

When the injunction failed to get the "slaves" back into the pits, the operators banked on the courts to find them guilty of contempt. When the miners were cleared of that charge, the owners began to get a little uneasy, but it remainded for a proposed seizure bill that didn't guarantee them their profits under Government operation to get a semblance of collective bargaining under way.

The history of the coal strike completely discredits the Taft-Hartley Act, and it should serve as a warning to antilabor spokesmen in Congress for big business who are clamoring for a bigger and better union-busting law than that monstrosity.

The New York Times, commenting editorially, said: "More than 7 months of bitter controversy—a controversy which in its later stages threatened to rupture the very economic and social fabric of the Nation—are terminated with the agreement between the major soft-coal operators and the United Mine Workers.

"And this agreement was finally reached in the manner in which it should have been reached in the first place—by direct labor-management bargaining. The pity is that it required the threat of Government seizure and what amounted to Government arbitration to bring the disputants together."

The Nation owes the miners a great debt, for in standing up for their principles they

have dramatized in the most effective way the iniquity of the Taft-Hartley concoction. They have shown how such laws are not designed to protect the public, or stop strikes, nor to correct inequities, but only to help unscrupulous employers crush labor.

The best remedy for labor-management strife remains as always—genuine collective bargaining. It's also the keynote of a free economy and a functioning democracy.

The Democratic Heritage of Poland

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a recent radio address, given at Springfield, Mass., by Prof. Frank Nowak, on the Justice for Poland program, sponsored by the western Massachusetts branch of the Polish-American Congress.

Dr. Nowak is a distinguished professor of history at Boston University and is also a member of the faculty at the Fletcher School of Law and Diplomacy.

His address follows:

THE DEMOCRATIC HERITAGE OF POLAND

The drastic purges and renewed persecutions of recent date behind the iron curtain together with the appointment of a Soviet marshal, Rokossovsky, as virtual dictator of Poland are abundant proof of the complete bankruptcy of Stalin's Polish policy. Like Lenin in 1920 he has been compelled to admit, by deed if not by word, his false political reckoning that the Polish masses would welcome or even be reconciled to Muscovite tyranny and Communist slavery.

A cursory acquaintance with the history of Poland, her great western cultural heritage, and her extraordinary democratic achievements would have disabused both Lenin and Stalin of their oriental fantasy that a people imbued with democratic ideals for centuries could surrender that great heritage without a struggle, even in the face of overwhelming force.

Before the partitions of Poland in the eighteenth century by Russia, Prussia, and Austria the Polish Republic was the largest and freest federal republic in Europe created by the political genius of the Polish gentry. In the short space of 200 years, beginning with the pact of Koszyce in 1374 and ending with control of the highest judicial tribunal in the state in 1576, the Polish gentry effectively limited the power of monarchy and established a democracy of nobles who enjoyed all the guaranties of due process of law, habeas corpus, freedom of press, speech, assembly, religion, and representative government characteristic of the contract theory of government. Indeed, the Polish nobility in two centuries gained more extensive rights and privileges than did the English nobility in the five centuries from the days of Magna Carta in 1215 to the glorious revolution of 1689. They gained control of the highest offices in the state, elected their kings, voted all taxes through local and central parliaments, and proclaimed the sovereignty of the people.

In this gentry-democracy all nobles were brothers and equal before the law. Foreign titles were not recognized but specifically forbidden. It is significant, too, that the nobility of Poland were very numerous, constituting over a million persons in the eighteenth century or 12 percent of the population. They outnumbered the English nobility, who controlled the democratic institutions of that country by a ratio of 2 to 1.

Moreover, most of the Polish gentry were small landowners, farming their own lands and forming a kind of aristocratic-proletariat.

The peasantry also enjoyed an economic status higher than that enjoyed by the peasantry of any other continental country of comparable size, including Austria, Germany, and France. The democratic ideals, security, and higher standard of living of the people of old Poland, were a powerful magnet attracting numerous neighbors like Lithuania, Ruthenia, White Russia, and the Baltic States, who sought voluntary union with the Polish Republic.

In the eighteenth century, however, the whole structure of the Polish constitutional system was put in jeopardy by the rise of totalitarian states. The so-called enlightened despots of Russia, Prussia, and Austria, abhorring democratic republicanism and bent on aggression, intervened in Poland and by fifth-column activities succeeded in placing their own candidates on the Polish throne.

In opposing these puppet kings, the Polish gentry distorted the old constitution and adopted a policy of political obstruction that took the form of the filibuster, the liberum veto, the confederated diets, and reduction of the royal army to a paltry 24,000 men. Confusion and weakness invited further aggression by Russia, Prussia, and Austria.

The violent shock of the first partition of Poland in 1772, however, aroused the nation which now gave heed to the wise counsels of the great political reformers, Karwicki, Konarski, and Leszczynski. In the next two decades the Polish people experienced a remarkable renaissance in almost every field of endeavor—intellectual, social, and political.

The crowning achievement of the great reforms was the adoption of a new constitution on May 3, 1791, which corrected the old abuses and established a modern parliamentary democracy. Peasants and townspeople received increased freedom of action under protection of the law. The executive power was strengthened. The Liberum Veto was abolished. Under new leaders, there was a return to the positive, progressive features of the old constitution. The Polish Nation demonstrated that the country was fundamentally sound and could undertake far-reaching social reforms without the violence characteristic of the contemporary French Revolution.

The phenomenal success of the Polish democracy in 1791 in putting its own house in order under most trying conditions brought consternation to the courts of St. Petersburg, Berlin, and Vienna. The so-called enlightened despots joined forces to crush this "hydra" of democracy and annihilated the Polish state in the partitions of 1793 and 1795.

The partitions of Poland were a fatal blow to international morality and inaugurated the era of might makes right in international affairs. Political thinkers and lovers of freedom the world over from Jean Jacques Rousseau and Edmund Burke to our own Thomas Jefferson and Woodrow Wilson have condemned this international crime. Liberals in Germany, Austria, and Russia also raised their voices against this baneful precedent which undermined the cause of liberty and civilization everywhere.

Convinced of the justice of their cause the Polish people continued the struggle for freedom against overwhelming odds. Insurrection followed insurrection throughout the nineteenth and twentieth centuries until freedom was again achieved in the First World War.

In 1939 the totalitarian despots of Germany and Russia again invaded and destroyed the Polish state but the Polish people continued the struggle on almost every battlefield of Europe. Their heroism in France, Scandinavia, North Africa, Italy, and in the battle of Britain was widely acclaimed yet when the victory was won it was apparent that Poland had been freed from the domination of one neighbor only to fall a prey to another. Once again the betrayal of Poland was a blow to international morality and ushered in chaos in international affairs.

Appeasement of Russia has strengthened the tyranny of communism over the Russian people themselves who seek release from slavery by enslaving the whole world. This is no new phenomenon in Russian history. It was noted 110 years ago by the French diplomat, the Marquis de Custine, when he stated, "An immense inordinate ambition of the kind which can take root only in the soul of an oppressed people and be nourished only on the misery of the entire country is now astir in the hearts of the Russians. This essentially aggressive nation lives in a state of submissiveness so degrading that it seems to be expiating in advance at home, its expectations of tyranny over other men. The glory and booty to which the Russian looks forward turn his thoughts from the shame to which he is being subjected. This kneeling slave fills his dreams with visions of world domination."

By contrast the undaunted courage and will to live of the Polish nation and its devotion to the cause of democracy and freedom are a moral and spiritual phenomenon that Stalin can not and never will understand. His crude response to this baffling challenge is more arrests, bigger concentration camps, more Marshall Rokossovskys on the theory that might will make right.

Poland will rise again, for today as in the past the world has belatedly discovered that the treatment meted out to Polish people has become the touchstone of international justice and morality. Nor can it be said that the worst terrors of communism can destroy the spiritual and cultural heritage of a thousand years of Polish history.

Wildlife Restoration Week

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. THOMPSON. Mr. Speaker, the Nation is becoming increasingly aware of the necessity for conservation of our natural resources. Knowledge of the tremendous growth of our population brings with it the realization that we are steadily approaching the point where our productive acreage will no longer be sufficient to provide the food that we need—unless steps are taken to restore lost acreage and to prevent the further destruction of the soil.

It is recognized that with our national conservation program there must also be conservation and restoration of our wildlife. It is an essential phase of the broad aspect of the conservation movement. It is significant that this important phase is recognized this week with the observance of the thirteenth annual National Wildlife Restoration Week.

The purpose of this observance is well set forth in the proclamation of my own

governor, the Honorable Allan Shivers, of Texas, which follows:

OFFICIAL MEMORANDUM

MARCH 7, 1950.

America's thirteenth annual National Wildlife Restoration Week, originally established by Presidential proclamation in 1938, will be observed this year during the week of March 19–25, under the sponsorship of the National Wildlife Federation.

Conservation of natural resources vitally affects every citizen. Life itself depends upon soil and water, which must be conserved as the basic step toward preserving our natural heritage. Broader understanding of the fundamental concepts of conservation will inevitably bring into the picture the conservation and protection of wildlife.

With a solid background of knowledge and understanding for a foundation, we will be able to expedite efforts to restore wildlife for Texans. The extent to which this is accomplished will be stimulated by the cooperation of every individual citizen, even in the most remote areas.

The increasing interest in water- and soil-saving programs is indicative of the growing alertness of the citizenry to our unmistakable obligation to perpetuate our natural resources for future welfare and prosperity.

Therefore, I, as Governor of the State of Texas, hereby designate the week of March 19–25 as Wildlife Restoration Week in Texas, and urge that Texans observe this week with appropriate programs in schools, sportsmen's clubs, civic clubs, garden clubs and other groups and meetings.

ALLAN SHIVERS.

St. Patrick's Day

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1950

Mr. FEIGHAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me over radio-television station WXEL at Cleveland, Ohio, March 17, 9:30 to 9:45 p. m.:

The pilot who flew me from London to Dublin on my short trip last September had never seen Ireland. As we approached Dublin, the pilot said: "I can understand now why they call Ireland the Emerald Isle."

It was indeed a garden of green, resplendent in the morning sun. We drove from Dublin to the west coast of Galway Bay and were fascinated by the beautiful countryside and the warm personality of the people. Everyone expressed great interest in the United States and faith in its world leadership. The Irish are cognizant of the unity amid diversity of the United States and look for spiritual help from us to bring to their nation unity out of its diversity. They want their country to be what we proclaim America to be when we recite the pledge of allegiance to our flag—"One Nation, indivisible, with liberty and justice for all."

In a world in which the dominant ideological color is not black or white, but gray, there is nothing either indefinite or indefinable in Ireland's tragic story. The creative power of God brought it into being out of nothingness, and the burning zeal of Patrick brought it from darkness and superstition to make it an island of sanctity and learning.

From sea to sea—from the Bay of Belfast to the Cove of Cork—it is by nature one undivided entity. That oneness was sundered by the partition of 1920, which cut off its most sanctified and strategic segment, Ulster, where Patrick from the Hills of Tara, started Ireland on the high road to sanctification and where the intense struggle for freedom began. It was in Ulster that Theobold Wolfe Tone and his noble band of followers—not Catholics but Presbyterians—rallied to the cause to make Ireland and Irishmen throughout the world their everlasting debtors. Here was Ireland's Lexington and Concord, and this is the portion that is separated from independent Ireland by a line of demarcation that is an indictment of the natural law of boundaries, logic, and diplomacy.

One Nation under God was the prayer of Lincoln, and that prayer was answered after a hundred blood-drenched battlefields. A Mason and Dixon's line dividing our country today would present a parallel to Ireland as it is now partitioned. E pluribus unum, the mighty symbol of the United States of America, would be a folly and a myth had the Union not survived. President Lincoln said that by all means the Union must be preserved. Every nation today seeks its own unity. India, Indonesia, Pakistan, the Philippines, to mention a few, have sought and found their own freedom within recent years. Present-day Germany, divided into French, Russian, British, and American zones, seeks to regain its unity as a nation. The same may be said of Korea, partitioned at the thirty-eighth degree parallel, occupied by the Soviets in the north and by the United States in the south. I hope and pray that the time will come, consistent with the freedom and liberty of those within its borders, when every partitioned nation may again join the family of United Nations.

The morally indefensible partition of Ireland ought to evoke a protest not alone from a sympathetic world, but from an understanding world. To retain the partition of Ireland is foolhardy when she alone, in proximity to quaking Europe, is untouched by communism.

"Divide and rule" were the military tactics of the Caesars and in their wake lay strewn the remnants of once mighty powers and world empires.

Today the world is threatened with those same tactics by the Soviets who have spread their tenacious tentacles over most of eastern Europe and northern and central Asia.

Lovers of liberty and righteousness cannot afford to permit Ireland to be the latest victim of "divide and conquer." A united Ireland would be an impregnable fortress against the onslaughts of communism with all its insidious works and deceitful pomps. Ireland stands as a flaming torch of freedom in a world threatened with communism. If given its unity and freedom of action, Ireland will throw its beam of faith and determination over land and sea to enlighten this spiritually darkened world, sorely in need of guidance.

Throughout the free world people are gathered to refresh in their minds and hearts the memory of St. Patrick and of his labors, to catch if they can, some spark of the love and faith which produced such labors, such fidelity, such zeal, not only in the saint himself, but in those who followed his footsteps.

It is more than 1,500 years since Patrick, captured by pagan Irish, was brought to Ireland to work as a shepherd tending the flocks on the hillsides. The churches he built, the schools and monasteries that he founded, multiplied over the land until it seemed there was no longer room to contain them and they overflowed on to the Continent of Europe.

Hosts of Irish missionaries trained in the monasteries and the schools of Erin's isle took with them to distant shores the faith and the lore which filled the island. With knowledge secular and divine they became the counsellors of kings and emperors, teachers of whole nations. Even today, Irish priests go forth carrying the message of Christ and of Patrick to Africa, to China, to Iraq, to Australia. From the earliest of them venturing across the channel into continental Europe, to the latest young priest from Maynooth setting sail for a parish in some backlands, they are the fruit of Patrick's planting.

From the days of gentle St. Patrick, to our present time, the Irish have played a part in world history out of all proportion to their comparatively small numbers.

There was a time in history when Ireland remained outside the path of the conqueror, the Roman legions overran the Continent and dominated even Britain. They did not cross the Irish Sea and Ireland was left free to develop its own civilization, its own native culture, its own illustrious schools. After the downfall of Rome, it was to Ireland that the civilized world looked for spiritual and intellectual succor. And again when Christian civilization was all but destroyed by the barbarian invasions which brought on the real dark ages, Ireland became the sanctuary and refuge of learning and culture, when to know the Greek language was a sure indication that the scholar was either an Irishman or had had an Irish teacher.

And it became the historic role of Irishmen to bring back to the continent of Europe the light which had almost disappeared, to relight the lamps of civilization. Ireland, the land of saints and scholars may have to reassume her ancient role in these distracted times, when men are trying to substitute might for right, to substitute material goods for spiritual values. Strong forces are seeking to drive God out of the world and to set up in his stead the false gods of money and power.

The Irish have always had a genius for spiritual values. In their entire history they have opposed the false philosophies which have often distored men's sense of proportion.

Driven from their native heath, by conditions imposed upon them by an unjust aggressor, Irishman have spread throughout the world and carried with them the same love of liberty and justice, the same hatred of oppression, the same reckless pursuit of an ideal, the same love of culture and learning, characteristic of their entire history.

Millions of the faithful Irish laity as well as priests and missionaries have streamed out from that tiny island carrying with them into their new homes beyond the seas, the faith their fathers received from St. Patrick. They have gone, and the faith and the church and the school always went with them.

The Irish are not invaders, not greedy of others' territory but they have ever been willing despite the cost, to fight the battle of freedom for others as well as for themselves.

From the year 1000 down to our own times, Irishmen have fought in what seemed a hopeless cause and against terrific odds for the very principles of liberty and justice upon which the American Nation was founded. Theirs would have been a lost cause at home if it had not been for the fact that they kept aglow their love and enthusiasm for liberty, truth, and justice.

Despite the severest handicaps imposed by tyranny and persecution, Ireland has built, from its own blood and sweat and tears, a nation which today is among the most stable in the world. If you want testimony of this, you may find it in the fact that the United States recently raised our diplomatic mission to full ambassadorial status.

On this feast of St. Patrick, every Irishman will acclaim with me this recognition by our Government that Ireland has found her place in the sun. One thing yet remains, however, before the full flowing of Ireland, and that, as I said before, is the reunion of the North and the South.

UNIVERSITY OF

Resolution of Veterans of Foreign Wars of Atlanta, Ga.

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. DAVIS of Georgia. Mr. Speaker, I am in receipt of a letter from Post Commander Charles D. Vocalis, of Greater Atlanta Post, No. 390, Veterans of Foreign Wars of the United States, forwarding to me a copy of a resolution adopted by unanimous vote of the members at a meeting held on March 7, 1950.

This resolution relates to a proposed reduction of employees of the Veterans' Administration, to be effective April 11, 1950.

In order that Members may have the benefit of the views of this post of the Veterans of Foreign Wars regarding this important matter, I am inserting the resolution herewith:

TEXT OF RESOLUTION ADOPTED BY UNANIMOUS VOTE AT REGULAR MEETING OF GREATER ATLANTA POST, NO. 390, VETERANS OF FOREIGN WARS OF THE UNITED STATES, CONVENED ON MARCH 7, 1950

Whereas further reduction of number of employees of the Veterans' Administration has been ordered because of an alleged reduction in the budget; and

Whereas it has been alleged that this reduction is to be made effective April 11, 1950, to prevent a more drastic reduction in July 1950, indicating that a further reduction will be announced in June 1950; and

Whereas the reduction to be effective April 11, 1950, will result in a drastic reduction in the number of employees in the claims and medical services under the jurisdiction of the Georgia regional office while no reduction but, in fact, an increase, in the number of employees, as distinguished from positions, will be effected in one or more other services, and it is assumed that the same will apply to other regional offices; and

Whereas it is believed that the sentiment of an overwhelming majority of veterans, as a whole, is that the most important services of the Veterans' Administration are those rendered by the claims and medical services; and

Whereas it is further believed that any reduction in the present staff of the Veterans' Administration claims and medical services will impair these important and essential functions; and

Wherefore, these statements hath been heard with attentive ears: Now be it

Resolved by the members of Greater Atlanta Post, No. 390, Veterans of Foreign Wars of the United States, in regular meeting this, the 7th day of March in the year of our Lord, 1950, That—

1. A representative or representatives of the Veterans of Foreign Wars of the United States be called upon to personally bespeak the Administrator of Veterans' Affairs, chairman of the United States Senate Civil Service and Post Office Committee and chairman of the United States House of Representatives Committee on Veterans' Affairs for the purpose of preventing or attempting to prevent reduction in personnel of the Veterans' Administration claims and medical services.

2. The Veterans of Foreign Wars of the United States formulate and recommend any legislation to prevent or discourage future unwarranted reductions in the Veterans' Administration claims and medical services if it should be necessary and appropriate to do so: Be it further

Resolved, That this resolution be transmitted through customary channels for effectuating the purposes intended and that copies be mailed direct to all of Georgia's United States Senators and Representatives and the Veterans of Foreign Wars national rehabilitation director and legislative officer.

Certified:

JAMES G. HOOPER,
Post Adjutant.

Michigan State College—A Land-Grant College

EXTENSION OF REMARKS
OF
HON. WILLIAM W. BLACKNEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. BLACKNEY. Mr. Speaker, under permission to extend my remarks in the RECORD, I am including herein a statement with particular reference to the Michigan State College, one of the finest educational institutions of the country.

I am particularly proud of the Michigan State College, located at East Lansing, in my congressional district. This college, under the leadership of President John A. Hannah, has established itself as one of the most progressive colleges of its type in America.

The legislature of 1855 passed an act which provided for the establishment of a State agricultural school, and appropriated $40,000 and 22 sections of salt spring lands for the purpose of purchasing land for the site of the new school, and for providing the necessary buildings and equipment.

The school was formally opened and dedicated May 13, 1857, at East Lansing, the site of the present college.

This was the first agricultural college in America and, largely as a result of its leadership, the Federal Congress in 1862 passed, and President Lincoln signed, the United States Land Grant College Act.

All income from the sale of the land appropriated to the college was to be invested by the State in safe securities yielding not less than 5 percent annually, and the State was "to keep the same invested, to constitute a perpetual fund, the capital of which shall remain forever undiminished; and the annual interest shall be regularly applied under the direction of the State board of agriculture, to the endowment, support, and maintenance of the State agricultural college, where the leading objective shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic arts in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions in life."

In regulations issued by the Veterans' Administration early in 1946, it was provided that, where land-grant colleges submitted cost estimates for the adjusted tuition rate, land-grant funds received from the Federal Government for instruction or teaching should be deducted in figuring the cost of tuition to be paid by the Veterans' Administration for the training of veterans.

The land-grant colleges began a series of conferences with the Veterans' Administration, in order to have this regulation changed or amended in such a way as to no longer compel the deduction of such funds in determining the adjusted rate of tuition. However, the Veterans' Administration refused to amend or change its regulation. Therefore, in order to remove the injustice and inequity of the Veterans' Administration's ruling, H. R. 7057 was introduced in the House. This was a bill to amend Veterans' Regulation No. 1 (a) with respect to computation of estimated cost of teaching personnel and supplies for instruction in the case of colleges of agriculture and the mechanic arts and other nonprofit educational institutions.

It was self-evident that, if H. R. 7057 was not passed, the total deficit of the land-grant schools would have to be made up either by additional appropriations from the United States Congress, the State legislatures, or increase the future tuition under the GI bill; and failure to pass this bill would be taking money out of one pocket to put in the other, just robbing Peter to pay Paul.

Everybody concedes that the Michigan State College has done a fine job on behalf of the GI. This college has a claim filed against it by the Federal Government, of around $500,000. The claim has varied from $130,000 to $500,000. If H. R. 7057 were not passed, the Michigan State College, its student body with its fine educational program, would suffer immeasurably. This bill would correct the inequities against State colleges that took the income on their endowment fund as a part of the tuition of the veterans.

I have watched the growth of the Michigan State College with particular interest. It is, as stated above, the first agricultural college established in America. It has grown remarkably in attendance and in efficiency, and stands today, under the leadership of President John A. Hannah, as one of the finest educational institutions in the country.

I was very happy when this bill passed the House yesterday by a vote of 245 yeas to 101 nays.

Rural Electrification

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 15 (legislative day of Wednesday, March 8), 1950

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the

Appendix of the RECORD a statement regarding rural electrification by Mr. Clyde T. Ellis, executive manager of the National Rural Electric Cooperative Association, at its annual meeting in Chicago on March 6, 1950. I am advised by the Public Printer that the manuscript will make approximately 2¾ pages of the RECORD, at a cost of $225.50.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF CLYDE T. ELLIS, EXECUTIVE MANAGER, NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION, ANNUAL MEETING, STEVENS HOTEL, CHICAGO, MARCH 6, 1950

Mr. President, members of NRECA, and guests, this convention will be unique. It is tailored in detail to your expressed preferences. In your resolutions, regional and national, and in your post-convention questionnaires of last year, you indicated your desire for more audience participation and fewer speeches. You indicated some of the topics you wanted discussed.

All of that is in store for you exactly as you ordered it. For instance, nearly half of the time will be devoted to actual audience or group participation.

Since our rural-electrification program is truly "of the people, by the people, and for the people," perhaps we should strive to be the most democratic of national organizations. All our efforts, singly and together, all our hopes of future years, are justified by the conviction that each of our more than 5,000,000 members makes his or her contribution beyond a mere apathetic acceptance of service. Thus alone can we succeed.

During the next 12 months, almost a million rural people will attend our nearly 1,000 annual meetings in 45 States, the Virgin Islands, and Alaska. Out of this meeting should come much that will be helpful to you in conducting these meetings.

RURAL TELEPHONES

At New York last year you decided in favor of an all-out drive to extend the REA principle into the field of rural telephones, because phones are necessary to report electric outages quickly and because not many more farmers had efficient telephone service than had electric service in 1935. Not only did Congress pass the bill, but it approved administrative funds and loan funds approved to start the program.

The farmers of our country are eternally indebted to every Member of the Congress who withstood strong pressure to inaugurate that new service. We are indebted particularly to those able statesmen who initiated the bills and led the fights in their respective Houses, Senator LISTER HILL, of Alabama, and Congressman BOB POAGE, of Texas.

For the next fiscal year the Bureau of the Budget has requested Congress to provide for the REA telephone program administrative funds totaling $2,100,000, plus $175,000 Solicitor's funds, and $50,000,000 in loan funds. Your elected legislative committee appeared before the House committee a few days ago in support of those items.

NEEDS FOR RURAL ELECTRIFICATION

At New York you asked for an increase in the budget request for rural electrification administrative funds. It was approved.

Your legislative committee has now asked Congress to approve the budget requests for REA's electrification program next year, $7,425,000 for administrative funds, $559,400 for the Solicitor's office, and $400,000,000 for loan funds. Your recent annual survey of all systems indicates that you will need $4 2,000,000 in loan funds for next fiscal year. However, percentage-wise, the figures were so close that your committee, in supporting the loan item, told the House committee it was asking no increase over the budget request.

We provided the Congress with other valuable information from your survey questionnaires this year. You said you were serving 3,109,286 farms and other consumers on January 1. You said you expected to serve 1,823,675 more. Then our task of connecting the unserved in our areas is only 63 percent complete.

But note this. You connected 594,696 new consumers in 1949. Yet, you still planned to connect within 276,943 of as many as you planned to connect a year ago. Our systems are still growing in number and size, as our population increases.

But for some reason our loan applications are slowing down. Since we have undertaken to serve all who want service within our system areas, it would seem that we should endeavor to keep our construction programs speeded up until we are much nearer the goal.

You said in your survey that you would have to invest 23 percent of your total funds next year in heavying-up existing facilities. You said you would have to produce more of your own power.

Twenty-two percent of you reported a present power shortage. Twenty-six percent of you don't have enough power in sight. Forty-three percent say your present suppliers impose restrictions, involuntary servitude clauses, in your contracts prohibiting free use of the energy you buy from them. Thirty-four percent of you say your power costs went up in the past 12 months.

We told the committee this year, as we did last—and as you directed—that we will have to invest an increasingly higher percentage of whatever loan funds are available to us in our own generation and transmission facilities. In many areas further construction of distribution lines must await development of our own power sources. Either inadequate power is available or its high costs or restrictions are retarding area coverage.

VICIOUS POWER COMPANY ATTACKS

While the farmers' demands on REA for generation loans are and have been strong, the power-company pressures on REA against them have been stronger and often bitter.

We believe the recently introduced Thomas-Tackett bills to change the generation-transmission loan procedures would do great injury to the rural electrification program. While there is probably little danger of them being passed as independent bills, we have feared a possible move to tie them on as riders to the agriculture appropriation bill.

It is no secret that our generating program has been under fire in the Agriculture Subcommittee of the House Appropriations Committee in recent weeks. The hearings were closed, so we don't know much of what happened.

Your legislative committee and I ran into this trouble when we appeared before that committee. As we entered the room President Frank Wilkes, of Southwestern Gas & Electric Co., was sitting outside the door checking the transcript of testimony he had given. A few minutes later some of the committee members read to us statements which he and other power-company officials had made against us. Evidently they had thrown everything, plus the kitchen sink, at us. Five power-company presidents and vice presidents, accompanied by several others—for moral support, I suppose—had testified against us for between 2 and 3 hours. We had no way of knowing what they had said except for the few quotations which committee members read to us from the transcript. Under the House committee rule we are not permitted to even see the record until it is published sometime later. It hasn't been released yet. Nor is a witness permitted to reveal what he told the committee until the record is published.

We stayed much longer than we were scheduled, and when we had to go the committee gave us permission to file a supplemental statement answering what we knew of the power companies' charges. We spent the next 5 days and nights preparing our 51-page reply.

Well, your committee did know by then a little more about what the companies had told the House committee, for evidently Vice President Warren L. Porter, of Kansas City Power & Light Co., had promptly released his statement to the press, and the Kansas City Times had carried part of it. We got a copy.

I have that February 15 issue of the Kansas City Times here in my hand. I want to read you some of Mr. Porter's and other power company officials' quotations from it concerning one of the Missouri generation loans. What big, ugly words they used trying to frighten Congress into stopping this comparatively small farmers' generating plant: "misappropriation of funds"; "Government bureaus furthering their own ambitions"; "funds originally intended to build lines to farm homes are being diverted to build steam plants"; "distortion of the intent of Congress"; "the industry is in a fight for survival"; "a move intended to destroy the Kansas City company."

But that's not the worst Mr. Porter and others told the committee. They said there is not now and never has been any power shortage in the Missouri generation co-op areas. Testifying a few days earlier before the Interior subcommittee against the same northwestern Missouri Generating Co-op, of Savannah—that testimony has been released—Mr. Porter said, and I quote from page 1279 of the hearings:

"Kansas City Power & Light Co. and four other utilities have provided ample power for these seven distributing cooperatives since their inception."

Missouri farmers know how incorrect both of his statements were. They are typical of the way power companies distort the facts before congressional committees.

ATCHISON-HOLT CASE DISTORTED

Take the case of the farmers of Atchison-Holt Electric Cooperative, of Rock Port, Mo., one of the seven members of Northwestern Electric Power Co-op. Their co-op has never had enough power. It has spent several hundred thousand dollars following the power companies around with its own transmission lines to pick up any available kilowatts. Examples: 1. This same Kansas City Power & Light Co. and St. Joseph Light & Power Co. together sold it 300 kilowatts but the co-op had to build facilities to get it costing nearly $7,000. Ten months later, in November 1948, the co-op was ordered to quit taking power there and hasn't been able to use those facilities since.

2. St. Joseph Power & Light denied the co-op power late in 1947, claiming shortage. Finally, it sold the co-op a limited, inadequate amount subject to availability, to be delivered on the extreme edge of co-op's territory, provided co-op would agree to not buy power from anyone else. Co-op spent $400,000 building 40 miles of 33,000-volt transmission line—completed in December—to deliver the power to its own load centers, and when it got it there it wouldn't work. The voltages were too low because of the antiquated, overloaded power-company lines back of the pick-up point. Result: farmers' motors are burning out, radios won't play, and the farm wives are discarding their electric ranges for bottled gas.

3. Meanwhile, the power companies have been charging co-op 11 mills per kilowatt for power and spite lining its territory and taking its best potential consumers at the same time.

President John Buck and Manager Bruce Gibbs, of Atchison-Holt Electric Cooperative, are sitting here beside me. Stand up, fellows, and let the folks have a look at you. President Buck, have I correctly stated the fact about your power supply? He says, "You told the absolute truth."

Still, Mr. Porter says here:

"Kansas City Power & Light Co. and four other utilities have provided ample power for these seven distributing cooperatives since their inception."

Will Congress believe these selfish Power Trust distorters of the truth or will Congress believe the people who seek only a little power to use?

The newspapers say the St. Joseph Power & Light Co. got into Washington to testify for these farmers, too. I have here in my hand a clipping from the February 15 issue of the St. Joseph News-Press. It quotes Vice President Douglas Merrifield as telling Congress:

"* * * the companies feel that the farmer is as much a victim of this plan to socialize the electric industry as the companies whose economic existence will be jeopardized by subsidized competition.

"In a very real sense I truly believe Administrator Wickard is guilty of what is tantamount to a betrayal of the great trust in which he is held by all farmers in permitting this slick and sly deal to be consummated."

Why didn't you tell Congress the facts, Mr. Merrifield, about how your company has been treating our several thousand farm members of Atchison-Holt Electric Cooperative? But then your trip would have been wasted.

BOONE ELECTRIC CASE DISTORTED

Now let's take the case of the farmers of Boone Electric Cooperative, of Columbia, Mo. It is a member of the Central Electric Power Cooperative, of Linn, Mo., another one which the power companies are trying to kill. Missouri Power & Light Co. is one of Boone Electric's two suppliers. The power company's assistant to the president, J. D. James, testified against the generating co-ops along with Wilkes, Porter, and Merrifield. Actually Mr. James did not say Boone Electric had had adequate power but other power company officials before and after him said it of the general area, and he sat there and didn't deny it.

Boone Electric has two contracts with Missouri Power & Light, both subject to cancellation on 30 days' notice. On one contract, for the month ending February 15, it had to pay the company almost 2 cents per kilowatt-hour for wholesale power, and on the other it had to pay 2.3 cents per kilowatt-hour. (Its power will cost it less than a third of that from the farmers' own generating co-op—about 29 percent to be exact.)

The power company limits the farmers at both co-op substations.

Boone Electric is supplying single-phase service to a rock-wool plant. The wool plant recently wanted three-phase service. The co-op figured out a way to provide it. The power company heard about it and told the co-op if it did the power company would cut the co-op off completely. The wool plant is still getting single-phase service.

Missouri Power & Light has indicated it would sell the co-op more power provided the co-op would agree to a 50-kilowatt load limitation, involuntary-servitude clause. The co-op has refused to sign it. Referring to this limitation, the president of Missouri Power & Light wrote Mr. Wickard on January 11, "We have no apology to make for this restriction."

So the co-op's power situation is desperate. Its farm wives even have an I Won't Wash on Monday Club out there and here is the certificate they use. Mr. James testified on a Monday, before the Interior Subcommittee. Don't you know these women would have enjoyed washing him that Monday?

Director Les Crews and Manager Joe Martin, of Boone Electric, are also sitting here beside me. Stand up fellows and make a bow. Director Crews, tell our people whether these things I've just said about your power supply situation are true.

Mr. Crews said, "That is the truth."

Is it possible that in this free country of ours Congress might believe those who would wreck our program when the tens of thousands of our relatively inarticulate farm people affected know the facts to be otherwise? If that happens it will surely shake the confidence of many of our best people.

POWER COMPANIES GET UNPRECEDENTED SENATE HEARING

The power company officials are also quoted here in the paper as saying they would take their fight against the farmers right on over to the Senate, if the House didn't stop these recent generation-transmission loans. I guess they did, for we have learned that a joint meeting of the Agriculture Subcommittee and the Interior Subcommittee of the Senate Appropriations Committee has been called for Thursday of next week, March 16, to hear the power-company complaints against these generating loans. They want stop orders on many loans already made to generating co-ops, and they want no more such loans made. Immediately affected would be the loans to generating co-ops in South Carolina, North Dakota, Virginia, Kentucky, Missouri, Oklahoma, and Michigan, and perhaps other States. Immediately affected also would be generation loan applications from Illinois, Louisiana, South Dakota, Georgia, Iowa, and Arkansas, and possibly other States.

We have asked to be heard at this hearing, and we hope the committee will place both the power companies and us under oath. The committees should find out who is telling the truth and who is not.

We all know, and we must somehow let the country know, what the facts are. We must let the people know that these examples are not isolated cases; that they are typical of what we are now confronted with. The power companies are being grossly unfair with the farmers, with Congress, and with their country.

MICHIGAN CASE DISTORTED

Here is another one. On that same February 15, there was placed in the CONGRESSIONAL RECORD an article which had appeared in a magazine, written by James W. Parker, president of Detroit Edison Power Co. Here are a few of his classic lines:

"But with the farm job well over 85 percent accomplished, can anybody tell me why on earth the Rural Electrification Administration should still have unexpended appropriations of $1,950,000 at their disposal?"

Is that true, Mr. Wickard? The answer is "No." REA on that date had unloaned funds on hand totaling less than one-fifth of that amount.

"Money like that," says Mr. Parker, "never goes back unspent into the Treasury; it gets spent for something. And I'll tell you what they are trying to spend it on. They are going into the transmission business and coming up with the super co-op. It's cropping up in two places in Michigan right now. This is just plain competing with money that is already invested, with lines that are already in existence."

Our Michigan farmers in the area of which he speaks have long faced a desperate power situation similar to that of the Missouri farmers. If they could ever capture an extra kilowatt up in that country, they would probably put it on display and build a resort around it.

Mr. Parker, however, concludes with an optimistic note: "I'm not at all downhearted about this. It's good having a hand in trying to see to it that the public gets wise, and that's what we are out to do."

Well, if the public ever gets wise to who is making it wise and who is paying the bill, we won't be downhearted either.

It is quite obvious—even to the power companies—that the farmers are rapidly being driven to the conclusion that their electric co-ops which do not have a friendly source of power supply do not have a very long life expectancy. Is it surprising that the farmers who have seen the power companies juggle power supply to kill some of their electric co-ops already now conclude that they must either generate or perish?

If the time ever comes when the power monopoly can say to the American farmer, through Government or otherwise, that he cannot produce a product which he uses on his farm—and which he may not be able to get elsewhere—if that time ever comes, our freedom and our democracy will both be lost. That danger is a very real one this morning.

Our right to produce our own power is as sacred as any other right guaranteed to us in the Constitution. Whether we do produce it or not, the right provides us with our only bargaining position in negotiating power contracts. Actually we are producing only 6 percent of all the power we use.

TRANSMISSION LINE CASES DISTORTED

The transmission-line battle is the same fight. The issue is whether we shall have a reasonable power source or whether the power companies shall be permitted to monopolize the public's power too.

Last year at New York, you resolved vigorously and eloquently for the continuation of our Government's power policy, which embraces the development of our hydro-power potential and the delivery of that power over self-liquidating Government transmission lines for sale at wholesale, at the lowest possible rates, to the load centers of public bodies, cooperatives, and private companies.

The Interior Subcommittee of the Senate Appropriations Committee, nevertheless, last year voted to eliminate most of the lines that would help us and to which the power companies objected. This was true of Reclamation, Bonneville, and SPA lines. The committee cut out Southeastern Power Marketing completely. The Senate committee added a North Dakota line, which both the local power company and we wanted.

But why did the Senate committee cut out all those lines? In each case the power companies assured the Senators that the lines were not needed; that they would deliver the hydro power to the agencies' preferred customers, including the farmers' co-ops and power districts. They led the Senators to believe they would deliver it to us at our load centers on a permanent basis without restrictions and without charge. The committee relied on their statements.

But the Senate felt otherwise. After an extended fight, it restored all of the lines but one, some of them on close votes.

However, some say there was an implied mandate in the Senate debates for Interior's power agencies to endeavor to negotiate reasonable wheeling arrangements with the power companies, in lieu of lines to be built.

But what happened then? The power companies evidently figured they could ignore their promises to Congress, that they could get the power of the dams anyway, and on their own terms. They reneged. For instance, the two big Oklahoma companies, both parties to the without-charge delivery promises, promptly demanded contracts of SPA to take the hydropower—but refused and still refuse to agree to deliver power to us at our load centers, even in their own areas. We understand great pressure is being brought on the Secretary of the Interior to approve the contracts which they have submitted to him with those refusals

in them. They are also demanding heavy tolls for letting SPA power pass over such lines as they have. If Congress is going to give the power companies a monopoly to haul us over their toll bridges, it ought to make them at least agree to deliver us all the way and not dump us in the river. The power companies are not keeping their word with Congress.

The Montana Power Co. is negotiating with both Bonneville and Reclamation and demanding a 50-percent toll, one kilowatt-hour out of every two that would pass over its toll bridges for delivery to us.

Representatives of our cooperatives and power districts in Reclamation, Bonneville, SPA, and Southeastern Power Administration areas have already been before the House Interior Subcommittee in support of the agencies' budget requests for power facilities. Most of the agencies' requests for next year are inadequate. Many power company officials have testified at length before that committee. Those hearings have been published and we have read what they said. They said Government power lines are not needed in Montana, Idaho, Colorado, Oklahoma, Missouri, and other places where we know we must have them.

However, the power companies have become more incensed over the fact that the farmers are discovering ways to effect further significant economies in their generating co-ops wherever they can integrate them with hydro power like the power companies do. The companies just can't stand the fact that some of our rates will then approximate Bonneville's. Shows them up.

You who are not familiar with the SPA area will be interested to know how the generating co-op Government hydro integration works. SPA does not have and will never have enough hydropower to go around, not even enough to serve its preferred customers. All of its power will never exceed 20 percent of the requirements of the area.

Knowing this, the farmers of each generating co-op area have been studying ways to generate their own power for years. Only when power-exchange agreements with SPA became possible did most of the half dozen generating co-ops become feasible.

The Arkansas Electric Cooperative Corp., of Fayetteville, will achieve the lowest rate, so note what happens there. The farmers employed one of the best electrical engineering firms in the country to make what has been a 3-year study. Here is the plan. The farmers will set their own generator right under SPA's backbone transmission line and right on top of the coal and gas fields; and, I might add, in an area where the power companies which are fighting us, Mr. Wilkes and his group, now restrict our use of the power they sell us. Co-op will use a 30,000 kilowatt unit because its loads will require that much in 10 years, and because there is efficiency in the larger unit. No stand-by will be required because of the integration with SPA, and this will be a tremendous saving. Co-op will operate its plant constantly, in practice selling its excess at a profit to SPA. (Technically, co-op sells all its power to SPA and buys back its requirements.) SPA needs the excess in order to store water in off-peak hours and seasons, thus firming up substantial blocks of its secondary power which would otherwise have to be sold to some big power system at dump prices. So SPA makes money on the deal too. Co-op then buys from SPA whatever power it needs, whether more or less than it generates.

To bring the cost down further, it was found that there would be savings in the farmers leasing their transmission lines to SPA to operate in connection with its other lines. The power exchange contracts are for 40 years. The lease is for 40 years. The estimated life of the lines is about 40 years. Therefore, the rents from the lines must amortize them in 40 years. SPA requested and got an option to purchase the lines for a nominal price when they are amortized—upon the approval of Congress, of course. Could anything be fairer than that?

The rate of the current to the distribution co-ops will be under 4 mills, delivered at the load centers, without restrictions on its use. This will be the lowest or one of the lowest rates to a co-op in the United States.

A study of one of the distribution co-ops, Arkansas Valley Electric at Ozark, shows that under the last best wholesale power offers of the power companies the co-op can never hope to reach all the farmers of its rugged territory, but under this plan it can do so and still be in the black.

The power companies charge that SPA would thus ultimately own lines which Congress has denied to it. That is not true. On the contrary, this arrangement will obviate SPA building some lines which Congress has approved. If Congress doesn't want SPA to take title to any of these lines when the time comes, all it need do is refuse the authority.

This power company drive against both the farmer's right to generate and his right to purchase Federal hydro power over self-liquidating Government transmission lines is no more nor less than an effort to make him purchase whatever power he would be able to get from the power companies on their own terms and conditions, and with all the deadly restrictions they would impose. If the power companies succeed in this effort, they will wreck America's rural electrification program.

Our farmers in each affected area are practically unanimous in their support of the requested Federal agency transmission facilities which would deliver the hydro power to our load centers. Just as the power companies have banded together to kill each line, we must fight side by side 3,000,000 strong to save it.

POWER PROJECTS

Our hydro-power project troubles are not with the transmission lines alone. Just last week we learned that the Chief of Army Engineers had eliminated the power facilities in four dams to be built on the Licking River in Kentucky—in another power desert, in the area of one of our new generating co-ops. We are advised that both the district office at Cincinnati and the Board of Engineers at Washington had approved 180,000 kilowatt capacity for the four dams. We hear that the power features were eliminated because there was opposition. The Hoover Commission recommended that the river-basin functions of the Army engineers be transferred to the Department of the Interior. I'm sure Interior would not have knocked the power out.

The prospects for the St. Lawrence project, I am happy to report, are looking a little better. Many industries of the Great Lakes region which once opposed it are now favorable. Meanwhile, the power situation in the Pennsylvania, New Jersey, New York, and New England area is becoming relatively more critical. House hearings are scheduled for April. On the Senate side, an attempt will probably be made to add the St. Lawrence to the omnibus rivers and harbors bill when it comes up in a few weeks.

ORGANIZATION COUNTS

One thing is certain: We've got to stick together and help each other on all our power problems. It makes no difference whether the fight is over our right to generate, over a transmission line, or over a power project, it is the same issue. A battle lost anywhere will hurt all the rest, including TVA. No one of our power programs can be much more secure than all the others.

That voice of the power companies, Electrical World magazine, calls for the defeat of Congressmen who support the Government's power program. It says George Gallup has "found that only 24 percent of the people think that the United States Government should own the power companies." That is not and never has been an issue. The United States Government is not in the retail power business anywhere, not even in TVA, and no one that I know of is advocating that it get in. I don't believe 24 percent of our farmers, or even 5 percent, favor that. But that is the way Electrical World deducts that the majority is opposed to the Federal hydro-wholesale power program. We know that a great majority of the farmers, and we believe a substantial majority of all the people, favor the present power program.

Electrical World concludes its editorial of January 16 with the demand that "the Congressmen who now vote in opposition to the will of the majority must be defeated in future elections."

If the power companies force this issue they will be sorry.

PEOPLE ARE PITIFULLY OVERCHARGED FOR POWER

In 1948, according to Federal Power Commission figures, the electric utilities overcharged the American people $2,097,071,724 by comparison with TVA rates—which also includes substantial taxes and income-tax equivalents.

The farmers' electric cooperatives and power districts paid the commercial power companies $30,681,759 for 3,191,543,216 kilowatt-hours of power last fiscal year, at an average cost of 9.6 mills. (I reckon we helped them some with their income taxes, too.) The average kilowatt-hour cost of all the power we purchased from the Federal agencies last year was 5 mills. If the 57 percent of our systems which purchased their power from the commercial companies last year had been able to buy their power at the average Federal rate, they would have saved $14,724,043.

CONCLUSION

These are but a few of the facts behind the one-sided cold war that is being waged against the farmers by the greedy power companies. The farmers don't want to fight anybody. They would like that war to end. They want to finish the rural-electrification job.

Like any democratic people, we desire peace. But we have no intention of forfeiting our freedom.

Our job of electrifying rural America is far from finished; the program is not yet safe from those who would destroy it; the enemy is making its most determined drive to eliminate us; and we must have the active participation of every farm leader and every farm family all the way from the meter box to the ballot box if necessary.

Accomplishments of the American Medical Profession and of Wisconsin Physicians

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 21 (legislative day of Wednesday, March 8), 1950

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement I have prepared on the subject of the 12-point program of the American Medical Association and the accomplishments of physicians of the State of Wisconsin along each of the 12 lines. I also ask unanimous consent

to have printed in the RECORD, following my statement, the text of the program of the American Medical Association and the record of Wisconsin achievements as printed in the medical forum section of the Wisconsin Medical Journal in its issue of January 1950.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

PROGRESS OF WISCONSIN MEDICINE

Mr. President, throughout the public debate on the issue of the future health program of our Nation, I have emphasized that the medical profession of the United States is more than adequate and competent to meet the health needs of the American people without political nostrums—without socialized medicine.

I have emphasized that Great Britain's sorry experiences with socialized medicine underline the importance of our avoidance of European type political medicine. We here on this blessed continent have achieved the highest medical standards for our people in the world, thanks to America's private practitioners.

It is estimated that more than 60,000,000 persons now have hospital benefit insurance; 35,000,000 have surgical protection; 15,000,000 have medical benefit policies. It is with deep pride that I note that the State of Wisconsin has pioneered to provide prepaid health care. Nearly one million people in the Badger State are enrolled in various plans—the Blue Shield plan of the State Medical Society, the plan of the Milwaukee County Medical Society, Blue Cross, and so forth.

In the January 1950 issue of the Wisconsin Medical Journal published at Madison by the State medical society, there is an excellent statement on the 12-point program of the American Medical Association on such vital issues as research, insurance, mental hygiene, veterans medical care, and so forth. In this issue of this fine publication there is, moreover, a point-by-point analysis of the way by which the Wisconsin medical profession has pioneered along every single one of these dozen paths recommended by the American Medical Association.

Not only is this an excellent commentary on the pioneering vision, the industry, the energy, the resourcefulness of Wisconsin practitioners, but it shows that the American Medical Association has not simply set up paper plans but rather that its program is based upon reality, upon active measures which it will dynamically continue.

This 12-point program certainly belies the unfounded charges which have been constantly hurled at the AMA by the political quacks who are seeking to foist socialized medicine on our country. If one were to believe those political quacks, one would think that the doctors of America had no future program, no active interest in expanded medical services, no concern with the people's welfare, particularly of folks in the lower and middle brackets.

But let the record now speak for itself. Let the Wisconsin record and the AMA record demonstrate as I have previously demonstrated the utter falsity of the charges which the Socialist-minded Democratic administration and its adherents have hurled.

[From the Wisconsin Medical Journal of January 1950]

AMERICAN MEDICAL ASSOCIATION 12-POINT PROGRAM

WISCONSIN LISTS ACCOMPLISHMENTS ON MANY POINTS

A Federal Department of Health

1. Creation of a Federal Department of Health of cabinet status with a Secretary who is a doctor of medicine, and the coordination and integration of all Federal health activities under this Department, except for the military activities of the medical services of the armed forces.

Wisconsin: This is a national development, but one that has been recommended by the AMA since 1884.

Medical research

2. Promotion of medical research through a National Science Foundation with grants to private institutions which have facilities and personnel sufficient to carry on qualified research.

Wisconsin: Both the University of Wisconsin Medical School and Marquette University School of Medicine receive grants from the United States Public Health Service for medical research. Over $25,000 yearly from State funds goes to the University of Wisconsin for cancer research, $55,000 annually from the Wisconsin Alumni Research Foundation with added amounts to several departments for related research, and many thousands of dollars from trust funds and bequests are earmarked for various specific research. Similar amounts are available to Marquette University from the United States Public Health Service, bequests, and trust funds. County-wide research projects by local medical societies are encouraged by the State society.

Voluntary insurance

3. Further development and wider coverage by voluntary hospital and medical care plans to meet the costs of illness, with extension as rapidly as possible into rural areas. Aid through the States to the indigent and medically indigent by the utilization of voluntary hospital and medical care plans with local administration and local determination of needs.

Wisconsin: The State medical society began experiments with voluntary prepaid hospital and surgical care plans as early as 1937. Experience with these plans resulted in the formation of Wisconsin Physicians Service (Blue Shield) in 1946. On December 1, 1949, it provided surgical, maternity, and medical coverage to more than 160,000 persons. The Nation's first medical society sponsored voluntary plan operated through private insurance carriers was developed by the society. It is the Wisconsin plan, which now covers more than 225,000 persons. A local Milwaukee County Medical Society plan reports over 195,000 coverage in Milwaukee County. Both the Blue Shield plan and the Wisconsin plan make their coverage available to people in rural areas, single-family units, and individual subscribers.

Medical care authority with consumer representation

4. Establishment in each State of a medical-care authority to receive and administer funds with proper representation of medical and consumer interest.

Wisconsin: This concerns the establishment within each State government of an agency to receive and administer any funds coming to the State as the result of Federal legislation for the medical care of the medically indigent as part of an over-all program to provide comprehensive medical care for the American people on a locally administered basis.

New facilities

5. Encouragement of prompt development of diagnostic facilities, health centers, and hospital services, locally originated, for rural and other areas in which the need can be shown and with local administration and control as provided by the National Hospital Survey and Construction Act or by suitable private agencies.

Wisconsin: The Hospital Survey and Construction Act is administered in Wisconsin by the State board of health. At present 35 hospital projects are actually under way, mostly in rural areas, and a total of $6,000,000 in Federal aid has been allotted to these projects. The medical society has supported this program and legislation to improve its administration. It has also sponsored legislation for the development of diagnostic and convalescent facilities for rheumatic fever and cancer victims.

Public health

6. Establishment of local public-health units and services and incorporation in health centers and local public-health units of such services as communicable-disease control, vital statistics, environmental sanitation, control of venereal diseases, maternal and child hygiene, and public-health laboratory services. Remuneration of health officials commensurate with their responsibility.

Wisconsin: The efforts of the State board of health in the field of communicable disease control has made Wisconsin one of the healthiest States in the Nation. Small-pox, typhoid, and diphtheria are virtually nonexistent, the State has one of the lowest venereal-disease rates in the Nation and there is every prospect that tuberculosis may be completely eradicated in little more than a decade. A new State laboratory of hygiene to provide additional modern laboratory services to rural physicians was authorized by the legislature at the request of the State medical society. The society is continuously supporting the establishment of local health units in county and city-county areas, and legislation to insure adequate salaries for public-health officers has been sponsored by the society.

Mental hygiene

7. The development of a program of mental hygiene with aid to mental-hygiene clinics in suitable areas.

Wisconsin: Since 1941 a mental health and hygiene program has been underway in Wisconsin through the State board of health with the active support of the State medical society. Up to $75,000 a year in Federal funds are used to demonstrate what child-guidance clinics can do, and local initiative takes over to maintain the clinic thereafter. Twelve such clinics are now operated in the State as the result of this program.

Health education

8. Health-education programs administered through suitable State and local health and medical agencies to inform the people of the available facilities and of their own responsibilities in health care.

Wisconsin: The State board of health and the State medical society devote a majority of their efforts to educational programs to inform the people of available facilities and personal responsibility for health care. Health councils, health meetings, and school health programs, as well as weekly radio and newspaper presentations on health, have accomplished much in the better education of the State's citizens. The medical society's radio program, the March of Medicine, carries the health-education campaign to the people via 25 radio stations.

Chronic diseases and the aged

9. Provisions of facilities for care and rehabilitation of the aged and those with chronic disease and various other groups not covered by existing proposals.

Wisconsin: A detailed study of Wisconsin's needs for the chronically ill and aged has been conducted by the State medical society. The resulting publicity has created considerable public support for legislation offered in the current session by the society seeking permissive laws for the building of county infirmaries for the aged and chronically ill, and State aid for their maintenance. Many counties solved the problem on a local basis, but others need State aid, and the so-

ciety is giving its support in every way possible.

Veterans' medical care

10. Maintenance of existing high standards of medical care for veterans, including extension of facilities where the need can be shown and, where practicable, care of the veteran in his own community by a physician of his own choice.

Wisconsin: The veterans' medical service agency of the State medical society has enabled thousands of Wisconsin veterans to obtain medical care at Government expense through the physicians of their choice. In the last 1½ years more than 21,000 Wisconsin veterans have been served through this agency. The veterans' hospitals in Wisconsin are closely affiliated with the medical schools of the University of Wisconsin and Marquette University, as well as private hospitals.

Industrial medicine

11. Greater emphasis on the program of industrial medicine, with increased safeguards against industrial hazards and prevention of accidents occurring on the highway, home, and on the farm.

Wisconsin: The State's industrial health program is one of the most outstanding in the Nation. Through cooperation between the State board of health's industrial hygiene unit, in-plan industrial health clinics are held for hundreds of workers and many employers. Great progress in safety and health education has been made as a result. The society's committee on rural health and accident prevention has carried on a constant campaign for safety on the farm, highway, and home. Through cooperation with the State workmen's compensation department, the society insures that most of the State's industrial workers have the benefit of free choice of physician in industrial accident cases.

Medical education and personnel

12. Adequate support with funds free from political control, domination, and regulation of the medical, dental, and nursing schools and other institutions necessary for the training of specialized personnel required in the provision and distribution of medical care.

Wisconsin: Better distribution of physicians through the preceptorship system of the University of Wisconsin medical school (which has resulted in many physicians locating in rural areas), a physician's location service of the State medical society to help bring physicians to communities needing them, and legislation for the appointment of "special medical officers" in sparsely populated areas to perform public-health duties and encourage them to establish a private practice in those areas.

Medical School at Yeshiva University

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, March 21 (legislative day of Wednesday, March 8), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the text of an address delivered by the Honorable Paul E. Lockwood at the third annual dinner sponsored by the society for the establishment of a medical college at Yeshiva University, held in New York City on February 5, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is with pleasure and a feeling of privilege that I am here to greet you tonight. The task you have set of creating a medical school at Yeshiva University is a great contribution to our society. All men must recognize in it profound significance and a humanitarian value of a very high order.

The Jewish people down the centuries—as much as or perhaps more than any other group—have contributed richly to the development of the art of healing man's physical ills.

From the earliest times, from the earliest Biblical periods, we find a recognition amongst the Jews of the principle of a science of medicine based upon experience and the laws of nature. Of this we find ample evidence in the Bible and in that great body of religious literature known to all men as the Talmud. As the first in the Western World to carry to mankind the principles of mercy and charity, the Jewish people naturally have produced distinguished healers and leaders of medicine. In the Dark Ages when the natural sciences were undeveloped and man looked to magic and superstition for his bodily well-being, it was Jewish men of science who were bold enough to search out the secrets of life and to seek means of checking sickness and death. It is enough to mention the great name of Maimonides, physician, philosopher, and interpreter of the law, to exemplify the great role of the Jewish people as pioneers in medical science.

Throughout the Middle Ages, when the lot of Jewry was so tragic, even their detractors came to Jews—sometimes secretively—with their problems of health. Rulers and kings, lords of realms, whatever their attitude in secular affairs in regard to Jews, were constrained to confer privileges on physicians of the Jewish group out of their self-interest for the health of themselves and their people. Even in ancient Spain, it was the Jews and the Moors who carried the inspiration of the search for truth in the fields of the natural and physical sciences.

It is not, therefore, surprising to find that the Jewish people who have unfailingly demonstrated an instinct for learning, should have continued to make such valuable contributions in the cultural development of western civilization. Nor is it surprising that a group which has always been so keenly sensitive of social responsibilities, should have turned its love of learning for its own sake to the application of that learning to the conferring of benefactions upon its fellow men.

In modern times the contributions of Jewish physicians and scientists in the field of medical research have occurred and reoccurred with a frequency that is no less than astounding. The names of discoverers and developers of revolutionary approaches in the medical field, whose bearers are Jewish, are legion. It is enough to mention Dr. Paul Ehrlich, the discoverer of salvarsan; of August von Wasserman, of the famous test of that name; of Bela Schick, whose test for diphtheria has saved the lives of hundreds of thousands, to illustrate the role of the Jewish people in modern medicine.

Our own country has been blessed with a multitude of Jewish physicians and scientists. The position of the United States, at the forefront of the medical progress of the world, is undoubtedly due in large part to their contributions. Recently your university honored Dr. Selman Waksman, of Rutgers, for his outstanding discovery of streptomycin and his work in soil microbiology. He is but another link in the great company of Jewish scientists and doctors who in laboratory and hospital have unrelentingly attacked the evils of disease.

Your university, now in its fifth year as such, has already attained a high standing among the great institutions of learning in our State. Its mission and its achievements will not be complete without a school of medicine. For its sake and for the sake of all of us, we wish you well in this great venture. With your own traditions and with traditions of a great people to inspire it, the contribution that a medical school at Yeshiva University can make will be regarded in the years to come as one of the great landmarks in the history of medicine and health.

America stands today far above all other nations in matters of health and medicine. At the same time we suffer a lack of physicians. This is difficult to explain in a country of such great wealth, cultural achievement, and blessed with such great institutions of education. Nevertheless, the fact is clear that there is a great shortage of physicians—not only in the rural areas but in many of the greater cities—most particularly in the field of the general practitioner. It is most unfortunate that for many reasons, which we hope to see drastically change, our medical schools until now have not been in a position to train enough physicians to meet the needs of our people.

There have been a number of factors which have brought about this condition. Among those factors, I regret to say, has been that of discrimination, based upon race or creed. It is cheering, indeed, to realize that in a world beset with so many problems that might have diverted us from a solution of this one problem, we can now say that here is a factor that will surely be no more. Upon the recommendation of Governor Dewey, the Legislature of the State of New York has passed and put into effect laws to remove effectively such practices in the field of education. That law, I am happy to say, is already having its effect. The same progress that has been obtained by similar legislation in the field of employment we are now developing at an even more rapid rate in the field of education.

We must not forget that there are still other factors that have resulted in the curtailment of educational opportunities. One of them has been the decline of medical-school facilities during the past four decades. It is an astonishing fact that there are fewer medical schools in the United States today than there were at the turn of the century. Again, as a result of the efforts of Governor Dewey and the State administration, vigorous and direct steps have been and will continue to be taken to lift those limitations.

There has been created a great new State university. It has 11 teachers' colleges; a notable school of agriculture; the first school of labor and industrial relations in the Nation; schools of forestry, ceramics, veterinary medicine; 5 new technical institutes; a maritime college; and 6 agricultural technical institutes.

It is in the difficult field of medical education that the State university is making a great contribution. Two existing medical schools, one at Syracuse and one in Brooklyn, have been incorporated into the new university and their facilities expanded. The expansion now increases the number of medical students in the two schools by a number equal to that of an entire new medical school. So that we now have what is in number of students a new medical school, and this has been accomplished without the delays that would have been necessary in building and staffing one. These, of course, are the first few steps of a massive program upon which the State university is engaged. It is already seventh in size among the universities of the country and you rightly can be proud of it.

Government cannot solve all the problems of expanding medical education alone. The medical center of the twentieth century, with hospitals, clinics, teaching institutions, and related research programs, requires the vast endownment of private philanthropy.

UNIVERSITY OF MICHIGAN LIBRARIES

The men who staff such centers, the men who impart their rich knowledge to the students, the devoted scholars who labor their lives away over the microscopes and test tubes of the laboratory do so not because they want jobs in an institution at so much a week. They dedicate themselves and their lives to an aspiration, to an ideal. They respond to leadership—not direction—and from their devotion and their dedication comes a great university.

That is the challenge that faces you who with countless other Americans aspire to create a Yeshiva university college of medicine.

Moreover, in the field of education, we will lose an invaluable tradition if we have failed to obtain a broad diversity of institution and outlook. Therefore, it is most essential that a great institution such as yours should directly make its contribution to the field of medical education. Its contribution could not—and we would not wish it to be—a total solution to the problems of discrimination and limitation of facilities in the field of medicine. By the same token, Government's contribution to that solution should not be the sole one. Our Nation and our people were built upon diversity. Our educational system should reflect that diversity and all the rich values that diversity can contribute to a culture. In this pattern Yeshiva University carries a unique responsibility and for that reason all of us have a unique responsibility to it.

Who does not feel a thrill at the prospect of a great medical center under the auspices of Yeshiva where miracles of modern science will come under the influence of a tradition of thousands of years. What entering student can fail to feel a rich spiritual exaltation in being admitted to an ancient learning—a learning that began when men in the desert cast out the idols of the barbarian—idols at whose feet the sick sought escape from death—men who, strengthened by a belief in an eternal God, sought to find for themselves the true causes of disease. What student can fail to dedicate himself in the tradition of the ancient Jewish physicians who, when the world was dark, gave treatment and even life itself to their oppressors, and did so because of their belief in the brotherhood of man and the fatherhood of God.

That is why Government sponsorship is not the answer. That is why it is up to you and to all of us to labor and to give to create this great institution. Then all of us may feel some of that inspiration. It is a great cause—let us all be worthy of it.

Decision of Hong Kong Court Awarding Certain Aircraft to Chinese Communists

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, March 21 (legislative day of Wednesday, March 8), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an article which appeared in Time magazine, March 6, 1950, entitled "Hong Kong With His Majesty's Compliments."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HONG KONG WITH HIS MAJESTY'S COMPLIMENTS

In Hong Kong last week a British colonial court decided that 71 United States-made planes, formerly the property of Nationalist China, now belong to the Chinese Communists. With the aircraft (including DC-3's, five Convairs, and five four-engined Skymasters) went 20,000 tons of maintenance equipment; altogether the property was worth $30,000,000.

The planes had been operated by Nationalist China's government-owned CNAC and CATC. As Communist armies overran the mainland, the lines retreated to Hong Kong's Kai Tak airfield. There, last November, most of their Chinese personnel declared allegiance to the Communists (Time, November 21) and shooed off Nationalist officials.

To get the planes out of Communist hands, the Nationalist Government sold the property to a United States corporation headed by its good friend of Flying Tiger fame, Maj. Gen. Claire Chennault, who operated Nationalist China's other air line (CAT). But when Chennault tried to take possession, Hong Kong authorities blocked him. There were reports of Communist threats to British business interests; one story was that the Communists threatened to confiscate one British business in Shanghai for every plane that went into Chennault's hands.

Meanwhile, there was an unexplained delay in a final court hearing. Then, in January, His Majesty's Government recognized Communist China. In last week's decision, Chief Justice Sir Leslie Gibson ruled that British recognition established Red ownership of the disputed planes. "Any question as to sovereignty * * * of a foreign state," he said, "is a question on which the court must be guided by the attitude of His Majesty's Government. * * * Our state cannot speak with two voices on such a matter, the judiciary saying one thing and the executive another."

At Kai Tak airfield, exultant Chinese Communist mechanics painted Red flags on 71 fuselages.

This Intellectual Potential Must Not Be Utterly Wasted

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. KLEIN. Mr. Speaker, we are all agreed that war is wasteful; and among the most tragic of all wastes, in war and the uneasy peace that follows war, is the terrible waste of brains—of intellectual potential of a very high order, already trained.

The Second World War, precipitated by mediocrity raised to absolute power, was, quite naturally, more than usually wasteful of the best brains, and the cold war following has continued that extravagance.

Under leave, I am inserting in the RECORD the appeal made to me and to other Members by Dr. Reinhold Niebuhr, president of Union Theological Seminary of New York, and also an authentic leader of the non-Marxist liberal movement in this country. Dr. Niebuhr describes the situation which exists in the European displaced-persons camps—those traps for wasted human energy which are the late fruit of Hitlerism—today as far as the intellectuals are concerned.

It is particularly distressing that the intellectuals of the United States, or as we would be more inclined to say, the body of professional practitioners, far from welcoming the new ideas and the new personalities of the Europeans, fear them, and are trying to make it more and more difficult for professional men of foreign birth, regardless of nationality or gifts, to practice their arts and sciences in this country.

Nevertheless, those of us who believe that a world can exist without war and without mass antagonisms must respond to Dr. Niebuhr's appeal as best we can.

UNION THEOLOGICAL SEMINARY,
New York, N. Y., March 16, 1950.

The Honorable ARTHUR G. KLEIN,
House Office Building,
Washington, D. C.

DEAR SIR: The ablest and best-trained men and women of Europe—30,000 of them—qualified practitioners in all the arts and sciences—are still rotting in the displaced persons camps of Europe today. While hundreds of thousands of their fellow refugees have gained acceptance for immigration as manual laborers, they have been passed over. The few who have found new homes did so often by acquiring new manual skills and trying to forget that they were once respected in their professions. This is the great tragedy of the present DP scene. Surely it is time that a solution to this tremendous human problem is sought out.

I am enclosing for your information the summary of a recent survey by the International Refugee Organization of the UN which indicates certain needed categories of professions which can be resettled in various countries. The International Rescue Committee, an organization with 16 years of experience in voluntary relief work, maintaining eight strategically located overseas field offices, is now preparing a campaign to aid the forgotten intellectuals and professionals of the DP camps.

Because I believe that this is a noble attempt by a responsible and well-equipped organization to eliminate this needless and costly suffering, I have agreed to act as general chairman of this rescue campaign.

With this letter I am asking you and other Americans prominent in the sciences and humanities to join me in this effort as a member of the national committee. The strongest possible leadership is vital if we are to arouse the American people to aid in saving these gifted European intellectuals and professionals from the corroding existence to which they are now doomed. We seek to restore them to a productive, satisfying existence in which they can contribute toward the enrichment of our civilization.

Will you please fill in and return the enclosed card indicating your willingness to serve as a member of the committee sponsoring this rescue work? I earnestly hope for your favorable and prompt response.

REINHOLD NIEBUHR.

MEMORANDUM ON FORGOTTEN INTELLECTUALS AND PROFESSIONALS

From: Reinhold Niebuhr.
To: The Honorable ARTHUR G. KLEIN.

In Europe today there are approximately 30,000 of the ablest, best-trained men and women of the continent—qualified practitioners of all the arts, sciences and professions, who at one time were leading citizens in their native countries. They are the forgotton intellectuals and professionals—now living in the most abysmal circumstances in the DP camps. They have been consistently passed over by most national missions selecting refugees for resettlement in favor of skilled and unskilled manual laborers.

Their talents cover virtually the entire range of human knowledge. There are musicians who have studied under some of music's greatest masters, distinguished historians, linguists who cannot only teach foreign languages but also, through first-hand experience, know the countries in which they are spoken. There are engineers who have been associated with some of Europe's best-known firms, doctors who have conducted original research and practiced in every field of specialized medicine, geologists who have led expeditions through some of the most remote parts of the world.

For example, among these refugee specialists is an agronomist who initiated work on the reclamation of arid wastelands in Macedonia and Serbia; the former prima ballerina of Latvia, a graduate of Moscow's famous ballet school; a doctor who has had extensive experience with tropical diseases in the Orient; a novelist whose second book won the Hungarian literary prize in 1947.

Their professional qualifications are established by close examination of their documents and special testing commissions, made up of recognized experts, who review their educational background, personally examine and interview persons who have lost their documents, audition musicians, view works of art, and evaluate levels of skill.

Most of these highly qualified professional and intellectual people need only to learn a new language to fit into a new land—and the majority of the refugee specialists already speak at least two foreign languages, one of which is frequently English. An appendicitis operation is the same in Prague as in Peru, the notes of a Beethoven symphony are the same in Belgrade as in Birmingham, a bridge is built fundamentally the same whether it is to cross the Danube or the Mississippi. And so long as there remain children to be taught, crops to be improved, sick to be healed, and bridges to be built, the world cannot afford to toss on the junk heap its teachers, doctors, agronomists, and engineers. A shocking waste of talent has already occurred as these refugees have had to wait in camps since the war while governments have hesitated to accept them as immigrants; yet there exist vast populations in dire need of the very services they have to offer in exchange for the right to freedom and citizenship in a new land. This short-sighted waste of human talent is the great tragedy of the postwar world.

There are, however, evidences that the world is beginning to recognize the contributions that these ably trained men and women can make. For example, Norway has recently chosen three dentists who have been trained for 6 months in Germany and found their methods perfectly adaptable. The Netherlands Ministry of Social Welfare recently made a spontaneous survey of Dutch farms, and obtained requests for 30 badly needed technicians and pharmaceutical chemists. A group of 53 refugee doctors were resettled in Pakistan last month. A recent world-wide canvass for specialists in professional jobs which was carried out by the International Refugee Organization under the leadership of J. Donald Kingley, Director General, indicates that there are certain needed categories in various countries throughout the world which could be filled by such DP specialists. A recent survey in the United States indicates that here also there are categories for professionals in which resettlement would be possible—e. g., top level mathematicians, clinical psychologists, etc.

There have been a few attempts to deal with this problem by American agencies. Of them all, the International Rescue Committee has had the greatest success. Last year IRC resettled 250 intellectual DP's—over 30 percent of its total DP program. Further, by its very nature IRC has experience in dealing with intellectuals. During the early days of the Nazi rise its work was primarily concerned with the rescue and care of anti-Fascist intellectuals. Consequently, of all the relief agencies, IRC is perhaps best equipped to handle such an effort. Through its field offices in eight European countries and its headquarters in New York City, this organization is prepared to begin the work of resettlement of the forgotten intellectuals in the DP camps of Europe. After thorough study of the problem it is estimated that resettlement would be possible for the sum of $500 per case. After conference with both IRO and UNESCO offices in Washington, who have pledged their full support for this effort, the International Rescue Committee is ready to begin work.

This project deserves the support of every American. The responsibility is ours. Only we have the material resources and the spiritual strength to sustain those who are able to contribute so much to the enrichment of our civilization. History is not only passing judgment on the totalitarian evil, it will also pass judgment on us if we fail to help in this gigantic tragedy.

In order to arouse the American people to action, I am calling on distinguished and representative men and women from the sciences and humanities to lend their support by endorsing this project.

R. N.

[From the New York Times]

BARRIER AGAINST BRAINS

On the day after Christmas an airplane took off from an Italian field, bound for Pakistan. In the plane were 54 men and women of various nationalities, religions, and professions. There were Latvians and Hungarians, Mohammedans and Protestants, doctors, and at least one entomologist of international reputation. These Europeans, who had been living in DP camps, were now seeking a new life and a new usefulness in distant Asia. Officials of the International Refugee Organization pointed out that the flight was particularly noteworthy as an outstanding example of our efforts to resettle specialists.

The man from Mars might indeed be excused if he thought that the easiest of all refugees to resettle in new homes would obviously be those whose training and experience were of particular value to humanity—the doctors, surgeons, and nurses; the chemists, physicists, and engineers; the teachers, artists, and writers. But in this most contrary of all worlds such is not the case. It is the height of irony that these specialists, the cream of Europe's displaced persons, are virtually as hard to place as the physically disabled, the totally blind, the hopeless invalids. Some of the scientists—more power to them—turn themselves into manual laborers in order to gain admission to new lands. In one country an agronomist and an industrial chemist are mining coal. In another a research chemist is handling a rock drill. But not all of them can do that; and right now there are some 25,000 of these specialists wasting away in the DP camps of Italy, Austria, and western Germany.

Partial IRO list of professionals and intellectuals still idle in the DP camps of Europe

Accountants	764
Agronomists	1,024
Architects	326
Artist	470
Chemists	471
Dentists	474
Engineers (civil)	788
Engineers (electrical)	353
Engineers (industrial)	173
Engineers (mechanical)	565
Engineers (mining)	80
Engineers (sanitary)	13
Physicians (general practitioners)	869
Physicians (specialists)	656
Musicians	862
Nurses (graduate)	739
Pharmacists	494
Sculptors	57
Singers	318
Teachers (arts and crafts)	279
Professors (academic)	4,333
Professors (technical)	496
Veterinarians	214
Writers	161
Other professionals	1,254

Besides these, it is estimated that 30 percent of the escapees from behind the iron curtain are professionals and intellectuals of standing.

Red China May Get an Air Force and Navy

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 21 (legislative day of Wednesday, March 8), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an article which appeared in the Washington Daily News, March 17, 1950, by Clyde Farnsworth entitled "Red China May Get an Air Force and Navy."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RED CHINA MAY GET AN AIR FORCE AND NAVY WITH RUSSIAN AND BRITISH HELP

(By Clyde Farnsworth)

HONG KONG, March 17.—There are good reasons to believe that with Russian and British help Red China will turn up with an air force and navy of sorts when and if she attacks Formosa, or even earlier.

Russia's help will be in technical personnel mainly, Britain's will be mainly in supplies.

Heavy Nationalist bombing of Red-held airfields at Shanghai and Canton, together with preparation for black-outs in Formosa suggest that Chinese Nationalist Government is aware of an air threat.

Shanghai and Canton would be likely bases for air assaults on Formosa and Hainan. It's authoritatively estimated the Reds have about 50 war planes and 20 warships. Planes include American-made B–24 heavy bombers, B–25 medium bombers and P–51 fighters.

Warships run no heavier than mine layers. The Reds probably also are trying to arm fishing boats and even large junks. Most of the Red fleet is reported in the lower Yangtze. Nanking is especially mentioned as a concentration point.

Preparation of naval support for the Red's Formosa planning would account for tight security measures taken by Nationalist picket boats enforcing a blockade of the Yangtze. The Nationalists intend to keep the Red fleet bottled up.

PROPAGANDA AND PLANES

The Communists will try for propaganda purposes to preserve the paultry character of its air force and navy and still try to use them in an effective manner at sea. Their greatest chance would come if Britain ordered her fleet to crack the Chinese Nationalist blockade.

It would be much better for the Reds if they could score first with an air force entirely composed of American-made planes—theirs by capture or desertion from the Nationalists.

UNIVERSITY OF MICHIGAN LIBRARIES

To make an air force out of 50 old American bombers and fighters is where the Russians would come in, certainly as technicians and possibly also as fliers.

Behind a front of 50 American-made planes the Russians could draw on their own wartime lend-lease receipts of American aircraft and equipment—and maybe send in whole planes. It probably will be the most indestructible 50-plane air force the world ever saw.

HOUSES FOR RUSSIANS

Recent arrivals in Hong Kong say the Reds in Shanghai requisitioned 100 houses in the vicinity of the Hungjao airfield, one of a cluster of four Shanghai airfields. These travelers said the houses were being taken over for a Russian adviser.

Even if the Russians are planning a substantial air advisory group, they wouldn't need hundreds of houses, so it's more likely that Shanghai is making room for many Russian civil administrators as well as airmen.

It's probable that the Chinese Red air force already has run one mission, an attack a few weeks ago on Hsichang, one of the principal cities of Sikeang Province held by Nationalist Gen. Hu Tsung-nan's army.

Just where the Reds will get aviation gasoline is an interesting question. Russia could provide it—and may have done so—but an easier way would be to take it out of Hong Kong.

WATCH HONG KONG?

If the United States embargo of critical items needed by the Chinese Reds is too effective, somebody's going to have to watch Hong Kong. The United States consulate says there have been no shipments of American aviation gasoline to Reds through Hong Kong, but it relies upon British reporting of Hong Kong's trading.

There have been considerable shipments of other motor fuels and Chinese Nationalist airmen have set up some bright fires in a Red China fuel dump at Shumchun just across the frontier from this crown colony.

Britain's greatest lift to the air-minded Communists, however, probably was the court turn-over of two former Nationalist air lines. The 71 planes still are here, but thousands of tons of spare parts, engines, instruments, and other equipment are reported being shipped to north China while litigation still is pending on the appeal from the Hong Kong Supreme Court decision.

The Reds probably would have planes also by this time if they had qualified fliers. The easiest way to get them would be for the British to grant Hong Kong visas to Russian ferry pilots.

Earle D. Willey, of Delaware

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Tuesday, March 21 (legislative day of Wednesday, March 8), 1950

Mr. WILLIAMS. Mr. President, yesterday I attended the funeral in Dover, Del., of one of the most outstanding men in my State. I was amazed at the number of persons from every section of Delaware and from every walk of life who came to pay their respects to their friend who truly had lived in his house by the side of the road and been a friend to man—for 60 years.

Without warning the Grim Reaper knocked at the door of Hon. Earle D. Willey as he sat in his home in the early evening of Friday, March 17, chatting with a friend.

Judge Willey, as he was respectfully and popularly known, has held many honorable public and private positions in the State of Delaware. Included in these were judge of common pleas and juvenile court, secretary of state, and Representative in the Seventy-eighth Congress.

Earle Willey was a man of great kindness and friendliness, profoundly conscious of his obligations to all the people of his State and Nation. In these exacting and trying times such men are sorely needed. His passing leaves a void that cannot easily be filled.

Our Nation has lost a faithful and efficient leader. Our State has lost an outstanding citizen and public servant. I have lost a cherished friend.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD an editorial in the Journal-Every Evening, Wilmington, Del., Saturday, March 18, 1950, entitled "Earle D. Willey."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Wilmington (Del.) Journal-Every Evening of March 18, 1950]

EARLE D. WILLEY

Delaware was shocked and saddened this morning by the sudden death last night of Earle D. Willey. It was only a little more than a year ago that the gentle and kindly judge resumed the private practice of the law in Dover after a long and useful career in public service. He was only 60 when he died—an age at which he might have expected many more active and useful years.

Last year Mr. Willey received the first citizenship award of the Department of Delaware, American Legion, in recognition of his services to the community, State, and Nation.

Those services were varied and many indeed. They began as long ago as 1915 in Washington, where Mr. Willey was pursuing his studies in the law. He was secretary then to Representative Thomas W. Miller, of Delaware; 27 years later he returned to Washington as Congressman in his own right. Among the many other offices he held were those of State librarian; judge of the court of common pleas for Kent County; deputy attorney general for Kent; and head of the Legislative Reference Bureau.

Throughout his long career he was a loyal Republican and son of Kent County. He will be missed both by the party and the county he served long and well and also by the host of Delawareans who claimed him as a friend.

"As a Layman, I Am Awed by the Incredible Advances in Medical Techniques"

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. KLEIN. Mr. Speaker, there are always some men in any community who attract civic burdens as a lightning rod attracts a charge of static electricity; and such a man, in our great and teeming community of New York, is Charles H. Silver, philanthropist, businessman, humanitarian, good citizen.

Many men would find being vice president of the American Woolen Co., a large and successful business, a full-time job; not Charlie Silver.

With indefatigable energy, he pursues a multitude of private charities and benevolent enterprises, of which the most important is to occupy the presidency of Beth Israel Hospital. It gives me pleasure, under leave, to insert in the RECORD the text of an address by Mr. Silver which he delivered to the graduating class of nurses of the School of Nursing, Beth Israel Hospital, on March 8, 1950, and to associate myself with his tribute to the profession of nursing:

Nearly 50 years ago, a great neurologist and writer, Dr. S. Weir Mitchel, who made his home in Philadelphia, came to this city and delivered an address at the graduation exercises of the school of nursing of a hospital. Dr. Mitchel was one of the outstanding physicians of his time and I would like to quote just one statement from his address which, I think, has some relationship to the occasion this evening. He said:

"The better the woman the better the nurse. I want you to feel how noble is the life before you. I foresee for you that, which to me, has been a source of happiness, the satisfaction of work well done, of success where hope seemed dead, the pleasure of watching the return of health, of seeing the rose replace the lily."

Here are expressed thoughts that are timeless. As I was reading this address recently, I could not help wondering how Dr. Mitchel would feel and think and talk if he came back to earth and saw the tremendous and almost incredible strides that have been made in the field of medicine. Perhaps he would have, with his gift for expression, uttered words of exultation and joy that progress has been so sure and rapid.

Tonight, however, we are concerned with the human phase that enters into the conduct of a hospital; we have gathered to mark the attainment of a noble objective by a group of ladies in white. As a writer once said, they are the "supreme servants of humanity."

It has been my privilege to have been associated with Beth Israel over a quarter of a century. And as president of the hospital, I am in a somewhat better position than most people to observe the daily life and activities of this fine institution. I shall never cease to wonder at the powerful forces which combine every hour of the day, every minute of the hour, to give solace and healing to the sick and ailing.

As a layman I am awed by the incredible advances in medical techniques; it is overwhelming to note the almost daily progress that is being made; to read of the miracle drugs, all of which have brought about not only relief from pain and dreadful misery, but also longer life.

But what has always fascinated and enthralled me has been the smooth efficiency of the nurses, their silent devotion to duty, their constant attention of the patient. For no matter how breathtaking has been the advance in medical techniques, the nurse remains an indispensable factor in the work of the hospital. To her both doctor and patient turn for help and consolation. She is at the right hand of the doctor and at the bedside of the patient.

Patients see the doctor at certain intervals, friends of the family visit them at stated hours, but the nurse is with them almost constantly. You become part of their

lives at the hospital: You are their friend and companion, you are the one to whom they turn at a moment of pain and anguish when neither the doctor nor the family is with them. You supplement the work of the doctor and the compassionate attention of their families. And it certainly is true that you are the supreme servants of humanity by virtue of your skill and sympathetic understanding.

You who are about to receive your diplomas must realize that there is no blueprint for compassion; there is no chart for understanding and sympathy. The emotions lodged in the human breast are as old as life itself and in going about your work must have the strong inner necessity to come to the aid of fellow humans in distress.

You have seen much suffering and misery while in training; it is not pleasant to see people suffer pain. I am sure that you have not become hardened or callous for I have the feeling that what you have experienced in your training period has challenged you to give the best in you in following through in your chosen career.

We at Beth Israel—and I am sure I reflect the feeling of all who are identified with the hospital—are proud of you and we rejoice with you in the completion of your training period. Your garment of white is the symbol of a noble purpose and the realization of an ideal. For the women in white, and the men in white make up the backbone of a great hospital.

I must say a word of tribute to a lady of great personal charm who is held in deep affection by those in the profession of nursing. I refer to the head of the nursing department, Miss Claire Casey. I want to add that she is not only loved and respected by her immediate associates but by all of us at Beth Israel. It has been my pleasure and privilege to observe her at her work, and I want to say for the record that her competence is beyond praise. She has not only a true conception of her duties, but she has blended this knowledge of techniques with the humane approach to the difficult problems that arise almost hourly.

Tonight, my friends, we are indeed fortunate to have with us Dean McEwen of the Medical School of New York University with which Beth Israel is affiliated. When we received word that Dean McEwen would join us this evening at these exercises, we felt highly pleased and complimented.

It may interest you to know that when he became Dean in 1937, at the age of 35, he was the youngest dean of a medical college in the country. His medical interests, besides medical education in general, are principally arthritis and rheumatic fever. When he was at Rockefeller Institute, I believe he made extensive studies in connection with these diseases.

It is especially appropriate to have Dean McEwen with us because of his deep interest in the profession of nursing. He has been active for many years in helping to improve the standards of nursing and I am sure that under his guidance and advice nursing education has made definite and encouraging strides.

His interest in connection with research in rheumatic diseases has been very keen. Since the introduction of the so-called "wonder drugs," Dean McEwen has manifested an even greater interest in the treatment of arthritis and kindred diseases through the application of these new drugs. Dean McEwen is a credit to the medical profession, but above all is a highly useful and able member of our community.

And a final word of thanks from me to our graduates—not only thanks but a heartfelt wish that the years will bring you the health and happiness to satisfy that inner necessity to help your fellow human beings.

I have attended many graduations in the past, and it is always a genuine pleasure to be present. It gives me great personal satisfaction to know that Beth Israel is contributing, through you, to the well-being of the people of our great city. Congratulations and more power to you.

What Are Taxes Worth?

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. BIEMILLER. Mr. Speaker, just now when we have all felt the pinch of the tax gatherer, I think it is well for us to consider why we pay taxes, and what privileges we buy with those payments. Malvina Lindsay discussed this subject in a recent column in the Washington Post. Her discussion is as usual both sparkling and profound. Under leave to extend my remarks, I include her column What Are Taxes Worth? in the RECORD, and call your particular attention to her quotation from the late Justice Oliver Wendell Holmes, that taxes are our "investment in civilization":

WHAT ARE TAXES WORTH?
(By Malvina Lindsay)
TAXPAYER'S INVENTORY

Well, here you are again writing a check to support a lot of loafers and grafters—now, now wait. You sound like old Snortie on the bus, always griping about the bunch that's running something—anything. And he works for the Government.

Anyway, you're fed up with taxes and you're going to grouse all you please. Doesn't everybody? Didn't even our faultless forefathers when they grudgingly paid as much as $2 per capita over a period of 8 years to help finance the Revolution and the Continental Congress?

Still, you loathe bellyaching—at least in other persons. Put up or shut up, you think, when you hear the annual March 15 whining. Offer a better system (or a better country) or pay through the nose cheerfully.

Then what about yourself? Are you just vaporously crabbing or do you know where your tax dollar goes?

Oh, yes. Three-fourths to national defense, to pay the costs of past wars, to prepare for or prevent future ones. You think of all the money going directly for armament—weapons, ships, planes, men in uniform—between thirteen and fourteen billion out of a $44,000,000,000 budget; of the twelve billion for veterans' programs and for interest on the war debt; four billion to arm and feed foreign allies; eight hundred million for atomic energy; other millions for minor war costs.

What a change in your tax bill if the world were only at peace—or even without a cold war. But there's nothing you can do about that. Or can you?

You think of all the other calls on your tax dollar, flood control and reclamation, highways, education, research, postal deficit, housing, Government administration, farm price supports—

Ah, that's it. The farmer. Living off your tax dollar. Yet, if the farmer goes broke and can't buy, what happens to your job? You think of the 1920's when business got the lift and the farmer didn't. You think of 1929.

Anyway there are the bureaucrats. They're what's wrong with your tax dollar. They're what keeps your nose to the grindstone. Those loafers. You look at the budget. Their cost is around one thousand two hundred million. A little over 2½ cents out of your tax dollar.

Still it's the penny saved that counts. Why aren't all these things run at less cost? Then there are these income-tax inequities. Why isn't something done about them? Yet what are you doing—except grousing? How much do you know about how your tax dollar's being invested or squandered? Or about who's handling it?

Well, from now on you're going to look into things more. You've as good a right as anybody to do something—nose around, go to tax hearings, call a meeting, circulate a petition, get out a pamphlet, mount a soap box, run for office. That's one thing about this country. Anybody can raise a big fog about anything he doesn't like.

Yes, that is one thing about this country. Maybe, it's one of the biggest things you buy with your tax check.

You've never thought of the other side of it—what you get when you pay taxes. You've always thought of yourself as charitably and nobly bestowing a hand-out on a groveling Uncle Sam. You think of Justice Oliver Wendell Holmes—what he said when he heard his young secretary grumbling about a tax bill. "Young man, I like to pay taxes. They're my investment in civilization."

What are you getting out of your investment? At least a lot more than the first taxpayers, the early serfs who had to give everything, including themselves, to the top boss. And more now than taxpayers in most other countries. Certainly more than taxpayers behind iron curtains.

And now it looks as if you were going to be paying big taxes for a long, long time. Even if you and other righteous citizens were to bring about a Utopia of efficiency and economy in Government there'd still be the cold-war world. Still 74 cents out of your dollar on defense.

So maybe it might make things easier in future to have a different attitude toward your taxes. Not to be so pinched in spirit about them. To write your check or open your pocketbook with the grand air of one making an investment in civilization. To think of the order, opportunity, comfort, civilized living, personal freedom they were buying you. Even to feel they might be buying a little more of these things for people everywhere.

ECA and the International Monetary Fund

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks a timely address delivered last September by Mr. Eugene R. Black, president of the International Bank for Reconstruction and Development. It has considerable bearing upon a subject which this House will debate within the next week:

ADDRESS BY MR. EUGENE R. BLACK, PRESIDENT OF THE INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT, IN PRESENTING THE FOURTH ANNUAL REPORT OF THE INTERNATIONAL BANK TO THE BOARD OF GOVERNORS

This is the third meeting of the Board of Governors that it has been my privilege to attend, and my first as president of the bank.

UNIVERSITY OF MICHIGAN LIBRARIES

I am deeply aware of the important responsibilities of this new post, and of the high standards of achievement set by my predecessor, Mr. McCloy. But the sound policies and cooperative relations established under his leadership provide a firm foundation on which we can build the bank's future. I welcome the opportunity to work with you in this task.

The past year has been, I think, a period of substantial progress and accomplishment for the bank. Our activities are summarized at some length in the fourth annual report, and I shall not repeat what is said there. But I do want to touch briefly on a few high spots of our recent operations, and to suggest some possible implications for the bank of broader currents in the world economy.

Most of our loans during the past 12 months have been for projects designed to increase the output of useful goods and services in less developed countries. These development loans make up a considerable total and, as is indicated in the annual report, negotiations for the financing of a number of other development projects are well advanced. But I must say frankly that the volume of development loans granted to date has not come up to our earlier expectations.

This gap between hopes and performance is partly the result of overoptimism about the length of time it would take to get the bank fully organized—to bring together a competent staff, to define our policies and procedures, and make them clear to our member countries, and to gather the economic and technical data necessary for sound decisions. The acceleration of our activity during the past year shows, I think, that this preliminary phase is largely behind us.

More important at present are the difficulties which are more or less universal in underdeveloped countries—the lack of economic data, of experienced personnel, of well-organized projects, of local capital, and all the other deficiencies that are both the cause and the consequence of underdevelopment. It is no accident that the development loans we have made thus far have been mainly to countries where considerable economic and technical advance has already taken place, and to enterprises with a substantial record of experience behind them. The greater the progress a country has already made in development the easier it is for it to progress further; and by the same token it is almost always easier to expand a going concern than to start a new one from scratch.

Yet, the essence of successful economic development, and therefore the essential task of the bank, is precisely to bring new enterprises into being and new techniques into effective use in economically retarded areas—and the more retarded the country the more urgent and challenging is our task.

I believe we have made good progress in overcoming some of the special difficulties of economic development which are analyzed in the annual report. Through missions to most of our less developed member countries we have greatly enlarged our knowledge of their economic problems and needs, their capacity to absorb and service external loans, and the merits of particular development projects. A better understanding now prevails, I think, of the bank's policies and methods; and more and more governments are eliminating legal or procedural obstacles to loans from the bank by taking appropriate action to enable them to incur or guarantee such loans.

Perhaps most important, through our surveys and discussions with member governments, we are better able to assist the less developed countries in diagnosing and solving their own problems. Giving advice is not, of course, our primary function. But we have an immediate and vital concern in trying to promote conditions favorable to the success of our loans and to the increase of productive investment from other sources. I believe that one of the most constructive contributions we can make to the progress of development, especially in the least advanced countries, is to help make available to them the experience of other nations. Moreover, the resulting close and continuous relationship with our members helps to speed up the preparation of development plans and the execution of projects for which bank financing is appropriate.

The initial cultivation of the seeds of development has, therefore, been a somewhat longer task than at first we had hoped. I am confident, however, that we may look forward to an abundant harvest. The first fruits—the loans granted during the past year—are to me the source of considerable satisfaction.

It is also a source of satisfaction that the bank has been able during the past year to make its first loan to one of its members in eastern Europe. The difficulties and uncertainties cited in the third annual report still exist, and have hampered further loans by the bank in this region. But these difficulties have been lessened somewhat by economic developments—notably the increasing availability of manufactured goods in western Europe urgently needed by eastern Europe and the similar availability of essential materials in eastern Europe which are required by the western countries. If these trends continue and political tensions are relaxed, the possibilities for constructive assistance by the bank to its eastern European members should expand considerably.

I am also happy to report that during the past month we have been able to conclude our first loan to one of our Asian member States, and I feel confident that this financing will be followed by other transactions by the bank in that great region of the world. In the Middle East we have not yet consummated any loan, but, as the annual report shows, we have been examining a number of projects in various Middle Eastern countries, some of which I hope will qualify for bank financing in the relatively near future.

On the other side of the balance sheet for the year, I am sorry to say that we have not succeeded to the extent we had hoped in broadening the international character of the financial resources at the disposal of the bank. I refer in particular to our efforts to obtain additional consents to the use in our lending operations of the 18 percent local currency part of the bank's capital. Apart from the United States, which has made the full amount of its 18-percent currency available, some releases have been made by Belgium, Canada, Denmark, and the United Kingdom. They amount in the aggregate, however, to only slightly more than the equivalent of $12,000,000.

In my judgment, it is extremely important that the bank receive greater help from its members in this connection. The strength of the bank is that it is an international cooperative institution. Its ownership, its purposes and its responsibilities are shared by all its member nations. We who are familiar with the bank and its basic concepts appreciate, of course, that the international character of the bank's resources is best demonstrated by the fact that no matter in which capital market the bank may borrow, each member country pledges its credit that the bank will meet its obligations. This real but subtle point unfortunately tends to be overlooked by the world at large and there is an increasing disposition to cite the bank's reliance on dollars for lending purposes as evidence that it has only limited international participation.

My experience has been that the most effective answer to these criticisms is to show that the bank is making use of other resources besides dollars and in particular of the 18-percent currencies of members other than the United States. Accepting the reality that the United States must remain the chief potential source of lending capital for the bank for some time to come, I still believe that it is possible for a number of other member governments to make a substantial amount of their 18-percent capital subscription available for lending.

I do not make this plea for larger releases from the 18-percent subscriptions merely to underline the word international in our title. We have a definite use for these currencies. So long as inconvertibility continues many countries will be able to repay indebtedness in other currencies although they may not be able to service dollar loans.

It is true that most of the countries from which we would like consent to use their 18 percent subscriptions have pressing investment needs at home and are actually net importers of capital. But many of them still invest substantial sums abroad. I do not think I am asking too much if I call on these countries to make a part of their foreign investment through the medium of the bank.

There is another method by which many of our member countries can add to the international character of the bank's resources and that is to increase the eligibility for investment of the bank's bonds. Through legislative or administrative action in a number of countries, a substantial contribution can be made by our members to the creation of a broader market for those bonds. I attach importance to this matter and I propose to discuss it with you in more detail at a later stage of the meeting.

I should like to turn now to a matter much wider in scope than the bank's own operations but which nevertheless profoundly affects the bank and is of vital concern to all the countries represented at this table. I am speaking of the problem of European recovery.

As was foreshadowed in the bank's annual report a year ago, problems of development have increasingly occupied our attention. Since the last Governors' meeting we have made only two small loans to western European countries. Necessarily the principal role in assisting European reconstruction is being played by ECA.

Nevertheless European recovery is of vital importance to the operations of the bank because of the pivotal part played by the great trading nations of Europe in the functioning of the world economy. European purchases and sales abroad have long been a decisive factor in balancing international trade. Unless the European economies can be reestablished on a stable basis the economic position of almost every country, even of those in the dollar area, will be insecure. In passing upon loan applications, whether from countries in Latin America, Asia, the Middle East, or elsewhere, we always come face to face with the necessity for appraising whether the customary trade of these countries with Europe can be reestablished on a satisfactory basis. It is, therefore, no exaggeration to state that the soundness of all our loans is affected by the outcome of the European recovery efforts.

The first objectives of the European recovery program—to expand production and restore financial stability in the participating countries—have been achieved to an impressive extent. But we must face the fact that, though prewar levels of output have been reached and surpassed and though the menace of inflation has been curbed, progress along these lines alone is no longer enough. It has become plain, I think, that the time has now arrived for making fundamental readjustments in present patterns of trade and production. And if these necessary readjustments are to be made successfully, they must

include complementary action by both the European countries and the United States.

So far as concerns the European countries, the most urgent requirement is obviously to sell more of their production abroad, and particularly in dollar markets. In order to accomplish this, many things are necessary—but to my mind the most important are to reduce export costs and to make exports to the dollar area at least as attractive to individual producers as sales either in the domestic market or in other foreign areas.

In my judgment there are several lines of action which must be followed to achieve these objectives. The first, which I need not elaborate before this audience, and which is appropriately dealt with at some length in the annual report of the International Monetary Fund, is the establishment of a system of exchange rates which will assist the dollar-deficit countries to compete effectively in world markets, will furnish an incentive to exporters to increase their sales in the dollar area and will encourage importers to buy, to the extent possible, in countries whose currencies they can best afford. I do not underestimate either the complexities or the far-reaching consequences of such action, but I fail to see how it can be avoided.

The second line of approach must be to reduce the domestic costs of production, both by increasing the efficiency of management and labor and by limiting the burden of indirect costs, principally government expenditures, which must be borne by producers. In most countries the level of productivity has already risen substantially since the war, but they still lag far behind the United States and Canada.

It has been pretty well demonstrated, I think, that productive efficiency cannot be brought about merely through governmental edict or exhortation. To make the most effective use of existing productive facilities, real incentives are required, and perhaps most important, the pressure of competition. To my mind, one of the most essential steps toward solution of the dollar problem is for the dollar-deficit countries to start clearing away the wilderness of bilateral arrangements, special currency controls, quotas and similar restrictions, both internal and external, which have grown up over the past 20 years to protect inefficient production and trade practices. I don't suggest that this can or should be done overnight. The important thing is to begin now to move—and to move rapidly—toward a freer, more competitive exchange of goods.

The problem of reducing the burden of governmental costs on production is a difficult one, particularly susceptible to controversy and misunderstanding. Since World War II many governments have committed themselves to extensive programs of social welfare. No one can dispute their right to follow this course, if they have the means to undertake it. Unfortunately, however, it has become apparent that many countries cannot now afford ambitious programs of social services without either reducing their living standards in other respects or cutting back their productive investments designed to make possible a better standard of living in the future.

In addition to the necessary reduction in costs, it is important that the European countries undertake vigorous, concentrated measures to broaden their market in the United States and Canada. What is required, I believe, is not only the offer of a greater variety of goods adapted to American tastes and priced attractively, but also a wider and more forceful attack on the attention of the American consuming public.

If the European countries take energetic action along these lines in the months ahead, they should with continued ECA aid be able to make additional significant progress toward true recovery. I regard the continuance of ECA aid essential, but I believe it important that the aid should be so allocated as to give the participating countries the greatest possible incentive to pursue this new course of action. However useful the present method of ERP programing has been to date, I think the time has come when it, too, calls for review. I therefore welcome the announcement by Mr. Hoffman that allocation of ECA aid during the second half of the current fiscal year will be directly related to the performance of the participating countries, acting both individually and collectively through the OEEC, in effectively using the aid and realizing the objectives of the recovery program.

Up to the present time assistance from ECA has been allocated primarily on the basis of the anticipated dollar deficit of the respective countries—the largest shares going to those having the biggest deficits. It is true that, in estimating the deficits, it has been assumed that the countries concerned would take effective action to reduce the dollar gap. Nevertheless, the incentive has tended to be a negative one since the greater the gap, the greater the claim for aid, while the smaller the deficit, the less assistance was likely to be anticipated. Furthermore, so long as ECA dollars cannot be saved, but only used for current imports, the ERP countries have difficulty in building up adequate foreign exchange reserves, without which they cannot relax their trade and currency controls or face with confidence the difficult years after 1952.

I know that ECA is fully conscious of this problem and is doing all within its power to encourage the participating countries to carry out the necessary readjustments. I am nevertheless troubled about the situation because I believe that the basic difficulties may not be as readily susceptible of solution if dealt with only within the terms of the powers now available to ECA.

Specifically, I suggest that careful thought be given to the following approach: First, that the share of ECA aid to each participating country be defined as clearly as possible for the remainder of the recovery program, and each country be given assurance that its share will not be reduced if it earns or saves more dollars than had been expected, nor increased if its dollar deficit grows larger; and second, that all restrictions be removed from the use to which ECA dollars may be put so that such dollars will cease to be soft dollars and each country will have the opportunity to make the most economic use of the aid provided.

If this approach should prove feasible, it may have most salutary effects. Each country would know how much dollar aid it could count on and, knowing that no further aid could be anticipated, would be encouraged to husband it carefully. Responsibility would be squarely placed upon the participating nations to take the measures necessary for their own recovery.

I should like to emphasize one further point. Action by the dollar-deficit countries, however soundly conceived and vigorously executed, will not suffice to solve the dollar problem unless the United States takes complementary measures. For despite a rather remarkable shift in the attitude of the United States in recent years, some of its policies are still basically inconsistent with its position as the great creditor nation of the world. Modifications of these policies, like those that are necessary in Europe, may injure particular groups or interests within this country, but in my judgment such modifications are essential both to restore the health of the world economy and to maintain America's own prosperity.

United States tariffs provide the most important case in point. Their over-all level has been greatly reduced since the early thirties, but at certain crucial points they remain a barrier to the import of foreign goods. Moreover, producers in other countries fear, with some justification, that if they should succeed in establishing a market for their goods in the United States, their efforts would be negated by new or higher protective tariffs. Even where the level of duties does not exclude foreign goods, they are frequently kept out by unduly complex customs procedures and regulations.

In addition to tariff barriers there are also a number of other types of restrictions designed to protect American companies against foreign competition, which are hardly consistent with the expressed policy and long-range interests of the United States. In my judgment, it does not make good sense for America to encourage the production of goods for the domestic market which could more economically be imported, and certainly all attempts to use the aid programs as a vehicle for dumping surplus goods abroad should be strongly resisted.

I would like to close on a note of guarded optimism. When rationing stopped after the war, there was a shortage of many classes of goods. In some cases the shortage was so acute as to drive people to extraordinary lengths to obtain the goods they wanted. It is astonishing how quickly some of these acute shortages disappeared when there was a moderately increased flow to the market. To suggest that the dollar shortage can be compared with that of butter would be wishful thinking, but I do believe the world is somewhat in the grip of a shortage psychosis. If only—and it is no small "if"—if only we can start on the way toward equilibrium, we may find the effects of returning confidence highly cumulative and our difficulties dispelled more quickly than we dared hope.

Our Surpluses Meet Europe's Needs

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. VORYS. Mr. Speaker, H. R. 7797, the Foreign Economic Assistance Act of 1950, was voted out of our committee today, containing the Vorys amendment cutting the ECA appropriation $1,000,000,000 and substituting $1,000,000,000 in surplus agricultural commodities. While everyone knows that we have billions in farm surplus acquired in price-support programs, the question has been raised whether Europe's specific needs could be met by our surpluses.

The following table, furnished by ECA answers this question.

It compares $1,122,900,000 of requested food and agricultural imports from the United States with Commodity Credit Corporation stocks and loans on January 31, 1950. It shows that far more than $1,000,000,000 of surpluses are available now of the precise items needed by Europe; that of the whole $1,122,900,000 listed, all but $3,600,000 of dried fruit can be furnished out of surpluses which will be on hand before the new fiscal year begins, July 1, 1950. Of course, my

UNIVERSITY OF MICHIGAN LIBRARIES

amendment leaves $1,950,000,000 of appropriations in the bill, of which $396,500,000 is programed for food and agricultural products, in addition to the billion furnished in kind.

We can meet Europe's precise needs by using a billion of our surpluses, and still leave plenty of flexibility in the ECA program.

The table follows:

Comparison of CCC stocks and loans, Jan. 31, 1950, with ECA-financed 1950-51 import estimates

[In millions of dollars]

	ECA-financed imports (FAS)	CCC stocks, Jan. 31, 1950 (cost)		CCC loans, Jan. 31, 1950		Loan due date
Cotton	474.7	614.5		382.5		June 30.
Wheat (and rye)	457.2	[1] 382.9	−74.3	585.0		Apr. 30.
Coarse grains	135.2	209.7		648.0		Apr. 30-Aug. 31.
Soybeans	12.0	[1] 6.9	−5.1	15.9		May 31.
Linseed and linseed oil	3.0	201.6		29.6		Apr. 30.
Cheese	5.0	8.5				
Peanuts	7.5	9.2		17.6		June 1.
Eggs	2.5	98.1				
Wool	7.0	40.1				
Rosin	8.0	17.1		12.3		Mar. 31.
Turpentine	1.5	[1] 1.0	−.5	1.3		Do.
Dried Fruit	9.3	[1] 5.7	−3.6	(2)	−3.6	
Total	1,122.9	1,595.3	−83.5	1,692.2	−3.6	

[1] Jan. 31, 1950, stocks less than estimated ECA-financed requirements for fiscal year 1951.
[2] Jan. 31, 1950, stocks plus loans (if any) less than estimated ECA-financed requirements.

The New York Feis

EXTENSION OF REMARKS
OF

HON. CHRISTOPHER C. McGRATH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. McGRATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following remarks:

THE NEW YORK FEIS

Every year during the month of June, millions of Americans have their attention drawn to the Irish feis, which is held by the United Irish Counties Association of New York, Inc., on the beautiful and spacious campus of Fordham University in New York City.

This successful Irish festival has not only become an established cultural event in the hearts and minds of all New Yorkers, but as a result of its success in New York it has also sown its cultural seeds in the form of other similar Irish festivals held annually in the States of Illinois, California, Pennsylvania, Massachusetts, and New Jersey. These festivals are patterned after the feis of New York. At present, there is located in New York an organization known as the National Feis Council of America, which gives expert advice and guidance to those contemplating the holding of a feis.

A brief outline of the background of the feis in Ireland is necessary at this point. The word "feis" (pronounced fesh) is a Gaelic word meaning festival; entertainment; convention; conference; parliament. Its plural is feiseanna.

Historically, the roots of the feis in Ireland extend beyond 1,000 B. C. It was founded by King Ollamh Fodhla at Tara (now in the county Meath), which was then the seat of the Ard-Righ or High King of Ireland. The name Ollamh (pronounced Ollav) in those days meant philosopher; consequently, King Ollamh was known as the sage King of Ireland.

Tara, located near the center of Ireland, witnessed the arrival at the feis of the learned men who lived in Ireland 1,000 years before the coming of the Christian era. These were the kings, poets, philosophers, judges, doctors, antiquaries, bards, scribes, and minstrels who came to compete at the feis of Tara in poetry and literature, law and medicine, history and genealogy, philology and archaeology, musical composition and instrumental music, elocution and story telling, and singing and dancing.

Following the invasion of Ireland by the English in the twelfth century, the feis of Tara was suppressed by the invaders. After seven centuries of such suppression, the feis was revived in many Irish towns and villages. Today, it is held in nearly all of the towns in Ireland and in populous rural areas. The biggest feis of all in Ireland is called the Feis Ceol which is held annually in Dublin.

The feis of Tara had a profound intellectual influence in its time upon the Celtic peoples of Wales, Scotland, and of Brittany in France. The effect of this influence is still felt; for even today, we see the Welsh, Scots, and Bretons participating in the Irish feis at Fordham.

The feis of New York is truly a revival along modern lines of the feis of Tara. It is a cultural institution which brings before the American people the ancient arts, customs, and traditions practiced in Ireland a thousand years or more before the birth of Christ; it is an instrument of good will which transfers a highly desirable cultural legacy to the American people.

Many feiseanna, of course, have been held by Irish societies in several parts of the United States throughout the past 100 years; therefore, the modern feis is not a relatively new arrival in America. However, the most successful feis in America is the one that has been organized, developed, and sustained by the United Irish Counties Association of New York; and which is held under its auspices each year at Fordham University in New York City.

The United Irish Counties Association is an organization composed of 32 associations; each bearing the name of one of the historic counties of Ireland. It is nonsectarian, has a membership of over 90,000 dues-paying members, and maintains a full-time headquarters for welfare, educational, and cultural purposes.

The feis of New York has been designed for all Americans. Nothing better can explain this aspect of the feis than the following quotation taken from the foreword of the 1950 feis syllabus, and carried over the signatures of the chairman of the feis committee, James J. Comerford, and of the president of the United Irish Counties Association, Thomas J. Ayers. It says:

"This syllabus, to a great extent, explains itself. It offers over 100 competitions; nearly all of them are traditionally Irish in their origin and growth.

"However, for the benefit of those not fully acquainted with our program, we wish to point out that each competition is open to all Americans.

"A survey of feis prize winners indicates clearly that neither national origin, nor color, nor race, nor creed has ever hindered any of the competitors from winning top honors in their respective competitions on the day of the feis.

"Many persons have contributed to the preparation of this syllabus. Their birthplaces reveal that collectively they reflect a wide geographical sphere of Celtic influence; for Wales, Scotland, Bretagne, as well as Ireland and the United States have provided us with contributors who are well trained and experienced in their respective fields. All are Americans. Yet, each one loves the traditional culture of the Celt."

Like most major, successful cultural events in America, the feis sponsored by the United Irish Counties Association of New York had small beginnings; it went through a relatively long period of planning and experimenting before it actually became that dynamic institution which it is today. Many distinguished Americans, active in Irish societies, contributed to its organization and development.

In August 1933, the first actual step toward the feis was taken by the United Irish Counties Association, when it held a very successful festival in New York. Each year, from then on, the feis grew in scope and in prestige, until it outgrew available facilities for its presentation.

In 1941, the feis moved into Fordham University at the invitation of the Reverend Robert I. Gannon, S. J., president of this world-renowned Jesuit university.

Here the beautiful campus and spacious buildings of Fordham offered ample facilities for the accommodation of the 2,500 competitors and the 35,000 spectators who by 1947 began to participate in this greatest of Irish festivals in America.

On June 18, 1950, the feis of the United Irish Counties Association will be held as usual at Fordham through the generosity of the present president of Fordham University, the Reverend Laurence J. McGinley, S. J., who is honorary chairman of the Feis, and is also a great admirer of its educational potentialities as well as of its cultural gift to Americans.

The 1950 feis syllabus provides for 107 competitions embracing drama, elocution, essays, book reviews, recitations, arts, crafts, costumes, design, music, singing, including operatic and choral, dancing, both solo and figure, and many other events including Gaelic sports. Over 25 percent of the total program has its competitions carried out through the medium of the Gaelic language.

An important aspect about the New York feis is the fact that organizations representing the Celtic peoples of Wales, Scotland, Brittany in France, Isle of Man, and Cornwall send large contingents not only to see the feis but to participate actively in its competitions and exhibitions. Here at the feis on Fordham campus, in a true American way, the Irish, Welsh, Scotch, Bretons, Cornish, and Manx, together with other Americans of many national and racial origins pay a tribute to the ancient culture of the Celt.

The contributions of the Irish feis to the cultural life of America are many. In particular, it can be said that the feis has given to thousands of young Americans, regardless of religion, race, or color a magnificent opportunity to participate as competitors in some of the great and ancient

traditional cultural activities of the Irish people.

Many young Americans now ranking high as famous singers, dancers, musicians and performers in the entertainment field of our time, obtained the first start in their careers through recognition received for their talent after having the attention of talent scouts brought to them by virtue of winning top prizes at the Irish feis.

In addition, the Irish feis of New York together with the numerous feiseanna in the several other States have made it possible for hundreds of thousands of Americans to witness the various types of competitions in cultural events whose origin goes back over 3,000 years; and to see for themselves the age-old culture of the Celt being brought forward from the land of the Gael and transplanted in America where it impresses itself upon the customs of Americans with such an effect that eventually it becomes part of the warp and woof of modern American civilization.

However, we must remember that knowledge of the feis is not a relatively recent acquisition by Americans. Its origin was known to them in colonial days. Ezra Stile, president of Yale College in 1777 and one of the learned men of his time in the American Colonies, in a lecture delivered in May 1783 at Hartford, Conn., on the Future Glory of the United States, said in part:

"That great and wise monarch, Ollamh Fodhla, the Alfred of Ireland, 1,000 years before Christ, instituted an annual review and examination of all the achievements and illustrious characters in the realm; and, being approved by himself and the annual assembly of the nobles, he ordered their names and achievements to be enrolled in a public register of merit. This continued 2,000 years, to the time of that illustrious chieftain, Brian Boru.

"This had an amazing effect. By this animation, the heroic, military, and political virtues, with civilization, and I add, science and literature, ascended to an almost unexampled and incredible perfection in Ireland ages before they figured in other parts of Europe, not excepting even Athens and Rome. I have a great opinion of Hibernian merit, literary as well as civil and military, even in the ages before St. Patrick."

The present day Irish feis in America is far removed in space from its Tara site in Ireland and also far removed in time from the year 1,000 B. C. However, its dynamic cultural traditions are much closer in the United States today than we may think. The Feis of Tara still influences many Americans; for its offspring, the Irish feis of New York, affects the cultural environment of many Americans whose ancestors were other than Celtic.

Worth the Money

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of March 22, 1950:

WORTH THE MONEY

If Congress follows the advice of the House Appropriations Committee almost all Federal agencies will get less spending money than President Truman asked for them.

There is one notable exception—the Federal Bureau of Investigation.

The committee says the FBI should have the full $57,400,000 proposed in Mr. Truman's budget, although that will be almost $5,000,000 more than it's spending this fiscal year.

The increase will enable FBI to hire more agents and other employees, and few even among the firmest advocates of economy are likely to object to this particular expansion of bureaucracy.

As the committee observes, "conditions at home and abroad" make it unsafe to save money at the expense of an agency which bears such heavy responsibility for national security.

Of course, Communists and their sympathizers hate the FBI. They call it a "police-state" organization. And, undeniably, in the wrong hands it might become something dangerously like that.

But we believe the FBI has, and deserves, the admiring confidence of most Americans. If so, great credit is due to the character of the man who has been its director for 26 years.

Under J. Edgar Hoover the FBI has won a reputation for high efficiency. More important, it has maintained a reputation for high integrity. He has insisted on keeping it what its name implies—a bureau of investigation, an objective fact finder, not a judge of such things as loyalty, not a state police agency or prosecution or persecution. He understands and practices the true American concept of justice and democratic government.

So we're glad that the FBI's appropriation includes a $4,000 salary increase for Director Hoover, to $20,000 a year. He'll be worth far more than that as long as he heads the FBI, and we hope that will be a long time.

Five-Cent Hike in Natural Gas Would Cost $145,000,000

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article entitled "Five-Cent Hike in Natural Gas Would Cost $145,000,000," which appeared in the March 13, 1950, issue of the League Reporter:

FIVE-CENT HIKE IN NATURAL GAS WOULD COST $145,000,000

What is the natural-gas bill which the Senate will consider soon? Why should you be concerned with it?

The measure seriously would weaken Federal regulation of natural-gas rates. That means only one thing to you: Higher prices for natural gas.

Senator GUY GILLETTE, Democrat, of Iowa, has obtained figures from the Federal Power Commission which show how many millions of dollars are involved in this fight between the people and a handful of wealthy oil companies.

If the Senate approves the House-passed legislation, natural gas companies will be able to increase their rates almost at will. Immediate increases of from 1 to 5 cents for 1,000 cubic feet of gas could be expected.

The American Gas Association estimates that a family heating a two-bedroom home with natural gas in New York State would use about 150,000 cubic feet of gas annually.

Based on 1948 figures, a 5-cent increase would mean that gas bills would go up $8,500,000 each year in Pennsylvania alone. Ohio consumers would have to pay $11,400,000 more for natural gas than they did in 1948. In Illinois the increase would cost consumers about $4,800,000 yearly.

Throughout the Nation the added cost to natural gas bills would total close to $145,000,000.

In the past 2 years there has been tremendous expansion of natural-gas lines in New England and the Carolinas. Natural-gas consumption also has increased greatly in the 33 States where it was being used in 1948. So the figures are conservative.

FPC now can regulate the price of natural gas from the time it is taken from the southwestern fields until it reaches your city. To be effective, rate regulation must begin in the fields and continue until you use the gas for heating and cooking.

Natural gas interests want to take from FPC the power to regulate the initial sale of gas from the producer to the pipe-line company. Then all rates could be determined by the prices the big concerns decide to charge in the fields.

Last year 24,000,000 consumers used natural gas. And 38 big companies produced 86 percent of the gas sent over interstate pipe lines.

Are your Senators going to vote for the interests of 24,000,000 Americans or for the interests of 38 large businesses?

The table below shows what 1-cent and 5-cent increases per 1,000 cubic feet would cost the 33 States where natural gas was used in 1948, the last year for which figures are available. The statistics are from the FPC.

[In thousands of dollars]

State	1-cent increase	5-cent increase
Alabama	593	2,965
Arizona	328	1,641
Arkansas	859	4,293
California	4,227	21,137
Colorado	557	2,783
Florida	88	439
Georgia	458	2,288
Illinois	954	4,769
Indiana	389	1,944
Iowa	320	1,598
Kansas	1,504	7,521
Kentucky	268	1,340
Louisiana	2,168	10,842
Maryland	42	212
Michigan	749	3,745
Minnesota	430	2,149
Mississippi	478	2,392
Missouri	731	3,655
Montana	288	1,441
Nebraska	468	2,338
New Mexico	270	1,349
New York	299	1,496
North Dakota	29	145
Ohio	2,288	11,441
Oklahoma	1,469	7,346
Pennsylvania	1,711	8,556
South Dakota	88	440
Tennessee	353	1,766
Texas	5,162	25,809
Utah	222	1,108
Virginia	37	183
West Virginia	811	4,053
Wyoming	213	1,063
Total [1]	28,943	144,714

[1] Discrepancies due to rounding.

The State Department

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks, I

UNIVERSITY OF MICHIGAN LIBRARIES

desire to have included the following article by Mr. George Sokolsky appearing in the Washington Times-Herald of March 21, 1950:

THESE DAYS

(By George Sokolsky)

Never before has the State Department been attacked as violently as during the past 10 years. The attacks did not begin with Senator MCCARTHY, of Wisconsin, nor will they end with his current reports.

The attacks began really in 1933 when we recognized Soviet Russia. They were intensified with the startling Amerasia case, in which 100 files from the State and other departments were found in the offices of this left-wing magazine in which was also situated photographing equipment.

That case was hushed up.

Those interested in the infiltration of the highest level of Government by known Communists, whose party membership could not be proved without their consent, continued to dig into the record. While much was discovered, little could be established, for what these men were engaged in was a conspiracy, internationally directed.

Their trail might be uncovered, but it could not be established by the rules of evidence applicable in a court of law. Only when they fumbled, or when one of them broke from the crowd, and stated facts under oath, was it possible to publish the already known facts.

The principals in this business, such men as George Mink, J. Peters, Gerhart Eisler, and others whom even now I cannot name with provable evidence, were clever, trained men.

The most damaging contribution to the subject has thus far been made by John Peurifoy, Deputy Under Secretary of State in charge of administration. His statement should have shocked this Nation.

When Maximilian Harden, the German journalist, called attention to a similar camarilla in the Kaiser's court, involving Prince Eulenburg, it shocked and astonished the world.

Yet, in this generation, in the United States, a charge that 91 employees of the State Department were dismissed for being homosexuals passes with little excitement.

Perhaps the reason is that the word, homosexual, is considered bad. It is not the word that is bad; it is the consequences of the deed that lay the individual open to blackmail. He is ashamed; he is frightened; he has become accustomed to secrecy, conspiracy, lying. He is always subject to blackmail.

Mr. Peurifoy said, in giving the figure 91: "Most of them were homosexuals. In fact, I would say all of them were."

Of course, Mr. Peurifoy withheld the names of these persons and therefore it is not known what positions they held. For instance, if a homosexual held such a position as Under Secretary of State or as sensitive bureau chief, the menace to the United States would be that if the espionage services of a foreign power or of a world-wide conspiracy got at him, he would have three alternatives:

1. To resign yet to risk exposure. 2. To submit to blackmail and become a spy for a foreign power; or 3, to commit suicide.

I am dealing with this problem not from a moral but from a practical standpoint. There are some persons who excuse the homosexual on the ground that he was born that way. Others become involved in Freudian jargon and explain this phenomenon as due to a variety of causes. From our standpoint, it is merely a question as to whether a person whose conduct lays him open to blackmail is a good security risk.

Now, in all the arguments on the subject, those who defend the State Department and attack Senator MCCARTHY miss two points:

1. Our foreign policy has been wrong since 1943 (Tehran) because it was controlled by a foreign power, Soviet Russia. Dean Acheson's speeches in San Francisco must be read as a condemnation of these policies; otherwise they have no meaning.

What part did these homosexuals, subject to blackmail, play in the formulation and conduct of those erroneous policies?

2. Whereas some of the rest of us may be as black at heart as Al Capone, those in the State Department must be as pure in mind and purpose as driven snow, for that Department gathers the data, formulates the policies, lay down the techniques, short of war, for the defense of our country in times of peace and war.

A liar, advantageously stationed; a blackmailed creature in a sensitive spot; a frightened soul, caught in the web of conspiracy, can produce such a result as the conquest of China by Soviet Russia by consent. There is the menace.

Let's Eliminate Waste and Duplication in Government

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. TOLLEFSON. Mr. Speaker, as Congress begins consideration of a $43,000,000,000 budget, we are faced with a deficit which may exceed $5,000,000,000. Only twice since 1932 has this Nation had a balanced budget. How long are we going to continue spending more each year than we collect in taxes?

We have before us the Hoover Commission report, which if adopted, would save from $3,000,000,000 to $4,000,000,000 annually simply by reorganizing the National Government and eliminating overlapping functions of the various bureaus and agencies. That amount could be saved, the Commission estimates, simply by eliminating waste and without curtailing any services now rendered by the Government.

There are some 1,800 Government bureaus, divisions, agencies, and commissions—all rushing to and fro on their own projects, knowing or caring little what other agencies of the Government are doing. They are fighting fiercely to protect their jobs, their departments, their red tape and their right to spend the taxpayers' money.

There are 38 different Government agencies that lend money; 16 different Government agencies are engaged in wildlife preservation, 34 agencies are engaged in obtaining land, 10 in Government construction, 9 in credit and finance, 4 in bank examinations, 65 in gathering statistics, 14 in forestry matters, 28 in welfare matters, 12 in home and community planning, and 25 dealing with the Nation's mineral resources.

A farmer wrote a letter to the Department of Agriculture seeking advice on the best type of fertilizer to use on his soil. He received answers from five separate offices in the Department and all the answers were different and contradictory.

The Army tore down a $16,000,000 camp in Alaska and shipped the lumber to Seattle, where it was acquired by the Department of the Interior, which shipped it back to a point less than 10 miles from the original camp site.

The Federal Government owns 848,567 typewriters, or better than 3½ typewriters for every stenographer and typist on the pay roll. Some bureaus and divisions have enough office supplies on hand to last them more than 100 years.

We often hesitate to make any cuts in the national defense budget, yet $7,000,000 annually could be saved if the Army, Navy, and Air Force could agree on uniform underwear for their personnel.

In the past 20 years the cost of the Federal Government has skyrocketed from $28 to $317 per capita. Just think of that. The per capita cost has gone up more than 1,000 percent.

To bring home what a $43,000,000,000 budget means to the people of my own State of Washington, consider this. Washington's State's share of the administration's proposed 1951 budget is $700,243,500. If we put into effect the Hoover Commission recommendations and save $4,000,000,000, it will save the taxpayers of Washington State nearly $100,000,000—nearly $30 saved for every man, woman, and child in the State.

It is time that we acted on the Hoover report—not next week, next month, or next session—but now. Every day we delay millions of dollars are being wasted. I believe some sections of the Hoover report should have further study, but the bulk of its recommendations should be adopted immediately.

We have reached a crisis in Government. If Congress is now unable to put through an honest, widespread, and effective reorganization, they and the taxpayers might as well surrender. If the bureaucrats win again, as they have before, we might as well concede defeat.

But I am convinced that governmental affairs can be conducted on a business-like basis, that we can set up efficient operating systems, eliminate red tape and promptly discharge department heads who put their own interests above those of the taxpayers. If we really want efficiency and economy in Government, now is the time to act.

Macy Asks Probe of Organized Crime

EXTENSION OF REMARKS

OF

HON. HENRY J. LATHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. LATHAM. Mr. Speaker, under leave to extend my remarks, I wish to set forth in the RECORD a news article from the Washington Star of March 15, 1950, in connection with the introduction of House Resolution 509 by my distinguished colleague the gentleman from New York [Mr. MACY]:

MACY ASKS SPECIAL HOUSE UNIT TO PROBE UNITED STATES ORGANIZED CRIME

(By Robert K. Walsh)

Representative MACY, advocating complete investigation of organized crime, be-

lieves Congress must meet the challenge of rackets that take in three times as much money as the Government now gives in foreign aid.

The New York Republican yesterday introduced a House resolution for a seven-member House committee to probe criminal activities on a country-wide basis.

But, he said today, he seeks neither glory nor more work for himself. He declared he "would be perfectly willing to suppress myself" in order to get immediate congressional action.

A somewhat similar Senate resolution, sponsored by Senator KEFAUVER, Democrat, of Tennessee, won Senate Judiciary Committee approval February 28. It has been in the Rules Committee since then. On a comparatively limited scale, a House District Subcommittee headed by Representative DAVIS, Democrat, of Georgia, is looking into crime, punishment and enforcement methods in the District.

NEW RESOLUTION BROADER

"I have been planning for a long time to propose a congressional investigation," Mr. MACY explained. "I withheld my resolution in the hope that the Senate resolution would make progress. I finally decided to put mine in, and I hope it will stimulate action all along the line, especially since mine is broader than the Senate measure."

Disavowing pride of authorship, and denying partisan motives, the 51-year-old legislator said he would have no objection if his resolution finally wound up with Senator KEFAUVER'S to make a joint congressional committee investigation.

Prominence in investigative activities, however, would be nothing new to Mr. MACY, a former New York State legislator. More than 20 years ago he took a leading part in an investigation of the New York State Banking Department. Disclosures led to conviction and imprisonment of the then superintendent of banking.

A few years later, Mr. MACY joined in the Seabury inquiry that resulted in the resignation of the late Mayor James J. Walker.

One of his major assignments since he came to Congress in 1947 was to head a House Public Works Subcommittee that last year investigated a reported gray market in automobiles and steel.

Although not a lawyer, Mr. MACY is especially interested in law enforcement aspects that would be examined by the investigating committee he proposes.

"Naturally the subject of law enforcement would be an important phase of any thorough investigation of organized crime throughout the United States," he said. "I said many years ago in New York, and I still say, that it's not enough to make laws. If laws can't be enforced, they aren't worth enacting.

"Legislative bodies have a duty not only to make good laws but to look closely from time to time to see if they are enforced and if they can be enforced."

The Macy resolution would authorize the Speaker to appoint a special committee of seven Representatives with power to hold public hearings, hire expert assistance, subpena witnesses and records, and recommend possible changes to tighten Federal laws.

FIFTEEN BILLION YEARLY

Associates of Mr. MACY estimated that at least $100,000 would be necessary to assure an adequate investigation. Mr. MACY himself set no figure in his bill, but he remarked today:

"We have been told repeatedly that organized rackets, crime syndicates, and other criminal operations in interstate activities alone are costing the American people and the Government something like $15,000,000,000. That is three times the amount we are giving to help foreign countries. Surely, it is more necessary than ever at this time to try to cut down at least a part of the heavy cost of crime."

And from a Federal Treasury standpoint, he added, a comprehensive, hard-hitting congressional investigation of organized crime should sharply reduce tax evasion and hidden profits.

Others supporting the Macy resolution said they believed a prime purpose of the committee would be to find out who gets the big pay-offs for big-time crime and who really supports huge rackets.

The Kefauver resolution, as enlarged by the Senate Judiciary Committee last month, would allot $100,000 for an investigating committee project. Originally the resolution centered largely on an investigation of interstate gambling operations.

It now would also cover interstate prostitution, narcotics, loan-shark rackets, swindling schemes, organized murder and extortion, and preying on legitimate business and labor.

Address of Hon. Brendan Corish

EXTENSION OF REMARKS
OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. GREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Mr. Brendan Corish, parliamentary secretary to the Minister for Local Government of the Republic of Ireland, at the annual St. Patrick's Day banquet of the Irish American Association, Panthervalley, Pa., March 16, 1950:

Before commencing my address to you tonight, I feel I must tell you what an honor it is to me to be here as your guest. The warmth and friendliness of the atmosphere in which I find myself almost wipes out the distance that lies between us and Ireland, for here is Irish hospitality, here are Irish people, and here I am among friends. On this eve of the feast of St. Patrick it is no wonder that distances should lessen, that ties of friendship should be stronger, and that Ireland should be seen, not as a small island but as a shining thread of green woven through the tapestry of the great nations. I feel this more strongly because, as one of the younger generation, it had not yet been impressed on me how strong is our "Nation beyond the seas." I knew the help that had always come to us at home whenever it was needed. I know how unfailingly the great weight of the influence of the Irish in America has always been thrown behind the cause of Irish freedom and how in the continuance of that influence there lies one of our greatest hopes for eventual unity. But it is not until now, when I am among you, that I realize to the full how closely you are bound to the motherland by a thousand links that can never be broken. I am here firstly as a member of the Irish Government. In that capacity it is my pleasant duty to bring you their greetings and those of the people of Ireland. No more welcome duty could ever be given to me. I must, however, as a member of the Irish Labor Party, add to it a special greeting to the forces of organized labor which I know to be in this district. Even in this we are in your debt. It is not yet 6 months since American organized labor came to the fore with a forthright statement on Ireland's claim to unity. The passing of a resolution at the annual conventions of the American Federation of Labor and the Congress of Industrial Organizations condemning the partition of our country and calling upon the President, the State Department, and the Congress of the United States to do all in their power to end it is still fresh in our minds and is evidence of the burning desire for justice which is always to be found among the working men and women of the great democracies. Representing as they do over 14,000,000 American workers, the gesture of these two great organizations has been one of the features of the relations between the two countries during the past year.

Significant too has been the action of the State Department in raising the status of their representation in Ireland to that of an embassy. It has long been felt, and we are proud that it has been finally acknowledged, that the special ties between the two countries call for the highest diplomatic representation that can be accorded.

If I were asked then my impression of how it is with the Irish in America I should not hesitate to say, "It is well." Everything I have seen since I arrived here serves to confirm that impression. You may ask me in return, "How is it with them at home?" and my answer would be the same. Ireland, like many another small nation, has vast problems before her today—problems of reconstruction, of economic recovery, of nation-wide improvement. But the existence of such problems does not mean that we have admitted their presence and failed to tackle them. With unity of purpose and with faith in our ability we have set about their solution. Here again the ever-present help of America is evident. The loans made available by Marshall aid under the Economic Cooperation Administration have helped us in a great industrial and agricultural drive to bridge the dollar gap which yawns between us and prosperity. Our investments abroad are being called home and placed in sound schemes for the development of the country. A vast land rehabilitation program is in course of operation—for we realize that we are primarily an agricultural country and that in a healthy soil and a careful and skilled agricultural economy lies our surest guaranty of future prosperity. Land drainage, reafforestation, turf development—all are part of the over-all scheme of improvement.

As far as is possible we are developing our industrial resources, particularly in those spheres in which our excellence is acknowledged. Our tourist trade, the most valuable of our dollar-earning industries, is gradually assuming more satisfying proportions and, what is more important to those of you who, we hope, will come and visit Ireland, more satisfying standards of excellence. Housing for our people is being provided in a vast housing scheme, and our hospital system, always a source of pride to us, is being enlarged and expanded by the provision of new modern sanatoria in several parts of the country. The life of the rural worker will, it is hoped, be lightened by the system of rural electrification which has been planned and which has already begun to operate in some places. I could continue to give you examples of the various avenues into which the energies of the people have been directed, but suffice it to say that they are all part of an over-all pattern of energy, of new life, and of concentrated effort. Ireland is building, Ireland is developing, but, above all, Ireland is working. We are content to be so. As a race we have never shirked our duty; we have never sought to avoid honest toil when it was for the benefit of our people and our country, and the Ireland of 1950 is determined to prove no less worthy of respect and honor than the Ireland of other generations.

We are facing our problems, and we think we are achieving a large measure of success. In this again I repeat that we owe a vast debt of gratitude to your Government and to the broad statesmanlike plan which made available at a crucial time the aid which

UNIVERSITY OF MICHIGAN LIBRARIES

Europe needed. We can repay the debt in kind, but we can never repay sufficiently in warmth of feeling or in gratitude what we owe to you.

There is one problem, however, which remains before us as a challenge to our endeavors. For 30 years it has been the main object of every national effort, for 30 years we have striven to find a solution for it—and today we can only hope that the great desire for peace in the world will soon help us to solve it. You know what the problem is before I mention it—it is the division of our country. Today, as never before, the light of publicity has at least begun to make this problem one in which all peace-loving nations should concern themselves. It is difficult, I know, for us to whom it is a very vital concern, to realize that to many people the facts of the case have never been presented. If we are to succeed we must make the problem known, we must give the facts to the world and determine that justice shall be brought about finally.

The history of partition and its accomplishment and the story of its maintenance is a sad and sordid one. Nowhere in her long history does the perfidy of Britain show clearer than in her relationship with Ireland and nowhere in that relationship is the evidence more damning than in the story of partition.

If I ask you to examine that evidence it is not with any spirit of rancour and bitterness; it is, rather, to secure that you will continue to play your part now, as ever, to remove any cause of quarrel between Britain and Ireland and so aid the solution of a problem, which we feel is vital to world peace. Claims have been made by Britain that partition is an Irish problem but we maintain that Britain created partition, is responsible for its maintenance and has a responsibility to the world to secure its early removal.

In 1920, in defiance of the wishes of the elected representatives of the Irish Nation, an act of the British Parliament imposed partition and divided the six northeastern counties from the rest of Ireland. No Irishman voted for the partitioning act. The area thus cut off from the remainder had no basis in history, or geography. It was so designed that a majority could be found therein, who were opposed to home rule for Ireland and who since have been prepared to defy the will of the vast majority of the nation for a United Ireland. A boundary was drawn between the six counties and their southern brethren and this boundary has since been manned by British customs officers. Meanwhile, in the 26 counties, control of affairs passed into the hands of Irishmen and successive governments proceeded to take steps to remove step by step any constitutional limitations on their sovereignty—at one and the same time repugnant to Irish national sentiment and a bar to good relations with Great Britain. The bringing into operation of the Republic Act, 1949, last year marked the last step in that phase and left only one bar to true friendship with Britain—partition. On Easter Monday 1949, the Irish Nation rejoiced at seeing for the first time an Irish Republic internationally recognized. A partial rejoicing it must be admitted, for there remained yet one final step in the road to the achievement of its national objective; the reunion under its national flag of its fellow countrymen in the six northeastern counties. On that day the Irish Republic took its formal place among the nations of the world, amid world-wide messages of good will, and called on the world to assist in the removal of the last barrier to true friendship with Great Britain. Alas, in May 1949, the latter took a step, which can only be regarded as a measure of ill will. In that month the British House of Commons under a labor government passed the Ireland Act, which contained a clause iniquitous to the heart of any true Irishmen, handing over the right to decide the destiny of the area, known as Northern Ireland to the Northern Ireland Parliament for decision. No time was lost in voicing the protest of Ireland against this flagrant violation of democratic rule. Both Houses of Parliament met in special assembly, registered a protest in no uncertain terms and called on the British Government and people to end the present occupation of our six northeastern counties, and thereby enable the unity of Ireland to be restored and the age-long differences between the two countries brought to an end.

We regret sincerely that such an element should have been introduced into our relations with Britain. It adds to our sorrow when we recall that at the time of the imposition of partition the members of the party, who introduced and secured the passage of the Ireland Act, pledged themselves at the time to recognize fully Ireland's right to decide her own destiny as one nation. By the passage of that act one further chapter was added to the wrongs committed by Britain toward our nation and a flagrant violation of the democratic ideal. Irishmen cannot be blamed for feeling that Britain by that step has no true feeling for the democratic ideal when one considers the history of the Parliament to which she has committed the destiny of six counties of our national territory.

Is it not ironical to recall that as a result of the recent elections for the British Parliament 10 out of 12 representatives from the sundered area of Northern Ireland threaten the majority of the British Government, which passed the Ireland Act?

I have already referred to the area of jurisdiction of that Parliament, showing that it was deliberately designed that a majority could be found therein opposed at the time to the idea of home rule for Ireland and who have since ranged themselves as opposed to the unity of Ireland. Facts and figures as regard subsequent elections to it have demonstrated the success of its author's designs under a system of election, contrary to any democratic principle, the Tory party has always succeeded over an area, comprising one-third of the total area, of securing a majority even against the will of the people of the remaining two-thirds. By a process of gerrymandering worthy of any totalitarian state, large areas with a majority in favor of Ireland's unity have been deprived of representation in the Parliament, which under Britain's latest law, is to decide the destiny of the territory. Derry City, one of the oldest in the motherland, has 29,000 to 18,000 in favor of unity of the country. To deny representation to that majority in Parliament the city electoral division was rearranged. Part of the city was omitted altogether. Then the city boundaries, for Parliamentary elections only, were stretched 8 miles into the country to gather enough opposing votes to eclipse the will of the majority in the city as regards representation in Parliament.

Fired with repugnance for such a system and such examples of the violation of the democratic ideal, the vast majority of the motherland appeal to the sons and daughters all over the world to help them to bring this unhappy state of affairs to an end. It does so in no spirit of hostility to those of our fellow countrymen in its separated counties who are opposed to the ideal of a 32-county republic. On the contrary, our spokesmen have several times declared that we are prepared to afford them any constitutional guaranties that may be reasonably required to allay any fears, real or imaginary, that they may have. We recognize their finer qualities, such as doggedness, firm purpose and industry, and yearn for the time that these qualities will be brought to play under the banner of a 32-county Republic of Ireland. We in the liberated part of the motherland can point to a fine tradition of liberty, toleration, and respect for the human person among all sections of our people.

Accordingly we call on the citizens of this great democracy of yours, a democracy which has met and surmounted the ugly threat of partition, to assist us in our great task and we know that all sons and daughters of the motherland in this great country will do their utmost to insure that a 32-county republic of Ireland, united in territory and bonds of good will, will take its place among the nations of the world.

A Congressional Blunder

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of Tuesday, March 21, 1950:

A CONGRESSIONAL BLUNDER

In one of those acts of impromptu statesmanship that occasionally crop up in Congress, the House Foreign Affairs Committee voted yesterday to slash cash funds for the third Marshall plan year by a round billion dollars and to substitute an equivalent amount in American farm surplus commodities. The administration has asked for new authorization of $2,950,000,000 as an absolute minimum needed to continue the Marshall plan in full effectiveness. But the House committee decided to disregard this request, as well as all objections to its own plan, and by a vote that cut across party lines adopted a proposal by Republican Representative VORYS, of Ohio, which would reduce actual Marshall plan funds to $1,950,000,000 and authorize the Commodity Credit Corporation to supply $1,000,000,000 worth of agricultural surplus goods as required.

No doubt Representative VORYS and the committee majority are inclined to regard their action as a clever piece of work. They are presumably prepared to claim credit simultaneously for a billion-dollar reduction in a deficit budget and for facilitating the disposal of American farm surpluses now carried by the Government at a cost of four billions. Both the budget deficit and the farm surpluses pose serious problems, but the committee's way is not the way to solve them. For, as Representative KEE, the chairman of the committee, warned, the Vorys plan, if adopted, would be certain to have a crippling effect both on the European recovery program and on the administration's farm support program, in which both parties have an interest.

It is bound to have a crippling effect on the European recovery program, because that program is not a relief program, as the committee majority seems to think, but a reconstruction program in which the supply of American food has been decreasing steadily in favor of raw materials, semifinished goods, and machinery to increase Europe's own productive ability. As a result, not only has western Europe's industrial production risen considerably above prewar levels but its agricultural production has also recovered so thoroughly that in some countries and some items the problem may soon be one of food surpluses. It is the present purpose of the Marshall plan to enable Europe to continue its recovery and to put itself in shape to sustain the new productive levels by its own strength, through an integration which would break down trade barriers and enable the surpluses of individual nations to move

across present frontiers to areas where they may be needed.

The House committee now proposes to interrupt this process by methods which would not only imperil the results attained but also give a semblance of justification to the charges of our opponents that the Marshall plan is merely a vast program for subsidizing our own production at the expense of those we profess to aid. Communists everywhere could be depended upon to exploit to the utmost this misrepresentation of our aims.

As for the farm surpluses, it will be noted that the Economic Cooperation Administration has supplemented the Government support program by buying foods in the open market and usually at lower prices than paid by the Government under the parity principle. The committee's action would thus merely foist upon ECA commodities at higher prices than it has paid before—a maneuver that would increase the dollar gap which the Marshal' plan is supposed to bridge, while at the same time forcing the Government to buy that much more in its support program at an additional expense to the taxpayers. Even as a farm-support measure, therefore, the Vorys plan is of more than doubtful value. Its enactment would be both a poor economy and a formidable blow to our whole foreign policy, giving aid and comfort to our opponents in the cold war. It must be hoped that either the committee or the House as a whole will reconsider this action and correct a blunder that could have serious consequences.

Television Revolution Will Be Digested, Too

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. SADLAK. Mr. Speaker, a very interesting editorial resolves the currently much-discussed problem of television, children, and school or home work. Because of its timeliness, I commend it to my colleagues. May I also, Mr. Speaker, mention my opposition to an imposition of a tax on television sets now under consideration by the Ways and Means Committee to offset some wartime taxes that should be removed. The television industry in its infancy needs encouragement, not a tax burden to retard the progress.

The editorial, from the Bridgeport (Conn.) Sunday Herald of March 19, 1950, follows:

TELEVISION REVOLUTION WILL BE DIGESTED, TOO

The capacity of the American parent to be surprised and concerned over the activities of his offspring is exceeded only by the capacity of the American genius to provide newer and more stimulating things for that offspring to do.

Radio, the movies, comic books—all have had their day with the small fry, and all have taken their turn at being lambasted by parents and educators as pernicious influences on the young.

And years ago, before the advent of these modern delights, even the good books that are now esteemed so highly because fewer and fewer children read them, were the object of plenty of parental suspicion. In his time, the lad who kept his nose in a book to the exclusion of other interests, including home work, was the object of parental concern even as is today's devotee of Howdy Doody.

Now it's television's turn. All of a sudden everybody is concerned over the number of hours the kids spend before the screen. A survey of television habits among junior high school students in Stamford last week seems to have touched off a small explosion and, to mix a metaphor, everybody's getting into the act.

Why the results of the survey should be as surprising to so many is in itself matter for surprise. It should have been perfectly obvious from the time the first program appeared on the first television set that here was an innovation that was going to turn American family life upside down.

Moreover, results of surveys made so far, including the one in Stamford, have not attempted to correlate scholastic standing with television watching.

The kids claim that television doesn't interfere with homework, except in a few honest instances. And until such times as it has been proved that there is a definite relationship between slipping grades and increased video viewing, why become alarmed over a phenomenon that is only demonstrating the charm of novelty in the usual fashion?

While television is new and wonderful, practically everyone spends most of his free time watching it. And children, the least selective of enthusiasts, spend more time than anybody else, in part because they have more free time.

But those who have had television sets in their homes long enough for the novelty to wear off, report that in time television takes its place as only another adjunct to a full life. Selectivity returns, even to children, and the youngster who once would not have missed a radio mystery story only to become colossally indifferent to it after the arrival of the television set, finds that after a time Howdy Doody palls and even Milton Berle is much the same.

And at that point, he may even read a book.—N. H.

Near Eastern Armaments Situation

EXTENSION OF REMARKS

OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. DOLLINGER. Mr. Speaker, on March 7, 1950, I inserted in the RECORD a copy of my letter to the Secretary of State, in which I protested the participation by the United States in the arms race in the Middle East. I have since received a reply from the Secretary, which is not a satisfactory explanation of the role being played by us in the Middle East, nor does it assuage my fears for the security of Israel. I do not intend to wait until a shooting war starts before we take action.

If the rearmament of the Arab states is truly for defense purposes against aggressor nations, then certainly Israel is an important ally and should be included in the defense plans.

Because of the widespread interest in this crisis, I am including in the RECORD the letter sent me by the Secretary of State on March 13, and my answer:

DEPARTMENT OF STATE,
Washington, March 13, 1950.

The Honorable ISIDORE DOLLINGER,
House of Representatives.

MY DEAR MR. DOLLINGER: I acknowledge the receipt of your letter of March 7 concerning the near-eastern armaments situation. Since you have been following this matter closely, you are aware of the great importance which this Government attaches to the question of the establishment of peace and the maintenance of stability in the Near East, and of the Department's desire not to see an arms race take place in the area. I need not reiterate here those elements underlying the United States Government's position on the problem which were set forth in the Secretary's letter to Representative JAVITS, since you are doubtless familiar with the contents of that communication.

In considering the situation, it is useful to recall that on August 11 the Security Council, in view of the cessation of hostilities in the Near East and the tranquil conditions existing there, lifted the embargo which it had placed upon the shipment of arms to the Palestine area. In deciding thus, the Council took into consideration the important fact that the relations between Israel and the neighboring Arab States are governed by valid armistice agreements, under the terms of which the parties are committed not to resort to hostilities. The execution of the provisions of these agreements is being effectively supervised on the spot in Palestine by United Nations observers. It is a matter of satisfaction that these observers report that the situation in Palestine continues tranquil and that no serious preparations are being made to resume hostilities. Should a threat to the peace arise in the area, it would be the duty of the United Nations observers on the scene, or of the states themselves, to report this development to the Security Council, the body which remains seized of the matter of the preservation of peace in Palestine.

An analysis of reports and information available to the Department leads to the conclusion, I am glad to say, that the trend in the Palestine area is away from war towards peace. Indications of this trend are the peace talks reportedly taking place between Israel and Jordan, various recent high level official Arab declarations categorically denying any intention of resuming hostilities in Palestine, the recent lifting by Egypt of restrictions involving foreigners whose passports bear Israeli visas, the agreement signed between Israeli and Egyptian representatives on February 22 involving the disposition of certain no-man's-land areas near the Gaza region, and a recent agreement between Jordan and Israel limiting the heavy arms to be located on the armistice lines between the two countries. The Department considers these developments encouraging and believes they represent a hopeful change in the previous attitude of the Arab States toward reaching agreements involving Israel. In connection with the general attitude of the Arabs and Israelis toward one another, it should be recalled that passions were raised to a high pitch during the Palestine conflict, and that a relatively short time has passed since the hostilities ended.

At the time the Security Council lifted the Palestine arms embargo, the United States and Great Britain stated that they did not wish to see an arms race develop in the Near East. The United States stands by this policy, and has been permitting the exportation to both the Arab States and Israel of military equipment which has been considered necessary for the maintenance of internal order and to provide for legitimate defense requirements. The United States will continue to receive applications from

UNIVERSITY OF MICHIGAN LIBRARIES

all governments in the Near East for the exportation of military equipment and will consider these applications within the framework of the above policy.

The United Kingdom, which to the best of the Department's knowledge is guided in its near-eastern arms export policy by the same general principles as those underlying American policy, has been supplying to certain Arab states, notably those with which it has treaty arrangements, military material to enable them to provide for defense needs. You will be interested to learn that the mutual defense assistance program for the fiscal year 1950 does not provide to the United Kingdom any items of the kinds being furnished to Arab states. Neither does the mutual defense assistance program furnish to the United Kingdom replacement items for items thus supplied by the United Kingdom.

With respect to your reference to the release by the Department of news concerning the recent Israeli note on Israel's arms requirements, I can assure you that the Department had no intention of making public the Israeli request. However, the Department has no choice but to confirm the receipt of the note after correspondents learned from sources outside the Department that it had been sent.

You will be interested to learn that it had been previously agreed with the Ambassador of Israel that, if questioned by the press, the Department and the Israeli Embassy would confine their comments to a confirmation that the Israeli request had been made.

I assure you that the Department will continue to keep very careful watch on developments affecting the Palestine situation and that should information be received indicating that serious measures were being taken in preparation for the resumption of hostilities in the Near East, the United States Government would be quick to use all of its influence in an attempt to frustrate such plans. Happily, as I have said, the present trend in the area seems to be toward conditions of peace and stability.

Sincerely yours,

JACK K. MCFALL,
Assistant Secretary
(For the Secretary of State).

MARCH 21, 1950.

The Honorable the SECRETARY OF STATE,
Washington, D. C.

SIR: This will acknowledge your letter of March 13, in reply to mine of March 7, in which I protested the participation by the United States in the arms race in the Middle East, to the detriment of Israel.

Your reply does not give me the feeling of complacency that you intended, nor do I consider it a fitting explanation of the role being played by the United States in the Middle East at this time.

In your reply, you acknowledge the vast shipments of arms by Great Britain to the Arab States, and imply that this heavy rearming of the Arab States has the approval of our State Department. You discount any ensuing danger to Israel by saying that the present trend in the Middle East is away from war toward peace.

In my opinion, the State Department takes too bright a view of the situation, and I cannot share its optimism. It chooses to believe that the existing armistice agreements will be lived up to by the Arab States, and therefore, there is no danger of a renewed attack upon Israel. This is blind faith, when we consider the threats being made by Arab statesmen, press, and radio, that they are looking forward to the "second round" against Israel, and that there will be a war of revenge. In reality—there is a smoldering resentment toward Israel, which at any moment can burst into the flame of war. What assurances are there that the threats constantly being made by Arab States will not be carried out?

You state that the United Kingdom has been supplying military material to the Arab States to enable them to provide for defense needs. As I pointed out to you in my letter of the 7th, the military supplies and money being furnished the Arab States are far beyond the amounts necessary for ordinary defense purposes in peacetime. They are so far beyond normal needs that they constitute an invitation to conquest by the disgruntled losers, of their less prepared intended victim—Israel.

When you say: "Should a threat to the peace arise, it would be the duty of the United Nations observers to report the matter to the Security Council, the body which remains seized of the matter of the preservation of peace in Palestine"—you state an interesting fact. But, Mr. Secretary, by then the shooting war would be under way; bloodshed would have begun; Israel, not equipped for war by great nations in the meantime, would be put to another supreme test to preserve her liberty. This is what we do not want, this is what must be avoided.

Again I repeat—Israel wants peace. If her bitter and sworn enemies are to be armed by Britain, and indirectly by the United States, then in all fairness, Israel must be given the opportunity to acquire arms to the extent that a balance of arms will be established between her and the Arab States. If it is true that the rearmament of the Arab States is based upon a policy of security for the Middle East against possible invasion by a third power, then Israel should be equally included with every other nation, in that policy. In fact, if the eastern Mediterranean is considered so important in our world plans, Israel must also be a link in the chain, as strong as any other. Israel is a new nation, recognized by us and included in the United Nations. Therefore, it is our duty to treat Israel accordingly, and to give her the same consideration as any other nation, in defense plans.

Our aim is to preserve peace. On this ground, we can insist that Britain strengthen Israel as well as the Arab States if she persists in her present program which she calls defense. If this fails, it is our duty to give Israel all the help she needs to make her equally strong with the Arab States. But we must take a stand, and let it be known that the security of Israel is our concern; that we respect Israel's national integrity and expect other nations to do the same. If we continue with our do-nothing policy, we break faith with Israel and the world.

I urge again that the State Department fulfill its obligations under the authority vested in it, to take all necessary steps to avert the threatened war in the Middle East, and to give Israel the support to which she is entitled.

I, and all others interested in the preservation of the peace, and our integrity as a leading nation of the world, await your reply.

Sincerely yours,

ISIDORE DOLLINGER,
Member of Congress.

Revision of the Tax Structure

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include an article which appeared in the New York Herald Tribune on Monday, March 20, 1950:

COUDERT TO ASK NONPARTISAN STUDY OF TAXES—SEEKS SWEEPING REVISION, DECLARES ENCROACHMENTS THREATEN AMERICAN SYSTEM

(By Tom O'Hara)

Representative FREDERIC R. COUDERT, JR., of the Seventeenth Congressional District, said yesterday in an interview that he will introduce this week in the House a resolution calling for a nonpartisan commission to study and recommend a sweeping plan to revise the Federal tax structure.

The plan, Mr. COUDERT said, will serve to carry out the recommendation of the section on the national economy in the declaration of policy of the Republican Party as adopted last February 5 and to push the same idea as recommended by the Commission on Reorganization of the Executive Branch, headed by former President Herbert Hoover.

"If we continue to go on as we are at present," Mr. COUDERT said of the mounting Federal encroachment in the field of taxes, "then the whole system of life in the United States will go overboard, the Federal Union will disappear, and we will inevitably break the treasury of the States and the Nation and have some sort of totalitarian set-up."

URGES STATES' TAX RIGHTS

Of necessity, Mr. COUDERT said, any study of the Federal tax structure must include the relation of it to the State and local governments. "Someone must get the ball rolling," he observed, "and I'd like to start it." He especially urged that the States should regain their right to certain taxes to erase a drain of some $5,000,000,000 now lost because so much handling is involved before the Federal tax moneys finally arrive back in local communities.

In the current Federal budget some $2,420,000,000 was handed back to the States and for the coming fiscal year some $3,265,000,000 will be given back, Mr. COUDERT said, and yet the total income of all the States was $7,000,000,000, indicating the Federal control over the State economies.

In 1948, he continued, the Federal Government took $600,000,000 in gasoline and oil taxes and yet only $315,000,000 of it came back to the States. The question was, he said, "Where did the money go?" New York State, he said, gave $100,000,000 in admission taxes on amusements to the Federal Government which took in a total of $569,000,000 in that category, a total more than enough to take care of the $300,000,000 Federal plan for Federal aid-to-education, a program which he said could best be done by the States.

FAVORS LOCAL CONTROLS

The chief virtue of returning taxes and therefore government functions to the States, he said, was that services performed locally under the eye of the voter and the taxpayer, and under local supervision are bound to be more effectively administered.

"The surest way to socialism," he warned, "is excessive expenditure and destructive taxation."

Mr. COUDERT said taxes are not dramatic but they are of vital importance to the domestic situation, and a good domestic situation determines the strength of the Nation in its dealings abroad. Enough public interest, he said, would force Congress to act, particularly on a nonpartisan basis.

Under the present administration, he said, nothing is done to aid business and industrial expansion, such as by reduction in taxes or diversion of taxing powers to the States to reduce costs. Nevertheless, the corollary is true that some 750,000 new potential wage earners enter the labor market each year and no place can be found for them in production.

Middle-Income Housing Bill

EXTENSION OF REMARKS
OF
HON. CHASE GOING WOODHOUSE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert herewith the following statement from the national housing director of the American Veterans Committee in regard to the middle-income housing bill:

MARCH 20, 1950.

The Honorable CHASE GOING WOODHOUSE,
Congresswoman from Connecticut,
House of Representatives,
New House Office Building,
Washington, D. C.

DEAR MRS. WOODHOUSE: In common cause with all other major veterans organizations, the American Veterans Committee (AVC) has warmly endorsed the provisions of the Housing Act of 1950 relating to middle-income housing.

Charges made that this legislation discriminates against the veteran are completely without foundation on fact. Statistically, a greater proportion of veterans of World War II are in the middle-income group, as defined by current legislation, than any other major segment of our population. Veterans stand to gain more proportionately from this legislation than any other group. Every year this legislation is delayed will cut into the ability of veterans to obtain benefits from it. In addition, veterans are widely organized in social groups that easily lend themselves to setting up bona fide housing cooperatives or nonprofit corporations.

We sincerely trust that the middle-income housing provisions are adopted by the House of Representatives as an essential step toward the elimination of the current housing shortage.

Sincerely,

RICHARD L. HAWKINS,
National Housing Director, American Veterans Committee.

Lawyer's Reference Plan

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. BOGGS of Louisiana. Mr. Speaker, I congratulate the editor of the New Orleans States, Mr. W. H. Fitzpatrick, on his editorial of March 13 entitled "A Way To Beat Socialized Law," which I am incorporating herein.

The editor commends a constructive program of the American Bar Association which seeks to meet a definite need. His approach is affirmative. Agitation for Government programs seldom arises without some need or some abuse.

By recognizing such needs through intelligent action the pressure for Government intervention dies a-borning and the good are not punished with the bad as so often happens in reform measures adopted as a result of public demand.

The editorial follows:

LAWYER'S REFERENCE PLAN—A WAY TO BEAT SOCIALIZED LAW

The legal profession in many places has begun a far-seeing service to eliminate any possible need for socialized law. The medical profession, coping with its problem of possible socialization, could profit from a clinical study of what the lawyers are doing.

Sponsored by the American Bar Association, the service being initiated by many local bar associations is called the lawyer-reference plan. It seeks to make available to persons of moderate means legal advice and services at fees stipulated in advance. The leaders of the plan feel that the profession ought to supply such aid, and feel that if it is not done adequately and promptly by private initiative, a demand may arise for Government services similar to the demand faced by the medical profession.

As outlined by the president of the American Bar Association in an article reprinted by this newspaper Saturday, the plan works like this: The local bar association sets up a reference list of lawyers who wish to participate in the plan. A person of moderate means who feels the need of legal service goes to the association's headquarters, pays a small registration fee, consults with an experienced attorney in charge of the list, and then is sent by the consultant to an appropriate listed attorney. The listed lawyers agree to charge a flat fee, usually $3 or $5, for the first conference. Any other fees for further work are discussed before the work is done. Consequently, costs to the client are known in advance.

For developing the lawyer-reference plan, the legal profession deserves praise. The move represents the sort of initiative that characterizes the American way of doing things. It's an example of individual men, not government, working out a solution to the problems that give rise to socialization. The plan provides needed public service and at the same time preserves professional independence. The State and city bar associations here would do well to adopt this plan.

In contrast, the situation in the medical profession—as described by its own members—seems to lack the planned approach being taken by the lawyers. A view of the medical profession's difficulties was presented here last week at the Thirteenth Annual New Orleans Graduate Medical Assembly by the oldest physician attending. He was Dr. G. E. Cannon, of Hope, Ark., a general practitioner and surgeon for more than 50 years. He said:

"It's ridiculous to think of Government in medicine. It just won't work. But these socialized medicine people are encouraged by excessive charges being made by some practitioners."

He urged the medical men to "clean house" as the best way to fight socialized medicine.

"The medical profession is not without sin, but socialized medicine is not the answer," he said.

Dr. Cannon has made what seems to us an accurate diagnosis of the medical profession's case. The profession itself ought to move to remedy the situation that is encouraging the trend toward socialization.

The lawyers are taking preventive measures to block such a trend in their profession. If the doctors could take similar and appropriate action that would not leave room for an argument in behalf of socialized medicine, they would be doing the public and the medical profession a great service. They would preserve the necessary traditional independence of the profession. They would help block the spread of Federal domination into new fields. That domination looms as a threat to all phases of our lives.

Voting Machines for Congress

EXTENSION OF REMARKS
OF
HON. JAMES E. NOLAND
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. NOLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Richmond (Va.) Times-Dispatch.

At the present time 18 State legislatures throughout the United States use an electrical roll-call system and save many wasted hours.

Practical objections to the automatic system of voting can easily be met with proper adaptation of such a system to the rules of the House.

The editorial follows:

VOTING MACHINES FOR CONGRESS

"I thank heaven for the voting machine," said Speaker Blackburn Moore, of the Virginia House of Delegates, recently. "I don't see how we ever got anything done without it."

Such, no doubt, is the opinion of everybody else in both branches of the State legislature. A machine was first installed in the house in 1923 and the senate in 1929, and these devices make it possible for the general assembly to transact in 60 days business that would take nobody knows how long if old-fashioned roll calls had to be resorted to.

Yet the Senate and House of Representatives in Washington, with much larger memberships, still cling to time-consuming roll calls. The situations in Richmond and Washington are not identical, it is true, and there are certain things that would have to be worked out in Congress in order for voting machines to fit snugly into the congressional system, but the obstacles seem far from insuperable.

An article in Collier's for March 4 by James C. Derieux, chief of its Washington bureau, calls attention to the clumsy and outmoded voting machinery which continues to function on both sides of our Nation's Capitol. Mr. Derieux says the cost of installing electric voting devices in both houses probably would be between $300,000 and $400,000, "which is not even piggy-bank change in these days of billions."

He feels that in addition to the great amount of time which would be saved in Washington by the use of voting machines, there would also be counteraction of the impression that Congress transacts its business in a clumsy and antiquated manner. Such an impression, if sufficiently widespread, could seriously injure the people's faith in our institutions.

Certain objections are raised to voting machines by members of the national legislature, although Senator KEFAUVER, of Tennessee, has declared that antiquated voting procedure reduces congressional efficiency more than any other single practice.

It is contended that since Members are off the floor in Congress much more than in the State legislatures, and properly so, they would not be in their seats when a roll call by machine was completed in a matter of seconds. It seems reasonable, and feasible, to arrange for notice of 10 minutes, or even more, before the taking of a roll call. If this would mean wasting 10 minutes, at least it wouldn't waste from 40 to 45 minutes, which is the time consumed in calling the roll of the 435 House Members.

Mr. Derieux points to certain objections to mechanical voting which are not wholly

UNIVERSITY OF MICHIGAN LIBRARIES

respectable. "The Member who waits to learn how the vote is going before throwing his yea or nay would be discomfited. Also, the Member who likes to avoid putting his vote on record except on selected bills would suffer political pains, for, if the machine is used on all calls, he could not count on the anonymity of the unrecorded voice vote," he says.

The House of Representatives would benefit more than the Senate by the installation of voting machines, since roll calls take so much longer there, because of the lengthy roll. It is argued that Members of the Senate and House necessarily spend much of their time off the floor in committee meetings, or in their offices. The present slow system gives them time to get to the floor after a roll call begins, but why cannot the same system of warning bells which is now operative, tell them that a roll call will begin within a specific period? This and other details can be worked out, if the Members really want to work them out.

Electing a President

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include a series of three articles by Mr. Walter Lippmann, which appeared in the New York Herald Tribune the week of March 6, 1950:

[From the New York Herald Tribune of March 6, 1950]

TODAY AND TOMORROW

(By Walter Lippmann)

ELECTING A PRESIDENT—I

The proposed amendment would make several changes in the method of electing the President and the Vice President. One would abolish the electoral college and the presidential electors. But this does not mean that the President would be elected directly by popular vote. The essence of the existing system is retained: The choice would still be made by electoral votes, each State being entitled as now to as many electoral votes as it has Representatives and Senators combined.

Standing by itself, this change is of little importance.

A second provision would make the election definitive if a candidate has a plurality of at least 40 percent of the total electoral vote. At present, under the twelfth amendmend, there is no election unless the candidate has a majority, and the choice is then thrown into the House.

The proposed amendment would reduce to an acceptable minimum the chance that the choice would not be decided in the popular election, and that the country would face the risk of a prolonged uncertainty while the House of Representatives elected a President.

The third provision deals with the situation that would arise if no candidate had a plurality of 40 percent and the election were thrown into the House. Under the twelfth amendment the vote in the House is by the unit rule. That is to say, each State casts one vote. This is obviously unfair to the larger States. The Lodge-Gossett amendment would have the President and the Vice President chosen from the two leading candidates by a majority of the two Houses sitting in a joint session.

This is an improvement on the twelfth amendment and, so far as we know, no serious objection to it has been raised by anyone. It should be noted, however, that no provision is made for the case where two candidates are tied with more than 40 percent of the electoral vote.

But the fourth provision, which is the heart of the amendment, is very important and very controversial.

Under the existing system, which rests on State laws and on custom but not on the Constitution itself, all the electoral votes in each State are cast for the candidate who obtains a plurality of the popular vote in that State. This arrangement is known as the general ticket system. It was almost certainly never contemplated by the men who framed the Constitution. It was introduced by political leaders in some of the States to increase their own power, and as early as 1824 Senator Benton attacked it, saying that it was contrary to the intent of the Constitution that each State should have a consolidated vote rather than each elector a separate vote.

The disadvantages of the general ticket system are many and they are serious. The Lodge-Gossett amendment is designed to remedy them. We believe, however, that the remedy is not the right remedy—that it has disadvantages at least as great, and probably greater, than those which it would remove, and that there is a better remedy. We dislike having to differ with Senator LODGE, since we are in complete sympathy with his purposes. The reason we have to differ with him is that we are opposed to any recognition of the principle of proportional representation in the American system of government. We believe that it is the fatal error of European democratic constitutions, the great cause of their worst difficulties, and we think it no exaggeration to say that if the principle of proportional representation were introduced here, it would end by destroying the stability of the Government.

Senator LODGE would, we know, object as strongly as we do to proportional representation in the legislative branch of the Government. But he believes, and we do not, that it could be introduced into the system of electing the President without any serious danger that it would then spread to the legislature.

In our succeeding articles we shall go into this more precisely in order to show, first, why Senator LODGE is right that the present general ticket system should be reformed—and second, why we think proportional representation is the wrong remedy and what the better remedy is.

[From the New York Herald Tribune of March 7, 1950]

TODAY AND TOMORROW

(By Walter Lippmann)

ELECTING A PRESIDENT—II

We shall now discuss the disadvantages of the present general ticket system—that is to say the system by which all the electoral votes of the State are cast as a unit for the candidate who obtains a plurality of the popular vote.

This system allows a much greater weight to the pluralities in large States than they are entitled to on the basis of numbers. Suppose, to make the mathematics simple, that the Union consisted of only two States, New York with 47 electoral votes and Mississippi with 9. Suppose further that if the votes were cast by districts—in the same manner that Representatives are chosen—the Democrat got 23 in New York and 8 in Mississippi, the Republican 24 in New York and 1 in Mississippi. In such a case it would be quite clear that the majority of the people in the two States combined had elected the Democrat by a vote of 31 to 25. Yet under the general ticket system the Republican would be declared President by a vote of 47 to 9. This cannot be fair.

Furthermore, the system permits the most important event in our political process—the election of a President—to be determined by small and local caucuses. It puts a premium on accident. It puts a premium on fraud. It exaggerates the power of splinter parties. It exaggerates the power of special interests. It makes it possible for a State minority, rather than a State majority, to capture the whole vote of the State, and so perhaps to swing the whole election.

The system puts a premium on accident because any casual event—a rainy day in the rural districts, for example—may keep the voters of the State majority at home and swing the whole vote of the State to the voters of the minority. It is well known that bad weather affects urban voters less than rural voters and the two are commonly in different political parties.

The system puts a premium on fraud because by purchasing or fabricating a comparatively few votes in order to turn a popular minority into an apparent plurality, the whole electoral vote of the State can be had. In close elections in big States the temptation is very great.

Thus to use an example which will not offend any one at the moment, we know that in 1868 Boss Tweed manufactured a Democratic majority for the whole State of New York by fraud in the city of New York. This gave Seymour instead of Grant the 33 electoral votes of New York State. A local fraud determined the position of the whole State. In 1868 this fraud did not decide the choice of the President. In a close election it could have done that.

The present system exaggerates beyond all reason the power of splinter parties. Thus in the 1948 election the supporters of Henry Wallace held the balance of power in New York State between Truman and Dewey, and they were able to throw 47 electoral votes to Dewey. Wallace polled 509,000 votes. Dewey's plurality over Truman was 61,000 votes.

The system also exaggerates most undesirably the power of special interests in that a small shift of votes makes such a big difference in the electoral vote. In the election of 1888 Harrison carried the large States by small pluralities and lost the small States by large pluralities. Due to the mechanism of the system, a deficit of 96,000 popular votes was turned into a winning surplus of 65 electoral votes.

The present system, moreover, exercises a strong tendency to limit effective participation in democratic elections to the doubtful States—to make a considerable number of States—that is to say the sure States—so politically inactive that in fact the two-party system does not really operate. In the selection of presidential candidates, in the appeal to public opinion, political managers fix their attention on the large and doubtful States, ignoring those which are small or sure.

In the solid South few Republicans bother to vote. For they know that their votes will be lost. Nor do many Democrats go to the polls. For they know that their votes are not needed. In these States a very considerable number of electoral votes are controlled by a very few persons. Such an abdication of individual political power and responsibility by the voters cannot be a good thing in a democratic society. But it is the consequence of politics played under the rules of the game set by the general ticket system.

At first blush it might seem that the obvious remedy would be to abolish the whole electoral voting system and to leave the choice to a plurality of the people voting at large. But such a reform could not pass the Senate.

It could not pass the Senate because the present electoral voting system, by giving to each State a bonus of two votes regardless of size, works to the advantage of the small States. They will never renounce this advantage, which they regard as a genuine and

desirable element of the Constitution in its intention to protect them from the absolute power of the large States.

It ought not to pass because it is a sounder rule that the relative weight of communities in the electoral process should be proportional to their total population—voters and nonvoters alike—rather than to the number of their actual voters.

Furthermore, if the President were elected by the people at large all the evils which we have mentioned in connection with the general ticket system—accident, fraud, and so forth—would appear in aggravated form because they would not stop at the State lines. In addition, States would be under an inducement to compete with each other in lowering their voting qualifications. In Georgia, for example, children of 18 can vote; other States would soon follow or better the example. And in the end the Federal Government would have to step in and fix uniform voting qualifications, itself an undesirable result.

Yet the disadvantages and evils of the general ticket system ought to be dealt with. The question is how.

To the founding fathers and to many of the statesmen who came after them—to Hamilton, Jefferson, Madison, Gallatin, James A. Bayard, John Quincy Adams, Van Buren, Benton, Webster, Story, and many others—the district system was clearly the most satisfactory remedy. This is the system supported by Representative FREDERIC R. COUDERT, JR., of New York, which he is offering as a substitute to the Lodge-Gossett amendment.

This district system, in the form which Mr. COUDERT seems to have in mind, would divide each State into as many similar districts as there are Representatives in the House. In addition, there would be two State-wide districts. The choice of a plurality of the people of each district would count as one electoral vote for the President. The choice of the people of the State as a whole would determine the other two electoral votes of the State. Thus, all but two of the electors of each State would be chosen by pluralities in a district and would be unaffected by the pluralities elsewhere in the State.

The district system, as we learn from Madison, was mostly, if not exclusively, in view when the Constitution was framed and adopted. It was supplanted by the general ticket system now in use as the only expedient for baffling the policy of the particular States which had set the example, that is to say, had adopted the general ticket system. It was a case of a bad system driving out a better one. For the district system in one State cannot exist in competition with the general ticket in another State. The State which operates under a general ticket system will then exercise more weight in the electoral vote than it deserves. Therefore, the only way that the district system can be restored is by constitutional amendment which would prevent any State from adopting the general ticket system.

In our view the district system is a better remedy than the Lodge amendment and it should be restored. Our reason for preferring this system, which is contemplated in the Coudert substitute for the Lodge-Gossett amendment, rests on our objection to the principle of proportional representation. We shall discuss that in the third and concluding article of this series.

[From the New York Herald Tribune]

TODAY AND TOMORROW

(By Walter Lippmann)

ELECTING A PRESIDENT—III

We shall now discuss that part of the Lodge-Gossett amendment which employs the principle of proportional representation showing why we believe that the district system, as intended by the framers of the Constitution, is preferable. We realize that not for many years has the district system been considered seriously in Congress. But the reason, we think, is that American reformers were so strongly influenced after the middle of the nineteenth century by John Stuart Mill's advocacy of proportional representation. The apparent fairness of the principle of proportional representation hid the grave dangers and defects of that principle. The Lodge-Gossett amendment is based on that principle.

It does away with the State electoral colleges but it keeps the State electoral votes. These it distributes among the several candidates for President on the principle of proportion. Thus a candidate who receives 42.5 percent of the popular vote of a State would earn 42.5 percent of its electoral vote, etc., etc. The calculations in the Lodge-Gossett amendment are to be carried to three decimal places in an attempt to achieve mathematical accuracy.

The merits of this system are very easy to see. It gives to every political grouping of voters in the national election a weight as nearly proportional to its mass as the present unequal electoral weighting of the States permits. It avoids the seizure of minority votes by majorities. That is to say the arrangement, for example, by which in 1948 the 2,780,000 votes cast for Truman in New York were counted in the electoral college for Dewey, and the 1,960,000 votes cast for Dewey in Illinois were counted for Truman in the electoral college.

Moreover, the proposed method reduces the size of the electoral swings which may be caused by accident, fraud, or the power of minor parties. In large measure it destroys the political advantages of the large doubtful States. It would revive political activity in the sure States.

Its demerits are not so obvious. And yet we think they exist. They can best be brought out by comparing the Lodge-Gossett amendment with its alternative—the district system.

Let us consider how the two systems would probably work in practice. Under the district system accidents will generally have no effect upon the result of a national election. Bad weather keeps voters home in one district; local issues bring them out in another. But Democrats and Republicans are equally affected by the accidents; district results as a whole are not substantially changed. Each district casts its single vote just as it would have cast it had the weather been clear and the issues normal. Under the proportional system the accident is reflected in the distribution of the State's electoral vote and eventually in the Nation-wide electoral vote. So with fraud. Under the district system a manufactured vote can affect only the district in which it is cast. If the candidate on whose behalf it was manufactured carries the district without its help or if he fails to carry the district, the effect is nil; in other cases, the fraud will swing one electoral vote. But under the proportional system, a manufactured vote is always reflected in the distribution of the electoral vote and its effect is limited only by the size of the fraud.

This brings us to our main objection to the Lodge-Gossett amendment, to our main reason for preferring the district system amendment. We believe that if the system of proportional representation is applied to the presidential electors or, what comes to the same thing to the presidential electoral vote, that it will eventually be applied to the Representatives in Congress. And such a result is, we think, to be avoided at all costs—even at that of retaining the obnoxious general ticket system which we now have.

For by applying the principle of proportional representation to electoral votes the Lodge-Gossett amendment would provide a precedent, and, as Senator FERGUSON has remarked, no one needs to be told the importance of precedent in democratic government. It will be difficult to explain to a vigorous minority why it is entitled to a third, let us say, of a State's electoral votes and yet is not entitled to a third of its votes in the House of Representatives. In the 1948 election, for example, Wallace got 2.4 percent of the popular vote. Under the Lodge-Gossett amendment he would have been credited with 1.9 percent of the electoral vote. If such a system were in effect, it would be very difficult to explain to the followers of a Wallace that their votes were entitled to proportional representation in the electoral vote but that they were not entitled to proportional representation in the House.

This is more than a theoretical danger. The establishment of proportional representation in the congressional delegations might come about in one of two ways. It could be introduced piecemeal by the legislatures of the several States. Section 3 of the Apportionment Act of 1911, prescribing that Representatives in all States shall be elected on the single-member district system, is no longer on the statute books. It was declared by the Supreme Court in 1932 to have expired by its own limitation with the apportionment to which it related. Congress has never reenacted the provision.

Proportional representation might also be introduced in the House of Representatives by Congress itself. Suppose that the general ticket system for Representatives should come to be established by the State legislatures as the ordinary method of choosing Representatives—that is to say suppose Congressmen came to be elected at large rather than by districts. The evils following on this change would soon give rise to a movement for reform. Congress would be called upon to exercise its original and concurrent power to make or alter the State regulations in regard to the manner of holding elections for Representatives. With the example of the Lodge-Gossett amendment before it, it might plump for the system of proportional representation.

This contingency is not so remote as it might seem. Some States now use the general ticket system to choose Representatives and others have experimented with it from time to time.

The evils of proportional representation are, one, that it destroys the two-party system and substitutes for it a many-party system. This has happened everywhere that the principle has been applied and is one of the chief causes of the instability of democratic government in countries like France.

The second evil is closely related to it. The effect of proportional representation is to fill the legislature with men who are immoderate and uncompromising. For under proportional representation the constituents of a Representative are not the people living in a geographical area but an abstract group of voters who all think alike. A Representative does not have to consider those who may differ with him. He is merely the delegate of those who think alike. Therefore, he is not predisposed to moderate views and to compromises but to irreconciliability and extremism.

Moreover, under the proportional system the constituency of each Representative is mathematical rather than geographical, abstract rather than personal. The Representative does not know what actual persons he represents. Therefore his election is controlled by the party managers who really appoint him to represent the mathematical constituencies that the principle of proportional representation creates. And what the party managers will, therefore, look for in him is not thought but obedience. Anyone who has observed parliamentary government

UNIVERSITY OF MICHIGAN LIBRARIES

in a country where proportional representation exists will realize how in practice this works out.

We regard these objections to the Lodge-Gossett amendment as sufficient to justify its rejection. We believe that the district system, as contemplated in the Coudert substitute, is not open to these objections and that it will cure all the evils of the present system quite as well as the Lodge-Gossett amendment.

Discrimination Against North Dakota Processed Grain Manufacturers

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 22 (legislative day of Wednesday, March 8), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Cart Blasts North Dakota Bulk, Processed Freight Variance," from the Bismarck Tribune for March 7, 1950. Mr. Cart was formerly president of the Public Service Commission of North Dakota, and is now a member, elected by the people.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CART BLASTS NORTH DAKOTA BULK, PROCESSED FREIGHT VARIANCE

North Dakota's processed-grain manufacturers are suffering discrimination in favor of bulk shippers through the Great Lakes region.

Public Service Commissioner Elmer W. Cart, in a statement prepared for delivery before the United States Senate Committee on Interstate and Foreign Commerce, said:

"At the present time and, in fact, since the summer of 1942, there has been no water transportation available to transport these products on account of lack of package freight service from Superior to eastern lake ports such as Buffalo, New York, Cleveland, etc.

"Today, in practical effect, this useful and important water route is limited to the transportation of bulk freight. This should not be tolerated any more than having a railroad limited to hauling only bulk freight," Cart said.

Commissioner Cart noted that the costs of rail service compared to lakes transportation was a costly discrimination against the processed-grain dealers in North Dakota:

"During the shipping season of 1949, the contract rate for the movement of wheat as a bulk cargo from Duluth to Buffalo, N. Y., was approximately 11 cents per hundredweight. The all-rail rate, which processed-grain shippers used, was 53½ cents—a difference of 42 cents."

Cart said that North Dakota was one of the Nation's great producers of grain—amounting to 1,284,000,000 bushels of wheat alone during the 1941–1949 period. And a good share of that grain was processed here.

"Therefore," Cart said, "I urge your favorable consideration of shipping legislation which we believe will bring about restoration of package freight service on the Great Lakes."

Cart said restoration of lakes service would not correct all the problems of rate increases plaguing the North Dakota processors, since rates are up on the lakes. But he said great progress would be made.

Hon. Elbert D. Thomas, of Utah, Backed by Labor in Race

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, March 22 (legislative day of Wednesday, March 8), 1950

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial by Mr. Gould Lincoln, a well-known veteran political analyst of the Washington Evening Star, appearing in the Evening Star for March 21, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE POLITICAL MILL—SENATOR ELBERT D. THOMAS BACKED BY LABOR IN RACE—LAWMAKER FACES HARD FIGHT; NOW CAMPAIGNING IN UTAH

(By Gould Lincoln)

Organized labor is expected to fight just as hard to reelect Senator ELBERT D. THOMAS, Utah Democrat, as it is planning to fight against the reelection of Senator "BOB" TAFT, of Ohio. Should it fail in Utah, it will be almost as much of a black eye for political labor as it will be if Mr. TAFT is reelected in Ohio.

Senator THOMAS, so far as the labor leaders are concerned, is the direct antithesis of Senator TAFT. It was Senator THOMAS who sat successfully on the lid—as chairman of the Senate Committee on Labor—when the House passed bill after bill seeking to curtail the dictatorial actions of organized labor from 1940 on. Never, while Senator THOMAS was on the job, were any of these measures allowed to come up for consideration.

Next to former Senator WAGNER of New York, whose name was attached to the National Labor Relations Act superseded by the Taft-Hartley Act, Senator THOMAS has been more prominently identified with the labor group in Congress than any other. And labor, according to reports, will throw into the campaign all the funds that are necessary.

BACKED BY ORGANIZATION

Utah Democrats insist that Senator THOMAS will be renominated and reelected beyond doubt. They point out that he will have not only the active support of organized labor but that he will have all the school teachers—who favor Federal aid to education—back of him. Also, they say, the Democratic organization in the State will be strongly back of Senator THOMAS.

Senator THOMAS, however, is back in the State now, campaigning vigorously, long before the State conventions and primary elections—something which he has not felt essential for a long time. He has gone back there, it is believed, to head off a possible race for the Democratic senatorial nomination by former Governor Maw. If Mr. Maw made a contest, it might split the Democrats wide open and leave scars which might not heal before the election next November. Mr. Maw, politically ambitious, was twice elected governor—and failed in 1948, when he ran some fifty thousand votes behind the Democratic ticket.

Senator THOMAS, however, remembers that in 1946 the Republicans elected Senator ARTHUR V. WATKINS when no one believed they had a chance for victory, and he remembers, too, that the Republicans in 1948 elected a governor, J. Bracken Lee. So he is out there beating the bushes and mending his political fences.

STRIKES ANGER FARMERS

Labor support is not entirely an unmitigated advantage for Mr. THOMAS. The coal strike made a lot of Utah farmers and other citizens angry, for example, and, on the other hand, despite his firm stand for everything labor has wanted, Senator THOMAS has not been able to deliver; he was entirely unable to lead the Democratic Senate last year to repeal the Taft-Hartley Act, and when the Thomas labor bill did pass it had been entirely rewritten to fit the idea of Senator TAFT himself. So there might be a slight lack of enthusiasm on the part of some labor leaders for Mr. THOMAS.

Also, although Mr. THOMAS has fathered bills for Federal aid to education time and again, he was never able to get one through the Senate, and it was Senator TAFT, in the Republican Eightieth Congress, who put such a measure through. This measure was repassed in the Eighty-first Congress, with Senator TAFT's aid.

The GOP has a number of available candidates for the senatorial nomination to run against Senator THOMAS—among them Wallace Bennett, recently president of the National Association of Manufacturers; Brig. Gen. Franklin Riter, a Salt Lake City attorney who saw service in the last war; former Representative William A. Dawson; State Senator Rue L. Clegg, of Salt Lake City; and Preston D. Richards, an attorney, also in Salt Lake City. Utah has the convention-primary system for senatorial nominations. The conventions are held first and select two candidates—no more—who fight it out for the party nomination in a primary.

Republicans insist that Senator THOMAS is vulnerable—as was Republican Senator Smoot whom Senator THOMAS defeated in 1932—because he has given his time and attention to national and international affairs rather than to legislation which was of particular interest to Utah. Senator WATKINS, on the other hand, was involved in reclamation and irrigation projects for a number of years before he came to the Senate and has concentrated on getting things done for the State. Further, the Republicans claim that they have an even better chance to defeat Senator THOMAS than they had to elect Senator WATKINS 4 years ago.

Broadcast by Hon. James P. Kem, of Missouri, on the Work of the Senate

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, March 22 (legislative day of Wednesday, March 8), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a broadcast by me, over 26 stations in Missouri, on the work of the United States Senate.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

Hello, everyone. This is JIM KEM, in Washington, reporting to the people of Missouri on the work of the United States Senate.

Several days ago the Senate began debate on the so-called Kerr bill to amend the Natural Gas Act. If this bill becomes law, it will almost certainly lead to a boost in the cost of living for millions of families in Missouri and other States. Farm folks will be affected, too, as well as consumers of natural gas in cities and towns. One of the sponsors

of the bill, is Senator ROBERT KERR, of Oklahoma. Usually he is a consistent supporter of the administration's program. Senator KERR freely admitted that the purpose of his proposal is to raise the price of natural gas in the gas fields, including those in Oklahoma.

The Kerr bill would take away from the Federal Power Commission its authority to regulate the price paid by pipe-line companies for gas sold them by so-called independent gas producers. These independent producers are, most of them, big companies that produce 70 to 80 percent of all the natural gas in the United States.

I opposed the Kerr bill when it came before the Senate. I spent practically all one afternoon telling the Senate just why I thought it was an unsound, unfair proposal.

For that is exactly what the Kerr bill is, unsound and unfair.

Here's why. Enactment of the bill would be a breach of faith with untold thousands of American gas consumers.

More and more families these days are using natural gas to cook their meals and heat their homes. Consumers have long had the benefit of gas manufactured from coal and other products. Now natural gas; that is, gas piped directly from nature's great underground storehouses, is rapidly being made available to cities and communities not previously enjoying its advantages. Since the end of World War II scores of huge pipe lines have fanned out from the vast bubble of gas underlying the old Kansas, Texas, and Oklahoma dust bowl, and from other areas.

As a result, millions of American households and thousands of factories are now being, or soon will be, served with this most convenient of all fuels. Natural gas now costs much less than manufactured gas—it is cleaner—and it yields twice as much heat.

St. Louis has just recently been converted to straight natural gas. There, and in other cities and communities that are being served for the first time, gas-burning equipment has been either installed or converted at great expense to the consumer.

Now, after all this has been done, Congress has been asked to make it possible for the price of gas to be pushed up without regard to public interest. The National Institute of Municipal Law Officers estimates that the Kerr bill would cost consumers more than $200,000,000 a year.

While those living in our cities and towns would probably be hit hardest by the Kerr bill, our farm folks, too, would be hurt by this ill-advised legislation. Many farm families now enjoy the benefits of so-called bottled gas. Two-thirds of the supply of bottled gas is made from natural gas. So if the price of natural gas rises, an increase in the price of bottled gas will likely follow. Then, too, farmers buy many products manufactured by companies using natural gas as fuel. It has been said that natural gas is the "hot breath of life" for the cement industry. If the price of natural gas rises, it doesn't take a magician to figure out that the price of cement will also go up. And so it goes.

We who oppose the Kerr bill are charged by some of those favoring it as being enemies of free enterprise. I shall always stand for free enterprise. I stand on my record since I have been a member of the United States Senate.

For a hundred years or so it has been recognized that in order to make the free-enterprise system work, monopolies must be regulated. Monopolies must be restricted in the public interest.

From a consumer's standpoint, natural gas is a monopoly. If you want to buy a ton of coal, you can choose any 1 of 50 or so dealers in the telephone book. But, if you live in town and want to buy gas—there is just one place to go—and that is to the gas company that has constructed a gas line along the public street in front of your home under a public franchise.

Since the distribution of gas is a monopoly it should be regulated by public authority in the public interest. It is sometimes said that regulation should be on a State level. But when gas is consumed in one State, regulation by another State does not meet the situation. When the supply of gas is produced in Oklahoma and consumed in Missouri, the regulation must be interstate—the regulation must be by Federal authority.

If the Federal Power Commission is to do an effective job protecting Missouri gas consumers it must have the authority to regulate the price paid for gas from the first time it passes into the pipe line until it is sold to the local gas company. It cannot do this if the producers of the gas in the field are free to boost prices as they please.

The producer of natural gas isn't compelled to enter the public-utility market. He has other outlets for his product. He may sell his gas to a carbon-black plant, or to a chemical plant, or for other similar uses. But, if the producer decides to sell his gas to a pipe-line company supplying Missouri cities, he has entered the public-utility business. If he wants to play the game he should follow the rules. He should accept the responsibility to the public which becomes his when he sells to a public-utility market.

It's only fair that the gas producer receive a reasonable and just profit on the gas he sells. If a price increase becomes necessary in order to obtain a fair profit it should come only after full and open hearings before the Federal Power Commission.

We need not shed any crocodile tears for the condition of the natural-gas industry. The price of gas in the field is from 8 to 15 times higher than it was only a few short years ago. Very few other industries have enjoyed such price increases for their products or such a tremendous demand from buyers.

It is said that the policies of the Federal Power Commission have been confused and inconsistent. That may be true. This is partially due to the fact that some unwise appointments have been made to the Commission. It may be that certain changes are needed in the law to make the wishes of the Congress clear. If this be true, they should be made. But you don't knock out the windowpane just because dirt or frost makes it hard to see through. Neither should we scrap regulation of the gas monopoly because of confusion among the members of the Federal Power Commission.

The Federal regulation of gas rates has been effective and in the public interest. Since the passage of the Natural Gas Act in 1938, the Federal Power Commission has obtained reductions of more than $37,000,000 per year. This activity in the public interest should continue—it should continue unhampered. A bill similar to the Kerr bill didn't even get out of the Senate committee in the Eightieth Congress.

Let's take a closer look at how the Kerr bill would affect Missouri. Kansas City has had more than 50 years experience with the problem of a fair price for natural gas. All of the gas consumed in Kansas City is produced in Kansas and Oklahoma.

When the Kerr bill was before the Senate committee, David M. Proctor, city counselor of Kansas City, came to Washington to testify against it. Mr. Proctor told the committee that if the bill becomes law an additional cost and burden would be passed on from the gas fields to 100,000 defenseless consumers in Kansas City alone. When the Kerr bill came before the Senate, Mr. Proctor sent me a telegram opposing the bill. He said it would undoubtedly permit unjust and unwarranted increases in the price of gas to consumers.

A number of other city officials in Missouri sent telegrams opposing the Kerr bill.

Mayor Joseph Darst, of St. Louis, wired that many thousand householders, as well as important industries in his city, would be harmed by enactment of the bill.

Julian Bagby, mayor of Sedalia, said that in his opinion passage of the bill would be a major disaster to our communities.

Ronald Reed, city counselor of St. Joseph, also sent a wire. He said his city strongly feels that recent natural-gas rate reductions would be nullified if the Federal Power Commission is stripped of its authority to regulate gas prices in the field.

Mayor William Kemp, of Kansas City, sent a telegram opposing Senator KERR's bill, as did Mayor L. Russell McKee, of Joplin, and Otis L. Barbarick, mayor of Springfield.

I called these telegrams to the attention of the Senate.

In addition, I have received a very large number of letters from people all over Missouri—practically all of them opposing the Kerr bill.

Here's a typical letter from G. M. Ray, of Springfield. He writes: "If the Kerr bill passes, consumers will be forced to pay triple the present price for natural gas. Is it fair for working people to be 'held up' by another unjust deal?"

A similar bill has already passed the House. If cleared by the Senate, the bill will then go to President Truman—for his approval or disapproval. Last year Mr. Truman officially opposed the bill that was then pending. There are rumors in Washington that the President for some reason is ready to change his position. I hope these reports are unfounded.

The Kerr bill is a hodgepodge, piecemeal, special-interest proposal. It is a sorry example of the thinking of some of our leaders—they seem to be willing to have everybody regulated, or competed with, or interfered with by the Federal Government, except, of course, everybody but themselves.

High-pressure politics should not be permitted to influence a decision vitally affecting the welfare of 40,000,000 American gas consumers.

We should carry on by reasonable regulation of monopoly our earnest efforts to make the free-enterprise system work.

This is your Senator, JIM KEM, reporting from the Senate Office Building in Washington. Thank you for listening. I hope you will be listening at this same time, same station, next week.

Proposed Reduction of Personnel at Veterans' Hospitals

EXTENSION OF REMARKS

OF

HON. HARRY DARBY

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, March 22 (legislative day of Wednesday, March 8), 1950

Mr. DARBY. Mr. President, in connection with the Veterans' Administration's recent decision to reduce personnel at veterans' hospitals throughout the country, I ask unanimous consent to have inserted in the RECORD at this time an excellent editorial entitled "The Heart of the Matter," from the March 11 issue of the Topeka State Journal, an outstanding daily newspaper published at Topeka, Kans.

UNIVERSITY OF MICHIGAN LIBRARIES

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE HEART OF THE MATTER

Amid all the confusing, ill-informed, and contradictory reports about the VA's attempted cut-back at Winter Hospital here, one truth seems to us to have come clear.

That is, there is room aplenty for economy and more efficiency in the total Veterans' Administration set-up, but in the way improvement is sometimes sought in the wrong way, the cutting is being ordered in exactly the service that shouldn't be cut—the medical service—while the real overgrowth is neglected.

Winter VA Hospital is described by the VA's own neuropsychiatry chief in Washington in these words: "We regard it as the best hospital in the world. It is a major training center and has been the force in the psychiatric training and treatment program."

The background for such an estimate is familiar to many of us. The VA came here a few years ago smarting under justified criticism directed at the old regime. It wanted to make a fresh start. Under the new leadership of Gen. Omar Bradley it took over Winter Hospital from the Army. Because the world-famed Menninger Psychiatric Center was located here, VA under General Bradley determined to get the Menninger Foundation's aid to create a model, a pilot institution that would become a pivotal VA medical center and show the way to others. Winter was not only to be a treatment but a training center. Physicians were to be trained in the modern psychiatric approach to mental and emotional ills. That was done, magnificently. Results and then recognition came. Several of the most influential national magazines sent their best writers here and told the story to the Nation of something that had never been done before. Hundreds of specialists from all over the world visited Winter, carrying away with them the vision and the inspiration not only of a great hospital, but of a new kind of hospital. We have talked to a great many of these case-hardened observers, know what they say and how they feel. As an interested member of the laity, we have seen Winter inside and out, lived with it here all these postwar years. This newspaper thinks Winter VA Hospital is something unique and vital nationally, medically, humanly. We believe in Winter Hospital and in all that is being done there for sick veterans of our wars.

Now, saying that, let us tell you that we have also studied the Hoover Commission reports on the VA, and its recommendations about what should be done. We found what the National Citizens Committee for the Hoover report found, and concur in its statement, to wit, "At no place in the Commission's reports were there made any recommendations for the increase or curtailment of medical benefits or other services to veterans. Its recommendations covered only the better management of existing programs." Policy decisions as to what the people owe to veterans are dealt with as strictly the affair of Congress, which has laid down the principles for existing programs. Everything in the Hoover report is geared to the question of how many veterans may be given the best of medical care. Economies are sought that would not impair essential, needed services.

The VA should be trimming, as we stated at the outset, but the hospitals, particularly the best, the pilot, the model hospitals of which Winter is the foremost, should be approached with the utmost care and caution, not the heavy hand of the recent order. It is in VA's paper administration, principally in Washington, and at employee's desks, that savings could and should be made, not at the bedsides of sick men. The Hoover Commission Task Force on Veterans' Affairs estimated that there could be annual savings of 70 millions in handling veterans' affairs, particularly as relating to insurance, claims, overcomplicated procedures, printing, schooling payments, overpayments (totaling 179 millions to date, of which 50 millions have not been recovered), and so on.

Most of the cuts ordered for Winter would cripple medical services to ailing veterans now in the hospital, and waiting to get in. The cuts would cripple the program of physician-training by reducing the staff, staff hours, and human facilities for training, by which many other VA hospitals have benefited and are benefiting in receiving doctors and specialists trained here. A training hospital needs more staff than others. We believe VA and the taxpayers are really getting their money's worth, and much more, at the hospital here.

The VA is well advised in its indication Friday that the order respecting Winter will be reexamined and reevaluated, in its recognition that Winter is a unique situation within the total medical set-up. Let VA trim the unessentials of administrative and bureaucratic falderal, of which it has been drawn a picture, and VA will earn the gratitude of veteran and nonveteran alike. But let VA hold on to its greatest psychiatric hospital, and to the way that has been pointed here, as to the heart of the matter, which in fact the Winter meaning is.

Hawaii and Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a compelling editorial for the case of statehood for Hawaii and Alaska which appeared in the Washington Times-Herald of March 21. The editorial is reproduced in full text:

HAWAII AND ALASKA

The Senate Committee on Interior and Insular Affairs owes the public interest an early and extensive hearing on bills proposing statehood for Alaska and Hawaii.

Both proposals have passed the House in recent days. And in the Senate there are pending a number of bills dealing with each case. But the Interior Committee, of which Senator JOSEPH O'MAHONEY, Democrat, of Wyoming is chairman, has not yet put any of them down for hearing.

There are a number of puzzlers in this situation. The logic of statehood for these important and increasingly sensitive American territories, is unshakable on its face.

Each is inextricably a part of our national surival. Each is tied to us by economic, strategical and political necessity.

Each suffers, in its present condition, from the oppressions of bureaucracy that are inevitably a part of Territorial administration by the Federal Government.

The necessities which bind these Territories to us are not going to get any weaker as time goes by, but instead will intensify. In a military way, alone, Hawaii and Alaska must be American to the core, for this Nation's well-being.

And just as the basic reasons for Hawaii and Alaska to be American grow in importance as time goes by, so does the necessity for them to shed the feeble status of Territories.

WHY IS THERE OPPOSITION?

They cannot ever really grow up as long as the Federal Government is running them as branch offices of the Interior Department and general playgrounds for bureaucrats on the make. And the longer that growing up is delayed, the harder it is to grow up at all.

Yet obvious as all the foregoing is, still there runs somewhere in both Alaska and Hawaii a current of opposition to statehood. We are frank to admit we don't know why there is opposition or who operates it, but we do sense it is there.

The earliest possible Senate hearings are indicated therefore, in order to get the opposition out in the open, examine it, understand it and demonstrate it's weakness.

Undoubtedly there are possible arguments against statehood for these two Territories, but none as important to the United States as the reasons for it.

The House has voted for statehood. The Senate owes the country some action on its own part. Now.

National Boys' Club Week

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. RODINO. Mr. Speaker, inasmuch as we recognize the youth of today as the leaders of tomorrow, it is fitting that we pay tribute to the National Boys' Clubs which are being honored this week throughout the country. These clubs are doing for our young boys exactly what we who are interested in the spread of democracy would like to do on an international scale. Here is a marvelous opportunity for our children—learning to work, play, and live together; developing a comradeship, a sense of fair play, a will to share. Boys become united in these clubs even though there may be many dividing factors present. Race, color, creed—what do those words mean to the 300,000 members of boys' clubs? Not very much, I am sure. Those factors are relegated to a back seat and supplanted by a genuine admiration for good timing at the bat or "a fast curve." That is how it should be—appreciate talents and forget differences.

Boys' clubs which are nonsectarian were first organized on a national basis in 1906. There are now 325 clubs with over 300,000 members, aged 8 to 20. Although more attention is attracted to the work done with delinquents and underprivileged groups, the boys on the whole are average normal youngsters. The need for such organizations is only too apparent. Herbert Hoover who has been chairman of the national board since 1936 once estimated that over 3,000,000 boys would never find outdoor living except in crowded city areas. No wonder they all flock to the club where every possible chance is given them for wholesome recreation, physical development, and friendship.

Mr. David W. Armstrong is the executive director of the Boys' Clubs of America, Inc. In a recent article appearing in Coronet, Mr. Armstrong said that there seems to be a chain reaction. Many

boys who found fun and guidance through the boys' clubs have now become leaders. Armstrong, himself, belonged to a one-room club in Pittsfield, Mass. He did part-time work at the club and later became director of the club in Worcester from 1907 to 1941. His feelings for boys and the clubs are expressed simply:

Children are the most important of our natural resources. Most of them will grow up into useful citizens, but there is a minority that needs guidance. More important, there is the opportunity for making even the best of the crop more tolerant, more cooperative and more democratic.

The work of these clubs should never be underestimated. A glance at the lists of alumni reveals many leaders, clergymen, physicians, athletes, and such, that we acclaim. I would like to praise the boys today who are now members and extend my congratulations to the boys' clubs this week.

Reform in Connecticut

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, March 22 (legislative day of Wednesday, March 8), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the Washington Post of March 21, entitled "Reform in Connecticut." I think other States could well follow, as the editorial suggests, the excellent example set by this program initiated by Gov. Chester Bowles.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REFORM IN CONNECTICUT

Following the example of the Hoover Commission, Connecticut is making a heroic effort to modernize its governmental system. Its commission on State government organization has issued a series of reports indicating that the task of shaping State institutions to the needs of the present day is no less urgent than in the case of the Federal Government. Since the obsolescence that is plaguing Connecticut is typical of conditions to be found in many other States, the example that Gov. Chester Bowles is setting may well prove to be contagious.

At an early stage in the Connecticut study it became apparent that one major millstone around the neck of good government is the State constitution itself. Connecticut has amended her constitution 47 times. The investigators found that it is no longer "fairly intelligible to lay readers." The only way to understand it is, quite literally, to read it backwards. Only a complete redrafting will make it a useful and reliable charter of modern government, and that is what the commission has recommended. Incidentally, the commission thinks it is feasible to avoid calling a constitutional convention—a method that has produced negative results in the past—and to have a new constitution prepared by a legislative commission for submission to the voters.

Much of the streamlining visualized by the commission would be accomplished by means of constitutional changes. Among the changes recommended are the short ballot, concentrating public interest in the election of the Governor, Lieutenant Governor and members of the general assembly; automatic and periodic redistricting of the senate; reduction in the size of the house of representatives; annual sessions of the assembly, with no fixed adjournment date; prohibition of dual office-holding; elimination of elected sheriffs and probate judges; home rule for towns and cities, with no special local legislation; and a better method of effecting constitutional amendments and revisions. The reorganizers also suggest that provision be made for the recall of elected officers, direct primaries, the initiative and referendum, and an enlarged declaration of rights.

It is a mistake, as the report itself acknowledges, to place too much reliance on the recall, initiative, and referendum. The recall is likely to result in mere political harassment, and the initiative and referendum seem scarcely in keeping with the principle of the short ballot, although all three can doubtless be used to advantage in some situations if abuses can be avoided. What is really important is that Connecticut is moving to modify its governmental machinery and its organic law in accord with present-day requirements. The District of Columbia and other areas that are engaged in a similar struggle can only wish Connecticut well in its undertaking.

Dennis J. McMahon

EXTENSION OF REMARKS
OF
HON. JAMES J. HEFFERNAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. HEFFERNAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an article from the January issue of Marine News honoring the Honorable Denis J. McMahon, recently appointed collector of internal revenue of the second district of New York:

MEET DENIS J. MCMAHON, THE SHIPPING WORLD'S NEW COLLECTOR OF INTERNAL REVENUE

From Wall Street runner to runner-up for the top-flight office of collector of internal revenue for the second New York district in but a very few years, and to be appointed to this important post in the world's greatest port by President Truman—that is Denis J. McMahon. He has held only two jobs in his brief span of life so far, being probably the youngest collector of internal revenue New York ever had.

A Yorkville, Manhattan, boy, when he finished high school he went to work for the distinguished old Wall Street brokerage house of Clark, Dodge & Co. as a runner. Then he worked on the floor of the New York Stock Exchange.

When the 1929 crash came he had to look for another job. In less time than it takes to say, "Who killed cock robin?" he landed one in the upper West Side office of the collector of internal revenue, New York district. Soon after Franklin D. Roosevelt was elected to the Presidency for his first term Denis McMahon was appointed deputy collector.

As chief deputy, he supervised the other deputies charged with the enforcement of the collection of various Federal taxes, investigation of delinquent taxpayers, serving liens and levies, and assisting taxpayers who called at the office.

His was a big job, though one little heard of and about by the people of the metropolis. The tax work of the Bureau of Internal Revenue is divided up into different branches—three main divisions in New York: The special agents, who investigate all criminal fraud cases; the revenue agents, who are primarily auditors, and are responsible for uncovering much additional tax; and the collectors, whose job it is to see that the Government's tax money is collected. The special agents and the internal revenue agents work directly under the Bureau of Internal Revenue in Washington, D. C.

Denis McMahon could regale everyone in the shipping world with laughter relating some of his experiences—only he just hasn't got the time. However, if you want to get a big laugh out of him, just ask him about the batch of rabbit fur he had to confiscate for nonpayment of taxes that smelled up the whole building for weeks—until it was auctioned off. Then, there was the deputy who got his face slapped because he told a nice old lady she was delinquent.

McMahon learned all about taxes and such things by hurdling four civil service promotions to his job before being made collector. He's been a tax man for 16 years.

As a matter of choice, though, he prefers to use his talent for collecting money to help about a dozen outfits like the Poor Boys Priesthood Association, Beth Israel, or the Yeshiva El Torah. He's been doing that for about 10 years. Of course, it doesn't quite add up to the $30,000,000,000 a year in taxes from a million reluctant citizens that will fall to his lot now as collector of internal revenue.

Hanging on the walls of the collector's office in the United States Customs House overlooking Battery Park and New York Bay is a recognition from the Pope for work done with poor boys desiring to enter the priesthood; an honorary membership certificate he received in 1945 from the Internal Revenue Post 1255, American Legion, for meritorious service, and numerous other fine testimonials.

Young, alert, in every sense a good fellow; friendly, dynamic, with an infectious smile and a happy, wholesome countenance—that's Denis McMahon, collector of internal revenue for the greatest port in the world, New York.

Marine News takes this pleasurable opportunity to welcome, as well as congratulate him in his new high office, and to wish him everything this beginning of the New Year of 1950 can hold forth, and so to continue for many more years to come.

The Growing Protest Against Excessive Taxation

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. JENISON. Mr. Speaker, there is a steadily growing volume of protest against present excessive tax burdens. One of the most articulate of these comes in a "grass roots" protest from the editor of the Casey (Ill.) Daily Reporter. Mr. B. F. Morgan, the editor, chose the week of income-tax payments to focus the attention of his readers on the steadily growing costs of Government. Under permission granted to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I am including the text

UNIVERSITY OF MICHIGAN LIBRARIES

of his editorial, which, I might add, has attracted much attention and comment from his readers:

CASEY AT BAT

(By B. F.)

Good news next week. Navarily.

Or is March 15th one of good news?

Nine people out of ten wholeheartedly agree that the day has no significance but strongly indicates utter ruin if it continues a law of the land, nor is it one to produce even good thoughts. It is a day made so by man himself in which he discourages youth from thrift; in which he has caused more liars in America than any one law ever passed. This income tax law which was conceived and born below hades is one that is heart-rendering to one of ambition. The payment of such a tax is causing one who was or is possessed of ambition to lose courage, to give up in dispair and policy or to accept teaching that thriftiness pays. It is causing apathy in ambition because you pay out something with no value received. You pay out sums that have taken brains and toil to financially produce. What's the use of working to accumulate for old age or what's the use of being ambitious, just to see your savings go out in taxes that nobody knows where they go other than to see one group living handsomely on the profits of another group who works diligently to save to be thrifty, to have something someday so they too may live in better circumstances.

What good does it do to work hard and then give it away. What accomplishment is there at the year's end to have to part with savings that have been laboriously made. Isn't it about time to halt such an idiotic tax?

Our hat's off to Vivian Kellums in Connecticut who is even opposing collection of withholding taxes. She thinks she is entitled to compensation if this is a requirement. She has other things to do during the day besides collect such taxes, the use of such taxes for what purpose.

We need some more Vivians in this country to lead the way. If one will lead, then people are similar to sheep and the rest will follow. We have become so apathetic that today if somebody says "No" they are classed as radical. You can call the column a radical or whatever you want to but we like the idea of saying "No" when it seems necessary to do. Right here even in Casey we have become so used to never hearing the word "no" that most all walks of life sanction an ism that "Oh well, it may be all right. Why oppose it. Maybe it's all right." We know in one service club that attitude has taken place, we know other groups who follow suit. It's time to wake up. And if we don't wake up soon, you won't even have a ragged shirt to wear. You'll have a chain and serial number. This logic isn't hearsay. It's not fantastic. It's the way we're going, for all signs so indicate.

In the name of God and humanity, give us some men to run this country who can keep their heads cool and their feet on the ground. Give us some men who can implore the Almighty for guidance of the Nation rather than a bunch of poker-playing mammas. Give us some men who cannot fathom pussyfooting but who are possessed of common sense rather than a Harvard education; men who are for whom they serve instead of some foreign alliance; men who know the faith of their fathers, who built this country on private enterprise, rugged individualism, built on a better-mouse-trap idea; people who are free instead of burdened with taxes, for what? Yes; God, give us men. We are making life hard to live.

We send men to Washington and State legislatures who are no more fit to be there than a man in the moon. In Illinois the latest blunder coming out of Springfield is the school situation which was legislated similar to a cart before the horse. In Washington we send men there to govern affairs, but all they do is meet in committee and argue on some insignificant matter that doesn't amount to a whoop, whereas time is ill-spent. They squander but know nothing of how the money is made, by whom, and care little where it goes.

If we couldn't take a half-dozen ordinary citizens at random from this town and do a better job, then we'd come home with the tail under the hind legs; and the first thing, if we would ever be there, would be to let the people know that America comes first, the use of common sense so much outmoded would return pronto, and there'd be no excise tax, income tax, and all this other tomfoolery taxation. If a man made a dime, it would be his to spend, even for a glass of beer, and before we got this done we'd send Congress home and let the country have a major rest from legislation. There are so many laws now on the books and so many being passed and so many being written for approval that it's worse than nauseating, and the funny part—it's really comical—nobody knows what they're about, including the authors.

Let's wake up. Accumulation of grains of sand, though small, will soon build a sand bar, and try moving that in an hour. Let's wake up—get America back for Americans. Let's wake up with some common sense and practical knowledge rather than theory. Let's wake up and—it's not too late—enjoy life more abundantly with a free dollar, for with the present trend we are making life a burden.

It's time to wake up; it's time to rid ourselves of additional laws and taxes; and it's time to rid ourselves of such a deplorable, fraudulent tax as the income tax.

What do you think?

Presidential Electors

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include an article by Mr. J. Harvie Williams which appeared in the New York Times of March 6, 1950:

PRESIDENTIAL ELECTORS—AMENDMENT PROVIDING FOR DISTRICT ELECTION SYSTEM ADVOCATED

To the EDITOR OF THE NEW YORK TIMES:

Although the Lodge-Gossett amendment to change the method of electing the President passed the Senate by the necessary two-thirds majority, it has no chance of approval by this House of Representatives. If there is to be any electoral reform by this Congress, the opponents of the present highly unsatisfactory system must turn to the proposed amendment by Representative FREDERIC R. COUDERT, JR., of New York, which provides:

"Each State shall choose a number of electors of the President and Vice President, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress, in the same manner as its Senators and Representatives are chosen."

It further provides that when no candidate receives a majority of the electoral vote the final choice will be made from among the persons having the three highest numbers by a joint session of the House and Senate voting as a body, with three-fourths of the combined membership necessary for a quorum. Election will be by plurality on the first roll call.

The Lodge-Gossett amendment would abolish Presidential electors, retain the present basis for allotting electoral votes to the States and divide the electoral vote in each State among the candidates for President in direct proportion to the popular vote they receive therein, calculated to the third decimal place and farther if necessary to resolve a tie. Should no candidate win 40 percent of all the electoral votes, the final choice would be made by a joint session of the Congress voting by the head.

DIFFERING PLANS

Both of these electoral reform plans are as different from the present system as they are different from each other. The Coudert amendment is really the plan of the founding fathers before it was violated by the States in the rise of parties. It will be offered as a substitute for the Lodge plan.

The structure of our general government is based on a mixture of Federal and National principles. The Senate, in which each State has equal representation, is the Federal body, while the House of Representatives, being based on population, is the national body. The Congress of the United States, in every action, expresses the Federal and National principle.

The founding fathers regarded the electoral college as a counterpart body to the whole Congress in joint session for the single purpose of choosing the President and the Vice President. To each State they gave electoral power equal to the congressional power. The electoral college was and still is necessary to articulate the Federal and National basis of the Presidency. It was and still is necessary to maintain the separation of executive and legislative powers, an essential element in the structure of our Government. There is no way to bring about the direct popular election of the President without destroying our dual sovereignty. By abolishing the electoral college the Lodge amendment would be a long first step in that direction.

The problem sought to be solved springs from the State-wide election of all of a State's presidential electors, so that a plurality of a single vote may elect 47 electors of one party in the State of New York without a commensurate shift in congressional power. A balancing of electoral and congressional power can be had by electing all Representatives on State-wide tickets, as Senators and electors are now elected, or merely by electing those electors corresponding to Representatives in congressional districts. That is one of the essential features of the Coudert plan of electoral reform.

EFFECTS OF ADOPTION

Adoption of the Coudert amendment would have these effects:

Division of each State's electoral power among the political parties on the same basis as its congressional power is divided among them, thus giving national parties (merely aggregations of State parties) Presidential power commensurate with their congressional power—an ideal situation.

Give the Presidency to any party winning the equivalent of a bare majority in the House (218) and a bare majority of the States (25 with 50 electors).

Give the President and the Congress as a body the same constituency, cast up in the same form, thus ending the basis of the ideological conflict inherent in the present imbalance of electoral and congressional power.

Reduce to proper proportions States now having large blocs of doubtful electoral votes and make able men from other States available for presidential nominations.

Besides, proportional representation would create a greater disparity in the States and

sections between the electoral power and congressional power of the parties—certainly no basis for party government. For instance, the Republicans would lose electoral power in the Northern States, where their congressional power rests, and gain electoral power in the South, where they have no congressional power.

The Coudert amendment will solve our electoral problem within the framework of the established structure of our Government simply and effectively. It should be adopted.

The freakishness of the Lodge-Gossett amendment should condemn it.

J. HARVIE WILLIAMS.

NEW YORK, *March 2, 1950.*

For Want of a Code

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial titled "For Want of a Code," which appeared in today's Washington Post, March 22, 1950:

FOR WANT OF A CODE

Much of the hullabaloo that Senator MCCARTHY has aroused with his trumped-up charges might have been avoided by a code of fair procedure for congressional investigations. Acting without any such code, the Tydings subcommittee made a sincere effort to restrict Mr. MCCARTHY to presentation of facts and to give equal prominence to the denials of persons recklessly accused of Communist sympathies. But its efforts have not prevented the broadcasting of irresponsible charges from the committee room. Nor have they prevented the spread of confusion and loose suspicions relating to our foreign policy. The primary responsibility falls, of course, on Senator MCCARTHY, but his tirades could and would have been shortcircuited by proper investigative procedures.

The best investigators of our time have worked quietly until they assembled substantial facts to go on. This means careful staff work before open hearings are held. It is the business of the staff to separate flimsy and groundless charges from charges that have some evidence behind them. Then when the open hearing goes forward, a consistent and well-rounded picture can be presented, without releasing any trial balloons filled with hot air or poison gas. Experience has shown that when individual reputations are at stake such preliminary investigative work and screening is imperative if the rudiments of fairness are to be observed.

At the beginning of the present inquiry Senator TYDINGS made extraordinary efforts to be fair. He insisted on bringing immediately into the record relevant facts about each case—facts that Senator MCCARTHY had ignored. In this way he exposed the hollowness of the McCarthy accusations. But the result was to fill the air with a bedlam of charges and countercharges highly damaging to our national unity and to the conduct of our foreign policy. As a practical matter, we doubt that any committee can be prepared to give immediate refutation to wild charges, and, if it could, a great deal of harm would nevertheless be done by officially airing mere rumor and disconnected bits of information that add up to nothing.

What has been lacking here is careful staff work. Only on Monday did the subcommittee get from Senator MCCARTHY in confidence a list of 81 cases of alleged Communist infiltration in the State Department. Obviously the subcommittee should have had this list and should have done extensive checking as to the facts before any hearings were held. Then it could have given the public facts instead of Mr. MCCARTHY's inflamed imaginings. With members of both parties and a competent staff on hand to see that the facts were properly sifted, there would have been no danger of a whitewashing. And the Senate could have saved itself from an orgy of mud throwing.

Apparently the committee now intends to sift the evidence carefully and check it against State Department records before any further hearings are held. That is all to the good. But the fact remains that, in the hearings to date, Senator MCCARTHY has succeeded in taking the ball and running wild with it. This seems to us greatly to strengthen the case for adoption of a code of fair procedure for all congressional investigations. Two years ago we printed a series of editorials pointing to the need for such a code, and outlining what it should contain. The pertinence of the rules we suggested, and perhaps additional ones, looms even larger today. For Congress is falling in the esteem of the people, and that decline is likely to continue until it curbs the misuse of its vast investigative power to serve petty, mean, and partisan ends.

Cooperative Housing for Middle-Income Families

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by President Green, of the A. F. of L., in behalf of H. R. 7402:

The American Federation of Labor is wholeheartedly supporting H. R. 7402, the cooperative-housing bill for middle-income families.

There can be no doubt that additional legislation is needed to meet the acute housing needs of this group whose incomes are too high to qualify them for public housing and too low to afford the new homes being constructed by private builders. Discussion of this bill has developed an unusual amount of confusion. Yet the reasons why you should vote for it are essentially very simple.

The only way the housing needs of this middle-income group can be met without an outright Government subsidy is through a cooperative-housing program. In order for cooperative-housing projects to get underway they will need proper private financing. The bill provides this, without any increase in the public debt, by allowing private funds to purchase certain Government-backed debentures. The proceeds from the sale of these debentures would in turn be loaned to cooperatives.

Strict requirements have been included covering allowances for reserves (one-quarter of 1 percent) and administration (one-half of 1 percent). The cooperative-housing projects will be sound business enterprises, with a 10-percent equity required for all participants. Ample safeguards against speculation are also in the bill.

The results of utilizing the cooperative techniques together with the financing arrangements in the bill are the only way to make possible monthly payments of $60–$70 a month on units now renting for $85–$95 a month.

In behalf of 8,500,000 members of the American Federation of Labor, I specifically request that you vote for H. R. 7402, as reported by the House Banking and Currency Committee.

New Iron-Ore Fields Found in Northwest Central Minnesota

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. HAGEN. Mr. Speaker, new discoveries of iron ore in northwest central Minnesota may bring new prosperity to a section of my own district, the Ninth of Minnesota, and may help solve the problem of finding needed iron ore for our Nation.

An interesting story of the discovery of iron-ore deposits was reported in the St. Paul Dispatch for March 7, 1950. I am sure the article will be of interest to Members of the Congress.

It follows:

NEW IRON-ORE FIELD INDICATED IN BECKER-OTTER TAIL COUNTIES

Location of a huge magnetic field with definite possibilities of commercial iron ore development in Becker and Otter Tail Counties was announced today by the University of Minnesota.

Dr. C. H. Schwartz, geology professor and director of the Minnesota geological survey, said he is very optimistic about the field uncovered by the aerial doodle-bug survey.

The doodle bug, or magnetometer detector unit, is slung from a specially equipped airplane by a long cable. It is used to locate, not ore itself, but the type of glacial drift known to contain iron ore.

"Locating the ore itself is like finding the plums in a pudding," Dr. Schwartz said today. "In this case I think experimental drilling by the iron-ore companies may be extremely rewarding.

"The glacial drift is between 190 and 300 feet deep, and drilling will be admittedly expensive but I feel strongly that it would be worth it. With the search for new ore fields extending to remote parts of the world, a new discovery in a strategic location like Minnesota would be invaluable."

The newly discovered magnetic field is in the shape of a rough letter "E," 50 to 30 miles wide, lying partly in Otter Tail and partly in Becker Counties.

Some exploratory core drilling was done in Otter Tail County in 1910, Dr. Schwartz says, and developed an ore-bearing rock formation at 350 feet. Because the glacial drift at this point was at 294 feet, work was abandoned as being too expensive.

Dr. Schwartz feels that the area should be systematically reexamined. He doesn't promise another Mesabi range, but he says, "You never can tell what you will find."

UNIVERSITY OF MICHIGAN LIBRARIES

A Post Mortem on the Coal Strike

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial titled "A Post Mortem on the Coal Strike," which appeared in the St. Louis Labor Tribune on Thursday, March 16, 1950:

A POST MORTEM ON THE COAL STRIKE

The current issue of Labor, organ of the national railroad unions, stated that the new coal mine argeement signed last week was a triumph for both President Truman and John L. Lewis, and a stunning defeat for the Taft-Hartley Act.

That is a factual summation. As the article points out, President Truman "carefully calculated his moves, never lost his head, and paved the way for a peaceful settlement."

It also stressed the strongest link in the successful chain of events, namely the undaunted determination of the rank-and-file miners. Without belittling Lewis, the article declared, the rank-and-file in the last analysis won the battle.

As a characteristic indice of this determination, the article quotes a Cloverdale, Pa., miner who said: "We went on strike for a new contract, we went hungry for a new contract—and we won."

However, the one single individual who played the decisive role and served as the fulcrum which ended this stalemate, was Federal Judge Richmond B. Keech. The Taft-Hartley law encouraged the coal operators to resist collective bargaining on a reasonable basis because they thought the injunctive weapon provided by the Taft-Hartley Act would win the battle for them and force the miners back to the pits.

But unlike another Federal judge, Alan Goldsborough, who 2 years ago levied a seven-figure fine against the union for ignoring the court order, Judge Keech showed he was made of sterner stuff. He refused to play dog-in-the-manger for the mine owners. That forced them to quickly change their tactics and for the first time they bargained in good faith as they could have done any time during the previous 8 months after the old contract expired.

Labor owes Judge Keech a profound debt of gratitude, not only for showing that this injunctive phase of the Taft-Hartley Act is unenforceable and that you can't compel free American workers to work against their will; but because a contrary unjust ruling would not only have broken the mine workers' union but laid the ground work for the busting of all big industrial unions.

As one distinguished Senator, in close touch with the situation, said, "I have no doubt that the big financiers and industrialists, who are back of the coal operators, tried to block a settlement except on their own terms, because they thought that under the Taft-Hartley Act they had Lewis over a barrel. Furthermore, they figured that if they could break Lewis, they could go ahead and break other unions, too. Fortunately for the country, the plot failed."

It was indeed a great labor victory. But to make it a lasting one, Congress should heed President Truman's request to set up a fact-finding committee to make an exhaustive long-range study of this obviously unstable, sick industry, and find ways and means to stabilize it and prevent needless future labor-management clashes and contests for power like the one just closed.

Middle-Class Housing Bill

EXTENSION OF REMARKS
OF
HON. JOHN B. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks, heretofore obtained, I include herein an editorial from the St. Louis Labor Tribune of Thursday, March 16, 1950, entitled "What the Middle-Class Housing Bill Could Do."

The housing shortage is an evil that cuts across income lines.

It has as little respect for the family whose earnings total $3,000 a year as it has for the family bringing in half that.

The bald fact is that rents are high—and rents on the few dwellings that do become available are completely out of reach of low-income groups, and well out of range of our middle-income families—those whose earnings amount to between $2,700 to $4,400 a year.

In the past week, for example, the flats and apartments advertised for rent in St. Louis newspapers show rents far above the ability to pay of our middle-income groups.

Here is an efficiency apartment, for example—a small apartment—to rent for $90 a month. Here is a one-bedroom place for $105. Here are dwellings upon dwellings that specifically declare "no children."

We are often told by real-estate men that a family's rent should not exceed one-fourth of its income. At that rate, our middle-income groups can afford payments for housing of only $50 to not more than $85 a month.

But we know too well that because of our national income structure, more of the group we seek to help can afford closer to $50 a month than $85.

Can these families buy homes? Most of those who write me can't even afford the down payments. Yet they are in desperate need of housing. They are potential buyers, but not at present high levels. They need lower prices, and they need lower down payments.

They need lower rents. They need rents they can afford, payments which will not be so high as to be met only by doing without other necessities.

In this program to spur housing for the middle-income group, we will be doing more than providing the means for many of our people to have decent and adequate dwellings.

We will be helping to provide jobs, and income, for many; we will be aiding business; we will be helping our own general national economic situation.

There are some who may claim that these middle-income citizens can help themselves. But can they? I maintain not. And I insist they are getting far less than value received for the dwellings in which they must live because of this national housing shortage.

We have talked about some of the places that are coming open now. But what of those already rented? Here in my St. Louis district is a family paying $90 a month for four inadequate rooms over a garage. The father—the only breadwinner in the group—brings home $65 a week.

Here in my district is another family, a man, his wife, and three children, paying $16 a week for three rooms—with an outdoor toilet. This is $70 a month rent for a family whose income is $45 a week.

This is not just a question of excessive rents. It is a question of providing housing for people who can afford to pay the rate provided by this bill—providing better housing and through it, better health, better sanitation, better living conditions.

It is a question of whether we are willing to meet our responsibility to responsible citizens. Our path is clear.

The editorial follows:

WHAT THE MIDDLE CLASS HOUSING BILL COULD DO

There are millions of lower-income families who can't afford to buy a home under current inflated speculative prices. They, along with other millions of families are compelled to pay more for rent than many of them can afford. Still other income groups, who have been forced to move to suburban and rural areas to find a place to live, have to spend more for additional transportation than what they often save in rent.

This means that excessive rent just leaves the average tenant with so much less for everyday needs such as clothing, food, medical care, and a lot of other things which also help our dwindling retail trades.

It therefore does seem logical to assume that a Federal law which promotes needed cooperative housing for middle-income groups on easy terms would be a boon to the Nation's commerce. It would make more jobs for building mechanics; stimulate the demand for building materials and supplies which provide work for millions of persons. It would give these middle-income groups more money to buy the products of the farmer, manufactured goods, various forms of services including medical and dental treatment.

In other words, the present proposed middle-income housing bill, if passed by Congress, will put more money in more people's pockets to spend at a time when there is a great need for greater consumer spending power.

Let's hope that Congress, which is now considering this bill, does not fall down on this opportunity to provide a powerful needed vitamin to the Nation's economy.

Housing Cost Survey

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. BUCHANAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement:

AMERICANS FOR DEMOCRATIC ACTION,
Washington, D. C., March 21, 1950.

To: All members of the House Committee on Banking and Currency.

Subject: Housing cost survey, March 6, 1950.

When the Honorable Robert F. Wagner, Jr., appeared before your committee to present

ADA's views on the subject of middle-income housing, he was requested to ask the national ADA to conduct a housing cost survey and to send the findings of this survey on to the committee. The national ADA through its local chapters has conducted such a study in 20 cities in 16 States. In each city, the best source of information was used: i. e., FHA, real estate board, local building and loan companies, etc.

The findings of this survey are indicated in the attached table. All cost figures are current as of March 6, 1950.

JOHN J. GUNTHER,
Legislative Reresentative.

State and city	2-bedroom frame			2-bedroom brick			3-bedroom frame			3-bedroom brick		
	Minimum	Maximum	Average	Minimum	Maximum	Average	Minimum	Maximum	Average	Minimum	Maximum	Average
Connecticut (State-wide)	$7,500	$12,000	$9,300	$8,000	$16,000	$9,600	$8,900	$16,000	$10,500	$9,300	$29,000	$11,000
Illinois: Chicago (⅔ of homes costing less $12,000 were 4-room units)	11,200	14,500	12,600	11,700	18,000	13,500	12,600	[1] 23,000	15,000	13,000	[1] 30,000	15,600

Triennial National Convention of B'nai B'rith

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by Secretary-General Trygve Lie at the triennial national convention banquet of B'nai B'rith at the Hotel Statler, Washington, D. C., on Tuesday evening, March 21, 1950, and also the address of introduction of the Secretary General of the United Nations by Mr. Frank Goldman, president of B'nai B'rith:

INTRODUCTORY ADDRESS BY MR. FRANK GOLDMAN, PRESIDENT OF B'NAI B'RITH

Distinguished guests, ladies and gentlemen, on behalf of B'nai B'rith, I welcome you who are present at this dinner, as well as you who are our radio listeners throughout the United States and elsewhere in the world.

A handful of men in New York in 1843 established B'nai B'rith. B'nai B'rith has now grown to a membership of over 350,000 men and women of the Jewish faith.

It is the oldest and largest Jewish service organization in the world, and engages in a wide range of humanitarian activities. For more than a century it has sought to play an active, constructive role here and abroad to protect the freedom of individuals and institutions.

Last year, as the American constituent of the Coordinating Board of Jewish Organizations, we became a consultant to the Economic and Social Council of the United Nations. As a result, B'nai B'rith has had the privilege to participate in the work of the United Nations and especially in the field of protecting human rights.

We feel it most fitting that this dinner meeting during B'nai B'rith's Triennial Convention here in Washington should be dedicated to freedom and democracy. We are honored at the presence here of the Vice President of the United States, members of the Cabinet, the Congress, and the Supreme Court, and many other high officials of our Government and foreign governments and of the United Nations. There are present B'nai B'rith delegates from the United States, Canada, and other countries. We are delighted also to have with us a member of B'nai B'rith who has served so effectively and so selflessly on behalf of Jewish causes. I refer to Mr. Eddie Jacobson, of Kansas City, whom we will have occasion to honor later in our program.

We live in a world tragically divided and tragically insecure. Governments must devise policies premised on the continued existence of peace. The United Nations represents the most hopeful means of securing peace, of protecting the economic and social achievements of all peoples, and of building a world where people will practice tolerance and respect for one another.

Macaulay said: "Men are never so likely to settle a question rightly as when they discuss it freely."

Especially in the field of human rights has the United Nations already registered great accomplishments. We who lost one-third of our coreligionists as a result of the Nazi scourge hail the progress made in the protection of human rights since President Roosevelt enunciated the four freedoms.

To help carry out the program for the protection of human rights, B'nai B'rith has urged on the United Nations a modest two-point proposal.

First, the United Nations should ask each member state to establish a National Commission on Human Rights.

Second, the United Nations should establish fact-finding commissions to provide for world-wide surveys regarding the observance and protection of human rights.

We believe that a most effective means to eliminate undesirable conditions is continually to expose the facts in responsible forums. It is for that reason that we have made our suggestions to the United Nations.

B'nai B'rith is honored that the Secretary General of the United Nations should make his first public speech in Washington from the platform of our convention.

His life history has marked points of resemblance to the life history of many great Americans and further indicates the true democratic tradition of Norway.

He was born in Oslo in 1896. While still in high school he was elected president of the Norwegian Labor Party's branch in a suburb of Oslo. Later he became legal adviser to the Labor Party and a member of its national council. He was active in settling controversies between labor and management.

He served Norway as Minister of Justice, as Minister of Commerce, and as Minister of Foreign Affairs. He headed the Norwegian delegation to the San Francisco Conference on the United Nations in 1945 and served as chairman of the commission which drafted the Charter for the Security Council. When the first meeting of the General Assembly of the United Nations was held in London he was elected the first Secretary General of the United Nations.

The prodigious work of the Secretary General is well known to the world. He has devoted himself untiringly and with great skill and intense sincerity to accomplishing the purposes of the United Nations. He has made a great contribution to the peace and well-being of the world.

We are especially indebted to him and to the United Nations for assisting so effectively in bringing peace to Palestine, and Israel into the family of nations.

On behalf of B'nai B'rith I am privileged to present one who has aptly been called the world's first citizen, the Secretary General of the United Nations, Mr. Trygve Lie.

ADDRESS BY SECRETARY GENERAL TRYGVE LIE

Mr. Chairman, distinguished guests, ladies, and gentlemen, I am happy to be able to accept your invitation to speak at the triennial convention of B'nai B'rith.

I feel it is especially appropriate for the Secretary General of the United Nations to talk with the members of an organization that is working for better human relations and is helping to make the community a better place in which to live.

UNIVERSITY OF MICHIGAN LIBRARIES

Just as B'nai B'rith is working for these results in the American community and the American Nation, so the United Nations is working for the same objectives in the whole world.

International peace and security, friendly relations, respect for equal rights, self-determination, human rights and fundamental freedoms for all without distinction as to race, sex, language, and religion, harmonizing the actions of nations—these words of the United Nations Charter express the most deeply felt desires of peoples all over the world. They are words that express the desires of people of every religious faith, every political belief, every social order, every cultural tradition, and every stage of economic development from the most backward to the most advanced.

You will agree that these are great words.

But, you have the right to ask, what effect is being given to them—or can be given to them by the United Nations?

Some people think that the United Nations has not done much about these goals and will not be able to do much about them. Some fear that the United Nations is impotent because of the veto, that it has been paralyzed by the great power conflict and that it has been consigned to the deep freeze by the cold war.

This is a natural impression for people to get. The destructive effects of conflict between nations rather than the constructive effort toward harmonizing the actions of nations has held the spotlight of attention during the past 3 years.

Nobody should underestimate the dangers and difficulties created for the world and for the United Nations by the cold war. Nevertheless, this impression of the weakness of the United Nations, natural as it is, is very wrong. It is a mistake that must be corrected if the world is to succeed in bringing the cold war to a peaceful end.

It was only 5 years ago this coming June that the Charter of the United Nations was signed in San Francisco. That is an extremely brief period of time by any measurement of history.

Yet during that brief span of 5 years the words of the United Nations Charter on human rights and freedoms for individuals and on equal rights and self-determination for nations have been proved by events to reflect more accurately the most fundamental forces actually at work in the world than any of the slogans of the cold war.

In my fourth annual report to the General Assembly on the work of the Organization I referred to these events when I said:

"If the importance of these developments were correctly assessed, I believe that the world would find it possible to approach the present east-west difficulties with less hysteria, for they would be more easily seen in their true perspective. I believe that the rise of dependent peoples and the human-rights movement will, in the long run, have far more significance and give rise to greater events in the second half of the twentieth century than will the present ideological struggle."

As time passes, I think that more and more people will come to agree with that appraisal. We who live in these times are both witnessing and participating in some of the greatest changes in the history of the world.

Since the United Nations Charter was signed at San Francisco the following countries of Asia have gained their independence: The Philippines, India, Pakistan, Burma, Ceylon, Jordan, Israel, Korea, Nepal, and the United States of Indonesia. All these countries are now either members of the United Nations or they have asked to be admitted. Together these countries have a population of over 600,000,000, four times the population of the United States and over one-quarter the entire population of the world.

The mere existence of the United Nations, with its Charter pledging human rights for people and equal rights for nations, has helped along this movement.

In Africa the United Nations, by the action of the General Assembly last fall, has become the liberator of former colonies. Libya will become independent in 1952 and Somaliland in 1960. At this moment a United Nations commission is consulting the people in a third former colony—Eritrea—in order to determine their wishes as to their future.

Elsewhere in Africa the national movements toward freedom and equality are not so far advanced. But here, too, the United Nations plays a significant role through its trusteeship system and through the application of those provisions of the Charter that establish for the first time in history a degree of international responsibility for all dependent peoples.

The human-rights provisions of the United Nations Charter were greatly strengthened in San Francisco by the influence of nongovernmental organizations like B'nai B'rith, who were there as consultants or observers. Besides its general pledges to promote observances of human rights, the Charter specifically provided for the creation of a commission on human rights.

Under the distinguished chairmanship of Mrs. Franklin D. Roosevelt that commission worked for 2 years on drafting the universal declaration of human rights. The General Assembly of the United Nations adopted this declaration without a single negative vote—although there were some abstentions—in Paris on December 10, 1948, a little more than 1 year ago.

The Universal Declaration of Human Rights goes beyond previous declaration of human rights in two ways. In the first place it is international. It is the first declaration of human rights for the whole world in all history. In the second place it includes not only the traditional rights to political and religious freedoms. It is also an expression of economic and social rights—such rights as the right to work, the right to social security, and the right to a decent standard of living.

Like its great predecessors in the Western World—Magna Carta, the Declaration of Independence, and the Declaration of the Rights of Man—the Universal Declaration of Human Rights is not in itself a law. Like them, however, it is a source of law. It raises a standard to which all men everywhere can make appeal and by which they can measure the conduct of their Government.

Most of the rights proclaimed in this declaration are not yet enjoyed by most of the peoples of the world. Millions do not enjoy freedom of speech and religion. Millions are denied equal opportunity because of the color of their skin or their beliefs. Still greater millions have not yet won security from poverty and hunger.

Judging by what has begun to happen within a few months after it was first proclaimed, the Declaration of Human Rights is going to have a tremendous influence in helping people to win wider and more faithful observance of these rights from their governments.

Decades passed before more than a few dozen copies of the Magna Carta were made. Years passed before more than a few thousand copies of the Declaration of Independence were printed.

In only 12 months something like 2,000,000 copies of the Universal Declaration of Human Rights have been printed. Already it has been, or is being, translated into 30 languages. It has been put on film and on posters and repeated in radio broadcasts. And this is only the beginning.

I prophesy that the time is not far distant when there will be not 2,000,000, but 200,000,000 copies of the Universal Declaration of Human Rights, and it will be translated not only in 30 languages, but in 90 languages. If we work faithfully for it the time will come when there will be a copy for every schoolroom and every public bulletin board in the world.

Already the new Republics of Israel and Indonesia have borrowed from the Declaration in the drafting of the constitutional provisions for the human rights of their peoples. It has been cited in court cases in this and other countries. Meanwhile the Declaration is helping greater numbers of people all the time to be more articulate and effective in demanding and securing observance of these rights from their governments.

The United Nations is both influencing and being influenced by the rise of dependent people and the human rights movement in many ways. All the economic and social programs of the United Nations and the 12 specialized agencies associated with it are directed at winning more equal opportunity and wider enjoyment of human rights and freedoms.

The United Nations new and expanded program of technical assistance for economic development, which owes so much to the United States Government, and is slowly getting under way, is a case in point. The present financial scope of this program is modest. The possible ultimate results of the program, in terms of higher living standards, are immense, provided that technical assistance is accompanied and followed by capital investment over the next 10 to 20 years on a bold and creative scale.

Economic assistance programs carried out through the United Nations and the specialized agencies offer advantages to both lending and receiving countries and to the world as a whole. For the lending countries the United Nations offers such protection against charges of imperialism or of using economic aid for purposes of political pressure. To the recipient countries United Nations programs offer the opportunity to join on a basis of equality in planning and executing programs that are of benefit to lending and recipient countries alike. For the world as a whole every United Nations program of economic assistance offers another chance to ease the tensions of the cold war.

I was glad to note that your Secretary of State, Mr. Dean Acheson, declared in his speech at San Francisco last Wednesday that the United States in its financial, economic and technical assistance to countries in Asia would "work in the spirit and within the framework of the United Nations." I am certain that such a policy of working through the United Nations will be of benefit to the United States, to the countries of Asia and to the cause of world peace.

Another point should be made about the role of the United Nations in this vast movement of peoples toward equality in the world and toward a fuller realization of human rights and freedoms. The United Nations is also exerting constant influence to keep it within peaceful bounds. Such great changes as have occurred since the end of the war could not have taken place without far more violence and bloodshed if the United Nations had not existed.

I wish now to turn briefly to the great political issues before the United Nations.

One of these is the question of which government should represent China in the United Nations as a result of the civil war.

As you know, the world is strongly divided on the question of Chinese recognition and representation.

Of the countries with great power privileges in the United Nations, two—Great Britain and the Soviet Union—have recognized the new People's Republic Government in Peking. The other great powers, France and the United States, continue to recognize the Nationalist Government now on the island of Formosa.

Diplomatic recognition has been extended to the Peking government by 24 countries, 13 of which are member states. They include Asiatic countries like the neighboring states of Afghanistan, Burma, Ceylon, India, and Pakistan, and such European states besides the United Kingdom, as the Nordic countries, Denmark, Sweden, Finland, Norway, besides Switzerland and others.

The Nationalist Government at Formosa continues to have diplomatic relations with a somewhat larger number of governments, among them most of the American Republics. Finally, there is a third and smaller group of countries which do not have regular diplomatic relations with either government.

You will note that this division among the nations of the world does not at all follow the so-called usual lines.

I have been trying to help the member governments settle the question of who is to represent China in the United Nations. I am not doing this because the Soviet Union and its neighbors have refused to attend meetings at which China is represented by Nationalist delegates. I have never thought walking out of meetings and staying away from meetings was a good way to settle differences of opinion.

It is a serious matter to have the Soviet Union staying away from United Nations meetings, but that is not the first consideration. The first consideration is the people of China. There are 450,000,000 people in that country—the greatest in the world and in the United Nations in terms of population alone.

The 450,000,000 people of China are collectively original members of the United Nations by the terms of the Charter itself. They have a right to be represented in the United Nations by whatever government has the power to "employ the resources and direct the people of the state in fulfillment of the obligations of membership" in the United Nations. I repeat—whatever government is thus qualified, regardless of its ideology.

Before I conclude I wish to say just a word about the role of the United Nations in the cold war.

Can the United Nations do anything about the cold war?

I think it can.

United Nations programs of economic assistance and social welfare will help to reduce cold-war tensions, provided such programs are carried out on a nonpolitical basis.

The United Nations has demonstrated its capacity for mediation and conciliation of bitter conflicts in Palestine, Indonesia, and Kashmir.

The United Nations has been able to keep within peaceful bounds every other dispute between nations that has been brought before it. The great power veto has not prevented the Security Council most of the time from performing its conciliating and mediating role. The General Assembly, where there is no veto, has full power to supplement this pacific work of the Security Council and has done so with success in a number of instances.

It is true that no progress has been made for the last 2 years and a half toward getting agreement on the control of atomic energy, or on reducing other armaments, or on providing military forces to the Security Council to enforce its decisions.

Nevertheless, the United Nations has the great advantage of being able to apply to conflicts of power those moderating controls and conciliating influences that are the result of the principles of universality and sovereign equality among nations.

There are many resources for peace in the United Nations Charter and in the Organization that are either untapped or have been only partially used so far.

For example, the Charter calls for special periodic meetings of the Security Council at which the members can be represented by the foreign ministers or even the heads of government. Under the rules the Council should hold such meetings twice a year but so far there have not been any.

If such special meetings were to be held as a regular thing they should be devoted to a periodic review of outstanding issues before the United Nations, accompanied by quiet and private consultations on these issues among the foreign ministers.

Great results should not be expected from any one of these meetings. Their success or failure should not be measured in terms of decisions reached, but in terms of a step-by-step progress toward better understanding and the restoration of an atmosphere of mutual confidence more favorable to the peaceful settlement of outstanding issues.

Besides the opportunity for progress offered by high-level periodic meetings of the Security Council, the United Nations offers many other possibilities as well.

I think we should use all these resources in order to try to bring the cold war to an end.

I do not believe in political miracles. It will take a long series of steps to reduce the tensions of the conflict and bring the great powers together.

Equally I do not think the world can safely delay taking the first steps on this road of negotiation and conciliation. The danger of an indefinite continuation of the cold war in this age of the atom bomb, the hydrogen bomb, and bacteriological weapons is too great.

I want to make certain that I am not misunderstood when I speak for negotiation among the great powers. I do not mean by negotiation surrender or appeasement by either side. I mean negotiation—which requires honest give-and-take by both sides.

I have been encouraged by the recent reaffirmations from the two leading great powers—the United States and the Soviet Union—about the possibilities of peaceful coexistence between them and between the different economic and political systems they represent. The United Nations was founded upon that belief and the hope of world peace depends upon its validity.

What we need, what the world needs, is a 20-year program to win peace through the United Nations.

I believe that most people everywhere in the world will join me in the desire and hope that member governments of the United Nations will make renewed efforts to get together on the first steps of such a United Nations peace program without delay.

Andrew Jackson—Great in War, Great in Peace

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. LYNCH. Mr. Speaker, under the unanimous consent granted me to extend my remarks, I take pleasure in including herein an editorial by Harry H. Schlacht, which appeared on March 15, 1950, in the New York Journal-American. The editorial follows:

ANDREW JACKSON—GREAT IN WAR, GREAT IN PEACE

History is the mirror of the past. It is the guide of the present. It is the beacon of the future.

Affection has no greater theme, wisdom has no nobler counsel, than the living actions of our sainted sires.

Today is the one hundred and eighty-third anniversary of the birth of Andrew Jackson. He was the son of destiny. He was the seventh President of the United States.

He was the great warrior in the Battle of New Orleans. He is in a class by himself in the history of Presidents.

He was the foe of oppression. He was the lover of justice. He was the friend of humanity.

The story of Old Hickory is always inspiring, is always new. His life sprang from the dark valley of obscurity like the peak of his favorite Alleghenies—rough, rugged, sublime, piercing every cloud till its summits bathed in the sunlight of heaven.

Like Niagara Falls or Mount Washington, his character more deeply impresses us the more it is contemplated.

Symmetrical, massive, and grand, it challenges admiration. It prompts high ideals. It excites wonder.

Washington was the Father of his Country. Jefferson was the philosopher of democracy. Jackson was its defender.

In what age did Jackson live? Where in the records of history is to be found an era in which the human race made mightier movements? Where is to be found an era in which occurred the formation and dissolution of European governments and the triumph of the American system?

Today our country is at the crossroads of destiny. Today we are engaged in world-wide ideological conflict testing whether or not our form of government shall continue to endure. We are engaged in a desperate struggle with enemies within our gates who would destroy our sacred institutions, who would impose on us an alien system that would mean the end of everything that is dear to us.

Here on this continent Andrew Jackson helped to perpetuate a way of living which has proved to be the world's greatest contribution to the dignity of man.

It is civilization's brightest promise. It is civilization's strongest hope.

Here in America the poorest lad can learn from the career of Andrew Jackson—an orphan at birth—that poverty is no bar to the strength of the free spirit.

Here in America the avenues of the citadel of our strength and the posts of honor are open to universal competition.

Here in America the freedom-giving institutions of our land call to the highest honors her children from the workshop, from the farm, from the city.

The ranks of American eminence have come from the humblest origin. In life, Jackson's career was like the blaze of the sun in the fierceness of its noonday glory. In death, Jackson was as lovely as the mildest sunset of a summer evening when the sun descends in cloudless, tranquil beauty. Let us serve our country as he served it. Let us serve our God as he served Him.

God grant us the wisdom, the courage to protect and preserve America.

Selected Statistics on Corporate Profits and National Income, 1929–49

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statistics:

Selected statistics on corporate profits and national income, 1929–49

[Millions of dollars]

Year	National income	Corporate profits before tax	Corporate profits after tax	Corporate profits after tax as percent of national income
1929	87,355	9,818	8,420	9.6
1930	75,003	3,303	2,455	3.3
1931	58,873	−783	−1,283	−2.2
1932	41,690	−3,042	−3,424	−8.2
1933	39,584	162	−362	−.9
1934	48,613	1,723	977	2.0
1935	56,789	3,224	2,259	4.0
1936	64,719	5,684	4,273	6.6
1937	73,027	6,197	4,685	6.4
1938	67,375	3,329	2,289	3.4
1939	72,532	6,467	5,005	6.9
1940	81,347	9,325	6,447	7.9
1941	103,834	17,232	9,386	9.0
1942	137,119	21,098	9,433	6.9
1943	169,686	25,052	10,646	6.3
1944	183,838	24,333	10,808	5.9
1945	182,691	19,717	8,502	4.7
1946	179,562	23,560	13,940	7.8
1947	201,709	31,602	19,091	9.5
1948	226,204	34,793	21,174	9.4
1949	221,500	[1] 28,800	[1] 17,300	7.8

[1] Estimated by the Department of Commerce on the basis of a projection of the profits of the first 3 quarters. Recent corporate reports indicate that this method may underestimate the recovery of the last months of the year.

Young Newspaperman Points Up Difficulty in Reducing Appropriations

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. HAGEN. Mr. Speaker, I desire to call to the attention of the Members of the House an extension of remarks which I inserted in the RECORD on February 21. It will be found on page A1305 of the Appendix and it is entitled "Weekly Newspaper Editor Points Up Difficulty in Reducing Appropriations."

This is an article written by a young man on the staff of the Warren Sheaf, published at Warren, Minn., in my congressional district. His name is Victor Aalbu, who each week does a fine job of turning out an interesting column for this outstanding weekly newspaper. His column is entitled "Chips Off the Block."

On February 21, in calling attention to the column which I had inserted into the RECORD, I had mentioned that it was written by Neil Mattson. Mr. Mattson since has called to my attention the fact that it was Mr. Aalbu who wrote it. I take this opportunity to make this correction and to again call your attention to this interesting article showing how difficult it is to reduce appropriations.

Birthday of Thomas Alva Edison

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. WEICHEL. Mr. Speaker, the memory of one of America's greatest sons was honored when the Nation, from coast to coast and Lakes to Gulf, combined in a spontaneous observance of February 11, 1950, as the one hundred and third anniversary of the birth of the late Thomas Alva Edison. Edison's genius, which gave the world the electric light, the phonograph, the motion picture, and numerous greater inventions, was memorialized throughout the Nation and by persons from all walks of life. Annually throughout the country, Thomas Alva Edison is memorialized and I want to include the very fine address delivered by George E. Stringfellow, vice president of Thomas A. Edison, Inc., before the Rotary Club of Paterson, N. J., memorializing the great inventor:

THERE IS THE RISING SUN

To your eye and imagination, and to mine, nothing, I suppose, is more impressive than the rising sun; increasing the light slowly, yet with marvelous speed, from the faintest beginnings to the full splendor of a brilliant morning.

This planet of ours was a dreadful place in the old days before the sun had done its work. Monsters such as flying lizards and giant dinosaurs, bigger than 10 elephants, infested the earth. The air was so heavy, so filled with poison gases, that no creature now living could possibly have breathed.

But the sun has been working a long time to improve things, and we have a planet now upon which we can live and upon which we have made at least some start toward looking on nature's better side. In short, nature does not frighten us. It was not always so.

Solomon was called wise. But when the thunder roared, and the lightning flashed, and his conscience troubled him, King Solomon you recall, turned away from his thousand wives and his numerous other doubtful associates.

He ran to bed and put his head under an embroidered pillow. He just lay there and shivered. Sheba could do nothing for him. Poor Solomon.

It did not enter his mind that the lightning could be tamed and put to work.

So this is the story of the man who did it. I refer, of course, to Thomas Alva Edison. Edison was born February 11, 1847. You know much about his successes. Let me tell you before I finish something about his failures.

For it is by their failures and what they did in the face of their failures and misfortunes that we can know most about our

great men, and learn most that will help us all.

Edison, who lived to be 84, and whose formal education, as you recall, was limited to 3 months in the public school at Port Huron, Mich., insisted all his life that he could not have succeeded without the lessons of his misfortunes and failures. In fact, Edison always emphasized that even the misfortune of deafness, from which he never recovered, was a constant asset.

When young Edison, known as "Al" in his home town of Port Huron, was 12 years old he was working as a train butcher and newsboy on the Grand Trunk Railroad. He had a run between Port Huron, Mount Clemens, and Detroit. One of the way stations was called Smith's Creek. It was there the happening occurred which made Edison deaf.

Now we should see what were the facts.

There are many vivid and contrary versions of the origin of Edison's affliction, but what actually happened may be told in his own words: "My train was standing by the platform at Smith's Creek station. I was trying to climb into the freight car with both arms full of papers when the conductor took me by the ears and lifted me. I felt something snap inside my head. My deafness started from that time and has ever since progressed."

Here is a boy 12 years old, seized by a man and lifted by his ears; to be made deaf to the end of his days. A word of complaint? Never, throughout his long life. Bitterness toward the man—for this was the act of a man, not an act of nature. A feeling of self-pity, frustration, rancor: "Why did this have to happen to me?" Well, hardly. Look at the consequences.

Edison speaks of his deafness much as Helen Keller always speaks of her blindness. Said Edison: "My deafness has been not a handicap but a help to me. From the very start, after the earache pain ceased, deafness probably drove me to reading."

He was, in his energy, courage, compassion, and sincerity even thankful for the necessity of adapting his experiments to his affliction. He attributed at least two important developments to that necessity: the telephone as civilization knows it today, and the phonograph.

"In experimenting on the telephone," he explained, "I had to improve the transmitter so I could hear it. This made the telephone commercial, as the magneto telephone receiver of Bell was too weak to be used as a transmitter commercially.

"It was the same with the phonograph. The great defect of that instrument was the rendering of the overtones in the music, and the hissing consonants in speech. I worked over 1 year, 20 hours a day, Sundays and all, to get the word 'specie' perfectly recorded. When this was done I knew that everything else could be done—which was a fact."

This greatest inventor of all time was never discouraged by his small knowledge of anything. It wasn't so much what he knew that helped him, but what he tried to know. He was a genius, true. But once when he was pressed for a definition of a genius, he coined the famous adage: "Genius is 1 percent inspiration and 99 percent perspiration." For he knew that freedom and progress for an individual or a nation—or even for a genius—does not mean: "I do not have to work." He knew the future belongs to those who prepare for it. And he knew that the commonest form of opportunity and the most neglected is the opportunity for harder work and better work.

He knew that the heavy ball of progress needs a great deal of pushing. Said Edison: "I recall that after we had conducted thousands of experiments on a certain project without solving the problem, one of my associates expressed discouragement and disgust over having failed 'to find out anything.' But we had learned something. We had learned for a certainty that we couldn't do it that way, and that we would have to try some other way."

Further, with a full brimming measure of friendliness and goodwill, he consistently expressed gratitude to those who saw him through, and never stopped crediting the American free-opportunity system as an essential factor in what he was able to do for all mankind.

Into America's low-cost products, created by enterprises without which these products would not exist except for the rich and powerful, Edison realized that the industry, science, art, geography, commerce, and learning of the whole human race are assembled. He saw this an an asset for neighbors everywhere in our land like the assets flowing from the sun. "We live in a cooperative commonwealth," he said.

Time and again he pointed back to a date: October 24, 1878. This was the date on which 13 enterprising men who had resources and believed in Edison delivered to the New York County clerk's office the papers for incorporation of an undertaking to support and develop his work. Edison was one of the incorporators.

They called it the Edison Electric Light Co. To the public it sounded as strange as if you or I today were to form the Atomic Household Products Co.

This group was risking $300,000 in an enterprise that had as its only real asset the 31-year-old brain of young Edison.

But this brain, alive and humming with effort and imagination, was on a search for a filament that would glow brilliantly in a glass bulb when electricity passed through the filament. This was a problem of discovery which was buried deep in the mysteries of electric incandescence. In 4 days less than 1 year, with the support of his business associates, Edison produced a light which would light the world.

Actually, the lamp itself was only a fraction of what Edison needed to accomplish if the light was to be useful to people, on streets, in homes, in workplaces, and if the thousands of future tasks of electricity were to be born, in short, if men and women were to have an electrical age, electricity must be produced and distributed so effectively, so inexpensively, and so safely that people could afford to use it.

While the glowing lamp was the symbol of Edison's success, Edison had to develop, and his associates had to finance, an entire generating and distributing system including the invention and construction of giant dynamos, conduits, power lines, wires, insulators, sockets, meters, fuses—everything.

Of Edison's 1,097 patents, 360 dealt with the generation and distribution of power, viz, the hidden needs behind the glow in that little lamp which could light the country, light the world, and take up the task of light where the sun left off.

Edison's genius alone wasn't enough for the final result, the ultimate gift to humanity. While Edison overcame the scientific difficulties in the delivery of power and the defeat of darkness, he himself always pointed out that it was the cooperation, vitality, and risk-taking willingness of American business enterprise that sustained him on his job and brought his results within reach of all.

It was this enterprise, and the American opportunity for free enterprises, that left him free to develop his wonderful talents of invention and development. It ran the risk and supplied the vast capital needed to translate his inventions into tools for human advancement. In short, American enterprise made the inventions widely useful to average people, and at a low cost to all. And this is the essence of human progress.

But Edison's risks were not over. I spoke of failures a while earlier. This is what I meant.

About 1890, 11 years after the first success of his electric light, Edison set out to devise a system of mining and milling low-grade iron ore that would be economically sound. He was convinced that the country's known deposits of iron ore were disappearing. In short, he was now going beyond, and even deeper than the wires in the bulb, the power stations, dynamos. He was going to the problem of the supply of the iron ore itself.

His supporters stayed with him. Through his tremendous effort and what was for them an enormous expenditure of $3,000,000, Edison invented and put into operation a revolutionary method of reclaiming iron ore through ore refinement. It was called the magnetic ore separator.

But the undertaking did not work out. After 6 years, unforeseen developments left Edison and his backers with a terrible failure on their hands. New and immensely rich iron ore deposits were discovered by other men of imagination, working in other progressive undertakings. Edison's refining methods just could not compete.

Looking back on this period, Edison said: "For a good many years I worried about my pay roll; didn't know how I was always going to meet it. My trouble had been that I always had too much ambition and tried to do things that were financially too big for me. If I had not had so much ambition and had not tried to do so many things, I probably would have been much happier, but less useful."

Here, then, is a good example of what is meant by the profit and loss system in our country, a term which should always be used in referring to the way enterprises live instead of merely saying the profit system. For losses, you know, occur even more frequently than profits in business life. And they can occur even when an enterprise has in it a Thomas Edison. But there's a happier ending to this instance of loss. It ended in general wonderment and jubilation.

Instead of being discouraged and accepting failure, the great man redesigned the machinery and added new ideas. His backers stayed with him, and finally they substituted the making of cement for his original plan of rescuing low-grade iron-ore reserves. I believe it's hardly remembered, but Edison's ideas and the faithfulness of his business associates revolutionized the Portland cement industry in our country.

And in this way, a wonderfully American way, what had been a great loss, a tremendous mental and financial burden on Edison and his associates, was changed to a success.

Human progress is endless and continuous as the rising of the sun. Much has happened to the whole planet since the monsters disappeared. But more good things have happened to us than to men and women any place in the world. Further, as living Americans we are infinitely better off than we've ever been before on this earth. Look around your town, your home, your living room, your boy's school, your workplace, your parks and streets, your stores. And the greatest opportunities lie ahead.

The great days of America are by no means done. We have only touched the border of our achievement. If you and I did not believe this, we would not be believers in America. Because that faith is America.

Unlimited possibilities are ahead through the new Edisons being born today; the men and women of imagination and character who are each in their own way helping us today and will help us even more tomorrow in this wonderland of the world.

UNIVERSITY OF MICHIGAN LIBRARIES

Rogers Bill Calls for Responsibility

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. ROGERS of Florida. Mr. Speaker, it appears that my House Resolution 450 is receiving unanimous acclaim by the press of my State. As a part of my remarks on the merits of this bill, I am including herewith an editorial from the Miami Herald, Miami, Fla., in the issue of March 14. May I state that the Miami Herald is one of the leading and outstanding newspapers, not only of Florida but of the South, and I am gratified to know that through the editorial columns they endorse the principle of this resolution and believe that the Congress should give it favorable consideration. The editorial is as follows:

ROGERS BILL CALLS FOR RESPONSIBILITY

Sixth District Representative DWIGHT L. ROGERS, of Fort Lauderdale, believes that Congress would be acutely economy-minded if a yea-and-nay vote were made mandatory on all appropriations of a public nature.

Representative ROGERS would "magnify the responsibility of each Member" by getting his name on the record for every money measure.

ROGERS would implement the conviction of every taxpayer that there would be a tremendous reduction in governmental waste, extravagance, and duplication if every Representative knew that his vote would be a matter available.

ROGERS' resolution is simple. It would insert this amendment in the rules of the House:

"No bill or joint resolution of a public character making an appropriation shall be finally passed, and no amendment of the Senate to, or report of a committee of conference on, such bill or resolution shall be agreed to, unless the vote of the House is determined by yeas and nays."

The need for such an amendment is pressing in the current national financial status—a time when we are better than $256,000,000,000 in debt and going daily into the red for an anticipated $5,000,000,000 deficit at the end of the current fiscal period.

Last year the first session of the Eighty-first Congress appropriated some $29,000,000 with no record whatsoever as to how the individual Congressmen voted.

During the same session bills appropriating better than $6,000,000,000 were passed where a yea and a nay vote was taken in one house but not in the other.

Billions of dollars have been appropriated in the House, where appropriations are initiated, without any vote of record. In some instances these billions of dollars were appropriated without a majority of the House being present.

It is one thing to appropriate money when all that is required is to shout "Yes." It's something else when a Congressman's vote is known.

Get the individual votes of the money-spenders down for all to see and the country will at once be benefited with magnified responsibility Chairman CANNON of the Appropriations Committee envisions.

The resulting economies would be substantially below those of the President—and that without injuring our domestic economy or investigating our foreign commitments.

Shipbuilding and Ship Repair on the Pacific Coast

EXTENSION OF REMARKS
OF
HON. JOHN J. ALLEN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. ALLEN of California. Mr. Speaker, at a convention of the Pacific Coast District Metal Trades Council, recently assembled in Portland, Oreg., on January 16, 1950, two resolutions were adopted which merit the attention of the Members of the House.

In times of war emergencies, approximately one-half of the war-built tonnage of ships is built on the west coast. West-coast ship-repair facilities are virtually indispensable if war damage occurs to ships in the Pacific Ocean. Four years were required, from 1939 to 1943, to bring the shipyards of the Pacific coast States from a condition of inactivity to full production. The skills which were needed had been largely lost due to years of inactivity. Unless appropriate action by the Congress is taken soon, the period of inactivity which the west-coast yards have again entered may endure until the men who have the skills have again disappeared with lapse of time.

The resolutions referred to read as follows:

Resolution 1

(Submitted by Shipyard & Marine Shop Laborers Local 886, Oakland, Calif.)

West coast shipbuilding

Whereas the wartime records of the Pacific coast shipyards and their workers, both in the building and repairing of ships, was a vital factor in the winning of World War II; and

Whereas since the conclusion of hostilities, shipbuilding, ship repair, and conversion have been awarded almost exclusively to eastern yards; and

Whereas shipbuilding facilities in the Parific coast are largely unused, and many experienced shipyard workers are either unemployed or have turned to other work for their livelihood; and

Whereas facilities which are unused deteriorate with the passage of time, necessitating the expenditure of large sums in their replacement, and personnel losses involve large and costly training programs not to be accomplished overnight; and

Whereas the concentration of our Nation's shipbuilding in limited area along the eastern seaboard leaves the industry vulnerable to destructive attack; and

Whereas, in testimony before the Merchant Marine and Fisheries Committee of the House, a prominent Government official contended that there was only enough shipbuilding to keep a few yards going, and he favored the more efficient eastern yards; and

Whereas the favored few yards of the East, controlled by Big Steel, have obtained a monopoly on shipbuilding: Therefore, be it

Resolved, That this tenth annual convention of the Pacific Coast District Metal Trades Council, meeting in Portland, Oreg., on January 16, 1950, affirms that we are opposed to this eastern monopoly on the basis of (1) national defense, (2) deterioration of facilities, (3) loss of skilled shipbuilding personnel, and (4) unemployment resulting therefrom; and be it further

Resolved, That failing to secure this allocation through either the President of the United States or the Chairman of the Maritime Commission, legislation be initiated before the Merchant Marine and Fisheries Committee of the House of Representatives to compel the allocation of work to our west coast yards; and be it further

Resolved, That copies of this resolution be sent to President John P. Frey, of the Metal Trades Department of the American Federation of Labor; President William Green, of the American Federation of Labor; the President of the United States; Louis Johnson, Secretary of Defense; the Chairman of the Maritime Commission; and all United States Senators and Congressmen from the States of Washington, Oregon, and California.

Resolution 5

(Submitted by Drydock, Marine Waysmen, and Stage Riggers Local 3116)

Twenty-five million dollars for Maritime Commission Reserve Fleet reactivation

Whereas the Army, Navy, Maritime Commission Ship Plans Committee recommended appropriation of $25,000,000 to reactivate merchant fleet ships; and

Whereas the Maritime Commission, cooperating with our Nation's military leaders, inserted an item of $25,000,000 in their budget for 1949–50 to accomplish this work; and

Whereas the Bureau of the Budget deleted the requested appropriation; and

Whereas our Pacific coast shipyards lie idle, facilities deteriorating and personnel unemployed, constituting a grave danger to national defense: Now, therefore, be it

Resolved, That the Tenth Annual Convention of the Pacific Coast District Metal Trades Council, meeting in Portland, Oreg., on January 16, 1950, call upon the Congress of the United States to restore the $25,000,000 to the budget of the Maritime Commission for this reserve fleet reactivation work in the interest of national defense; and be it further

Resolved, That copies of this resolution be sent to President John P. Frey, of the Metal Trades Department of the American Federation of Labor; President William Green, of the American Federation of Labor; the President of the United States; Louis Johnson, Secretary of Defense; the Chairman of the Maritime Commission; and all United States Senators and Congressmen from the States of Washington, Oregon, and California.

Statement of W. R. New, Executive Secretary, Idaho Small Mine Operators Association

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. WHITE of Idaho. Mr. Speaker, Idaho is a State of vast undeveloped natural resources. Most of these resources are in public ownership. In fact, the lands in Idaho are 72 percent federally owned.

Idaho has vast potential resources of water power and minerals, together with large stands of timber, much of it white pine, the most valuable species of timber found in the national forests. Idaho also contains large areas of range land that support many herds of cattle and sheep.

Traversing Idaho north and south we have two great arterial highways, No. 93 on the east side of the State, and No. 95 on the west side of the State. Steady progress has been made in standardizing these arterial highways, but much construction work remains to be done.

There is submitted for the consideration of my colleagues the statement made before the Committee on Public Works by William R. New, executive secretary of the Idaho Small Mine Operators and Prospectors Association, of Hailey, Idaho:

STATEMENT BEFORE HOUSE PUBLIC WORKS COMMITTEE ON H. R. 7398, FEDERAL AID HIGHWAY ACT, BY WILLIAM R. NEW

My name is William R. New, of Hailey, Idaho. I am executive secretary of the Idaho Small Mine Operators Association.

If you would take time to look at the course of Highway 93, you will note that it runs through the central part of Idaho from Montana south to Nevada.

The principal interest my group has in this highway is that it would open up a great storehouse of undeveloped mineral resources; but that is only one of the many reasons why this committee should give special consideration to this highway.

This is one of the few north and south arterial highways from Canada to Mexico. As I have said, it passes through some of the richest undeveloped natural resources of our Nation which will many times pay the cost of its construction.

It is one of the most beautiful scenic highways of our Nation and would give millions of tourists an opportunity to see the Salmon River country and many other beautiful spots that only our western country offers.

Modern warfare necessitates that the areas such as this highway traverses be opened; and you cannot afford to put it off many more years if the reports that I read in the papers are correct.

I trust and hope that the committee will give due consideration to this important project.

City Without a Vote

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. KLEIN. Mr. Speaker, under unanimous consent I offer for insertion in the Appendix of the RECORD an editorial from the New York Herald Tribune of March 22, 1950:

CITY WITHOUT A VOTE

Imagine a city of 900,000 which works, pays taxes, lives and thinks like any other American community, and yet fails to enjoy local self-government. This is Washington, where citizenship carries only an abstract meaning. The questions of policy and administration, police and fire protection, schools and parks, traffic and transit, culture and civic development, and all the intensely local details of any city large or small apply equally to Washington. But the people who live in the capital, for all the interest they may feel in the real estate tax rate or the quality of schools, streets, and sanitation, have nothing to say. The government of the District of Columbia rests in Congress, down to regulation of barber shops, weed removal, street naming and shooing off the starlings. This is the height of government without representation, control of local affairs by committee and commission. The Washington citizen, if he may be called such, is helpless because he is a voteless neuter.

Now it seems reasonable that Washington, for all its national proprietorship, is entitled to home rule in essentially local matters. The taxpayer, without a vote, is an empty voice. If a city manager appears economically desirable, this is a choice and responsibility for those who pay the bills. Parents who send children to school have a right to elect the school board. The arguments have been hashed over and over, and are simply these: Washington deserves the same responsive home rule as any other American city, and Congress has more to do than act as Washington's nursemaid.

The United States Senate passed the Kefauver bill by voice vote on May 30, 1949. This legislation provides all the home rule that is feasible without constitutional amendment. It is a good bill, but the House of Representatives still fails to join approval because the District of Columbia committee has other ideas. This committee is weighted with southerners who apparently fear for racial segregation if Washington, with its 30 percent Negro population, should gain even the local ballot. The Kefauver bill is decidedly not a civil rights measure; it merely provides for a measure of local self-government. But the committee is determined on suppression, and the only hope for Washington home rule is to get the bill on to the floor by discharge petition. Of the required 218 signers, forty-four are still lacking. We hope that the rest will cross the line. Both parties support home rule; there is no sensible ground for objection. The vote should be taken. Washington, after all, also has a right to govern itself.

The Spirit of Poland

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. GORDON. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I insert an editorial from the Polish American Journal of Scranton, Pa.

The article is well worth the attention of the American people because it typifies the real spirit of Poland and the Polish people. Everyone knows the heartaches and hardships which have been the lot of the Polish people over the centuries and the hardiness and perseverance of that great race have been an inspiration to the world. Despite the greatest of difficulties and the terrible loss of life in the last war, Poland is once again rising out of, and building on, its ruins.

As one who has seen at first-hand the results of war's destruction on Poland and its people, I want to commend the article and to say that, come what may, Poland will again resurrect and her people will once again achieve the freedom and independence which is every Pole's birthright.

Poland may be down, for the moment, but nothing can ever hold back the aspirations of this great people in their search for freedom and independence. The Americans of Polish ancestry are joined by all America in their desire to see the arrival of that day and we all look forward, with confidence, to the achieving of that objective.

I predict that the alien yoke now so evident in Poland will be thrown off and Poland itself, will be free from all outside influences. The Marshal Rossakowsky plan for Poland may be imposed on the country for the time being, but the day is not too far distant when Poland will be governed by Poles and that country will once again hold up its head and take its rightful place as an equal and sovereign partner in the family of nations.

The editorial follows:

THE SPIRIT OF POLAND

After the Warsaw Insurrection of August 1944, when the Nazis systematically bombed the Polish capital, block by block and building by building, Hitler's generals reported that "Warsaw is destroyed forever."

The report was made on these facts: 700,000 of the city's 1,300,000 citizens were dead. Of 16,300 buildings, 9,100 were destroyed or beyond repair. Of 900 churches and historical sites, 810 were gone. Of 2,800 factories, 2,520 were destroyed. Of 940 schools and universities, 658 were demolished. Of 440 hospitals, clinics and infirmaries, 352 were destroyed. There was no water, no electricity, no gas, no fuel, no transportation, no food, no tools, nothing—just rubble and corpses.

That was the situation when Warsaw was liberated on January 17, 1945.

But what of Warsaw today? Despite lack of materials and machinery the capital, is fast being rebuilt. The inhabitants with their hands are digging out of the ruins, and erecting modern buildings. Churches and sacred places are being restored wherever possible. A total of 2,000 new homes were built in 1949.

But why are the Poles rebuilding Warsaw? It would have been much easier to erect the capital city a few miles north or a few miles south.

The answer is obvious to every Pole and to every American of Polish descent.

Warsaw represents the very heart of Poland, of all that is Polish. Warsaw is the crucified and martyred city. It is a holy shrine and it must be rebuilt, it must rise again.

And the tenacity with which the people are rebuilding their beloved Warsaw represents the very spirit of Poland. It represents a people who will labor beyond any imagination for that in which they believe; it represents a people who will endure limitless suffering and hardship for their ideals; it represents a people who will never give up, no matter the odds.

And the spirit behind the rebuilding of Warsaw is the same spirit in every American of Polish extraction. It is one of Poland's great contributions to this Nation. Despite hardships in this country, despite discriminations and prejudices, the first Polish immigrants and later their sons and daughters have become and are an important part of this great Nation. In war and peace, they have shouldered the responsibilities of good citizenship.

UNIVERSITY OF MICHIGAN LIBRARIES

Path to Peace

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. JAVITS. Mr. Speaker, there is appended an eloquent resolution adopted at the annual meeting at Jacksonville, Fla., of the bishops' council of the African Methodist Episcopal Church, as proposed by the distinguished Bishop D. Ward Nichols, of New York. The solicitude of the churches for the path to peace is one of the more auspicious activities in favor of peace taking place in our country:

Resolution to President Harry S. Truman, White House, Washington, D. C., from annual meeting of the bishops' council, Jacksonville, Fla., February 15, 16, 17

While we are ever mindful of the continuing need for protecting our shores from any enemy aggressors, the African Methodist Episcopal Church must stand in condemnation of the philosophy of power as a path to peace. The African Methodist Episcopal Church was founded in 1787 in Philadelphia by one Richard Allen, whose philosophy of life has been adopted as the motto of this world-wide organization: "God our Father, Christ our Redeemer, man our brother."

We must reaffirm the historic position of our revered founder and urge your implementation of the doctrines of democracy by calling upon the citizenry of America and the entire God-fearing world to defeat the rise of any political religion with a renaissance of the principles of Christendom.

Taking due cognizance of the gap between the tenets of true democracy and its malpractice here in America, we urge you to use your high office in behalf of the following:

1. International control over the manufacture and distribution of the satanic A and H bombs with which mankind now threatens to destroy himself.
2. Speedy enactment of fair-employment-practices legislation.
3. Rightful exercise of your authority as Commander in Chief of our armed forces to speedily end all quotas and policies based on race.
4. Enactment of Federal legislation to equalize educational facilities for all children regardless of race or creed.
5. A forthright foreign policy designed to promote the brotherhood of all mankind and to end all forms of colonialism.

Robbie Conlin, Student in Covington Community Elementary School, Author of Prize-Winning Essay

EXTENSION OF REMARKS
OF
HON. CECIL M. HARDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mrs. HARDEN. Mr. Speaker, under permission to extend my remarks, I should like to call to the attention of the Members of the House an article which recently appeared in my hometown newspaper, the Covington Republican. The article, which follows, includes an essay "What Citizenship Means to Me," written by one of Covington's adopted sons, 11-year-old Robbie Conlin, foster son of Frank D. Conlin, principal of the Covington Community Elementary School:

ROBBIE CONLIN, STUDENT IN COVINGTON COMMUNITY ELEMENTARY SCHOOL, AUTHOR OF PRIZE-WINNING ESSAY

Robbie Conlin, foster son of Frank D. Conlin, principal of the Covington Community Elementary School, was this week listed as a winner in an essay contest sponsored by radio station WLS. Robbie's prize for the winning essay was two GE radios, one for himself and the other for his classroom. His name was announced last Monday over WLS.

Robbie wrote his essay on the subject, "What Citizenship Means to Me," and is herewith published:

"Just 7 months ago I was a citizen of France, but on the 24th of June of the past year I had the great honor of becoming a citizen of the United States.

"I was born in 1939 in the city of Metz, in Lorraine, France.

"As early as I can remember, German soldiers occupied the city in which I lived. We were horrified when the Americans dropped bombs and strafed the streets with machine gun fire. Many of our innocent people were killed or wounded and my own brother was a victim of the war. While trying to escape being run over by tanks, he fell on the icy streets and broke his hip. This fall crippled him for life.

"In 1946 I was adopted by my foster father who was an officer in the American Army. Then I was brought to the United States and to my new home.

"I was eager to become an American citizen but the law required me to wait for 2 years before applying for naturalization.

"United States citizenship gives me a feeling of safety from falling bombs and machine gun fire. It also means plenty of food, clothing, and security.

"The Constitution, which is the basis of the laws of the United States, promises many things that I could not have had if I had stayed in France. Citizenship guarantees me free speech and equal opportunities. When I am old enough I shall have a chance to take part in electing Government officials, a right to own property, and I shall have protection for myself and my property.

"Above all, citizenship means that I may now claim the United States of America as my country, the Star-Spangled Banner as my flag, and my neighbors as my fellow citizens. Citizenship, too, means that, in case of war when I am a man, I may offer my services to my country, the United States.

False Editorial Propaganda

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. MADDEN. Mr. Speaker, on March 6, 1950, Mr. Walter Leckrone, editor of the Indianapolis Times, carried in his editorial columns an unfair, untrue, and intentionally misleading editorial. This editorial was supposed to be an answer to a speech which I made on the floor of the House March 4 concerning the settlement of the coal strike.

On March 10 I sent the letter following these remarks to Mr. Leckrone, asking that it be reprinted in his editorial column in order to correct the misleading, false, and prejudicial statements he made regarding my speech. Up to now he has refused to print my answer or to give the readers the true facts concerning the unfortunate editorial. Mr. Leckrone has sunk to a new low in a campaign to resell the Taft-Hartley law. Why does he refuse to print recorded facts concerning this law?

A free press contemplates a fair press. Evidently Mr. Leckrone is one of the few editors in this country who believes a public official should be a natural victim for malicious attacks regardless of the truth or facts involved. Fortunately, there are but a few editors of the Leckrone type employed by the newspapers in this country. In refusing his newspaper columns to me for the purpose of answering his false and unjust editorial, he is merely continuing his past reputation as a hit-and-run editor.

I hereby submit my letter in answer to his editorial which he refused to place in his columns:

MARCH 10, 1950.

Mr. WALTER LECKRONE,
Editor, the Indianapolis Times,
Indianapolis, Ind.

DEAR MR. LECKRONE: My attention has been called to an editorial in the Indianapolis Times of Monday, March 6, 1950.

The first line of this editorial refers to my speech in Congress on last Saturday regarding the coal strike as "demagogic double-talk." The last line says, and I quote "we do feel a Member of Congress has an obligation to tell the truth about matters of plain recorded fact." This line is merely a diplomatic inference that I was lying to the Members of Congress and to the American public regarding my two statements set out therein.

Enclosed you will find page 2823 of the CONGRESSIONAL RECORD which contains the speech I made, to which you referred.

One of my statements was that "during the last 18 months, there have been more serious strikes than any year in our history." You conveniently omitted the next line of my speech which said "the only exception might be the first year after the war, when thousands of labor contracts that had been status quo for 5 years during the war period came up for renewal." As a proof that I was not telling an untruth in that statement, I am hereby submitting for your readers, plain recorded facts, taken from the Bureau of Labor Statistics in the Department of Labor, covering the last 15 years with the exception of the war years when union labor and management did not negotiate work contracts.

Number of man-days lost by strikes and work stoppages between 1936 and 1940, 16,900,000 (average per year).

Omitting the war years, we come to 1946 which was the first year after the war: 1946, approximately 116,000,000 man-days lost; 1947, approximately 34,000,000 man-days lost; 1948, approximately 34,000,000 man-days lost; and 1949, approximately 53,000,000 man-days lost.

Before 1935, the man-days lost by strikes in any year in our history, does not rank even close to the years 1946 or 1949. So, Mr. Editor, the plain recorded fact is that I was not untruthful in my charge that the Taft-Hartley law has caused more labor disputes than any year in our history with the exception of 1946.

Your second charge that I did not tell the truth about matters of plain recorded fact

that the Taft-Hartley law failed 100 percent in the coal strike:

In my speech, which you failed to include in your editorial, I stated that Cyrus S. Ching, Federal Mediator and former rubber executive, publicly stated several weeks ago that there had not been any honest effort at collective bargaining since contract discussions started last summer. The response of the coal operators to all collective-bargaining proposals was an emphatic "No."

I further stated that powerful interests in this country wanted the Taft-Hartley injunction tested. When President Truman proceeded with the injunction, 450,000 miners refused to go back to work in spite of the injunction, and I further stated that when the operators discovered the monumental failure of the Taft-Hartley law injunction, they proceeded to collective bargain with the union.

When good-faith collective bargaining was engaged in, the strike was settled in a few days. Furthermore, in your editorial, you stated that I failed to say what caused the coal strike the year before the Taft-Hartley law was passed or the year before that and the others previously.

You are correct on that statement, but you failed to also mention that there has been four separate coal strikes and work stoppages since the Taft-Hartley Act was passed in the summer of 1947.

I am sure that your sense of justice and fair play as the editor of a newspaper, will prompt you to give this letter the same space in your editorial column as the editorial of Monday, March 6, 1950.

Very truly yours,

RAY J. MADDEN,
Member of Congress.

Development of Peat Resources

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. WIER. Mr. Speaker, in the interest of the industrial progress of the great Midwest, I would like to join my friend and colleague from Minnesota, Hon. FRED MARSHALL, in calling to the attention of this House the importance of legislation to encourage the development and utilization of our peat resources.

I think we ought to give serious consideration to the bills which he has introduced, H. R. 7330 and H. R. 7574. The first of these authorizes vitally needed research and preliminary development and the second would authorize the Reconstruction Finance Corporation to make loans to private business for better utilization of peat and its numerous byproducts.

The tremendous untapped peat resources of my own State and of other States throughout the country, if properly utilized, can bring industrial growth to many areas seriously retarded because peat lands were considered waste lands. Short-haul fuel and low-cost power will bring new industries into these areas and will create new jobs for our labor force.

As my colleague from northern Minnesota, Hon. JOHN BLATNIK, has already pointed out in support of this legislation, the effective development of our taconite deposits has been hampered for lack of a nearby fuel and power supply. If we can make use of the scientific advances which have been made in the production of peat, it will be a decided stimulus to effective use of our low-grade iron ore.

In considering the effect of such legislation in promoting industrial progress we must not overlook the many byproducts which have been discovered in the production of peat fuels. And its importance does not depend only upon its use as a fuel in the usual sense, but as a fuel to provide electric power for nearby industry and small business.

This importance is heightened in the case of Minnesota because of its geographical location which makes it dependent upon long overland and overwater hauls of fuel and raw materials. This strategic vulnerability can be reduced by development of nearby resources and can make possible sorely needed decentralization of industry and population in the interest of national defense and national security.

Minnesota's deposits of 7,000,000,000 tons of peat constitute half of the Nation's supply and on the basis of preliminary research have been found to be of good quality and easy access. Other large deposits are found in a number of States in every section of the country in what have come to be underdeveloped areas. A good peat-production program will be a boost to the local economy and will be a strengthening factor in the national economy.

Peat as a basic material could make possible low-cost production of such byproducts as alcohol, acetic acid, ammonia, ammonium sulfate, fertilizers, paraffin wax, phenol, asphalt, tars, oils, gases, and allied chemical products for American manufacturers. Because they would be byproducts of peat processing, they would be available at less cost than original production.

Because of their own economic needs, other countries with large peat deposits have made greater technological advances in development of this resource, but the impetus provided in this legislation can well bring us up to date and open even new roads to progress.

Peat deposits are found in about half of the States, and our total deposits are estimated to be about 14,000,000,000 tons. Minnesota, Wisconsin, and Michigan combined contain 75 percent of the reserves; 14 percent of the country's total is in Florida; and the rest is distributed through the New England and Pacific coast States.

Unfortunately, those very areas in which the best quality deposits are found are the areas now considered underdeveloped because these co-called wastelands have hampered both industrial and agricultural development. To turn these lands into sources of productive wealth for both industry and agriculture will bolster the backward economy of these areas and make new jobs without taking away existing jobs.

It is because of these factors, that I ask those who are interested in maintaining healthy employment rolls for our labor force to consider the effect the proposed legislation will have in bringing new industry and new jobs to the underdeveloped areas of our country.

Census Bureau Should Not Be Permitted To Make Inquiry Concerning Private Income and Business

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. REES. Mr. Speaker, I have today introduced a bill to prohibit officials and other representatives of the Census Bureau from making inquiry with respect to the income of private individuals.

The amount of the income and property of every man and woman is their own individual business and does not belong to the public. Folks just do not like to have census enumerators in their own communities inquiring as to how much money they make or how much property they own. It just does not set well.

Furthermore, the whole thing is absolutely unnecessary. If for some particular reason the Govefnment deems it necessary to check the income of private individuals it can be done through the Income Tax Department of Internal Revenue. To permit census enumerators to pry into the private affairs of individuals is carrying things too far.

It should be observed there is no law requiring this information. It is just an unnecessary regulation of the Census Bureau. It appears the only way to prevent this intrusion is through the approval of this legislation.

Middle-Income Housing Bill a Fraud

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. GWINN. Mr. Speaker, buying votes with promises is a profession. Those who do it skillfully can keep themselves in office indefinitely. The art is to keep new promises before the voters while making them forget unfulfilled past ones. Better yet, keep a few promises, and create the impression that all have been kept. The administration's program of houses for all is just such a political illusion.

One trick in stirring the emotions of people of good will is to give the impression that the Central Government is the only power that can remove slums and dry up disease, by itself building houses. But the Government propagandists do not show how this forces the tenants to vote for the political party which builds the houses, and charges the costs of all municipal services and deficits to the folks across the street from the political housing. Thus, it creates more slums than it clears.

There is another trick which has worked well from the beginning of all

UNIVERSITY OF MICHIGAN LIBRARIES

time. Obviously, there are more renters than landlords. So, all Socialist governments force landlords to subsidize their tenants. This scares any future landlord, and creates a housing shortage. Then the government can rush in to meet the need. It can build some houses, lend money for others, and insure loans for the rest. In short order, it controls the nation's housing. Then those who want to enjoy government low-rent subsidies must vote to retain the party in power. It is all a blindfolding fraud, which causes us to surrender the freedom our forefathers cherished so much.

First, an appearance of a housing shortage must be created. Rent control did this by forcing landlords to sell their property. The total number of new dwelling units in the United States increased 4,000,000 from 1940 to 1947. Yet the number for rent actually decreased by 2,000,000. This meant a shortage for those who wanted to rent.

Most of the postwar housing was built by Government loans or insurance but only one-fifth of it was built for rent. The cost was such that many families could not afford brand new homes. Few people wanted to move from bargain rents in the old houses under rent control.

The cunning politicians rushed in, and promised "cheap" public housing for the low-income families. They posed as the saviors of those whose distress they had caused. After much talking and promising, the Eighty-First Congress, last year, passed a public-housing bill. The politicians felt they had delivered the goods for the low-income families: With scarcely a pause, they next advanced a Government plan for housing the middle-income groups.

This promise of Government aid for middle-income families is built on several frauds. First it assumes the Government has already taken care of the lower third. And, second, it claims that middle-income families cannot now afford to house themselves. Both of these premises are clearly false.

The Public Housing Act of last year provides for housing less than one out of every ten low-income families. Even so, homes for this tenth will not be completed for at least 6 years and not until local communities agree to grant tax exemptions and free education for the children. So, it would take 60 years or more and many more billions before the lower third was housed.

As to middle-income families not being able to house themselves, we need only look at the Department of Labor's cost-of-living index. Since 1929, this index for all items has gone up more than 38 percent. Yet, the rent item has actually dropped almost 15 percent. So, rent is certainly not the reason for our high cost of living. Perhaps it is taxes. They have gone up 1,000 percent.

Administration leaders admit that shelter rent, not including heat and utilities, should be about 20 percent of a family's budget. Last year the Labor Department studied budgets in three typical cities, Houston, Denver, and Detroit. It found that families with incomes from $3,000 to $4,000 a year were spending only 12.1 percent, 13.9 percent, and 16.3 percent for rent, including heat, light, and refrigeration. The Federal Reserve Board, in its 1949 consumer survey, shows that home-owning families, with incomes of $2,000 to $5,000 a year, paid only 17 percent of their 1948 incomes for housing while those who rented paid a bare 13 percent.

This indicates that housing is available at prices middle-income families can well afford. The idea that middle-income families, the Nation's largest taxpayers, need a housing subsidy is a fraud. The bills now before Congress would not aid more than one in every 32 middle-income families. But it sounds nice. Before election most middle-income families will think they are going to be helped. They will not wake up until they get their next tax bill. And that can be blamed on the cold war.

Politics is a great game. Unfortunately, it is played for keeps. Ask any European who listened to deceptive promises like those being made by our own Fair Deal and do-gooder politicians of both parties.

Acheson's San Francisco Speech Impressive, but Main China Issue Still Undecided

---

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Edgar Ansel Mowrer:

ACHESON'S SAN FRANCISCO SPEECH IMPRESSIVE, BUT MAIN CHINA ISSUE STILL UNDECIDED

(By Edgar Ansel Mowrer)

The Secretary of State's speech in San Francisco last week is public confirmation that the administration is developing a scheme for saving non-Communist Asia.

As revealed by Mr. Acheson, this policy consists of help—military or political or economic—to Japan, free Korea, the Philippines, Indonesia, Thailand, and to the Bao Dai regime in Indochina.

It includes some first class political warfare against the Chinese Communists in the form of statements to the Chinese people. The Secretary pointed out how the Russians are plundering their Chinese allies, and how food has gone from China to Russia at a time when China faces the worst famine in history. To be sure, he fell into a contradiction when he first stated that the Chinese Nationalist Government had fallen because the people abandoned it and then insisted that their present unhappy status within the orbit of the Soviet Union is not the fault of the Chinese people but has been forced upon them by the Soviet Union.

Mr. Acheson cannot have it both ways. He answered himself when he forcefully invited the people of Asia to recognize that "the major threat to their freedom and to their social and economic progress is the attempted penetration of Asia by Soviet Communist imperialism and by the colonialism which that penetration attempts to conceal."

PRIVATE INTERESTS GRATIFIED

This is God's truth. It was, however, just as true 4 years ago when Gen. George Marshall tried to compel the Chinese Nationalist Government to collaborate with the Chinese Communists and stopped all American aid to China when Generalissimo Chiang Kai-shek refused. Had the American administration spoken in 1946 as Secretary Acheson speaks now, China might never have been lost.

The weakest part of the Secretary's speech was his offer to trade with Communist China on decent terms. This was honey to any American traders who might put personal profit above their country's welfare. It may tempt the Chinese Communist leaders who are responsible for their country's famine. It was a kick in the teeth for the Chinese Nationalists on Formosa and Hainan Islands who are bravely carrying on the fight. It implied that the United States will help break the Nationalists' blockade.

But the famine in China and rising discontent, plus the Nationalists' resistance on the islands, offers just a chance of overthrowing the Chinese Communists. The United States ought not to overlook any opportunity, however slight. The Chinese Communists should be compelled to stew unaided in the ruin they created.

AID PLEDGE WEAK

Another weak point in the Secretary's new policy for Asia is the half-hearted way in which he interprets the Truman doctrine of aid to Indochina. He promised Bao Dai not the kind of effective aid we gave to Greece, but aid within the prudent capabilities of our resources.

Obviously, if strictly limited aid is enough, well and good. It is not likely to impress the Russians or their Indochinese stooges.

It just happened that the Secretary's speech coincides with the report that Ho Chi-minh had gone to Peiping to sign a military alliance with the U. S. S. R. and with Communist China. Should this be exact, Ho will come back with a promise of something more than the prudent assistance promised Bao Dai by Secretary Acheson.

Apparently, too, Secretary Acheson has not yet made up his mind whether to support or not to support the Southeast Asia Union so sturdily championed by President Elpidio Quirino of the Philippines.

INDIA NEEDS SPUR

From recent remarks by External Minister Spender of Australia, that country is now ready to discuss such a scheme. Australia is one of the two bastions of strength in the area.

The other potential bastion, India, is still being kept in "neutrality" by Prime Minister Jawaharlal Nehru. Mr. Nehru has again refused President Quirino's invitation to a conference to discuss measures for meeting the Communist menace. Thereby he has again demonstrated how a distinguished fighter for freedom may turn out to be an inadequate statesman once freedom has been obtained. Mr. Nehru is still looking back at the imperialism his country has escaped from. If in the process he should be hit by the Soviet Russian truck it will be his own fault. Secretary Acheson might have reminded him that India's failure to cooperate with the other Asiatic nations could be taken as a sign that India does not properly qualify for aid under the Truman doctrine.

The San Francisco speech makes me think that the American administration has not yet faced the issue whether to defend southeastern Asia by all possible means or to let it go.

Electoral Reform

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. GOSSETT. Mr. Speaker, nothing is more important to the maintenance of a healthy democracy than a fair, honest, and accurate system of electing Presidents. Senate Joint Resolution 2, which passed the Senate recently by a vote of 64 to 27, and House Joint Resolution 2, now pending in the House, provide such a system.

In the current issue of ADA World, Mr. Bertram Gross has written an excellent article in support of this amendment. I offer his article for reproduction here in the RECORD:

LODGE-GOSSETT AMENDMENT—ELECTORAL CHANGE IS HAILED AS DEMOCRATIC

(By Bertram Gross)

Most liberals have long supported the Lodge-Gossett constitutional amendment to abolish the electoral college and split the electoral vote of each State among presidential candidates in proportion of their popular vote.

This is evidenced by the fact that men like Senators ESTES KEFAUVER, of Tennessee; JOHN SPARKMAN, of Alabama; WAYNE MORSE, of Oregon; and Representative EMANUEL CELLER, of New York, were active in the campaign that led to the recent 64 to 27 favorable vote in the Senate and to a favorable report by the House Judiciary Committee. It is borne out by the support given the measure on the floor of the Senate by Senator HUBERT HUMPHREY, of Minnesota, and every other liberal Member of the Senate.

It has recently been suggested, however, that these liberals have been hoaxed and that the Lodge-Gossett amendment is a "dangerous sleeper."

A case is made that a division of electoral votes among rival presidential candidates would give southern Democrats more power in the Democratic Party and thereby make the Democratic Party more conservative. Those who argue in this fashion have no objection to abolishing the electoral college as such. But they believe in keeping—at least for the present—the unit system of giving a State's total electoral vote to the candidate who obtains a plurality within the State.

To appraise the validity of this argument, let's take a look at the probable effects of dividing the electoral votes of the States among candidates in proportion to the popular vote.

The first effect would be—in the words used by Senator HUMPHREY on the floor of the Senate, February 1, 1950—"a definitive step in the direction of greater democratization of our electoral process."

Under the present system, the votes cast within any State for the candidate who receives less than a plurality are simply not counted in the final tabulation. Thus, Truman in 1948 got no credit for the millions of votes cast for him in the State of New York. Because he nosed out Truman by a slight margin, Dewey won all of New York's 47 electoral votes. Likewise, Dewey got no credit in the final count for the Republican votes in Virginia, although these votes amounted to 46 percent of the total.

Under the more democratic method of proportional allocation, the same number of popular votes would have given Truman 21 electoral votes in New York and Dewey 4.5 electoral votes in Virginia.

From a strictly theoretical viewpoint, it would be better to have a direct popular election of the President or else to base the electoral vote of each State on the number of its voters rather than its population. But both of these theoretical remedies would go so far in reducing the power of the small States as to make it impossible, in the judgment of congressional liberals, to obtain a two-thirds vote in Congress and ratification by 36 States.

The Lodge-Gossett amendment provides the only attainable method of democratizing Presidential elections.

Second, it would promote active campaigning by both major political parties in those one-party States that are customarily regarded as safe or solid.

At present the Republican organizations in the solid South and the Democratic organizations in the rock-ribbed Republican northern States like Maine and Vermont and others, never really put up a fight in presidential elections. This is one of the reasons why the popular vote is so small in these areas.

It is also one of the reasons why congressional candidates in these areas have little interest in, and often directly oppose the national platforms of their parties. It is one of the keys—but not the only one—to the great riddle of American politics: "Why is it that a President can be elected on a liberal program but at the same election a Congress can be elected which does not have a liberal majority?"

The pending amendment would promote active political competion in the now "solid" Democratic South and the now "solid" Republican Northern States. Both parties in these areas would find a direct and immediate interest in wooing additional votes.

In the South this would mean a rapid stepping-up of the present trend toward more Negro voting. The written and unwritten barriers to Negro voting would be pushed aside as both parties actively campaigned for Negro votes. The labor vote would also get increasing attention, since the votes of southern workers, together with the Negro votes, would provide the largest increments in future elections.

As a result, southern liberalism—already beginning to flower—would grow more rapidly. Southern conservatives would gravitate toward the Republicans. Both political parties would be more capable of delivering upon campaign promises.

Third, there would be a wider geographical distribution of political power and prestige.

It follows from the previous points that there would be less sectionalism in American politics, more emphasis on national issues.

There would be less emphasis on selecting presidential candidates on the basis of their ability to carry some large State, more political opportunities for men and women in every section of the country.

These things, in turn, mean more attention in presidential politics to the economic and social needs of both the South and the rock-ribbed Republican Northern States.

But the 404 electoral votes outside the South would still be more important than the South's 127 electoral votes. Southern politics would by no means, as some have contended, dominate the national scene.

Fourth, and finally, the balance-of-power positions now enjoyed by many small groups in the most populous States would be weakened.

At present when a few thousand votes on one side or the other may throw a whole block of electoral votes—like New York's 47 votes—to one candidate or the other, many small organizations are in highly strategic balance-of-power positions. They wield power out of all proportion to their voting strength.

Under the Lodge-Gossett amendment these strategic positions would be weakened. This goes for liberal organizations as well as for conservative, reactionary, and radical ones.

The greatest losses, however, would be felt by those organizations with little voting strength. The least losses would be felt by large mass organizations such as labor unions.

Although the four propositions underlined above can be fully substantiated, reasonable people—including reasonable liberals—can readily differ on how much value is to be placed on each of them.

It's like the dilemma faced by the man who is thinking of marrying a girl who is beautiful and intelligent, but simply can't cook. If home-cooked meals are more important to him than anything else in life, then it makes sense for him to restrain his natural impulses and remain a bachelor until he finds a better candidate.

In the same way, if a liberal places more value upon a restricted area of political competition and the maintenance of certain balance-of-power positions, or if he takes a defeatist attitude toward the chances of winning the votes of the majority of the American people under a more democratic electoral system, then it makes sense for him to oppose the Lodge-Gossett amendment.

If a liberal is more interested in winning pleasant campaign promises from both parties than in building a truly liberal party that can keep its promises, then he should oppose the Lodge-Gossett amendment.

I might add that if these are what he values most highly, then it also makes sense to oppose a direct popular election of the President.

On the other hand, if a liberal places greater value upon steps toward more democracy and toward developing genuine two-party politics in one-party areas, then he should support the Lodge-Gossett amendment.

If any liberal refuses to decide where he stands on this matter until he sees a mathematical demonstration that the amendment will help the liberals rather than the conservatives, then he had better get a nice comfortable cushion and prepare himself to sit on the fence the rest of his life.

Statistics cannot tell you whether it will help liberals or conservatives, Democrats or Republicans. Or rather, one can develop equally elaborate statistical stories on either side. Further, statistics cannot tell exactly how many new voters would be brought to the polls under the Lodge-Gossett amendment, or how soon.

The key reason that statistics cannot supply the answer is that the constitutional amendment by itself would not shift the balance one way or another. It would merely change the rules of the game so as to provide new opportunities for both sides.

The conservative camp in America will unquestionably gain under this constitutional amendment if the liberals fail to adjust to the new situation and develop their political strategy in a dynamic fashion.

But the liberal camp will most certainly gain if:

(1) Negro leaders will realize that this provides the first great opportunity for the organization and political awakening of Negroes in the South;

(2) Labor organizations intensify their organizational campaigns in the South; and

(3) At long last a liberal program were developed for greater industrialization and higher living standards throughout the South.

Those few liberals who have voiced objections to the Lodge-Gossett amendment have performed a valuable service.

The debate they have initiated underscores the fact that American liberalism faces crucial problems of political dynamics.

UNIVERSITY OF MICHIGAN LIBRARIES

When this debate is resolved in favor of the Lodge-Gossett amendment—as I am sure it will be—the country will have benefited from a more open discussion of the issues. And the liberal movement will have benefited from a more widespread appreciation of the fact that the adoption of the Lodge-Gossett amendment will call for a new strategy of liberal politics.

Mr. Speaker, I believe we will find that 95 percent of our political scientists and serious students of government endorse the so-called Lodge-Gossett amendment as the best possible reform in our cumbersome and undemocratic electoral machinery. I wish to offer here for the RECORD a letter from the chairman of a committee of the American Political Science Association, in which he discusses and endorses the aforesaid amendment:

SYRACUSE UNIVERSITY,
MAXWELL GRADUATE SCHOOL
OF CITIZENSHIP AND PUBLIC AFFAIRS,
Syracuse, N. Y., February 27, 1950.

Hon. ED COSSETT,
Member of Congress,
Washington, D. C.

DEAR MR. GOSSETT: I am very much interested in the proposed amendment to the United States Constitution, sponsored by you and by Senator LODGE, of Massachusetts, to revise certain provisions of the Constitution concerning the electoral college. It seems to me that your proposal is a major contribution to the perfection of democratic institutions in the United States. The principle involved in the proposed amendment is sound democratic theory, the idea that the electoral vote ought to reflect as fairly and accurately as possible the sentiments of the people themselves. Because it is solidly grounded in good democratic principles it is also a sound measure around which to develop our political institutions, institutions which are likely to function best when they implement the will of the people.

As a political scientist I have had a lifelong interest in American political parties, organizations without which a democratic government in a nation of 150,000,000 people is inconceivable. I feel that your proposal is very likely to have a good effect on the party system. It seems to me that the existing constitutional provisions governing the counting of the electoral vote make the development of an effective and responsible party system excessively difficult. The present system produces an electoral vote so unrepresentative of public opinion that it invites undemocratic, disruptive, and obstructive political practices. It places an undue premium on the vote of a few States and on the influence of certain minority and special interest blocs of voters in these States. One consequence of the adoption of your amendment would probably be to reduce political tension in a few States but to increase popular participation in Presidential elections throughout the country. In view of the fact that only a little more than 50 percent of the potential electorate has participated in recent Presidential elections it seems to me that broadening effects of the amendment would be beneficial. In general I should think that the tendency of the amendment would be to reduce sectional antagonism because it invites increased political participation by the whole Nation. Similarly, since it would make the electoral college vote reflect the popular vote as accurately as possible it might tend to reduce conflict between the President and Congress by keeping both branches of the Government close to the people. Finally, the existing system has tended, for a number of reasons, to discriminate more and more strongly against the defeated major party and to exaggerate the vote of the successful party so drastically that it has become something of a menace to the survival of the two-party system.

A committee of the American Political Science Association, of which I am chairman, has given your amendment a good deal of thought in course of recent years. While the report of the committee is not now ready for release and I am not authorized to speak for the members of the committee in this matter, I can say that the general trend of the opinion of the committee is similar to mine.

The questions raised by your proposal are so important that I hope that, regardless of the outcome of the present debate in the House, public discussion of the subject may be continued until the issues are clarified.

Sincerely,

E. E. SCHATTSCHNEIDER.

Extension of Rent Control

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Resolution memorializing Congress in favor of extending the effective period of the rent-control provisions of the Housing and Rent Act of 1948

Resolved, That the General Court of Massachusetts hereby urges the Congress of the United States to provide by legislation that the rent-control provisions of the Housing and Rent Act of 1948 shall continue in effect until February 28, 1951; and be it further

Resolved, That copies of these resolutions be sent forthwith by the secretary of the Commonwealth to the President of the United States, to the Presiding Officer of each branch of Congress, and to the Members thereof from this Commonwealth.

In house of representatives, adopted, March 13, 1950.

LAWRENCE R. GROVE,
Clerk.

In senate, adopted, in concurrence, March 16, 1950.

IRVING N. HAYDEN,
Clerk.

Revival of Coal Industry

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks I am including a copyrighted story from the Christian Science Monitor of Monday, March 20, which the Christian Science Monitor Washington bureau has kindly given me permission to insert in the RECORD.

This story is challenging and seems to me to offer a possible solution to the overproduction in the coal industry. I think it is worthy of wide circulation, if it does nothing more than cause discussion of the various processes for the extraction of oil and other byproducts from coal. If the Federal Government is suppressing this process, as charged in the article, I think that looking into the matter would be one of the most profitable investigations that Congress could make.

The article follows:

COAL INDUSTRY REVIVAL FORETOLD IN OIL DISTILLED FROM UNMINED SEAMS—ECONOMIC GAINS OF KARRICK PROCESS CITED IN MONITOR WRITER'S SIFTING OF EVIDENCE—DELAYS SEEN KEYED TO PETROLEUM FIRMS

(By Harlan Trott)

If a process existed which would—

End the Nation's domestic oil shortage permanently.

Provide abundant high-grade oil at lower cost.

Open up a vast new demand for coal.

Keep John L. Lewis' coal miners working full time.

Produce a cheap, smokeless fuel to solve the soot and smog problem of cities like Los Angeles, St. Louis, and Boston.

Produce 3,000 cubic feet of high-value fuel gas and 100 kilowatt-hours of electricity as additional products out of every ton of coal.

Justify building and operating coal-oil plants—three times cheaper in capital investment than present methods—as utilities in most cities and towns and at coal mines.

Then presumably this would create a lot of public interest.

If this coal-treating process really worked, then the Nation could have oil for nearly 2,000 years at its present rate of consumption. There is that much coal available, according to the Department of the Interior.

Such a process does exist.

The public is not being told about it.

For simplification, it is called in this article the Karrick process after the man who developed it. It is a low-temperature method of distilling oil from ordinary soft coal. It is radically different from a three-to-four-times more expensive process of obtaining oil from shale by a German method, which is favored and now is being developed by the United States Bureau of Mines.

The oil-shale method now being operated at Rifle, Colo., never could meet the Nation's oil and coal needs, the Bureau of Mines concedes. It yields only oil and a shale rock residue which has to be thrown away.

Indeed, the German processes, the Bergius and the Fischer-Tropsch, now being developed by the Bureau of Mines in Louisiana, Mo., were purchased by Standard Oil and associated major oil companies of the United States from the I. G. Farben Trust in 1929.

SHALE PROCESS TERMED INADEQUATE

The Karrick process, on the other hand, could mean just as much to the coal industry as to oil. It yields both oil and gas of the same heating value as natural gas, also a superior solid smokeless fuel. The latter is much superior in heat yield and usability to ordinary soft coal. It is completely smokeless, however burned, with all that that could mean to sooty American cities.

This process, in addition to costing barely one-third of the German methods for the same oil-producing capacity, solves the enormously wasteful present system of burning soft coal and sending its valuable oil content up the chimney in the form of soot to plague cities and housewives. It extracts the oil to solve the Nation's domestic oil shortage, and sends an improved and smokeless coal to household furnaces, fireplaces, kitchen or parlor stoves, factories, power plants, and railroads.

Despite these apparent advantages of the Karrick or coal-distilling process, the Inte-

rior Department's top synthetic fuel experts, who are busy improving the shale-distilling process and are using a $60,000,000 appropriation from Congress for this and the costly German-Standard Oil methods, are opposing developing oil by a coal-distilling industry.

Bureau of Mines officials are reluctant to explain the reasons for this.

When pressed, their explanation boils down to the following: They grant the essential technological claims—and even the cost figures—for the coal distillation process. But in administering the Synthetic Liquid Fuels Act, they consider it the Bureau of Mines business to produce oil. They do not consider it the bureau's business to get involved in the production of oil and a smokeless fuel by-product, even though it is a superior fuel for making synthetic gas.

Laboratory tests—backed up by the operation of four commercial-size coal-distillation plants—have proved that a plant processing only 50 tons a day of ordinary soft coal would be economically profitable. Such a plant could supply all the electric power, gas, and inexpensive oil for a community of 1,000 inhabitants.

At the same time the solid, smokeless, coke-like by-product fuel would supply 1,000 coal-burning facilities several times over.

EXTREMELY LOW OPERATING COST

The operating cost of such a project is so low, according to these Government-pioneered studies, that the sale of smokeless fuel at the same market price as for raw coal would permit the oil from coal to sell for practically nothing and yield a profit.

These carefully checked facts about the Nation's long-range fuel outlook are being bypassed by Interior Department officials. Meanwhile the public is being told that the country must depend increasingly on foreign oil supplies. It is being told, too, that there will be progressively fewer jobs for coal miners in the near future because of markets lost to oil and natural gas.

According to unpublished Government engineering data, if the Nation's raw, smoky bituminous coal were displaced by this distilled (de-smoked) oil-free coal, 50 to 100 percent more raw coal necessarily would be mined in order to meet the new supply of oil, gas, and electricity obtained from coal.

Reduced to simplest terms, there is one question to resolve: Is the process commercially practical or not? Everything else hinges on that.

Top Government experts assert that the question is beyond the layman's ability to assess. They contend that only the Interior Department's experts are qualified to judge how the Bureau of Mines shall spend the $60,000,000 Congress granted it under the Synthetic Liquid Fuels Act to further Government research and development of oil-from-coal technology.

There are four points to establish as a prelude to any appraisal of the questions of public policy raised by the Government's failure to do anything about it:

1. What, in brief, is the process and what results are claimed for it?

2. Who developed the process and what are his qualifications?

3. Is documentary evidence available to support the claims?

4. Can other individuals who either are engineers or are competent in appraising coal and oil problems corroborate the evidence?

Answers to these questions will suggest whether the process is to be taken seriously and whether the Interior Department is at fault in not backing the process.

HIGH VALUE IN PROCESSED FUELS

First, the so-called Karrick process, named for Lewis C. Karrick who developed it, uses low-pressure steam to distill ordinary soft coal. The process is known as low-temperature carbonization of coal. The basic process did not originate with Mr. Karrick. Indeed, prior to the discovery of the first petroleum oil well in Pennsylvania, the city of Boston had no less than five coal-oil plants, making kerosene, gas, smokeless fuel, lubricating oil, paraffin wax candles, and axle grease from coal; and there were 55 such plants in the United States.

Mr. Karrick has extended the process and introduced refinements for special coal uses including complete gasification, all of which are covered in his 20 patents.

The products obtainable from a ton of ordinary, noncoking Ohio bituminous coal by the Karrick process are:

Smokeless fuel, pounds	1,500
Fuel gas, cubic feet	3,500
Cresols, gallons	10
Electricity, kilowatt-hours	100
Crude oil, gallons	26

The break-down in terms of corresponding revenues—based on commercial processing of Ohio coal shipped to the St. Paul-Minneapolis area—is equally startling:

Smokeless fuel at $14 a ton	$10.50
Fuel gas at 10 cents per 1,000 cubic feet	.35
Cresols at 30 cents a gallon	3.00
Electricity at one-half cent a kilowatt-hour	.50
Crude oil at 6 cents a gallon	1.56
Total revenues	15.91

The combined cost of raw coal, freight, and processing is estimated at $10.80 a ton, leaving a net profit of $5.11.

Leaving out the crude oil and cresols, the net profit on a ton of processed coal would be 55 cents. Actually, therefore, the manufacturer could give away the oil products and still make 10 percent on the invested capital in his plant since the end-product of crude oil costs him nothing.

Second, who developed the process and what are his qualifications? Mr. Karrick is recognized as one of the Nation's leading oil-from-coal technologists. He has held the Government positions of chemist, petroleum-refinery engineer, oil-shale and coal technologist, and consulting engineer in the synthetic liquid-oils studies by the United States Bureau of Mines in Utah and Colorado, and in the Pittsburgh station while holding a research fellowship at Carnegie Institute of Technology. He is author of several Government papers.

Mr. Karrick also supervised coal-product researches at the University of Utah from 1930 to 1938 In 1943 he worked on the Alaska and Rocky Mountain coals for the United States Geological Survey, and showed them to be cheaper and better sources of oils than the shales of the naval oil-shale reserves. The following year he was given charge of new oil-source investigations for the Navy Department.

More recently, Mr. Karrick was hired by the State of Ohio to core drill and test the oil shales, discovering vast, apparently unknown oil resources in both oil shales and the coals.

Two years ago Mr. Karrick said in the opening address before the Ohio Society of Professional Engineers that on the basis of his studies of Ohio shales and coals there is enough oil in the oil shales and coals of southeastern Ohio to supply the entire United States with oil at the present rate of consumption for 2,000 to 10,000 years.

TESTED IN COMMERCIAL SIZE PLANTS

Third, what documentary evidence is available on this process? Mr. Karrick has built and operated a semi-commercial-sized plant in Utah, Colorado, and Pennsylvania, while making oil-from-coal studies for the United States Bureau of Mines.

He built and briefly operated a pilot two-unit commercial-sized plant in Ohio. He also built and ran a commercial scale, single-unit for the Navy.

Complete data on these operations and on the research behind them is both in his possession and that of the Government.

Fourth, what corroboration from competent sources? Mr. Karrick has a signed analysis attesting the high quality and value of the oil from his Ohio plant by Dr. Cecil E. Boord, head of the Department of Organic Chemistry at the Ohio State University.

He has a report by Dean R. B. Ketchum, of the University of Utah School of Mines and Engineering, surveying the Karrick process and recommending that the citizens of Salt Lake City adopt it both for its economic usefulness and to cope with the city's serious smoke problem.

Dr. Gustav Egloff, a former president of the American Institute of Chemists, and director of research for the Universal Oil Co., said in an address before the World Power Conference in London that the antiknock quality of the gasoline produced in Mr. Karrick's coal distilling plant in Pittsburgh, using Utah's cheap, nonchoking coals, is one-third better than the best commercial antiknock gasoline.

The Standard Oil Co. of New Jersey offered to buy and to contract for the development and use of the Karrick patents.

Finally, this correspondent has checked the essential facts and cost figures of the Karrick process with those Government oil-from-coal experts who decline to recommend it, or to spend any of their congressional appropriation to further it. The chief among them, as will be reported below, has conceded their basic accuracy.

Mr. Karrick asserts that the Interior Department never has published his original Government-supported research data. Neither has it permitted him to write up an official summary of his studies covering the technology and economics of his oil-from-coal process as is customary on the completion of basic research of this kind.

Mr. Karrick said that Government employees are not authorized to publish original Government data privately. For that reason, he said, he undertook to release the facts about his startling discoveries after he left the Government by becoming a research director at the University of Utah from 1930 to 1938.

VARIED CLAIMS VERIFIED IN THESIS

The stupendous nature of Mr. Karrick's Government-suppressed discoveries are verified in a thesis on low-temperature carbonization by Myron W. Mellor and Robert C. Woodhead, candidate for bachelor of science degrees. Their thesis bears the signed endorsement of Dr. E. A. Beckstrand, head of the Department of Mechanical Engineering, University of Utah.

In formal acknowledgments prefacing their work, it is stated: "The authors wish to express their sincere appreciation to Mr. L. C. Karrick, fuels engineer, and formerly refinery engineer, for the United States Bureau of Mines. Mr. Kerrick directed the research; the methods and processes used were largely those worked out by him, and his excellent cooperation and advice, as well as material assistance, were most valuable."

Under the heading, "Conclusions," the work states:

"In 1935, a low-temperature carbonization plant was built in the coal-research laboratory at the University of Utah large enough to be classed as a pilot plant. From this plant sufficient data were taken to further verify previous research on the subject and to base the calculations for a large commercial plant. Enough byproducts, smokeless fuel, crude oil, and gas were obtained to permit ample testing and use of them.

"The tests made on the byproducts were focused mainly on the smokeless fuel because of the very thorough studies that were already made by Mr. L. C. Karrick.

UNIVERSITY OF MICHIGAN LIBRARIES

"The conclusions made on the testing of this smokeless fuel versus raw coal are as follows:

"1. The smokeless fuel is positively smokeless, no matter how fired.

"2. A fire can be started as easily with the smokeless fuel as with the raw coal in any of the common forms of domestic heating appliances.

"3. The rate of combustion of smokeless fuel can be controlled more easily than the rate of combustion of raw coal.

"4. The efficiency of combustion of smokeless fuel is much higher and is much more constant over a wide range of firing rates than with raw coal.

"5. The combustion of smokeless fuel is from 4.14 percent more efficient in a cook stove to 65.9 percent more efficient in a fireplace than raw coal."

HANDS NOT STAINED AFTER HANDLING FUEL

"6. Smokeless fuels made from most of the Utah coals leaves no stain or dirty dust on one's hands after handling it.

"7. This coal can be classified as an artificial anthracite coal, but with free-burning properties.

"8. There is no need for anyone to purchase new house-heating equipment in order to make Salt Lake City, or like towns troubled with excessive smoke, smokeless when this new fuel is placed on the market.

"The conclusions regarding economic feasibility of the construction and operation of a commercial low-temperature carbonization plant for processing Utah coals, are as follows:

"1. It is economically feasible to construct a low-temperature carbonization plant the process tested in this thesis.

"2. It is economically feasible to construct a low-temperature carbonization plant using this process in series with a steam-generated power plant, and use the off-peak and exhaust steam for coal processing, while producing the power at a rate equivalent to the cost of maintaining the power-generating equipment.

"3. The low-temperature carbonization of Utah coals will save a large economic loss of fuel, and damage to property and health in our cities.

"4. The establishment of a low-temperature carbonization industry in Utah will expand the coal production from the Utah mines by supplying the heat energy consumed in the processing plants and by producing from Utah coal the oil products and the necessary city and industrial fuel gas. The coal mines will then operate at a more uniform rate throughout the year, and be a great boon to labor and to the inhabitants in the coal mining areas of our State.

The conclusions reached from the oil studies are as follows:

"1. High quality crude oil can be economically produced from Utah coals as a byproduct of a smokeless fuel industry. The studies have demonstrated that the coal oil can be cracked and refined into excellent yields and quality motor fuels and that the new liquid motor fuels are the equivalent of the best standard products.

"2. Many smokeless fuel demonstrations were made in our fuel laboratories throughout the winter of 1935–36 before representatives of all of the women's clubs of Salt Lake City. Luncheons were prepared on cooking ranges fired wtih various screen sizes of the smokeless fuels.

"The many visitors were permitted to light and care for the fires. The visitors were uniformly agreed that the fuel was perfect in its ignitability, easy to regulate, exceptionally good in holding a fire, completely free of smoke under all conditions of firing, there was no soiling of the inner surfaces of stove lids, the amount of ash was small, the fuel heated the ovens ready for baking more quickly than either natural gas or electricity, the fuel gave much more heat. They would gladly pay several dollars more per ton for this smokeless fuel than for any other solid fuel."

In 1930 a Standard Oil of New Jersey development company drew up a charter for a subsidiary development company tendering Mr. Karrick the position of vice president and chief engineer and one-third of the stock if he would turn over his patents and supporting research data. A contract was offered to him on these terms. Mr. Karrick declined the offer, preferring, he explained, that his patents be safeguarded in a way that would best insure their "broadest public use."

The phrase "broadest public service" harks back to 1926, when the late Senator Reed Smoot, of Utah, and Herbert Hoover, then Secretary of Commerce, urged Mr. Karrick to take out those patents and to see that they were used in a way to render "the broadest public service." Mr. Karrick attributes these words to Mr. Hoover. Mr. Karrick recalls Mr. Hoover as saying that only in that way, too, would full credit ever be accorded the Government and its researchers.

Certain officials in the Interior Department, interviewed by this reporter, are familiar with the Karrick process and its documented history.

SUPPORT HELD DENIED UNJUSTIFIABLY

They believe Mr. Karrick has been denied, without justification, adequate support in his efforts to use his process, which was developed by the taxpayers' money for the broadest public good. They are officials whose experience, competence, and opinion should not be lightly dismissed. They must remain nameless.

Certain Government lawyers, who likewise must remain nameless, have told this reporter that in their judgment, the Karrick process has been allowed to go unusued because big oil companies and their friends in Government have preferred to buy it or see it exploited independently if at all—with all the risks of establishing a new process in a field dominated by big and financially powerful companies which are ranked as tough competitors.

Back in 1944, when the question of spending Federal funds to develop foreign oil reserves was a serious wartime issue, Harold Ickes, then Secretary of the Interior, told a Town Meeting radio audience that it is possible to make synthetic gasoline from the shale and coal of Utah, but at a great deal more expense than natural oil.

"If the American people want to pay more for their gasoline, why we can give you synthetic oil."

The Secretary of the Interior apparently was not aware of the data secreted in his own files contradicting this still prevalent assumption that oil from coal is more costly.

The high-cost oil-from-coal process mentioned by Mr. Ickes—the process favored by the Bureau of Mines—stems from patents owned by large oil interests, including Standard Oil and I. G. Farben.

In 1943, Dr. R. R. Sayers, then chief of the United States Bureau of Mines, told the Senate Public Lands Committee:

"Because of the huge stake which the public has in this matter, it is up to the Government to undertake the development work—to perfect the known processes, to design and establish new processes, to work out the engineering details, and otherwise as well to demonstrate satisfactorily the practical worth of synthetic fuel production so that industry would be willing to take reasonable risks.

"The Bureau of Mines is equipped to undertake this public trust."

At the same time, Dr. Sayers avoided mentioning Bureau of Mines data relating to Mr. Karrick's studies.

On the contrary, later testimony made it clear that patent rights to methods the Bureau of Mines is spending millions of dollars to develop were acquired by the Standard Oil Co. in 1929.

These methods involve conversion of coal to oil by the hydrogenation process. The Karrick process extracts oil from coal by low-temperature carbonization, that is, by distillation as applied in distilling oil from oil shales.

The president of the Standard Oil Co. testified that the cost of making gasoline by the methods for which the company holds the patent rights runs from 14.7 to 15.9 cents a gallon.

SEES PLENTY OF WORK AHEAD FOR MINERS

In 1944, the United States consumed 1,650,000,000 barrels of crude oil and 650,000,000 tons of coal. If all this raw coal were replaced on the market by the smokeless byproduct of low-temperature carbonization, the miners would have to dig 1,000,000,000 tons of coal, since a ton of raw coal only produces on an average two-thirds of a ton of smokeless solid fuel. Also it would take an additional 250,000,000 tons of raw coal to supply the fuel used in converting the coal to smokeless fuel, oil, gas, and electric power.

Processing 1,000,000,000 tons of coal would yield about 825,000,000 barrels of crude oil, or half the Nation's yearly requirements based on the abnormally high 1944 figures.

If this oil distilled from coal were hydrogenated in its refining, as is done in England, Germany, and in the United States to heavy petroleum residuums, the volume of crude oil would be raised to 60 percent of the national oil need, Mr. Karrick asserts.

As far back as 1924, he and his associates both in the Government and at the universities of Utah and Colorado had developed enough data to show that:

1. Crude oil could be obtained from Rocky Mountain oil shales, by several types of processing plants, for $1.50 to $2 a barrel.

2. That if distilled underground, oil could be extracted from shale for 65 cents a barrel.

3. That bituminous coals also could produce oils in similar plants at $1.50 to $2 a barrel without any credit for the sales value of the gas and smokeless solid-fuel residue.

4. That if solid smokeless fuel was sold wholesale at raw smoky coal prices, then the oil would cost nothing. One could afford to give it away.

The simpler Karrick type of plant is estimated to require $2,000 of invested capital a ton of daily treating capacity. The German processes of converting oil from coal require four times as much invested capital a ton of daily treating capacity, according to information supplied Congress by Standard Oil Co. officials.

Is this oil-for-nothing prospect the underlying cause of the road block which is holding back oil-from-coal development and confusing the public about its commercial feasibility?

The few informed Washington officials who secretly decry the situation believe the desire within the Government to conceal the facts about this economical oil-from-coal process stems from the unwillingness of private oil interests to start people thinking in terms of all the oil the Nation needs for "nothing a barrel."

In order to check the facts with the Interior Department as carefully as possible, this reporter questioned Dr. James Boyd, director of the United States Bureau of Mines; Dr. Arno C. Fieldner, chief of the fuels and explosives branch of the Bureau of Mines; and Dr. Schroeder, the Bureau's leading specialist on synthetic liquid fuels.

Asked what in his opinion was wrong with the Karrick oil-from-coal process, Dr. Schroeder said the oil distilled from coal is tar.

According to Dr. Boord's previously mentioned analysis of oil actually distilled by Mr. Karrick from Ohio coal, by his process, the oil may be evaluated three ways, namely:

1. As coal tar it will vary from $3.80 to $4.20 a barrel.

2. On the basis of the cresylic acid and neutral oils, it is worth $5.80 a barrel.

3. Separating and refining the low-boiling cresylic acids, it is worth $6.50 a barrel.

Domestic crude oil currently is selling for $2.53 a barrel.

Asked about Mr. Karrick's smokeless coal, Dr. Schroeder replied, "Where's Karrick going to find any market for it?"

ADMITS HIGH DEVELOPMENT TECHNICALLY

Asked what's wrong with the Karrick process, Dr. Fieldner said, "Technically it's pretty good," He went on to say it was workable. He said there are quite a number of patented processes in the field of low-temperature carbonization of coal and that "Karrick's compares favorably with the rest."

Dr. Fieldner explained that in evaluating the Karrick process, it is essential to consider two things, "technology and economics." He said Mr. Karrick's process was "not any worse than any of the others."

Asked what about the tabulated list of fuel products obtainable by the Karrick process (printed earlier in this article), Dr. Fieldner said the figures are "about right."

The tabulated break-down of revenues obtainable from a ton of ordinary Ohio coal by the Karrick process (also printed earlier in this article) was called to his attention. Dr. Fieldner remarked that these figures "are fair enough."

Asked to check Mr. Karrick's claim that his oil-from-coal process is four times cheaper in terms of capital investment than the costly German-pioneered process controlled by Standard Oil, Dr. Fieldner said the Karrick investment cost was not four times cheaper. "I think nearer three."

Dr. Fieldner was asked that that being so, would not the public want to know why doesn't the Bureau spend all its millions of dollars of public funds in developing the three-times-cheaper process? Dr. Fieldner replied he thought the public naturally would.

"What is the answer?" he was asked.

"That's one of those things you cannot give an answer to," Dr. Fieldner replied.

When this reporter insisted that there surely must be an answer, Dr. Fieldner explained that the Bureau of Mines' Administration of the Synthetic Liquid Fuels Act discards coal distillation because under the Karrick process oil is a byproduct.

Dr. Fieldner said the Bureau wants gasoline from coal. It isn't interested in backing an oil-from-coal process where the main product is smokeless solid fuel, and the oil is a byproduct.

He said it boils down to a simple economic matter of where is the market for smokeless fuel?

AIMS TO HALT WASTEFUL METHODS

What about the users of raw smoky coal? Dr. Fieldner was asked. It was pointed out that, according to Mr. Karrick's tabulations of products obtainable from a ton of ordinary bituminous coal, which Dr. Fieldner confirmed, we waste nearly a barrel of oil in every ton of raw coal. Last year the Nation squandered 300,000,000 barrels of crude oil in the form of smoke up the flue.

Dr. Fieldner said that was true but that was something for industry to take over and develop, not the Bureau of Mines, which is interested in converting coal to gasoline without any byproducts.

Asked why his Government branch did not publish Mr. Karrick's original research data relating to his oil-from-coal while employed in the Bureau of Mines, Dr. Fieldner said it was news to him that any of Mr. Karrick's Government research data was lying around unpublished.

Dr. Boyd became head of the Bureau in 1947, and consequently came into this controversy at a late date. However, he has reviewed it and stands on the recommendation of the Bureau's experts. His comments assume responsibility for the Bureau's actions, but indicate that the decision lay with Dr. Fieldner, Dr. Schroeder, and their fellow technologists.

Substantially the following colloquy took place between Dr. Boyd and this reporter:

"Question. Dr. Boyd, what do you know about Lewis C. Karrick?

"Answer. Mr. Karrick is a very competent engineer. We've had him in here two or three times and he has wasted hours of our time. We've examined his case thoroughly, and we don't think his process is worth pushing. That's not just my opinion but the opinion of some 30 experts in the Bureau.

"Question. What's wrong with Mr. Karrick's process?

"Answer. I suggest you talk with our experts, Dr. Arno Fieldner, a very outstanding engineer, and Dr. Schroeder.

"Question. What other strides has the Bureau of Mines made in the field of oil-from-coal development that outstrips the Karrick process?

"Answer. I suggest you talk with our experts.

"Question. Why was not the Bureau of Mines interested enough in the Karrick process to publish the original research data gained at the Government's expense? Why has the Bureau not published this data?

"Answer. I don't know. You'll have to ask Dr. Fieldner.

"Question. What about that exchange of letters between you and Mr. Karrick which he has in his possession and in which you informed him 2 years ago that a bulletin was being written on the subject? That was 2 years ago, and apparently nothing has been done to bring Mr. Karrick's process to the public's attention.

"Answer. I don't remember. Possibly Dr. Fieldner has not been able to find anyone competent to assemble it.

"Question. What about Mr. Karrick?

"Answer. That would be up to Dr. Fieldner. Bear in mind that it would cost money. Our funds are outlined by Congress. The money has to be available before we can undertake it.

"Question. But you spent millions of dollars for oil-from-coal methods admittedly three times more expensive than the Karrick process.

"Answer. You must realize that this matter was decided by the best Government experts.

"Question. Like Dr. Fieldner and Dr. Schroeder?

"Answer. Yes, they are extremely competent men."

BUREAUCRATIC PROTOCOL STILLS TONGUES

A few informed officials have been concerned about the Bureau of Mines' suppression of Mr. Karrick's original Government data since long before Senator O'MAHONEY's oil investigating committee warned in 1947 that "this country cannot fight another war if it has to rely on its own oil supply." But they dare not violate the unwritten rules of bureaucratic protocol by speaking out.

The only basis on which Mr. Karrick is willing to dispose of those patents is to license them to whoever will (a) agree to develop them on the widest possible commercial scale, and (b) pay a nominal royalty on the processed tonnage for the maintenance of a coal research foundation to aid the coal miners and support vocational schools for labor.

Mr. Karrick declares that he never has felt reasonably certain that disposing of his patents to large private oil interests would insure their commercial development in the near future and at the same time safeguard his public trusteeship. He believes that the position of the major oil companies, particularly at this time, is not advantageous to his public-spirited purpose.

With domestic crude oil selling currently for about $2.53 a barrel, private companies naturally are interested in keeping up crude oil imports, it is pointed out, since crude oil can be obtained abroad for about 34 cents a barrel and shipped to the United States at a tanker cost of about 80 cents a barrel, and sold at a heavy profit.

Consequently, Mr. Karrick believes, the merits of his cheap domestic oil-from-coal process are unlikely to interest private oil companies, or the Interior Department for that matter, until the companies run out of sources of cheap foreign crude oil. But in the interests of his public trusteeship he is hopeful of persuading Congress to reappraise the Interior Department's administration of the synthetic fuels development program.

Central Arizona Reclamation Project

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. PHILLIPS of California. Mr. Speaker, under leave to extend my remarks, I submit a resolution adopted by the assembly and senate of the State of California. It refers to the proposed central Arizona reclamation project, now under consideration by a committee of this House and gives information which I hope will be read thoughtfully by all Members. The joint resolution follows:

Assembly Joint Resolution 1

Joint resolution relative to the central Arizona project

Whereas Senate bill 75 of the Eighty-first Congress, first session, which would authorize the central Arizona project, is now before the House of Representatives of the Congress of the United States for consideration; and

Whereas the proposed central Arizona project is economically unsound and would benefit an estimated 25,000 residents in Arizona at an estimated cost of $738,000,000 to the taxpayers of all the States and Territories of the United States; and

Whereas sufficient water for the proposed central Arizona project can be secured only by diverting, to that project, some water now needed to maintain authorized and existing projects on the Colorado River; and

Whereas the diversion of water from existing projects will jeopardize the water supply of 3,500,000 residents of California, who, relying on their contracts for water with the Federal Government, have invested more than $500,000,000 to provide facilities to enable them to use their share of the water from the Colorado River; and

Whereas the passage of Senate bill 75, while benefiting a few thousand landowners in Arizona, will bring irreparable injury to 3,500,000 residents of California, and will increase the tax burden of the taxpayers of all the States and Territories of the United States: Now, therefore, be it

Resolved by the Assembly and Senate of the State of California, jointly, That the House of Representatives of Congress of the United States be memorialized to refuse the passage of Senate bill 75 of the Eighty-first Congress, first session; and be it further

Resolved, That the chief clerk of the assembly be directed to transmit copies of this resolution to the President, to the Speaker of the House of Representatives, and to each Representative from California in the Congress of the United States.

Adopted in assembly March 8, 1950.

Adopted in senate March 16, 1950.

UNIVERSITY OF MICHIGAN LIBRARIES

Let's Strengthen Navy Power

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Post, Boston, Mass., March 19, 1950:

NAVAL POLICY TAKING RISKS—FORCE OF SHIPS AND PLANES ABLE TO COVER WORLD NEEDED TO MEET RUSSIAN THREAT

(By Lester Allen)

With the ocean washing its shores, New England operates navy yards, ship- and submarine-building plants, plants to provide power for planes and ships, a concentrated and feasible target for attack in an atomic age, but apparently cares little about the calculated risk being taken with national security by defense plans that whittle down our naval power to an absolute minimum.

Capt. Ernest M. Eller, USN, in the 1950 prize essay of United States Naval Institute Proceedings, sums up the attitude of the people of the country by saying, "Although the sea is the very tide of her life, America has never believed in it. Some leaders have proclaimed its importance, the greatest being Washington, who, in an hour of crisis, declared that, however important armies are, in a war like the Revolution a navy must cast the deciding vote. Power on the sea—and in this twentieth century above it—has helped to save us through many great dangers, but the sea itself has never become a part of the heart of America."

BITTER TRUTHS

It is a trenchant essay—one which should be quoted in its entirety if space permitted, for it contains bitter truths important to the Navy brass as well as the civilian who foots the bills. He points out that with great lack of tact the Navy scorned the national craving for a cheap war (in lives and treasure) and said bluntly that this was "weak-minded madness before the facts of life."

"Having learned the hard way that nothing is easy, the Navy as a whole thus did not participate in the brief golden hallucination when America had the world in her grasp," he asserts. "For a space the United States was God and fate. We alone had the A-bomb. It was terrifying to hear the man in the street throughout this Christian country of ours declare that we should go drop bombs on all their big cities. When we had blasted enough families and cowed the rest, then the world would be safe for democracy."

FAIL TO SEE NEED

In conclusion, he says: "Anyone who looks impartially at the events of 1949 must come to the conclusion that the American public has accepted a progressive reduction of its Navy below a minimum safe level because it does not see the need for it.

"This occurs at the moment the United States has become the first power in the world; at a moment when she is champion, leader, and most of the strength of western civilization, with growing obligations in all the seven seas. It occurs at a time when the United States, and only the United States, in this generation, at least, has the power to give all peoples that constant freedom of the seas necessary for world peace and progress."

SHOULD BE BUILT UP

Navy power should be built up under the sea and in the air. Even the bitterest antagonists of the Navy admit that it is in these categories that the Soviet Union is making the greatest progress toward the kind of strength needed for global expansion.

New England has a major role in such a build-up of the kind of naval power required to meet the threat of Soviet expansion. The Red navy has 270 submarines, including 30 German-type 21's, which can easily do 17 knots submerged. We have built two submarine hunter-destroyers, the U. S. S. *Carpenter* and the U. S. S. *Owens*, and are building the K-1, 2, and 3, small killer subs as a countermeasure. Vice Adm. Francis S. Low is the head of a special program of antisubmarine warfare for the Navy.

New England yards should be turning out killer subs, killer destroyers, and other antisubmarine weapons if Secretary of Defense Louis Johnson's estimate of the situation is right.

MUST SHIP SUPPLIES

He has declared that we would retaliate instantly if attacked. He means atomic bombardment. That means from overseas bases. Overseas bases mean an immense tonnage of supplies and the $64 question is how the supplies are going to move overseas if the Navy doesn't see that they get there.

The fact is that the Navy won't get them there if Russian snorkel submarines are on the loose, because a snorkel is much harder to find and kill—even with radar at its present high development—than an old type submarine that came up for air and recharging batteries.

NAVY CAN CURB REDS

Even the build-up of the strength of the Atlantic Pact nations requires a Navy at a much higher ratio of strength than it is today. It's a Navy job to get the stuff across to Europe—once the shooting starts. With a Navy ranging around the coastal frontiers of the Soviet Union the immense numerical strength of the Red fighting forces is whittled down to a size than can be handled by the United States because they have to spread their forces around to meet the threat of coastal incursions.

New England's concern should be over the fact that the yards and the plants used to build ships and power plants for ships and planes are not being utilized in the way that they should be if the plan is to undertake a rapid expansion in the event of war. But, just how rapid could that expansion be? If the experience after Pearl Harbor means anything, it will be at least a year before the plants are turning out even the minimum required amounts of matériel.

A great many people shudder to contemplate the possibility of war. They would shudder more if they contemplated the possibility of quick defeat and what it would mean.

POLAR ATTACK NOT LOGICAL

Armchair strategists declare that if the Russians launch an attack it will be over the pole and that Arctic operations are of paramount importance. Just why the Russians should select the Polar approach with all its difficulties when, with a submarine fleet, western European harbors and an air force of its present strength, they could wreak incalculably greater damage, is difficult to understand. The Polar approach can be checkmated by a build-up of Alaskan defenses. The European approach can only be stopped cold by the existence of a strong United States Navy.

The fact is that there are too many calculated risks being taken. As long as the Soviet Union can be confined to land operations in Eurasia there is every chance of rolling them back to where they came from. But, let them get their feet into the Atlantic, or the Pacific, and it would be a tough, long, and probably futile effort to keep them from global mastery.

Too many people sell short the ability of the Russians to create a sea fighting force. They can't imagine what would happen if by any chance the Russians should possess carrier forces to attack our coasts and we had none. The fact is that we soon will have none unless naval aviation is beefed up.

NEED WORLD-RANGING FORCE

An offensive and defensive power capable of ranging around the world will contain the Soviet Union in its land mass until the international chaos precipitated by World War II and the expansionist policies of the Soviet Union is resolved.

Carrier strength has been cut from 12 to 8 to 6 to 4. Soon, because the Soviet Union has not announced the building of any carriers, we may have no flat tops in commission. They will all be tied up rusting out as any New Englander can see by looking down Boston Harbor. There is this warning to be taken to heart—tied-up carriers cannot be used. They have to have planes, men, training—lots of it. Otherwise they might as well be a pile of iron ore still in the ground at Hibbing, Minn.

ANTISUB WEAPONS ESSENTIAL

Whether the supercarrier that Navy planned to build is the answer or not is beside the point. But, Navy building of antisubmarine weapons is imperative because the Red navy has plenty of submarines, has the German submarine yards and German know-how and is building more.

The Russians are not building a submarine flotilla to operate in the Polar seas. They are building it to operate in the Atlantic and the Pacific—and if the crisis of war ever comes that's where they will have to be hunted down.

If we are attacked, our best hope is to roll the Russians back out of Europe and the start would have to be made on European soil. In order to apply power of the order needed, men and material would have to be transported not only to Europe but across the Pacific as well. All the atomic bombing won't alter that fact.

TIME TO STIR CONGRESS

The sea may never become a part of the heart of America, but New England has lived beside and off the sea for more than three centuries. It's about time that the New England delegation in Congress awoke to the fact that there's work to be done—that the Navy is New England's concern.

"The American public particularly does not understand," says Captain Eller, "that the trident navy of today requires strength to fight in the air even though no probable opponent may have carriers. This attitude is incredible but it exists.

"No man, except the few who deliberately seek to destroy our Nation from within, would advocate that if Uncle Sam had a club and a pistol, and his opponent in a dark alley had only a club, that Uncle Sam should discard the pistol. No man would imagine that the way to defeat a Goliath is by making ourselves weak where he is weak.

"Yet, if we clip the powerful wings of the Navy that gave us enduring strength over the oceans of the world, we restrict ourselves to meeting our probable enemy in the area of his own choice. The airplanes of the Navy, combined with the ships that provide mutual protection and that transport them across oceans, give us freedom to attack where we chose, forcing the opponent into an uneasy defensive on all his frontiers."

Thomas B. Feeney's Ireland

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Lynn Telegram-News, Lynn, Mass., of recent date:

STORY OF IRELAND'S FIGHT FOR FAITH AND FREEDOM TOLD—GLORIOUS STRUGGLE PENNED BY FEENEY—NATIVE OF IRELAND, FATHER OF THREE PRIESTS, TRACES HISTORY BEFORE ST. PATRICK'S COMING TO CONVERT PEOPLE—PLEADS FOR ONE IRELAND

My friends asked me to write a little bit about Ireland for St. Patrick's Day 1950. There has been so much written about my native land, yet so much remains to be written to do justice to the Irish. This would be no small task.

There are many questions a student could ask about the customs and mode of living of the race of people who inhabited Ireland long before St. Patrick came to convert them.

Exactly 1,060 years before America was discovered by Columbus, Patrick, the Apostle, landed in Ireland. The nation to which he came was a most ancient race, derived from one of the primeval races that peopled the earth—from the great Phoenician family of the east. These ancient peoples landed in the remote mists of prehistoric times upon a green isle in the western ocean. They populated it, colonized it, established laws, opened schools, had their philosophy, their learning, and science and art, equal to that of any other civilization of the day.

They were a people well known to the ancient Greeks and Egyptians. The name of the island as it is known today—Eire—is only a name that came after the more ancient name, for the Greeks hundreds of years before the birth of Christ called the island Oggia; or the most ancient land. The most ancient Greek writers spoke of Ireland as the far distant ocean and as a place of wonderful beauty, as an island rising out of the sea, the fairest and most beautiful of all the sea's productions.

LAND OF DESTINY

Then the Milesians landed on an island they called Inisfail, their land of destiny. They brought with them an advanced degree of civilization. So the original inhabitants intermingled their race with the Milesians, and in that intermingling was formed the Celtic Constitution which divided Ireland into four kingdoms, all under one King (Ard-righ), the high king. The palace of this high king was built almost in the center of Ireland, a hill top, rich in verdure, crowned with a lovely wood on every side. It is the plain of Royal Meath. In this palace for centuries Ireland's kings lived. It was called in the language of the people Tara.

There on Easter Sunday morning in the year 432 early in the fifth century of the Christian era, a most singular sight presented itself, Ireland's monarch sat upon his throne, in high council, around him were the sovereign kings and chieftains of the nation. Also around him again in their rank were the pagan priests—the druids of the old fire worship, and around him again were the ancient minstrels of Ireland with snow-white flowing beards with their harps playing and filling the air with glorious melodies of Irish music pouring out upon the wings of song the time honored story of Ireland's heroes and their glorious kings.

Suddenly a man appeared with mitre on head, cape on shoulders and a crozier in his hand with the Cross of Christ upon it, and this man was Patrick who came from Rome, to preach Christianity to the Irish kings, chieftains, and people.

ST. PATRICK CAME

They received him and became a civilized and enlightened people. They did not stand like other nations in a wild hubbub of barbarism to denounce the truth, as soon as they heard it and put the truth teller to death. No, they sat down—these Kings—these minstrels—these judges of the land, these learned philosophers. They disputed with Patrick, they brought the keen weapons of human wisdom and human intellect to bear against that sword which Patrick wielded.

IRELAND'S CONVERSION

Oh, it was the sword of the spirit, the word of God, the Lord Jesus Christ, until at length that King and those chieftains, all these druids and bards found that Patrick preached a reasonable religion, that he brought conviction into their minds.

Up rose the head of all the bards, and that of Ireland's minstrels, the man next in authority to the King, and lifting up his harp in his hand he said:

"Hear one, oh high King and chieftains of the land, I now declare that this man who comes to us speaks from God, and so long as I live this harp of mine shall never sound again save to the praises of Christianity and its God."

And the King and chieftains and bards and warriors and the judges and all the people alike rose promptly, and never in the history of the world was there a people that so embraced the light and took it into their minds and hearts as the Irish people did on the day of their conversion.

Ireland took the message from Patrick's lips, surrounded him with honor, and before he died he received the singular grace distinct from all other saints—that he alone among all the other apostles that ever preached the Gospel found a people entirely pagan and left them entirely Christian.

This then briefly is the story of Ireland's conversion to Christianity.

STRUGGLE FOR FAITH

Ireland's faith was easy at first to keep, but, Lord, how they struggled later to keep it. For 300 years after Patrick preached the gospel Ireland was the holiest, most learned, most enlightened, the most glorious country in Christendom. From the ends of the earth students came to study in Irish schools. They came by tens of thousands, and they brought back to every nation in Europe the wondrous tale of Ireland's sanctity, of Ireland's peace, of Ireland's music, and above all the devotion of her priesthood, Ireland's love for the Blessed Mother of God, and the immaculate purity and wonderful beauty of the womanhood of Ireland. Ireland was then very quiet and very happy, but she was not destined to remain so long.

The Danes invaded Ireland and for 300 years every year saw fresh arrivals of armies, and for 300 years Ireland was challenged to fight in defense of her faith, and to prove to the world that until the Irish race and the Irish character were utterly destroyed the Catholic faith never would cease to exist in the land.

The nation (for thank God it was a nation in that day) drew the sword for their priests, for their altars, and for God. Think of 300 years of continuous war, look back if you will on our two World Wars, about 8 years duration for both; think of 300 years of slaughter. Every valley in Ireland tells the tale.

BORN IN IRELAND

There are many like myself, born in Ireland, who can remember the "rath," or mound, sometimes in the middle of the field, sometimes on the hilltop. The old people of Ireland will tell you that Ireland is full of them, and they will tell you that when the day of battle was over and the Danes were conquered and their bodies were strewn on the field, the Irish gathered the bodies together, made a big hole into which to put them, and covered them high with dirt and sods.

In every part of Ireland are found "raths," or mounds, and what do they tell? They tell this: That never until the day of judgment no man will be able to estimate the hundreds of thousands of Danish invaders that came to conquer Ireland only to find a place in the grave. This war with the Danes lasted over 300 years.

Well, we read of how the Danes were banished from Ireland by Brian Boru. Then came the Saxon, and another 700 years of war. The sword of Ireland was drawn against the Saxon at the beginning of the ninth century, and it is still out of its scabbard against the Saxon until all of Ireland will come under one head, one government doing business peacefully with the world.

DEVOTION TO MARY

The Irish people for 1,500 years fought for something they had never seen. They never saw Christ in the Blessed Eucharist. They never saw Our Blessed Mother and yet for all those 1,500 or more years they fought for that Christ on the Cross, for that Saviour in the Tabernacle and for Our Blessed Mother of Christ whose protection caressed the Irish people, not only in Ireland but scattered all over the world. The Irish always implore Mary's help and assistance. She is the Gateway to Heaven. St. Patrick taught them that God came to earth through Mary and that man can get into Heaven only through Her. Mary is the way to Christ and this is what Christ taught—belief in this divinely revealed truth, and all the other truths given to His Apostles.

St. Patrick spoke with no compromise to the Irish people. This is the reason that after all the persecutions the people of Ireland are able to keep the Catholic faith. St. Patrick brought them the joy of their redemption, the Catholic Apostolic Church, the acceptance of whose doctrine given us by God is the one and only way of protection against Satan and the wickedness of men. Christ is the sure road to salvation from all real harm in this world, and the one and only way of salvation in the world to come.

MYSTICAL DAY

This great Saint gave the Irish people all these wonderful things, and sure delights for their souls. He also gave them St. Patrick's Day, the day of gladness we celebrate. There is something mystical about the gladness of those who celebrate St. Patrick's Day. It is a gladness that is over and beyond anything racial or local. It is a merriment of heart that transcends the sweetness of Irish music or the lovableness of the Irish character. It is a gladness that seems to come from the very heart of Paradise.

One famous Irish poet has caught some of the spirit of it in these delightful lines in which he tells us that St. Patrick gave all the Irish a holiday in the middle of Lent:

And so in March gray
To drive troubles away,
God sends to the Irish
The saint and the day.

The late Reverend Father P. J. Carroll echoes the pride of the day in these beautiful words to St. Patrick:

UNIVERSITY OF MICHIGAN LIBRARIES

Called son by many lands,
Thou art a father unto one.
Of all these mothers claiming thee,
By honored titles naming thee
We ask: Where is thy priceless birthright gone?
That blessed faith of thine,
They mothering thee have sold
But she, thy daughter dutiful
Has kept thy treasure beautiful
Through many sorrows in her heart of gold.

Criminal Penalties of the Sherman Antitrust Law

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. CELLER. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I wish to call attention to the thorough and extensive hearings conducted by the Temporary National Economic Committee from 1938 to 1941, inclusive, and to the conclusions and recommendations reached by that committee, composed of the ablest Members of Congress and leaders of the executive agencies, after its inquiry into concentrations of economic power in the United States. More specifically, I wish to point out the unanimous recommendation of the Temporary National Economic Committee regarding increasing the criminal penalties of the Sherman antitrust law from $5,000 to $50,000. I am thereby including in the RECORD the unanimous recommendation of that committee regarding anti-trust-law penalties.

4. PENALTIES

In its preliminary report to the Congress this committee pointed out the inadequacy of existing civil remedies under the antitrust laws, as well as the inappropriateness of the criminal remedies in many cases. The committee then recommended the enactment of legislation which would subject corporations and corporate officers violating the antitrust laws to more stringent civil penalties than exist at the present time. The committee is still convinced of the validity of its earlier recommendation, and again urges the enactment of such legislation. A bill introduced in the Senate on June 28, 1939 (S. 2719) would, if enacted into law, carry into effect the recommendations here made. The committee also points out that the maximum criminal penalty, by way of fine (and the courts are reluctant to punish a criminal violation by imprisonment) is $5,000. This amount is clearly inadequate as a deterrent to businessmen or to groups of businessmen whose incomes are in the millions, and the committee therefore recommends that the maximum limit for fines be raised to at least $50,000, leaving discretion with the court to assess the penalty according to the means and circumstances of the defendant and according to the extent to which it has profited by the violation of the act.

(Approved with objection.) (Investigation of concentration of economic power, final report and recommendations of Temporary National Economic Committee, 77th Cong., 1st sess. (1941), p. 40.)

Grass-Roots Support for Hoover Report

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. NIXON. Mr. Speaker, it seems to me most fitting that I should take this occasion to make public acknowledgment of a very commendable activity which recently was undertaken in the city of Alhambra, Calif., located in the district which I represent.

The Junior Chamber of Commerce of Alhambra and the Alhambra Post-Advocate jointly sponsored an educational campaign to acquaint the people of that city with the provisions of the Hoover Commission report. The project had the further purpose of urging the people of Alhambra to let their representatives in the House of Representatives, and in the other body, know that they are wholeheartedly in favor of the adoption of the Hoover Commission's recommendations, in the interests of eliminating waste and extravagance in the operations of the Federal Government and thereby reducing expenditures of the taxpayers' money.

Yesterday the fruits of this commendable endeavor were brought to my attention in a most graphic manner. Mr. Clifford Cooper, who is not only a member of the Alhambra Junior Chamber of Commerce, but is also president of the National Junior Chamber of Commerce, came to my office and presented me with petitions, and coupons clipped from the Alhambra Post-Advocate, containing the names of more than 3,000 people urging the adoption of the Hoover Commission report.

Mr. Speaker, a recent Gallup poll indicated that more than 65 percent of the American people who were interviewed had no knowledge at all of the Hoover Commission's recommendations. This seemed to me a very startling revelation because of the great importance these recommendations hold for every taxpayer in the country. In Alhambra, the people of the junior chamber and the Post-Advocate determined to tell the whole story of the Hoover Report in detailed form in a series of articles in the Post-Advocate. The success of this endeavor to inform the people is apparent in the response that I received yesterday.

Divide and Conquer

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. BREHM. Mr. Speaker, on January 10, 1949, I addressed the House and stated in part that in an effort to combat false and malicious propaganda, as well as the whispering campaign which was employed against me during the 1948 campaign regarding my voting record, that I would periodically submit a factual report from the record how I had voted on every issue which would come before us during the coming session.

In keeping with this declaration I issued on August 15, 1949, a complete detailed record of how I had voted on each and every measure which had come before us up to that time, as well as a brief statement as to why I had so voted on each measure. I concluded this report by saying that—

During the next year we will see in operation the most highly organized propaganda machine ever devised in America.

Well, Mr. Speaker, now being thwarted in their plan to misrepresent my voting record, they have resorted to a new technique which I would like to describe herein.

According to the official registration poll books the congressional district which I have the honor to represent has a majority of 12,000 registered Democrats. The fact that I, a Republican, have been elected to represent the district four terms, should serve as ample proof that the majority of my Democratic constituents are of the true Jeffersonian variety and approve most of the votes which I have cast.

As every Member of this House knows, I am a "middle of the road Republican," leaning toward the conservative. Personally I feel that I am still young enough to recognize and accept progress, yet old enough to know that we must cling to our basic American concepts of government if we are to progress safely.

Therefore, Mr. Speaker, since a majority of both Democrats and Republicans voting in the Eleventh Congressional District evidently approved, at least a majority of the votes which I have cast, the same opposition which was so unscrupulous in their 1948 technique conceived the idea of trying to divide members of my own Republican Party in an effort to defeat me in the primary. Acting in accordance with this planned strategy, they set up the following program:

Knowing that most Americans are headline readers, they decided to put misleading headlines on various statements which I had made. They were smart enough not to misquote me completely in the body of their articles, because charges could be preferred against them. However, there is no law to prevent their putting any title to an article which they claim to be their interpretation of the remarks. Let me briefly illustrate what I mean.

Shortly after the last election I stated, in part:

You know I sometimes feel like giving President Truman everything he asks for. Perhaps if those who supported him really could see what would happen if his entire program were enacted they would become so sick of their bargain that they never again would vote that way.

The headlines appearing on that article were: "Representative BREHM willing to give President Truman everything he asks for."

On another occasion I was being interviewed regarding the Taft-Hartley Act. I stated, in part:

I am willing to vote to amend the act as recommended by the joint nonpartisan congressional committee which we set up to study and observe the law. I would also be willing to change the name or title if by so doing we would have some guaranty that labor leaders would cooperate for the best interest of their members, of industry, and for the country in general. This I think would be a small concession to make in exchange for industrial peace and production.

This time the headlines rang out: "Congressman BREHM will vote to repeal Taft-Hartley if that is what labor leaders want, because it will guarantee full production." Clever, are they not?

Still another time I was asked what I thought about the $100 per month pension for the miners. I replied:

Well, I have no way of knowing whether $100 is enough, not enough, or too much. In my opinion, all assistance should be on a basis of need. A person flat on his back might need twice that amount, while a fellow who had some other income might not need that much. This much I do know, with their dangerous assignment they are entitled to all they can get by bona fide collective bargaining.

Do you know what the headline was this time? "Representative BREHM says $100 too much pension for miners."

At another time I remarked that "I am not only interested in mine safety, but all types of safety which protect human life." I further stated that I intended to protect States' rights in mine safety legislation. This time, just because I did not agree to go along with the Federal position, with no questions asked, I received headlines which said: "Congressman BREHM Opposes Mine Safety Legislation." The article then went on to quote exactly the remarks which I had made. However, some of my supposedly good friends took this article and went among the miners, showing them only the headlines in an attempt to give them the impression that I was opposed to mine safety and wanted them all killed in some mine disaster.

Now, Mr. Speaker, some may wonder why I am putting this particular speech in the RECORD. Well, the reason is quite obvious. If I did not put it in the RECORD the same unscrupulous individuals who are now attempting to divide the Republicans by their misstatements regarding President Truman's program, the Taft-Hartley Act, the National Cemetery, my office personnel, positions in the Post Office Department, over which I have no say, statements to the effect that I go back to the district and visit labor leaders, but do not call on my own committeemen, and all the rest of the tommyrot, could and in all probability would say that these were untrue statements. Therefore, Mr. Speaker, I am simply using the public record in order that all may know the truth and that the light of day may shine upon their false accusations.

If I were asked to name the most unpleasant feature of serving in Congress, it would be that we do not have enough free time to go back into our districts and renew old friendships and make new ones. As everyone knows, during the war we were in almost continuous session. Last year it was late October before we adjourned and as a consequence there was no time to get over the district and visit with those to whom I owe so much.

Now of course anyone who is interested in how or why I voted on any measure, has only to look at a copy of the public record which I sent out at the close of the last session. After all, that is the test of my position and not some newspaper article which can be slanted or interpreted any way some particular writer might want it to appear.

It is the privilege of anyone to work against me, vote against me, or run against me, but I intend to insist that he keep the record straight. Oppose me for my vote on some issue, O. K. Oppose me because they do not like me, O. K. In fact oppose me for any legitimate reason they choose, but let no one dare give as his reason that I am not loyal to the principles of my party. The public record as well as our Republican leadership in Congress readily disproves any such charges.

It seems to me that before anyone goes gallivanting over the country putting out half-truths against those of us who have been waging an incessant fight to preserve our beloved Republic, he should first be able to show some battle scars in his encounter with the enemy. If a person is sincere he does not sleep in the same bed with our enemies.

I may say in closing that one reason it is becoming more and more difficult to induce good Christian men and women to run for public office, is because they refuse to subject themselves to the unscrupulous and downright lying propaganda which has apparently become standard equipment in recent years of those who seem determined to rule or ruin.

More Federal Control

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. NIXON. Mr. Speaker, one of the most startling and dangerous proposals which has been made in recent years is the suggestion that a Federal bureau should be set up for the purpose of licensing the motion-picture industry. Even actors and actresses would be required to take out licenses with the Government before they could appear in pictures. The ostensible purpose of this proposal is to improve the standard and quality of motion pictures. The ultimate effect of it, however, can be not only censorship of motion pictures themselves but also complete control of the individual lives of those who appear in and produce the pictures.

But the greatest threat inherent in this proposal is the precedent that would be established. It would open the way toward licensing everybody who engages in interstate commerce. This, in the final analysis, gives the Federal Government the power to deny a license to anybody whose business standards and personal behavior it does not approve. Right now we should be giving more thought to reducing the power of the Federal Government to control our individual lives and fortunes rather than considering proposals to increase that power.

The motion-picture industry has established its own governing body to enforce a code of morals and ethics. Under this procedure, the industry has been eminently successful in raising the moral standards of the films it produces. True, under this self-regulation, the code governs only the productions themselves and does not apply to the private lives of those who appear in the pictures. But I see no more reason for the Federal Government to set itself up as the arbitrator of the moral conduct of individuals in the motion-picture field than I do in any other field of private employment.

An excellent analysis of the proposal and the dangers inherent in it appeared in an editorial in the Washington Daily News of March 16. Under leave to extend my remarks, I am including a copy of the editorial:

WRONG REMEDY

Senator EDWIN C. JOHNSON, Democrat, of Colorado, wants Congress to impose a strict Federal licensing system on the movie industry—on the actors and actresses, the producers, the distributors, and the films.

Persons convicted of crimes involving moral turpitude, or who admitted acts "constituting the essential elements" of such crimes, would be denied licenses. They would be barred from acting, in directing, producing, or distributing movies.

Films "tending" to promote crime and juvenile delinquency also would be denied licenses. They would be barred from shipment across State lines.

Among other things, Senator JOHNSON is outraged by the recently published amours of Ingrid Bergman and Rita Hayworth, whom he denounces as "Hollywood's apostles of degradation."

He accuses RKO Pictures and Roberto Rossellini, director of Miss Bergman's latest film, Stromboli, and father of her child, of "shameless exploitation" and of "deliberately exhibiting the moral turpitude of the leading lady to pack their theaters."

And he says that these and other matters of movie morals will be explored in hearings by his Senate Interstate Commerce Committee next month.

There's a great deal to be said for the movie industry's contention, that films should be judged by their contents, not by the private lives of the persons who make them. It must be admitted, however, that the publicly paraded private affairs of same persons who make movies has an influence on young and impressionable people that cannot be described as wholesome or uplifting.

But the remedy, in our opinion, is not Federal licensing—a dangerous proposal of doubtful constitutionality.

Part of the remedy can be applied by the movie industry, through the making of better films and through disciplines rather than rewards for actors, actresses, directors, producers, and distributors who transgress. And the industry, now asking the United States Supreme Court to outlaw State and local censorships, had better give thought to its responsibility if it wishes to head off Federal controls.

UNIVERSITY OF MICHIGAN LIBRARIES

The other part of the remedy can be applied by decent American people, as Senator ALEXANDER WILEY, Republican, Wisconsin, points out. Let them express their disapproval of objectionable films of errant Hollywood stars by refusing to go to see them.

UN as Bridge to One World

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Thursday, March 23 (legislative day of Wednesday, March 8), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the text of an address delivered by Carlos P. Romulo, President, fourth session, United Nations General Assembly, at the New York Herald Tribune's High School Forum held in New York City on March 4.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ROMULO ENVISIONS UN AS BRIDGE TO ONE WORLD—CALLS AMERICAN MORAL LEADERSHIP BEST HOPE FOR PEACE; BACKS STRONGER UN

A free world, at peace and governed by just law—that is the world we want, the world we are trying to build through the United Nations. Lasting world peace and a durable world order presuppose some form of a limited world government. The alternatives are international anarchy, a state of perpetual conflict in a succession of cold wars each more dangerous than the last, or the ultimate catastrophe: a new world war fought with the weapons of mass destruction—atomic bombs, biological poisons and perhaps even hydrogen bombs.

There is no going back to national isolation. Such is the interdependence of nations today that no country—however great, powerful or prosperous—can stand insulated from its neighbors and oblivious of the plight and the problems of the rest of the world. It is not rhetoric but a simple statement of fact to say that peace and order are indeed indivisible, in the sense that only universal peace can really be effective, and only a system of law applicable to all nations can insure a just order in modern society.

World government, however cannot be established by fiat. We cannot have an effective world government until we have evolved a viable world community. This is precisely the function of the United Nations. Through a continual exchange of views, through declarations, agreements and covenants and—most important of all—through cooperative action by the member states, the United Nations is gradually building up a viable international body politic.

UN FACTOR FOR PEACE

The cold war has obscured the achievements of the United Nations in this most important task. The United Nations Charter itself is a milestone of the greatest significance in the evolution of human society toward a better and more stable order. By renouncing war and providing the means for the amicable settlement of international disputes, the charter has been a powerful factor for peace. It reaffirms faith in fundamental human rights and thereby serves as a bulwark against the perversion or denial of those rights. By pledging the member states to promote social progress and better standards of life in larger freedom, it has cleared the way for an unprecedented advance in these fields on a globe scale.

In pursuance of the principles and purposes of the Charter, the United Nations has produced the Universal Declaration of Human Rights and is now drawing up an International Convention on Human Rights which will add legal sanction to the moral force of the declaration. The General Assembly in 1948 adopted unanimously the International Convention on Genocide. The Trusteeship Council has established the principle that the well-being of dependent peoples is a responsibility of the international community, and has rendered invaluable service in helping to prepare them for self-government.

The Economic and Social Council has achieved great progress in dealing with the problems of health, labor, trade, relief, and reconstruction through international action. In the political field, the mediation or intervention of the United Nations has facilitated the peaceful solution of conflicts involving some 500,000,000 men, women, and children, comprising about one-fourth of mankind.

BRIDGE TO ONE WORLD

Even under the stress of the cold war the United Nations has succeeded, to an extent not generally realized, in laying the foundations of international understanding and international cooperation in coping with problems of hunger, freedom, rehabilitation, security, and social progress. The United Nations is our bridge to one world, to that living community of nations without which we cannot hope to have effective world government.

We must not destroy this bridge in our impatience to get to the promised land on the other side. Rather must we strengthen it the better to enable it to fulfill its function of spanning the gap between the world as it is and the world as we want it to be.

I have myself been one of the most ardent advocates of a stronger United Nations. On more than one occasion I have argued publicly that the United Nations to be fully effective must be given more power and authority. During the San Francisco Conference, I opposed the grant of the veto power to the Big Five. After the conference, in the committees of the United Nations and elsewhere, I strongly and repeatedly urged the modification of the Charter to pave the way for the organization of limited world government.

At one time I suggested the conversion of the General Assembly, which now can only make recommendations to member states, into a genuine parliamentary body with legislative powers sufficient to prevent war. Such powers would include the authority to prohibit all weapons of mass destruction, to maintain an adequate international police force, to apply the necessary sanctions, and to establish world tribunals. Under such a scheme, the Security Council would become the executive agent of the General Assembly, and in that capacity would be freed of the incubus of the veto which has often rendered it completely helpless in moments of crisis.

The proposal would include such other features as the establishment, in place of the one-nation-one-vote rule, of a system of weighted representation whereby each member state would have a voice in the General Assembly commensurate with its actual position in the world, taking into consideration such factors as population, industrial power, and resources, literacy, military strength, and others. Representatives to the United Nations would, accordingly, be elected by popular vote.

Such was the main outline of my plan for turning the United Nations into a limited world government. Obviously, under such a scheme, every member state would be obliged to surrender a more substantial portion of its national sovereignty than it had hitherto yielded under the United Nations Charter. Matters of domestic concern would remain under the jurisdiction of the national states. The result would be a judicious compromise between the traditional concept of national sovereignty and the newer concept of international order, enabling the nations to establish a world government with strictly delimited authority, operating under the fundamental principle that, while it would have all the powers required for mutual preservation, all other powers would be reserved to the member states.

In the present state of the world, any plan which aims at the establishment of even a limited world government must appear to be impractical. It is a fact that the world today is divided into hostile camps actively engaged in a cold war which has so far precluded agreement on such vital problems as disarmament and the control of atomic energy. International relations have deteriorated to such an extent that our main preoccupation has been reduced from the building of one world to the establishment of a modus vivendi between the contending camps. Whatever the distractions and difficulties of the moment, however, we must never lose sight of our ultimate goal—a world community secure in its rights and freedoms under some kind of world government.

In the meantime we must foster all the influences for conciliation, understanding, and cooperation that will enable us to avert war and establish lasting peace. Nowhere is the need for tolerance as the key to peace more keenly felt and appreciated than in Asia today. Since the end of the war, there has been a strong movement among the free states of Asia for a union or association dedicated to peace. In 1947, the Asian Relations Conference, held in New Delhi, defined Asia's role in world affairs as an exponent of the moral factor, a mediator between embattled ideologies, a firm and consistent advocate of amity and understanding in a world divided into hostile factions.

The New Delhi conference envisaged an association of Asian states dedicated to peace and pledged to use their combined influence in support of freedom and justice. Since then the need for taking further positive steps has been felt by the free nations of Asia. In response to this need, President Elpidio Quirino, of the Philippines, has taken the initiative in proposing a new conference to provide the peoples of Asia with an opportunity to discuss their common problems, strengthen their economic and cultural ties, and take counsel together on how they could most effectively help to preserve the peace of the world.

Asia comprises a region which in size, population, resources, and strategic situation ranks with the most important in the world. The free states of Asia have no desire to enter into any hostile combinations or to aggravate in any way the tensions and conflicts that divide the world. All that they wish to do is exert their combined influence in behalf of peace. And they propose to act, as they have done in the past, strictly within the framework of the United Nations.

More than any other nation, America understands the importance of the moral factor in dealing with the problems of war and peace. America's moral leadership, more than her material power, constitutes the greatest hope that peace will be preserved in our time and maintained in the time to come.

CONFIDENT OF FUTURE

The task of securing the peace now centers on the issue of the control of atomic energy and other means of mass destruction. In this as in other equally vital problems, I am

confident that America's moral leadership will assert itself and produce a solution which will not only be effective but unassailable from the standpoint of justice. I am confident that the nation which possesses the genius and the ingenuity to harness the power of the atom, and is even now on the threshold of mastering the energy of the sun itself, will eventually work out a system of control acceptable not only to the great majority but to all of the member states of the United Nations.

An agreement on the control of the means and weapons of mass destruction would be the first major step toward the free, peaceful, and progressive world which all men and nations of good will desire.

Eighty-third Anniversary of Admission of Nebraska to the Union

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, March 23 (legislative day of Wednesday, March 8), 1950

Mr. WHERRY. Mr. President, on March 21, 1950, there was held in Lincoln, Nebr., a celebration of the eighty-third anniversary of the admission of Nebraska to the Union. I had the privilege of making an address at the founders' day celebration in the Cornhusker Hotel, in Lincoln, on that day, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Nebraskans, we love and honor our great State of Nebraska. It is true blue and truly American in principles and spirit. On this eighty-third anniversary of its statehood, we eagerly pay tribute to those sturdy men and women, those pioneers, who founded this land of opportunity.

God grant that America continues to find inspiration in the spirit of four Nebraska founders. They met their problems with courage and fortitude. They were not spoon-fed by bureaucrats. They were not promised security and a life of ease. They did not settle here and build Nebraska communities, under directives from a paternalistic Government at Washington.

They depended upon their own initiative, frugality, and enterprise to pioneer this flowering garden spot of the Nation. The incentive of reward spurred them. And, when they got their reward, they were satisfied and happy. There were no strings attached to it.

In their day, Government bosses did not take it away from them. These founders and the unbroken line of builders of Nebraska enriched themselves and the Nation. They did it the free enterprise way.

Today, all that we hold dear is in jeopardy. The fateful issues are: Whether we shall preserve in America, human liberty, the dignity of the individual, and freedom of choice, or surrender them to all-powerful Government, which seeks to control our lives and all our activities; and whether, in foreign affairs, we shall restore constitutional procedures, with even-handed justice, or continue to see the peace frittered away by secret agreements, incompetence, and drift.

The American people face the hard fact, that though they won the war nearly 5 years ago, they have not yet won the peace. They see we are losing the cold war. They are alarmed by the mounting cost of Government, deficit spending and administration demands for more and more taxes.

The American people are calling, indeed, praying for leadership along the road to lasting peace, prosperity, and contentment, and most of all, for a leadership that will keep open the doors of opportunity for their children and posterity.

The Republican Party has just adopted a platform that gives the people a clean-cut choice on these issues. It is now our job, and the job of all Republicans everywhere, to fight for the never-dying principles that protect human liberty and individual dignity, as pledged in this platform.

It is also our job, and the job of all Republicans, to see that candidates are nominated who stand foursquare for those principles.

Let those who believe in free competition, and the right of the individual to make the most of his skill, initiative, and enterprise, come into our corner. And, let those who are for spendthrift socialism, get into President Truman's corner. Let's fight it out. Let's have the show-down in the 1950 elections.

Ah; don't be fooled. There are those who say President Truman does not want Congress to pass his socialistic proposals, that he is simply trying to lure the votes of pressure groups, with promises and more promises. Well, if that is true, he is insincere; he is a demogog, a hypocrite, and such tactics should be repudiated.

For my part, I think the President is sincere. He believes in spendthrift socialism. That is his official record. And, if he succeeds in getting elected to Congress men and women who believe in his left-wing, radical proposals, America will be legislated into strait-jacket socialism.

The present session of the Eighty-first Congress, has been under way 2½ months, traveling on a treadmill and getting nowhere.

President Truman who was unable to get along with the Democrat Seventy-ninth Congress, the Republican Eightieth Congress, and now the Democrat Eighty-first Congress, is using his promises again for this fall's election campaigns.

And, we Republicans must get out and fight, or he will get away with his phony panaceas once again.

This time, we Republicans are going to fight on clear-cut issues, and this time, we are going to win.

Before the adjournment bells for the present session of Congress ring, there will be battles over appropriations and tax bills.

The Republican Eightieth Congress cut taxes five billion, cut the national debt seven billion, and left a Treasury surplus of $8,500,000,000. But now the President is trying to blame others for squandering this surplus and running up a tremendous deficit. He says the present deficit has been caused by the cut in taxes made by the Republican Eightieth Congress, and by expenditures necessary to pay for past and possible future wars. On these two counts the President is dead wrong.

Anyone who will examine the budget will find the present deficit situation is the result of increasing expenditures, $9,000,000,000 over what they were 2 years ago; and that is four billion more than the tax cut voted by the Republican Eightieth Congress.

The situation is not due to tax reduction. And, furthermore, fellow Nebraskans, of that nine billion increase, six billion is for non-war-connected domestic civilian spending. It is not for national defense. It is not for foreign recovery. It is for spending here at home. The Truman administration is simply using national defense as a smoke screen to hide its extravagant expenditures here at home.

Of the forty-three billion four hundred million of estimated spending in the proposed 1951 budget, only nine billion four hundred million, or 22 percent, represents fixed charges not subject to reduction by Congress, the largest item of which is interest on the national debt of five billion six hundred million.

We Republicans have also worked to repeal excise taxes. And now that we have made great headway, the President comes forth with a "me too" proposal to reduce some of them, but at the same time increase corporation levies, so that there will be a net increase in the tax burden of $1,000,000,000.

All of this increase would eventually be paid by the people in their cost of living. The punitive, sky-high wartime excise taxes are killing business. The sensible course is to repeal them and give business a chance to operate. That will move goods and services, and the Government will receive more revenue.

Taxes can and should be cut by cutting the outrageously high cost of Government; balancing the budget; getting on a pay-as-you-go basis like we have in Nebraska; stopping the inflationary deficit spending; and cutting the national debt.

That is what the Republican Party stands for, and that is what the American people want.

The Truman approach, and that of his fellow travelers in Congress, revolves around the motto: Tax and spend, tax and spend, charge it to the public debt, and manufacture money for inflationary deficit spending.

Fellow Americans, elect a Republican Congress next November and put an end to this Saturnalia of incompetence, inefficiency, and waste.

If the constructive work of the Republican Eightieth Congress had been vigorously presented to the people in 1948, there would be a Republican President in the White House today. And there would be no Achesons undermining our national economy and losing the peace.

Secretary of State Dean Acheson is the most powerful man in the Government today. The voice is the voice of President Truman, but the hand is the hand of Dean Acheson. Apparently he has become so powerful, as the idol of the left-wing appease-Russia agitators, that President Truman is fearful, should he fire Mr. Acheson, he will lose the support of this radical, socialistic, pressure group in the coming elections and in 1952.

In the most vital fields of governmental activity is the hand of Secretary Acheson and the Hisses. Dean Acheson and the Alger Hiss clique have been close collaborators in the State Department for many years. They have been joint architects of many schemes that have run our foreign relations into the ditch until today even little countries like Bulgaria and Hungary trample upon our rights, and the United States of America is reduced to the ignominy of futile daily protests.

China falls under the heel of Moscow-directed Communists, and all Asia trembles in fear that the Red tide will engulf it.

Through power politics, with China as a springboard, all Asia is now dominated by the God-hating dictators of Russia.

Who sat at the side of our ailing late President, and prompted him with the answers at Yalta, when China was betrayed to Russia along with Poland, Czechoslovakia, and all those other countries of eastern Europe? Why, of course, Mr. Acheson's pal, Hiss. When China pleaded for aid to resist the Red armies, who turned the cold shoulder on our faithful war ally and friend through the years? You know it was Mr. Acheson.

UNIVERSITY OF MICHIGAN LIBRARIES

While he and the Hiss crowd have been calling the signals in the State Department, 14 men in the Moscow Politburo have captured control of one-fifth of the globe's land surface, 13,000,000 square miles, and one-third of all mankind, 800,000,000 human beings.

His belated warning in California last week, against further expansion by Red Russia, has a mighty hollow ring in the light of his appeasement record and total failure to win the peace.

If history repeats itself, Mr. Acheson is getting ready to further concessions to Russia, because each time he has issued a bristling warning, it usually has been accompanied by further appeasement.

Is he about ready to have President Truman officially recognize the Communist regime in China? Is his vacillation over admission of the Communists of China to the Security Council of the United Nations, a prelude to taking them into this powerful world organization? Why, recognition of the Red usurpers of China would compound the betrayal of the people of China. And freedom-loving people around the world would hang their heads in shame.

The United Nations Charter condemns territorial acquisition by aggression. Moscow directed the conquest of China. If the United Nations takes these Red usurpers into its highest governing body, it will stultify itself, and Mr. Acheson should now be in the forefront opposing such action.

Stung by the fingers of wrath that are pointing at Dean Acheson, and the administration, participants in the infamous, secret agreements at Yalta and Potsdam, have been issuing books and magazine articles giving their alibis for being hoodwinked by Stalin.

Now, they beg sympathy with protests that Stalin has not kept his agreements. They point to provisions for free elections, freedom of speech, and freedom of press in the countries handed over to Stalin.

Were they so naive as to believe that the tyrants of Russia would keep these pledges? No, no, fellow Americans; these alibis won't stick.

The overt act that opened the world to infiltration of communism culminating in the present cold war was committed in 1933, when the New Deal Democrat administration officially recognized the Soviet regime and welcomed Soviet Russia to the family of nations.

Republican Presidents, before 1933, had refused to recognize Soviet Russia, because her dictators would give no dependable assurance against spreading their propaganda to undermine and destroy our Republic.

Unfortunately, no such guaranty was demanded, and none was given in 1933, when Soviet Russia was officially recognized by the United States. That is when the seed of softness toward communism was sown.

Adolf Berle has testified before a congressional committee that when he was an Assistant Secretary of State in 1944, Acheson and Hiss headed a pro-Russia clique, while he (Berle) opposed appeasement of Russia. Berle said that eventually he was forced out of the State Department and appointed Ambassador to Brazil.

And we see the almost daily evidence of how these Russian appeasers are still running through the State Department.

Dean Acheson isn't content to just run the State Department, he reaches out into all branches of government. Within the last few days, the country witnessed the shocking action of Secretary Acheson in prevailing upon a United States court in New York City, to free a convicted Russian spy, Valentin Gubitchev, on condition he would leave the country.

When Gubitchev was arrested, for his conspiracy with Judith Coplon, to steal security secrets from Government files, Russia protested that Gubitchev was a Russian diplomatic officer and immune from punishment for spying.

Mr. Acheson rejected Russia's claim and asserted Gubitchev was subject to prosecution and punishment upon conviction. Having so determined at the outset of the case, Mr. Acheson should have let the law take its course.

Instead, after the jury of American citizens had found Gubitchev guilty, Mr. Acheson prevailed upon the Attorney General to tell the court Gubitchev must be given a suspended sentence of 15 years on condition he leave the country.

The State Department issued a statement that this leniency was necessary in the interest of good will between Russia and the United States. And it was suggested that by freeing Gubitchev, life would be made easier for Americans behind the iron curtain. Ah, but fellow Americans, friendship of Russia cannot be won by the bribery of turning loose her spies in the United States. We live in a country of law and order, and Mr. Acheson should keep his hands off the processes of justice, and not try to influence the courts.

In the national defense planning today, you will find Mr. Acheson in the center of the picture, just as Alger Hiss participated in the political agreements at Yalta, which have brought so much woe to the world.

In ECA and other schemes to siphon the cash and goods of the American people to foreign countries, including bolstering for the socialistic government of Great Britain, Mr. Acheson is a prime architect. ECA Administrator Paul Hoffman is merely an errand boy for Mr. Busy-Body, Mr. Acheson.

Yes, indeed, Mr. Acheson is a busy man, busy tearing down our national economy, through slashes in tariff protection for one example.

It is Mr. Acheson, with the blessing of President Truman, who has conducted the postwar international tariff conferences under the misnamed Reciprocal Trade Agreements Act. Under its provisions, the President has absolute power to slash tariff rates, but it is Mr. Acheson who wields the ax.

President Truman, Secretary Acheson, and ECA Administrator Hoffman are begging foreign countries to dump their goods into our domestic markets. They are helping foreigners find ways to capture markets here in competition with American producers. And, now, the tide of imports is rapidly overtaking America's exports.

According to the Bureau of the Census, January exports were valued at $743,600,000. Imports were valued at $622,700,000. This reduced the trade gap from $337,800,000 in December, and a monthly average of $447,800,000 for 1949, to only $120,900,000 in January. Just think of it, exports in January were 21 percent below the December value of $942,900,000.

But general imports of $622,700,000 in January, were higher than the $605,100,000 in December, and substantially higher than the 1949 monthly average of $552,200,000.

Farmers are being hit by the administration's tariff give-away policy along with other segments of our population.

For example, imports of animal and vegetable products in January 1950, were valued at $254,600,000, whereas our exports of these commodities were valued at only $158,200,000.

And, you livestock producers hear this: Imports of animal products in January amounted to $53,400,000, while our exports of the same products totaled only $27,100,000.

But this is not the only blot on our foreign policy picture.

American tourists and institutions are giving and spending abroad at the rate of about $107,000,000 each month. Subtract this $107,000,000 from the $120,900,000 for January, and the dollar gap is cut to $13,900,000 for the month.

Included in the Census Bureau figures on exports are ECA shipments, goods paid for by the American taxpayers and given to Great Britain, France, Italy, and the other ECA receiving countries. Eliminate the ECA shipments in January and the result is an unfavorable trade balance—more dollars going out than came in.

The pay off—in closed American factories, curtailment in oil production, and blows to agriculture—from the tariff give-away policy of the Truman administration and its global planner, Mr. Acheson, has just begun.

If the present trend continues, within a few months another 1,000,000 American jobs will be exported. Mr. Acheson admits that American industries are being hit. He proposes that the crippled industries be taken care of by subsidies out of the Federal Treasury.

ECA Administrator Hoffman suggests putting workers thrown out of jobs by tariff slashing on to expanded unemployment-insurance rolls.

All of this is the kind of cracked economics and disregard of the right to protection of American industry, agriculture, and labor, that runs through all of the socialistic planning of the Truman administration.

No wonder the Legislatures of Texas and Mississippi have petitioned Congress to thoroughly investigate the State Department and purge it of its pro-Communists and underminers of American prospertiy and security.

Mr. Acheson must go. He is a bad security risk. But cleansing the State Department alone will not get our country on the highway of peace, prosperity, and happiness, the road so clearly marked by the founders of Nebraska.

On a thousand fronts alien-minded schemers and plotters are boring from within our borders. There are more than a half million Communists in the United States, according to FBI Director J. Edgar Hoover.

The Republican Party must meet this challenge. It is the only safe party to effectuate good government. Your job is to see that the people never lose sight of the truth that "eternal vigilance is the price of liberty."

Go forward as modern Paul Reveres and minutemen. Carry the facts to the people in your business, the shops, the homes, the forms, and into every voting precinct. Ring the doorbells.

We Republicans offer a new leadership untaunted by communism. We Republicans insist that the United States shall not be bound to any course of action unless the spirit and letter of constitutional procedure are followed; and that means no secret agreements bartering away our rights and liberty.

We Republicans favor aid to other countries resisting communism only if it is essential to our national security, if it is within the total limits which the American economy can afford, if it will be effective, and if there is a well-conceived program for progressive reduction.

We Republicans favor the promotion of world trade on the basis of fair competition, within the Republican principle that American industry, agriculture, and labor must be protected against ruinous importations.

We Republicans always have and will continue to insist upon national defenses adequate to any emergency. We Republicans are for the Taft-Hartley labor law because it guarantees the right of collective bargaining and recognizes unions and the right to strike, while protecting the rights of union members and the public.

Under this law union membership has increased to new highs and wages have risen to record levels. We Republicans favor amending the law in the light of experience

and denounce the Truman administration for blocking enactment of improvements in the act voted by the Senate last year.

And we won't stand for any bypassing of the law, as President Truman has done. His refusal to enforce the Taft-Hartley Act for months and months in the face of the mounting coal crisis, while the Nation's economy moved inevitably toward complete collapse, we Republicans condemn as playing politics with human misery.

We Republicans believe agriculture is fundamental to a prosperous America. We favor fair prices for the farmers' products in the market place, aided by Government price-support loans until that need is made no longer necessary through enlightened adoption of programs that will utilize, not destroy, surplus crops. We Republicans denounce the so-called Brannan plan as a means to sovietize the farmers and rob them of their birthright of independence.

Fellow Americans, all of these Republican principles and objectives square with the American way of life. Upon these principles and with these objectives America will grow and be strong—strong economically, strong financially, and strong spiritually as the lighthouse for freedom-loving people everywhere.

The overwhelming majority of Americans cherish the heritage of freedom and opportunity handed down by the founders of Nebraska and their fellow pioneers across the land.

Let us here and now resolve to go forward in this crusade to see that the heritage handed down from our founding ancestors shall not perish. America is the custodian of human liberty. Let us be worthy of its guardianship.

American Foreign Policy

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 23 (legislative day of Wednesday, March 8), 1950

Mr. MARTIN. Mr. President, annually the Philadelphia Bulletin, a very outstanding newspaper, holds a forum, at which men of distinction from all over the Nation discuss subjects of interest to the people. At the forum held last night, the distinguished junior Senator from California [Mr. KNOWLAND] delivered an address, which I now ask unanimous consent to have inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, fellow Americans, in this day of the airplane and the atom, we must face the fact that both peace and war are global in character. If we are to help maintain a free world of free men we cannot achieve our objective by closing the door to Communist aggression in Europe while the door is left wide open in Asia.

Coalition with communism is no more workable in China or Korea than it is in Poland, Hungary, Czechoslovakia, Bulgaria, or Rumania. Communism is destructive of human liberty everywhere in the world. Last November in Chungking a Chinese official clearly put it in this way: "Senator, there can be no coalition with a tiger unless you are inside the beast."

During the 5 years I have been a Member of the United States Senate I have supported our foreign policy in Europe and been critical of it in the Far East.

The general objectives of our foreign policy have been clear to the American people and to the Congress. We have sought to establish a system of international law and order so that the peace of the world will be secure for this and future generations. Yet with this worth-while objective in mind we were not so naive as to believe that all nations would forego the use of military power to enforce their will on others.

The United Nations, it was hoped, would not only be a world forum for discussion but would also be an effective instrument for collective security.

It has not yet been put to the test of acting against an overt aggression of armed troops of one nation crossing the borders of another. That test may come this year or next in Yugoslavia, Iran, Viet Nam, or Burma. We do know that the Soviet Union, by its abuse of the veto in the Security Council, has put the world on notice that there will be no hesitation in blocking effective United Nations collective security action against aggression by another veto.

It was for this reason that our Government and those of western Europe clearly recognized that Marshall plan economic aid to help rehabilitate war-torn Europe was not sufficient in and of itself. The fear of aggression restricted the recovery so necessary if the free way of life was to have a fair chance for survival against totalitarian pressures.

Within the United Nations Charter the Atlantic Pact came into being. By its terms an attack against one of the North Atlantic nations would be recognized as an attack against all of them.

Outside of the North Atlantic Pact, by resolute action, Greece was saved from being engulfed by communism, Turkey, Iran, and Korea were given the tools with which their independence might be preserved.

In China our policy has contributed to the debacle in that area of the world. For more than half a century our historic policy had been to encourage and support a free and independent China. Today's realities clearly mean that this must also be a non-Communist China.

Yet at Yalta without consulting with China, our wartime ally and friend, we gave the Soviet Union a stranglehold on Manchuria. It was done without consultation with the American Congress or the American people.

Our State Department urged a coalition with the Communists. The government of the Republic of China quite properly refused. The United States placed an embargo against the shipment of arms and ammunition to the legal government of China while the Soviet army of occupation in Manchuria was turning over captured Japanese stocks of arms and ammunition to the Chinese Communist forces.

In July 1947 Gen. Albert C. Wedemeyer was sent out to China on a mission. He wrote a significant report dated September 19, 1947, which contained a constructive program to save China from communism. That report, containing information of great import, was suppressed for 2 years.

Until quite recently some of those who helped shape our China policy were speaking of Mao Tse-tung's followers as "agrarian liberals." It makes little difference whether this fatal miscalculation was because of design or ignorance. The end result is no less damaging to the future peace of the world and the security of the United States.

Our China policy has helped to undermine the Republic of China. While the Government was with its back to the wall the State Department issued the China white paper. Never before had we struck such an almost fatal blow at a historic friend during its darkest hour.

During the last 2 years the help that the Congress voted has been delayed or nullified. This can be and has been amply documented. Even purchases, military and civilian, with Chinese funds have been obstructed.

On January 5 the President announced that no further military assistance would be given to the Republic of China. We now know that this had been preceded on December 23 by a State Department memo to its officials overseas stating that the island of Formosa had no strategic value.

The interesting thing about that memo is that the State Department had no such advice from the Joint Chiefs of Staff, from Admiral Radford, commander in chief of our naval forces in the Pacific, or from Gen. Douglas MacArthur, our supreme commander in the Far East.

In fact the statement ran directly counter to a State Department bulletin of June 3, 1945, which stated with reference to Formosa that "with the exception of Singapore, no location in the Far East occupies such a controlling position."

The difficulty with the State Department is that they have been more interested in China in saving face than saving freedom.

However, I do not want to spend too much time on the past.

Where do we go from here?

Last week in my State of California, Secretary of State Dean Acheson made two significant speeches. If implemented, they furnish the basis of having a policy in Asia that will be consistent with our policy in Europe.

Those who favor a temporary respite by a Munich type of agreement that would divide the world into spheres of influence whereby communism could digest its gains in Europe and Asia and sacrifice human freedom in the process, will get no satisfaction from these talks.

While the door to negotiation is left open the Soviet Union must reestablish its diplomatic credit standing. There are too many pieces of paper floating around to warrant reliance on a new one until the others have been redeemed.

It is clearly underscored that aggression in Asia is of no less concern to the law abiding nations of the world than it is in Europe or the middle east.

The nations of Asia are given hope that those who are willing to help themselves to maintain their freedom will be eligible to apply for and receive various types of assistance from us.

Standing by itself the speech of Secretary Marshall at Harvard on June 5, 1947, without congressional implementation, bipartisan in character, would not have bolstered for long a single tottering war-weary government of Europe.

Nor will Secretary Acheson's speeches be more than a temporary whiff of oxygen until and unless implemented by the Congress.

Up to now there has not been the consultation with the majority and minority parties on far-eastern policy that there has been in recent years on our European policy.

To the administration I would respectfully state: It is not too late to begin such consultations but it is later than you think. As has been pointed out before such consultations must be on the "take-off" and not merely on the "crash landings."

If an attempt is made to circumvent Congress by use of loans from already established agencies rather than by congressional appropriations, I predict an amendment will be added to some essential legislation that will close that loophole.

There is one great void in the speech of the Secretary of State dealing with our Asia policy. He treats the islands of Formosa, Hainan, Kinmen, Chosun, and the Pescadores

UNIVERSITY OF MICHIGAN LIBRARIES

with their 8,000,000 people under the jurisdiction of the legal Government of the Republic of China as though they were ships which had been sunk beneath the waves of the China Sea and the Pacific.

Since Formosa alone has more population than either Australia or Greece, this is hardly realistic. Formosa is closer to the Philippines than the island of Luzon is to the island of Mindanao. It is hardly conceivable that this Government can view with unconcern the moving of international communism off the Asiatic land mass on its first major island-hopping venture.

An American missionary with years of experience in China recently said to me: "Senator, I cannot understand how Chiang Kai-shek can be the No. 1 target in the Far East of international communism and at the same time be the No. 1 target of the Far Eastern Division of our own State Department."

From my own observations in China last November and from recent communications from people still there and those who have just returned, I believe that the Republic of China has passed her darkest hour of Dunkerque and Valley Forge. There has been a new rebirth of morale that is of tremendous significance to those who are not so blind that they will not see.

The Benedict Arnolds, the Quislings, and the fair-weather friends have long since departed. The new Cabinet of President Chiang Kai-shek contains many young and able administrators who are men of integrity.

The civilian Governor of Formosa is K. C. Wu, graduate of Princeton with an outstanding record as wartime mayor of Chungking. The Premier is Chen Cheng, a man of lifelong integrity and one regarding whom most Americans, including the late General Stilwell, have spoken most highly. The commander of the ground forces is Gen. Sun Leh-jen, graduate of the Virginia Military Institute and a fighting soldier of the first rank.

Time does not permit me to name them all but I can assure you that they are as determined to maintain a China outside of the Communist orbit as we are to maintain our own freedom.

In developing a program for the economic and military assistance to the free nations of Asia, the non-Communist Republic of China should not and must not be overlooked.

To permit our tried and true friends of more than 50 years' standing to go down the drain of communism while we concentrate on new Asiatic continental countries that have many more internal problems than free China has today, can hardly be the basis of a policy warranting the support of the Congress and the Nation.

It is not realistic to ignore the fact that the Republic of China has approximately 600,000 men under arms, 300,000 of whom are excellent soldiers. This total number is greater than the combined troop strength of Korea, the Philippine Republic, the United States of Indonesia, Siam, Viet Nam, Burma, Australia, New Zealand, Hong Kong, and the United States forces in Japan.

The island of Formosa is not needed by the United States as either an air or naval base. In the friendly hands of the Republic of China, it presents no problem to our own defenses.

In the hands of international communism the many Japanese-built air strips and the excellent harbors would drive a wedge into our Pacific defense line that runs from Japan through Okinawa to the Philippines. In unfriendly hands it would be a strategic loss that no competent military, naval or air commander would or has overlooked.

There are no simple solutions to the complex problems we face in Asia or in Europe. But out of the discussions and debate in forums such as this, on the floor of the Senate and the House, in the press and over the radio there will develop an informed public opinion without which no foreign policy can succeed.

Our secret weapon against any potential totalitarian aggressor is not the plutonium bomb or the hydrogen bomb. These secrets can be stolen from us by a Dr. Fuchs. Our real strength is that which communism dares not steal to take to the Soviet Union or its European or Asiatic satellites. I refer to liberty and the determination of a self-reliant people to be informed, make their own judgments, choose their own leaders and having the ability to rally overnight if their free institutions are threatened from within or without.

This priceless ingredient, which we possess, the dictators understand less than they do the intricate blueprints of a super weapon. In itself our free way of life is a time bomb that will destroy any dictatorship once their people know the truth. This may explain the frantic lowering and sealing of the iron curtain from the Elbe to the China Sea. It should renew our determination, through the Voice of America and otherwise, to penetrate the darkness.

National Wildlife Restoration Week

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, March 23 (legislative day of Wednesday, March 8), 1950

Mr. BENTON. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a proclamation issued by Gov. Chester Bowles, of Connecticut, in observance of National Wildlife Restoration Week.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

GOVERNOR BOWLES' PROCLAMATION FOR WILDLIFE WEEK IN CONNECTICUT

Conservation of our natural resources is one of the foremost problems facing Connecticut, as well as the United States. The fertility of our soil, our water supplies, our food and our wildlife are dependent on measures taken to conserve the land. And a green and flourishing countryside has always been a great source of enjoyment and wholesome recreation to the citizens of Connecticut.

In our State and elsewhere in the country, land has in the past been abundant. Men in those days were able to ravage the land and move on to more virgin territory. This led to abuse by uneconomic cutting of forests; denuding much other land of both vegetation and fertility; reducing our water resources, and leaving eroded, dry, unsightly landscapes.

Most of these blighted and barren areas can be made green and beautiful if all citizens fully realize their moral obligations to others in the ownership of private, civic, or State land. Our forests, our farms, our cities, our roadsides, our church and school properties, our home and factory grounds should be planted with trees, shrubs, and grasses wherever the need exists. In our cities, trees and shrubs can filter dust, absorb noise, temper climate, provide better and more natural living.

Much of the future progress of our State, and its rare natural beauty rests upon the extent to which we replant and care for all the land. Our State can produce more if we strive to make and keep it beautiful. Everyone will benefit, in equal measure.

Therefore, as Governor of the State of Connecticut, I hereby proclaim a program and urge that each man, woman, and child throughout the State assume individual responsibility to conserve the natural resources of our State whether they be private or public property, and that, wherever possible bare land be planted with vegetation.

I also urge local governments, chambers of commerce, farm organizations, garden clubs, and other civic groups, the churches and schools, and the press, radio, motion-picture and other industries to cooperate fully in observance of the plant-Connecticut-to-help-plant-America program as soon as possible by means of local committees and permanent, planned cooperative endeavors based upon local needs.

I urge that the proper agencies of the State assist in informing the public of the urgent need for conserving our natural resources by planting Connecticut wherever the need exists, and to give guidance and counsel to the public on this subject.

Housing for Indians

EXTENSION OF REMARKS

OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 23 (legislative day of Wednesday, March 8), 1950

Mr. YOUNG. Mr. President, I ask unanimous consent to have printed in the RECORD an article on housing for Indians which appeared in the February 1950 issue of the North Dakota Welfare News and Views under the heading "Across the director's desk." The article was written by Carlyle D. Onsrud, director of the North Dakota State Welfare Board.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ACROSS THE DIRECTOR'S DESK

(By Carlyle D. Onsrud)

"Why should American soldiers live like pigs?" is the shocking question posed as well as the title of an article by Dr. Daniel A. Poling, editor of the Christian Herald magazine, writing in the February 14 Look. It just happens that the February 4 Saturday Evening Post has as a lead article a contribution by Sally Carrighar entitled "The Reds Are Rapping at Our Arctic Door."

From the standpoint of current concern about our Alaskan frontier—just 3 miles of water separate our American Eskimos from Siberia at one spot—there seems to be a clear call for line-of-action concentration in this area in these times. This would mean better Alaskan defenses and better treatment of those expected to do the defending. Quite apart from this, however, is the shocking exposé recorded by Dr. Poling in connection with how American soldiers live in Alaska.

Apparently, there is little excuse for what exists. Dr. Poling points his finger in a steady, accusing way at the United States Congress. He points out that Japan signed final surrender papers on September 2, 1945. This is February 1950. A picture accompanying the article shows a one-room shack with no running water or plumbing which rents at $140 a month to a sergeant, his wife, and two children. This and many more cases like them causes Dr. Poling to state

that "living conditions in Anchorage and Fairbanks are worse than those in shack towns on city dumps."

He has high praise for the post commanders, the American Red Cross, and the chaplains in the area who are trying to create some sort of comfort in the searing shame that is the Alaskan environment of the American soldier. Dr. Poling is less kind with the Congress, which finally got around to appropriating some money for Alaskan purposes last October—too late and too little. He also criticizes quite severely American home-front organizations and their apparent unconcern about the situation even with knowledge of the fact from people like the doctor and others who have been shocked into a high state of indignation about twentieth-century care of American soldiers.

All we have to do here in North Dakota is to substitute Indians for soldiers and we have essentially the same situation. The American Indians, like the American soldier, in comparison with the attention we give to organized labor, organized business, and organized farming, are America's forgotten people. They have had little choice in doing something about their situation. The American soldier who is drafted or who gives in peacetime from a deep sense of patriotism, and the American Indian who was here before the white man, seem to be relegated in many instances to the worst housing, the least attention, and to the greatest inequities of any of our people. And they have the least to say about this situation themselves.

This is not to say that there is not evidenced in America a lip service concern, replete with resolutions and committees and slogans. Resolutions and committees and slogans do not put food into people's mouths, nor do they improve housing conditions unless there is purposeful, continuing implementation.

The State welfare board has failed. After three intensely cold and snow-filled winters in trying, together with the counties in North Dakota, to get adequate general assistance money for our North Dakota Indians, being so acutely aware of the minimum-minimum standards set up for general assistance Indians, it is disillusioned, disheartened, and administratively disheveled. Where do we go from here?

As readers probably know, the Federal Government, through the social-security programs, the State, and the counties in North Dakota, take care of the Indian who is over 65, the Indian mother with dependent children, or the Indian blind person in the same manner and with the same standards as it does the white. There is left the great area of general assistance to be attended to. This is the area where, in the case of whites, the county government provides assistance. Furthermore, if an Indian citizen is a resident of the county, he receives general assistance from the county welfare board with county funds also. In the reservation counties and in the case of the ward Indians, the Federal Government, through the Office of Indian Affairs, has been attempting these many, many decades to take care of these people when in need. The counties in North Dakota on which are Indian reservations are not financially able to take over this assistance burden which has been assumed and for which the Federal Government is overwhelmingly responsible. The State has never assumed a responsibility for the Indian in need of general assistance.

In December 1947, a crisis developed on the Indian reservations in North Dakota. Indian funds were inadequate. Lethargy and apathy seemed to be the rule. The country governments were unable to provide assistance. The State welfare board, together with the counties, put on an intensive campaign for Federal allocations during the winter of 1947-48. It is true that inadequacy had been prevalent in the granting of this type of assistance for many years. What made it worse in 1947 was the booming high cost of living, the diminishing resources of the Indian people, accentuated by a cold and snow-bound winter.

In the winter of 1948-49, the State welfare board set a precedent by allocating several thousand dollars as pinch-hit money to relieve suffering out of its general assistance appropriation. Most States do not have anything to do with Indian general assistance, not even to the extent of joining in with the counties in rapping at the Federal door. North Dakota has been singular in its State concern with the problem.

The State legislature in 1949 appropriated $100,000 to the State welfare board for the purpose of aiding Indians in need of general assistance if Federal funds ceased to flow and suffering had to be alleviated. This means only $50,000 a year. It is available to all Indians in need of general assistance in counties upon which there are North Dakota Indian reservations. When it is considered that one reservation estimated a winter need of $50,000 for 1 month it can be seen that the State welfare board appropriation, quite apart from the reason for which it was given for disbursement, must be used as pinch-hit money only to insure against suffering if Federal dollars do not flow and to insure that Indians on all reservations have equity assured.

That means, therefore, that it is with a good deal of frustration that the State welfare board and the county welfare boards watch the administration of general assistance by the Federal Government. We know that our whites or Indians on old-age assistance, aid to the blind, or aid to dependent children would not want to live on the standards that their neighbors must receive when they are in need. We know of the money it would take to relieve the shacktown type of housing that these people receive. We know that the unacquainted or the careless will say that some Indians are not good workers, that they are poor managers, etc., even though we know that the same can be said about many white people, who, nevertheless, when in need receive at least minimum standards for care for themselves and their children.

Knowing that the State welfare board did not have the resources to do much more than stand by with pinch-hit money, we traveled to Washington last June in the interest of seeing whether a House appropriation bill could be increased in the Senate. We were fortified with estimates as to what would be needed this winter for these people. Needless to say, nothing happened. There is no blame attached to our North Dakota Congressmen, who, we must remember, are only a few of many in Washington. We are not interested in who gets the credit and who gets the blame. We are, however, disturbed by and apprehensive of a system which creates an immovable apathy, a hard, cold inaction in which everyone, apparently, subscribes to the need, but no one gets the results.

This writer has been told that the Office of Indian Affairs does not ask for enough money. We have been told that the Office of Indian Affairs is not vigorous enough in its representations. We have been told that even though enough was asked for and vigorous presentation was the technique used, nevertheless, it is the custom of Congress to only appropriate a token amount and rely on deficiency appropriations. The whole thing adds up to medieval treatment of a human problem. We are talking quite apart from the ramifications of self-support, good or poor management, or rehabilitation—rehabilitation: that sunshine word that is talked about like the weather but about which nothing is done. The fact remains that American citizens—North Dakota people—are depending on an erratic allocation system out of insufficient appropriations, and, if enough heat is turned on upon the ill-timed inadequacy of deficiency appropriations, made sometimes after cold weather is over. This all for a bare, frugal living. To add to disillusionment is the fact that nothing seems to be able to change the course of man-made action.

We are not speaking as crusaders or as going overboard for any certain class of people. We think that the person in need, no matter what the sex, age, or creed, should have a decent standard for the basic necessities. The American Indian, like the American Alaskan soldier, is not getting it.

Government Spokesmen Confused on Home Need

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Thursday, March 23 (legislative day of Wednesday, March 8), 1950

Mr. CAIN. Mr. President, I ask unanimous consent that an article on confusion by Garrett Winter, which appeared in the New York World-Telegram and Sun of March 22 be printed in the Appendix to the RECORD. It is to be hoped that some Government spokesman will undertake the difficult and perhaps impossible but interesting task of reconciling the contradictions stated by other Government spokesmen.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOVERNMENT SPOKESMEN CONFUSED ON HOME NEED

(By Garrett Winter)

Confusion among Government agencies as to the Nation's housing needs was high lighted today with a Department of Commerce report that the postwar boom will end after 1952, unless builders widen the market for replacing old houses.

Only last Friday Commissioner Ewan Clague, of the Bureau of Labor Statistics, contended that it will take several years more at the million-a-year pace to catch up with anticipated requirements.

A month ago at the National Association of Home Builders convention in Chicago, Administrator Raymond M. Foley, of the Housing and Home Finance Agency, warned that more than a million new dwellings will be needed for many years to come, especially in rental housing and in larger houses priced below $8,000.

Last November, Leon H. Keyserling, acting chairman of the President's Council of Economic Advisers, before the National Association of Housing Officials in Boston, called for an average annual output of 2,000,000 homes for the next 5 years.

The Commerce Department predicted today according to the Associated Press, that "three more years of building at the record pace of the last 3 years will exhaust the backlog of demand for an expansion of dwelling facilities." This will be followed, it continued, by a big construction slow-down, unless a lively demand appears for replacing old homes.

Commissioner Clague contends that American households have been increasing a lot faster than new dwellings for two decades. The problem, in his opinion, will be to find

UNIVERSITY OF MICHIGAN LIBRARIES

enough three- and four-bedroom houses for an increasing number of families with three or four children, as long as builders continue to concentrate on four- and five-room dwellings.

The National Association of Real Estate Boards this week predicted that 1950 home building will at least equal the 1949 peak and that about half the units will sell for $8,000 or less, while rental housing, despite continued rent control, will approach last year's ratio of 23 percent of all residential building.

The Investigation of the State Department

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, March 23 (legislative day of Wednesday, March 8), 1950

Mr. McCARTHY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article regarding the present investigation of the State Department, by Constantine Brown, published in the Washington Evening Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS CHANGING WORLD—FIFTEEN THOUSAND LETTERS AND WIRES RECEIVED BY McCARTHY SINCE PROBE STARTED

(By Constantine Brown)

Senator "Bull" McCARTHY has received no less than 15,000 letters and telegrams since the Senate Foreign Relations Subcommittee started hearings on his charges against officials of the State Department.

The overwhelming number of these communications approve the investigation which was prompted by his accusations. It appears from the tone of the letters that the writers are less worried over the ideological tendencies of State Department officers who are involved than they are by their nasty moral habits.

Criticism, with few exceptions, is directed at the method of the investigation by the subcommittee, which so far neither has proved nor discredited entirely some of the charges vented at the public hearings.

DISSERVICE TO DR. JESSUP

For instance, Dr. Phillip C. Jessup, American Ambassador at Large, made a masterful presentation of his own case by reading a carefully prepared document setting forth not only the services he has rendered the Government of the United States, but also his impressive background of Americanism.

Yet it must be said, without prejudicing Dr. Jessup's statement in the least, careful analysis of his presentation shows that it was superficial. The fault is not his but is that of the subcommittee, which did not permit Senator McCARTHY to ask pertinent questions.

If Senator McCARTHY's request had been granted it is very probable that the last shred of suspicion would have been eradicated and Dr. Jessup would have been completely cleared during last Monday's hearing. As it was the Republican member of the subcommittee asked him some vague and perfunctory questions, leaving doubts in the minds of those who followed the hearings, particularly with reference to the Hiss case in which Dr. Jessup testified as a character witness for the defendant.

The Democrats followed by giving him a clean bill of health without going into the files on which Senator McCARTHY's allegations of "affinity" for pinkos were based. This was much more unfair and harmful to Dr. Jessup than to his accuser.

The insertion into the testimony of letters of commendation and trust from two outstanding Americans such as Gen. George C. Marshall and Gen. Dwight D. Eisenhower was more impressive than convincing. Neither of these personalities have had the time or opportunity to look into the files which Senator McCARTHY collected and which now have been handed over to the subcommittee. It is recalled that two outstanding judges of the Supreme Court—Justices Frankfurter and Reed—took the stand in the Hiss trial and gave him their full endorsement.

ANCESTRY IS NO HELP

The fact that a person can trace his American ancestry back to the Eighteenth century—or even farther—does not necessarily place him beyond suspicion. Nor do his official activities and statements "on the record."

This is not intended, it must be emphasized, to cast any reflection on Dr. Jessup's statement that he has no affinity for any kind of subversive, Reds and pinkos. Alger Hiss testified before the House Committee on Un-American Activities that his loyalty should not be questioned, since he had served as a policy-maker at Yalta and was proud of his achievements there, and since he had come from a very old American family.

If Senator TYDINGS, the subcommittee chairman, had not acted on the spur of the moment he would have realized that he was rendering a real disservice to Dr. Jessup by refusing to permit Senator McCARTHY—the only man in the room who is supposed to have had pertinent questions to ask—to cross-examine the witness, whose character and discretion as a Government official were impugned.

Dr. Jessup unquestionably wanted to dispose of all such doubts once and for all when he eagerly offered himself for a searching cross-examination by his accuser.

The Indian as an Undeveloped Resource

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 23 (legislative day of Wednesday, March 8), 1950

Mr. YOUNG. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an excellent article appearing in the February issue of North Dakota Welfare News and Views, by Carl F. Fryhling, State director of the North Dakota State Employment Service, entitled "An Undeveloped Resource—The Indian."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN UNDEVELOPED RESOURCE—THE INDIAN

(By Carl F. Fryhling, State director, North Dakota State Employment Service)

A Nation, State, or local community cannot prosper unless all of its resources are utilized to the fullest extent. Manpower, as a resource, will be a damper on progress unless its real and latent abilities are fully developed and utilized. The Indian, a native American, is such a source which has much to contribute to our economic well being if he is properly located and utilized.

World War II brought out numerous resources, material and labor, and utilized them very effectively in the successful winning of the war. We found on many reservations the percentage of enlistments among the Indians was much higher than among the whites. Hundreds more were employed in war plants. The war demonstrated that we fail to utilize this resource to its fullest extent during peace.

The North Dakota State Employment Service has, during the past 2 years, made a special study to determine the employability of Indians and has made a special effort to place Indians in employment off the reservation. Our experience has brought out the following factors: (1) the employer objects to hiring an Indian, not because he is unable to do the work, but because he is an Indian; (2) the Indian is hesitant in accepting employment off the reservation in fear of racial discrimination, (3) the employer, when he does hire an Indian, does not give him the same opportunity as a white man; the Indian makes one mistake and he is fired; (4) the Indian lacks aggressiveness and is easily discouraged; (5) many Indians lack dependability. He usually stays away from his job to help in caring for his child rather than to hire temporary help and thus enable him to keep his job.

Our experience indicated a need of a broad educational program. The employer needs training in the supervision of an Indian worker. The community needs training in accepting the Indian as an American citizen and in assisting him to improve his standard of living. The Indian needs training in assuming his responsibility to himself, his employer, his neighbors, and his community.

Let us get back to the actual experience of placing Indians in jobs. During the month of September the employment service placed 127 Turtle Mountain Indians in the potato harvest. Many of them earned up to $15 per day with this employment, lasting 3 weeks to a month. No trouble was encountered and many employers expressed satisfaction. From this program we stepped into a program providing broader utilization of Indians in more permanent jobs. The employment service accepted a challenge to find off-reservation jobs for 100 Indians during the months of October and November. We accepted this challenge during that time of the year when jobs were becoming more scarce and workers more plentiful. We did not place 100 Indians but we did find jobs for close to 70. This program demonstrated to us that employers will hire Indians if properly approached and the Indian is placed on a job for which he qualifies. The Indian's ability must be sold and not the Indian.

Drowning Out the Nation's Voice

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 23 (legislative day of Wednesday, March 8), 1950

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Drowning Out the Nation's Voice," which appeared in the Washington Post on March 23, 1950. In my

opinion, it is an excellent editorial, which will provoke much thought. I believe we should think much on the question raised by the editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DROWNING OUT THE NATION'S VOICE

Never in recent times has such a miasma settled upon the Washington scene. Doubt, distrust, lack of confidence—they are rampant. Even those with mud on their hands can throw mud with impunity. To foreigners the American scene must look as if our major concern is to breed a race of informers and intellectual eunuchs. The reason for the malaise, it seems to us, is that leadership is not measuring up to the potential followership. There is a rending conflict between the President and the opposition. But this cannot be resolved till Presidential leadership has been filled.

And in this latter respect there is nobody but the President who can assume the responsibility. The President and his Secretary of State have been playing Alphonse and Gaston. Mr. Truman wants to give Mr. Acheson his head, but Mr. Acheson simply hasn't the party or popular standing to sustain him. The speeches he gave on the west coast came back to the Capital with a hollow echo, whatever may have been their effect upon the country at large. It may be that the wild and whirring MCCARTHY might yet make Acheson a national figure. But the stated purpose of the Republican chiefs, speaking while the Tydings inquiry is still on, is to destroy him. This is hardly a promising curtain raiser for the April meeting of the Foreign Ministers. In any event the fact remains that the President as well as Mr. Acheson must get into the act.

Actually Mr. Acheson never wanted the role of substantive responsibility that Mr. Truman seems to be thrusting upon him. He has rigid ideas about the leadership function of the White House in foreign relations. He saw in the Secretaryship of Mr. Byrnes what he thinks was a bad example of a Secretary who seemed to be out in front of the President. And on taking office he determined to lean over backward in deferring to the President's primacy. In strange silence the President has handed him a role that must be as uncongenial as it is uncomfortable and unrewarding.

The President, however, is the primate, and nobody else. He is the elected choice of all the people—not as an administrative chief, but as a voice, as custodian and cement and driving force of their unity. Under our system he can be as big, as Wilson said, as he makes his office. It is in the nature of the institutions of this Republic that drift in the White House leaves the country rudderless. The Presidency is the fixed point in our corporate life—we dare to say, in the life of the entire free world. A Frenchman said the other day that American power must be on the side of the people's hopes. No other member of the free world has the moral let alone the material resources to demonstrate any strong faith in its destiny. Europeans are living for the day only; Asiatics from hand to mouth. Only the United States can furnish the battering ram against a condition which is a historical great panic. The future has to be challenged if the present is to be saved.

Yet there is this void at the top in the Capital, and the Capital, in consequence, is given over to the raucous spirit of faction against which George Washington issued his last warning. It is not a situation of normal party division. A progressive debility is seizing the body politic. The reaction in the country is bound to be felt sooner or later in the same day-to-day outlook that has captured the Old World. It is enough of a drain on human nature to bear the silent conflict in the world without having to go without inspiration from the Nation's leaders. In time this moral passivity at the summit is sure to trickle down through the layers of society till nothing seems worth while. "The vigor of civilized societies," said A. N. Whitehead, the philosopher, "is preserved by the widespread sense that high aims are worth while."

Evidence of neglect at the top in upholding morale started with the shattering emptiness of the H-bomb announcement. You can't do this to a democracy. The State Department line is that the ending of our atomic monopoly failed by any manner of means to change power relationships. It is a singular attitude. Few Americans seem to share it, and all Europe has a contrary opinion, for it is since the recent atomic events that the idea of a neutral Europe has grown in Europe. Even the belated start in shipping arms under the military-aid program has not sufficed to offset that reaction. And it is bound to gather strength from the exhibition of the current jitters and hysteria. So, on top of Asiatic strife, there is European disintegration and defeatism to cope with.

Truly the burden is cast upon America to show not only cohesion but example to nations which are themselves tearing their unity apart on issues which are irrelevant to the master issue of survival and the assertion of common values.

Yet the President is not altogether to blame for the impasse in leadership. He is a modest man with no sense of mission. But looking at his record, nobody can say he lacks courage. If he is given a program to expound, and it appeals to him, he is not afraid to assume the responsibility. He showed leadership on the Truman doctrine. It was his own jogging of the introverted State Department that laid the train for the Marshall plan. When the diplomats seemed to have run out of ideas, he turned to his immediate advisers, and they suggested point IV, and he adopted it over the head of the diplomats. Instinctively, the President wants to use American power for the common good. But around him there is a lack of that creative imagination which must always be at the elbow of the President to inspire as well as to spur.

So the need on the Executive side, as we see it, is twofold.

1. Reassertion of continuing Executive leadership in our world affairs.

2. More dynamic staff work in the White House and State Department to keep that leadership primed for the carrying out of the critical assignment that history has put on the American doorstep.

In these events there might be some chance of mending and expanding the bipartisan approach to foreign affairs. In these times there must be some biparty respect for the water's edge. The Executive has never been continuously loyal to bipartisanship. It is chiefly Senator VANDENBERG that the country must thank for what success has been achieved so far in bipartisanship. Now VANDENBERG is ill, and the yawning rift testifies to the loss of his disinterested services. Nevertheless there is a responsible Republican leadership, and the President must invite its cooperation. For you can never have total diplomacy in the sense advocated by Mr. Acheson when the two parties are clawing at each other's throat.

It is surely apparent that ranks can be closed in the country only when there is evidence that they are closed in the Capital. This is no plea for any coalition, for there is plenty of room for partisanship. The trouble is that there is so much of it around nowadays that patriotism is being crowded out. More of it and this country will begin to look to the people of another planet like a blinded Samson pulling down the pillars on which the house standeth.

Extension of Federal Old-Age and Survivors Insurance System

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, March 23 (legislative day of Wednesday, March 8), 1950

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement on H. R. 6000, regarding proposed extension and improvements in the Federal old-age and survivors' insurance system, made by the National Brotherhood of Packing House Workers, before the Senate Committee on Finance.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Our union, the National Brotherhood of Packinghouse Workers, CUA, approves in principle, extension and improvements to the Federal old-age and survivors insurance system, to amend the public assistance and child-welfare provisions of the Social Security Act, and for other purposes as set forth in H. R. 6000. We feel that in one respect, at least, especially with reference to temporarily or permanently and totally disabled workers the bill (H. R. 6000) does not make ample provision. The effective date should be immediately after passage. Since the cruel effects on those afflicted with polio and heart disease, or permanently disabled by industrial or other accidents, is a matter that should no longer be ignored.

All statistics on the permanently and totally disabled in our population are estimates subject to a very large chance of error. No census of the disabled has ever been taken. As the disabled are not entitled to any special benefits in this country, there also is nothing resembling automatic registration of these people.

The estimate of 750,000 as the total number of all people who are under 65 and permanently and totally disabled comes from the Social Security Administration. It is based upon sample surveys made in the year 1945. This figure includes only people permanently and totally disabled who are in the employable ages, that is, from 16 to 65. Permanent total disability, as used in this estimate, takes account only of disabilities which have lasted more than 6 months. H. R. 6000 will provide benefits for only a small percentage of all of the people who are permanently and totally disabled. To qualify for benefits, not only must the disability be of such nature as to completely prevent employment and have already lasted at least 6 months, but the claimant must be able to establish that he was fully or currently insured. In most cases this will mean that only people who have had pretty regular employment up to the time that they become permanently and totally disabled will be able to get any benefits. Many disease conditions, however, are of such a character that disability comes on very gradually. Many such people will not be able to attain or maintain the status of being currently and fully insured as that involves at least employment in covered industries in half or quarter years. Workers who are newly brought under coverage by the amendments to the Social Security Act made in H. R. 6000 will not be eligible to any total and permanent disability benefits until 1956 at the earliest.

UNIVERSITY OF MICHIGAN LIBRARIES

Approximately how many people will be able to get permanent and total disability benefits should H. R. 6000 become law is even more of a guess than the total number of permanently and totally disabled persons. The best guesses on this point are those given in the report of the Advisory Council on Social Security on permanent and total disability insurance which was made to the Senate Committee on Finance in May 1948. On pages 15 and 16 of that report occurs the following estimate regarding the proposal for including permanent and total disability benefits in old-age-insurance benefits which was made by the advisory council:

"After the program has been in operation for a few years, the number of new disability claims arising annually will range from 20,000 to 50,000, although after perhaps a decade or so, when the full effect of the extension of coverage has made itself felt, this number will rise to perhaps 40,000 to 100,000. Eventually the total number of disabled persons who are on the benefit roll and who are under age 65 will number roughly 300,000 to 600,000. The eventual annual cost of the proposed permanent and total disability benefits as a percentage of pay roll will probably range from somewhat more than 0.1 to possibly as much as 0.3 percent of the pay roll, in terms of dollars this corresponds to about two hundred to five hundred million dollars a year."

The recommendations of this council were more liberal in this respect than H. R. 6000 but, in general, will also serve as an estimate of how many people will get benefits under H. R. 6000.

Another estimate relates to H. R. 6000 as passed by the House of Representatives. This was published last October by the House Ways and Means Committee as a separate document and is entitled "Actuarial Cost Estimates for Expanded Coverage and Liberalized Benefits Proposed for the Old-Age and Survivors Insurance System by H. R. 6000." These actuarial cost estimates were prepared for the use of the Ways and Means Committee by Robert J. Myers, actuary to the committee. As appears on page 7 of this report, the total number of beneficiaries who are expected to qualify for disability benefits under H. R. 6000 by the year 1955 is 190,000 to 594,000. Totals will increase in future years. The very wide range in the possible numbers is explained on the basis of varying assumptions, but it is made clear that the lower estimate is the more likely. From the same report it appears on page 9 that by 1955 the cost of permanent and total disability allowances will range from 0.12 percent of pay roll to 0.34 percent. The ultimate costs (by the year 2000) are estimated at 0.36 to 0.93 percent.

At the present time approximately 2,000,000 persons, aged 14 to 64, who would otherwise be gainfully employed, are affected with serious disabilities which have continued for more than 6 months. It has been estimated that the chief causes of disabilities lasting more than 45 days fall into the following classifications:

	Percent
Respiratory diseases	18.8
Degenerative diseases	17.0
Accidental injuries	13.4
Digestive diseases	11.5
Communicable diseases	9.0
Female diseases	6.3
Nervous diseases	6.1

Latest available figures from the National Office of Vital Statistics show deaths from cardiovascular diseases and congenital malformation of the cardiovascular system in United States in 1947 between ages of 25 and 64 were 211,758, according to Edward Robbins, national labor representative of the American Heart Association.

When disability strikes a wage earner it may be economically more disastrous for him and his family than unemployment, death, or forced retirement, for, in addition to the loss of wages, there are the costs of medical care, hospitalization, special diets, the expense of moving to a more favorable climate, etc.

The problem is being met, to a minor extent, in a number of ways. In some cases the workers receive payments from the workmen's compensation funds of his State. However, such payments are possible only where the disability has arisen out of the worker's employment. There are also some companies which make payments to their disabled employees. In some instances the worker carries insurance against disability either as an individual or in combination with his fellow workers. In recent years a few States have provided by statute for disability insurance.

However, these various methods provide protection for only about 27 percent of the workers who are covered by unemployment-compensation laws. The only adequate solution of the problem is the establishment of a national plan. Only a national plan can give country-wide coverage and lifetime protection. There is a constantly occurring mobility between both industries and States. After disability occurs it may be necessary or desirable for the disabled person to change his place of residence. A national system would allow this mobility much more easily than other plans. Under a national plan the cost burden in the case of varying rates of disability between localities, due to epidemics, catastrophes, varying age, sex, and occupational characteristics would be equalized.

This national system should be operated in conjunction with the present old-age survivors insurance plan. The existing facilities of this plan, with its wage-record system and field organization could be used in the administration of disability benefits. Employers would have to keep only one set of records. Contributions could be kept in a single trust fund which would provide greater flexibility in financing. There would be no overlapping of functions and the number of administrators would be kept at a minimum.

However, the provisions of the proposed H. R. 6000 relating to disability benefits do not go far enough. The proposed bill provides disability benefits for only those workers who are totally and permanently disabled. The problem of the temporarily disabled worker is also of large proportions. Each day about 2,000,000 persons are kept from their jobs by disability which has lasted less than 6 months. In addition, there are large numbers of workers whose physical condition is such that they should not be at work, but who are there because they cannot afford the loss of wages. It has been estimated that the annual wage loss to the labor force through temporary disability is between three and four billion dollars. In addition to this wage loss the labor force also is subject to a medical cost of $3,500,000,000.

Temporary disability also means a loss in productivity which is a vital loss to the Nation. It has been estimated that this loss of productivity equals the total of the wage loss and the medical costs. This hidden loss must be deducted from profits or passed on to the consumer in the form of higher prices.

In addition to the economic loss which the worker suffers as a result of temporary disability, he also suffers indirect losses. Among these are impairment of occupational efficiency, risk of permanent disability, lowering of the standard of living, and the psychological effect of want.

The bitter fight which is being made on permanent and total disability benefits in connection with the old-age insurance system centers around the possibility that the provisions for benefits may be greatly liberalized in future years. Under the restrictive conditions of H. R. 6000 both the total number of people who will get benefits and the cost of these benefits will not be great. The private insurance companies, however, do not want the Government to pay any permanent and total disability benefits although this is a feature of the old-age insurance systems in practically all other countries. Logically also a man who is permanently and totally disabled before 65 is from an economic point of view in substantially the same position as the person who is unable to work by reason of old age. Old age is itself for many people a condition of invalidity. Those who do not want us to get a decent old-age and survivors insurance system, however, oppose the logical step of providing benefits for people who are permanently and totally disabled before they reach old age.

DON MAHON,
President, National Brotherhood of Packinghouse Workers; Vice President, Confederated Unions of America.

Dental Operations on Children

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. FURCOLO. Mr. Speaker, I have been requested to call attention of Members of Congress to the following article:

Massachusetts' Health Commissioner Vlado A. Getting's precedent-breaking program permitting nonregistered dentists to perform dental operations on children is sharply rebuked in the current March issue of the Journal of the American Dental Association, the official organ of the American Dental Association, representing the Nation's 68,000 dentists.

While the American Dental Association went on record in a recent San Francisco conference as opposed to the Massachusetts federally-financed "training program," authorizing 2-year trainees to perform dental restorative work on children, the ADA Journal editorially suggests that Commissioner Getting "reconsider the program in the interests of achieving the broad objectives of his department."

With the Massachusetts dentists' committee, representing the State dental profession and backed by leading dental authorities throughout the Nation opposing the program as a danger to children's dental-health standards, the Journal declares:

"The commissioner might give some contemplated moments to a full and studied reconsideration in the interests of achieving the broad objectives, to which his department, and the American Dental Association, as a voluntary organization of the Nation's dentists are dedicated."

Commenting on Getting's program, which was origir ally identified as a "research project," the Journal declares:

"There is good evidence that the commissioner's 'research project' was handled * * * subtly and without full and free discussion.

"The association does not," the editorial continues, "object to the type of research mentioned (in the Getting program) provided that it is really research and not just curious tinkering masked in the prestige of research."

This "curious tinkering" alluded to by the Journal, is a 5-year program financed through the Federal Security Agency with $250,000 whereby female hygienists are being given 2 years' training and then will be permitted to perform highly specialized dental work on children—work formerly entrusted to a registered dentist with 8 years qualify-

ing training, according to Dr. Richard D. Cunningham, chairman of the Massachusetts dentists' committee for repeal of the program.

"Meanwhile," Cunningham continues, "Massachusetts has become the first State in the Nation to lower her dental standards where they should be the highest—in the treatment of children.

"The problem of combating greatly increasing tooth decay," he adds, "will not be solved by training an inferior group to take over highly specialized professional work. This problem can be solved only by training more qualified dentists, to give competent treatment under rigid professional standards."

Meantime, the Massachusetts dentists' committee, backed by the New York Dental Society, whose president, E. Harold Gale, wired the Governor and legislative leaders urging repeal, has mobilized dentists throughout the State to press for repeal. The repeal bill sponsored by the dentists' committee is now pending in the State legislature and will be acted on soon.

Dewey Proclaims Wildlife Restoration Week for New York

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. LATHAM. Mr. Speaker, under leave to extend my remarks, I wish to set forth the proclamation of the distinguished Governor of New York State, Hon. Thomas E. Dewey, proclaiming the period from March 19 through 25 as Wildlife Restoration Week:

PROCLAMATION

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany.

The increase of our wildlife population in New York State is a goal of great public value. It is a valuable and integral part of the urgent problem of conservation of our natural resources.

The movement to add to the number of our wild birds and mammals goes far beyond the pastime of people who like to hunt and fish. This recreation has built up a vast industry in terms of dollars alone. It is estimated that sportsmen throughout the country spend more than $4,000,000,000 a year on equipment, clothes, gasoline, boats, and other paraphernalia. It is reasonable to calculate that in our State alone, hunting and fishing represent a $500,000,000-a-year industry. Moreover, these sportsmen bring in 450,000,000 pounds dressed weight of food in game animals and fish every year.

But the urgency of the matter goes far beyond this practical side. There is also an esthetic aspect which is immeasurable. Furthermore, it is necessary to remember that all life depends upon soil and water. If we allow the balance of our wildlife to be destroyed, we lower the productive capacity of our soil and water and this quickly decreases the quantity of products available to us. Our wildlife population, accordingly, affects the interests of every individual in the State, no matter whether he ever fires a gun or wets a fishing line.

Now, therefore, I, Thomas E. Dewey, Governor of the State of New York, do hereby proclaim the period of March 19 through 25 as Wildlife Restoration Week in New York State and I hope the people of New York and particularly the students in all schools will observe this week by making a special effort to acquaint themselves with the problems of providing and maintaining suitable habitat for wildlife and take positive action to restore and improve this habitat by planting and other conservative measures.

Given under my hand and the privy seal of the State at the capitol in the city of Albany this 16th day of March A. D. 1950.

THOMAS E. DEWEY, *Governor.*

Coast Guard Reserve Program

EXTENSION OF REMARKS
OF
HON. PORTER HARDY, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. HARDY. Mr. Speaker, I am extremely interested in the Reserve program of the Coast Guard. The limited extent to which it now exists depends entirely upon voluntary participation of civilians who are motivated solely by a sense of patriotic duty. These people receive no compensation. In spite of recommendations from the Bureau of the Budget and the Department of Defense, the Appropriations Committee has thus far refused to include funds for this program in appropriations measures. At present the Coast Guard Reserve exists in name only. The Congress should provide funds for the training of these people upon whom we must rely for port security in the event of another national emergency. Should another war occur the protection of our ports would be of prime importance. We are running serious risks if we refuse to appropriate the relatively small amount needed for this program. When the appropriations bill is up for consideration I shall support an amendment to provide funds for the Coast Guard Reserve.

Perhaps I am more conscious of this need than many of my colleagues because of the geographical location of my district. The security of the Nation's ports is, however, of importance to our entire Nation. A recent editorial in the Norfolk Ledger-Dispatch, one of the leading newspapers in my district, clearly tells the story of the importance of a well-organized Coast Guard Reserve. I am inserting this editorial in the RECORD and I commend it to your thoughtful reading.

WHAT PRICE PORT SECURITY?

The United States Coast Guard is the only one of the comparable groups in the armed forces which is not supported by a Federal appropriation for its Reserve organization. Its Reserve component operates now entirely on a voluntary basis, without the kinds of compensation which other reserve bodies enjoy, and in consequence without some of the inducements which attract men of experience to maintain their knowledge of coast-guard work and to familiarize themselves with the techniques and the tools which they would use if they were called into active duty.

The result is an obvious handicap. President Truman has recognized the need for lifting this handicap in his recommendation last year for a small appropriation for the training of a Coast Guard Reserve, but Congress—for reasons which are not clear—would have none of it. An item of $4,100,000 was in the congressional works this year. It would lead eventually to the expenditure of about $8,000,000 a year. An Appropriations Committee subcommittee has now turned this item down, the full committee is described as likely to sustain this refusal, and the only hope appears to be a floor fight.

If it does not win approval, the Coast Guard Reserve will continue to have an existence (to quote George Fielding Eliot) "only on paper"; and the situation will continue to be that which the Seattle Times—published in a port—described in these words: "Coast Guard reservists by the hundreds have flocked to other reserve organizations, and no program whatever has been set up to train those who remain on the Reserve list in their port-security functions."

Note the emphasis on "port-security functions." The issue is national. But it is also peculiarly a Norfolk and a Tidewater issue. In an emergency the Coast Guard would be responsible for their port security—the safety of their water fronts, their harbors, their shipping, their ship and boat facilities of many types, even (since explosives are heavily involved) their whole safety. The Reserves would be thrown immediately into this work. In the late war, as Norfolk knows well, this was a major responsibility. The Coast Guard met it with high effectiveness.

All these functions, important as they have been in the past, are raised to a new level of significance in the atomic age.

The sum required to make the Coast Guard Reserve a real reliance, by enlargement from the small size to which its lack of financial support condemns it, and to keep it up to date, is no barrier in a $42,000,000,000 budget. If a reserve organization is worth having at all—and who questions that?—it is worth having on a realistic basis. In an era when the highest military leaders think that another war would hit hard from the start, this kind of training is surely essential.

Repeal of Children's Dental Experiment Law

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. FURCOLO. Mr. Speaker, I have been requested to call attention of Members of Congress to the following article:

ARGUMENTS IN FAVOR OF HOUSE BILL 2034, REPEAL OF CHILDREN'S DENTAL EXPERIMENT LAW

The Massachusetts dentists' committee, sponsoring a bill in the State legislature to prohibit nondentists from performing dental operations on children, recently conducted a poll which revealed that 2,700 of the State's 2,800 dentists are opposed to the 1949 act which permits hygienists with 2 years' training to do restorative dental work on children.

Massachusetts was the first State to adopt this federally financed program, which lowers dental health standards and uses our children as guinea pigs.

DENTAL PROFESSION OBJECTS TO THIS PROGRAM

Under authorization of the 1949 act, the Massachusetts Department of Public Health is currently supervising a 5-year program at the Forsyth Dental Clinic in Boston, where hygienists are being given 2-year courses and

UNIVERSITY OF MICHIGAN LIBRARIES

then authorized to do the work which was formerly entrusted to a registered dentist with 8 years' training.

Passage of this act came without the full approval of the Massachusetts Dental Society, even although certain of its officers spoke in favor of this act in 1949.

Passage of the act came without the full knowledge or consent of the dental profession in this State.

Passage of the act has been deplored and condemned by the American Dental Society by a vote of its house of delegates at the recent conference in San Francisco.

It is the opinion of the American Dental Association that restorative work on children's teeth cannot be entrusted to any person other than a fully qualified registered dentist. It is also the association's opinion that 2-year courses do not prepare trainees or hygienists for such highly specialized work.

It is the opinion of the Massachusetts dentists' committee and its members that the program undertaken by the Department of Public Health creates a dangerous new trend by establishing a substandard program in a field in which the highest possible standards should be maintained at all times.

We feel that Massachusetts has taken a dangerous step backward and that the dental health standards for the children of this State have received a serious setback, and that now is the time to cure the evil.

HOUSE BILL 2034 IS A PROTEST BILL

This bill may also be considered a protest from the heretofore disunited majority of the dental profession. The Massachusetts dentists' committee feels that it was completely ignored during consideration of the 1949 act. The first information the dental profession received of the existence of the act and the program it authorized, did not come until October 1949, 4 months after the passage of the act, and this information came through a notice in the New England Dental Journal.

We would also like to call attention to the fact that at no time did the governing body of the Massachusetts Dental Society, the house of delegates, approve this program.

We would also like to remind that only certain officers of the Massachusetts Dental Society approved this program, while the vast majority of 2,800 registered dentists were never polled nor given the opportunity to present their opinions on this far-reaching program.

The dental profession bases its opposition strictly on public health standards. We feel that if the filling of a tooth is isolated completely, as a mechanical technique, and has no bearing upon the general physical health of the child, the program instituted by the department of public health is liable seriously to restrict treatment in child dentistry. However, this is exactly what is proposed in the public health program.

A SOLUTION

Every member of the dental profession is interested in stopping the increasing rate of tooth decay in Massachusetts. However, we feel that this cannot be done by giving 2 years training to practitioners. The problem cannot be solved by training amateurs in this highly specialized field. The results of the program of the department of health would be likely to provide second-rate, substandard treatment to the children of the needy.

We would find that those children who require the highest quality treatment would probably receive the lowest, and it would probably provide a type of treatment which may have serious repercussion in the later lives of these children.

We feel that this problem can be solved by increasing the facilities for the education of trained, competent dental students. More qualified dentists are needed, not 2-year trainees. Ultimately, we feel, the problem will be solved by graduating from our dental schools increasing numbers of competent, fully-trained, registered dentists with 8 years qualifying training.

Formation of a separate group of mechanical technicians is not the answer

RICHARD D. CUNNINGHAM,
Chairman, the Massachusetts Dentists' Committee for Repeal of the Children's Dental Experiment Law.

Tax Revision

EXTENSION OF REMARKS
OF

HON. A. SIDNEY CAMP

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mr. CAMP. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD an excerpt from Atlanta's Suburban Reporter of March 20, 1950, and also one from the Atlanta Constitution of March 8, 1950:

[From Atlanta's Suburban Reporter of March 20, 1950]

THIS WEEK

(By Hubert Lee)

Our good friend, Congressman A. SIDNEY CAMP, of Newnan, who has represented the Fourth Congressional District since 1939, served as guest columnist for Editor Ralph McGill in the March 8, 1950, issue of the Atlanta Constitution.

Representative CAMP is a member of the powerful Ways and Means Committee, headed by North Carolina's Representative ROBERT L. DOUGHTON. Representative DOUGHTON was elected to the Sixty-second Congress and has served with distinction ever since.

The Ways and Means Committee calls for great ability and leadership and southerners on the committee measure up. In addition to Representatives DOUGHTON and CAMP, southerners include Representatives JERE COOPER (Tennessee); WILBUR D. MILLS (Arkansas); NOBLE J. GREGORY (Kentucky); J. M. COMBS (Texas); HALE BOGGS (Louisiana).

Taxes is one of the many problems of the Nation demanding the attention of the 25-member Ways and Means Committee. Here are some quotes from Congressman CAMP'S guest column:

"I am more familiar with what is being done on my committee, which has been in daily session for more than a month in an effort to bring about tax adjustments to ease some of the worst pain now being suffered by our patient taxpayers, and at the same time, not endanger the integrity of the Federal revenues, nor further increase the Federal budget. * * *

"Some wag in the House once said that ours was not the Committee on Ways and Means but the committee on woes and moans.

We suggest that anyone who missed reading the Constitution dig up the March 8 issue and clip out Congressman CAMP'S guest column. It is worth reading and rereading.

[From the Atlanta Constitution of March 8, 1950]

TAX ADJUSTMENT IS A TOUGH JOB

(Ralph McGill is in Palestine. In his absence members of the Georgia House of Representatives will write guest columns. Today's is by A. SIDNEY CAMP, of the fourth district of Georgia.)

I am honored to be asked to write this column for Ralph McGill, but feel very humble in doing so, for no one in our State is more able or better loved than he.

I am more familiar with what is being done on my committee, which has been in daily session for more than a month in an effort to bring about tax adjustments to ease some of the worst pain now being suffered by our patient taxpayers, and at the same time not endanger the integrity of the Federal revenues, nor further increase the Federal deficit.

MOANS

The job is a hard one. If you could sit with us and hear the various groups and classes relate their particular problems and assure us that no other group is carrying so weighty a burden, you would then understand why some wag in the house once said that ours was not the Committee on Ways and Means but the committee on woes and moans.

And we cannot laugh off these moans of our people over their tax woes. They are entitled to as much relief as it is possible to give them. Most every group has appeared before us except the consumers of tobacco and alcoholic beverages. These groups pay the highest tax of all—the Federal tax on a pack of cigarettes is 7 cents, and most States impose an additional tax. The tobacco costs 3 cents, or less than half of the Federal tax, while the Federal tax on a gallon of whisky is $10. Consumers seem to think these products cheap at any price.

LOOPHOLES

The President suggested that excise taxes be lowered in the same amount as we might recoup for the Treasury by closing of loopholes and making adjustments.

Some of the loopholes mentioned were collapsible corporations, such as those set up by moving picture producers for the production of only one picture and its liquidation after finishing the picture and before receipts from its distribution start, and some in the construction business where liquidation takes place before the houses are sold, so as to permit the tax to be recovered on a capital-gains basis rather than from direct income.

Selling business property by going concerns, and some sales of livestock by cattlemen and dairymen, so as to deduct losses from income rather than to reflect them in capital-gains accounts are similar practices in the reverse.

The Treasury urges a change in the law relating to those organizations now enjoying a tax-exempt status under section 101 (12) and suggests that the regular corporation tax rate be applied to business activities engaged in by religious, educational, charitable, and eleemosynary organizations which are wholly unrelated to the ordinary functions of the organization.

Thus if an agricultural college operated a farm or a bookstore, neither would be taxed, but if it owned and operated a watch factory the profits of the latter venture would be taxed.

They have also urged our attention to a growing system of lease-backs, an example being where a manufacturing company sells or gives its plant to a college which makes an addition, then leases it back to the company who continue to operate it. The college collects tax-free rents which are more than enough to pay for the additions.

Some cooperatives and charitable trusts that do not pay out virtually all of their income each year for charitable purposes and are not supported by the public generally, are other organizations under study.

ALLOWANCES

Other suggestions are to reduce the depletion allowance against gross profits now permitted to operators of oil and gas wells, coal, iron, and other metallic as well as some nonmetallic mines. These depletion allowances were made for the purpose of covering

the exhaustion of their resources and to encourage the discovery of new mines and wells, but it is claimed the allowances are far too much, and suggests that the oil- and gas-depletion allowances be reduced from 27½ to 15 percent, sulfur from 23 to 15 percent, and others to remain at 15 percent, coal at 5 percent, and all nonmetallics at 5 percent.

Suggestions for changes in the law concerning short selling on stock and commodity exchanges were made.

Any revenue we thus gain is to be used in reducing excise taxes.

Some of these excise taxes are collected at the manufacturing level—like tobacco, cigars and cigarettes, alcoholic beverages, automobile tires and parts, etc., while others are collected at the retail level—like jewelry, cosmetics, furs, railroad tickets, etc. I think some of those which should be reduced first are the taxes on ladies' handbags of the medium and lower prices, toilet articles, telephone and telegraph messages, railroad and transportation, motion picture and other admission taxes.

BALANCE

I think the most important need in Government today is a balanced budget. Our tax rates are high enough, and now produce over $40,000,000,000 a year.

Federal spending should be cut now. It is the only way our budget can be balanced, but it cannot be done without the cooperation of our people.

When cuts are proposed here, the people back home begin to howl and form pressure groups, send telegrams, write letters, pass resolutions—mostly beginning like this: "We know the budget should be balanced, but—." In 1948 the House cut the appropriations some $2,000,000,000, but before those bills came back to us from the conference committees most of it had been restored. It was the same story in 1949 and may be the same in 1950.

The Federal Government is carrying too great a portion of the local program, and we could cut expenditures for national defense and European and world recovery if everybody pulls together.

I am going to vote for such reductions.

Perhaps I have heard too many moans and listened to too many tales of woe.

Wildlife Restoration Week

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. D'EWART. Mr. Speaker, the State of Montana this week is celebrating Wildlife Restoration Week. Mindful of this event the Governor of our State has issued a proclamation, as follows:

A PROCLAMATION

STATE OF MONTANA,
EXECUTIVE DEPARTMENT.

Whereas we who have the privilege of calling ourselves citizens of Montana because of our nearness to the many bounties which nature has bestowed upon this State and our daily contact the multitude of natural blessings which we enjoy sometimes have to be reminded of the benefits and opportunities at hand. In constantly rubbing elbows with unlimited natural assets, we tend to lose sight of the fact that they are ours to enjoy. Were we not reminded of them from time to time, we would forget and start taking them for granted; and

Whereas the grandeur of the Treasure State and the abundant wildlife found here were recently set forth in the nationally circulated magazine Sports Afield, in an article written and prepared by Ken Thompson. Through descriptive text and highly illustrated photographs, Thompson unfolded for the whole United States to see just what we have within our borders; and

Whereas Montanans should be reawakened to the prizes within our borders. The magnificent mountain ranges, trout-filled streams, and the wild game that abounds should once again be called to our attention. We should take careful stock and, once again, we should be filled with a great appreciation:

Now, therefore, I, John W. Bonner, Governor of Montana, proclaim the period March 19–25 to be Wildlife Restoration Week in Montana and call upon all sportsmen's groups and conservation agencies to carry on a concerted campaign of education designed to reawaken public interest in the continuing need for a long-range wildlife-restoration program in Montana.

In witness whereof I have hereunto set my hand and caused the great seal of the State to be affixed. Done at the city of Helena, the capital, this the 13th day of March A. D. 1950.

JOHN W. BONNER, *Governor.*

Another Distinction for the Sunflower State

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. MEYER. Mr. Speaker, Kansans as a rule are not boastful folks. They know that their State is the breadbasket of the world and that its many natural resources, its rolling plains, its salubrious climate make Kansas one of the great States of the Union. These blessings they modestly take in stride.

Recently, however, a new distinction has come to the Sunflower State which, with pardonable pride, I bring to the attention of my colleagues by quoting the following editorial from the Arkansas City Traveler:

ANOTHER DISTINCTION

Kansas picked up another distinction this week in the announcement by Head G-Man J. Edgar Hoover that the Sunflower State is home to only six card-carrying Communists. This probably is one of the lowest proportionate figures in the country.

Although the scarcity of the comrades in Kansas is just cause for satisfaction, in a way it is a bit surprising that even six of the tribe can be found in the State.

Kansans just aren't the sort of folks who go in for communism and similar crackpot theories. For one thing they are 100-percent-loyal Americans who don't believe in looking overseas for inspiration. They also are pretty thorough realists, who aren't a bit fooled by the fancy propaganda that comes out of Moscow. On the whole they are solid, hard-working people with a touch of rugged individualism in their nature and a high regard for personal liberty.

Kansas also doesn't have either the closely defined gulf between rich and poor or the high degree of class consciousness that exists in many places. The great middle class which dominates the State is a bulwark of good citizenship. Social lines are extremely loosely drawn. A real grass-roots democracy prevails in fact as well as in theory.

In such sturdy environment, communism offers no appeal whatsoever. The six exceptions to whom Mr. Hoover refers must be temporary importations from other areas.

Congress Spends Thirty-five Billions Without Record Vote

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. ROGERS of Florida. Mr. Speaker, under unanimous consent granted me to extend my remarks, I am pleased to include therein an article from the Miami Herald, Miami, Fla., contained in John Pennekamp's column entitled "Behind the Front Page." May I say that Mr. Pennekamp is one of the leading and influential civic leaders of our State. His views and his judgment are highly respected by the citizens of Florida. He has been a great force in bringing to a realization and fruition the present Everglades National Park. He is associate editor of the Miami Herald.

CONGRESS SPENDS THIRTY-FIVE BILLIONS WITHOUT RECORD VOTE

(By John Pennekamp)

During its first session the Eighty-first Congress authorized the expenditure of $51,000,000,000.

Should you undertake to find out how your Senators or Representatives voted on these expenditures, here is what you would learn:

There is no recorded vote in either the House or Senate as to $28,969,126,989 of this gigantic expenditure. That is considerably more than half of the total that was voted.

As to the next $6,500,000,000, only one or other of the two Houses took a record vote.

So, more than two-thirds of the whole amount was appropriated without a record that will show you how your Congressman voted.

How much is $51,000,000,000? Dr. Christopher Daniels, of London, who has been visiting in Miami, recently figured it in terms of time.

If a man—say President Truman—stood on the shore of the Atlantic Ocean and tossed dollars into the water at the rate of 1 a second he could dispose of only 31,536,000 in 1 year.

Had he begun throwing the dollars into the ocean, at the rate of 50 a minute at the beginning of the Christian era, and continued so doing every minute around the clock through the years, right up to the end of 1950 he would have then disposed of $51,256,000,000.

That means he would have left on the shore something like $500,000,000 of the total that was appropriated by the first session of Congress.

Largest of the items appropriated without a record vote in either House was the $12,949,562,495 for the Military Establishment.

And the smallest was $16,000,000 for the United Nations for Palestine refugees.

Other items included, for independent offices, $7,617,739,361; for Treasury and Post Office Departments, $4,090,528,903; for Labor-Federal Security, $2,387,779,885; and to cover a second deficiency, $854,838,710.

UNIVERSITY OF MICHIGAN LIBRARIES

There was a Senate vote but none in the House, on $5,659,990,000 for foreign aid, and House votes but none in the Senate on $100,000,000 to authorize public-works planning and $664,178,190 for Army civil functions.

Fort Lauderdale's Representative DWIGHT L. ROGERS has offered a bill to cure this situation. It will have a tortuous course to adoption, but most certainly it should become a law.

It would make mandatory a yea-and-nay vote on all appropriations of a public nature.

"I think," he says, "this bill would be a step toward economy and would possibly bring about a reduction in governmental waste, extravagance, and duplication.

"The light of public opinion would cause some of the Congressmen to think before going on record for too many appropriations."

He continued:

"They would become appropriation conscious and certainly no appropriation could be passed without a majority of the House Members being present which has not been the history of appropriations this far in the Congress."

In the light of the size of the figures involved it is safe to assume that few, if any, Congressmen have even a reasonable comprehensive knowledge of where the money is going. As a matter of fact, committee members directly interested in the appropriations would be unable to study their particular budget and digest it to the the point where they could give intelligent, detailed information as to it.

I wonder why more department heads aren't finding it possible to economize—to return unexpended balances.

It looks like some of them are given so much money they don't have time to spend all of it.

Open Letter to DAR

EXTENSION OF REMARKS

OF

HON. CHARLES R. HOWELL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mr. HOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial printed on March 16, 1950, in the Trenton Times entitled "Open Letter to DAR." This editorial stresses the position which this historic organization can choose to play in support of the principle of freedom and justice under law by espousing the cause of limited world government. The editorial follows:

OPEN LETTER TO DAR

Ladies of the New Jersey Society, Daughters of the American Revolution:

As you convene today for your annual conference at the State house, we make bold to express the hope that you will chart a course in harmony with the free and revolutionary spirit of those ancestors whom, as an organization, you so proudly and justly venerate.

New Jersey, in recent years, has assumed the lead in many moves designed to spread and accentuate the ideals of freedoms.

It has come boldly to the defense of civil liberties.

It has taken a strong stand against racial segregation.

It has endorsed fair-employment practices.

And many of its Representatives in Congress, as well as thousands of its citizens, are lending their support to a type of world unity that offers the only promise of enduring peace and security.

In this latter connection, your New Jersey Society, if we may be permitted to say so, has a great and inspiring opportunity to break away from the narrow isolationism that has come to befog the thoughts and actions of your national organization.

We ask this: Do you have the courage to support the principle of freedom and justice under law on a world-wide basis?

The fathers of our country, implicitly and in general principle, did so when they conceived and gave governmental expression to the Federal doctrine of E Pluribus Unum (Out of Many, One).

Your society has vast potentialities for good. It can and we think should take a position of leadership in the quest for liberty, not only here in America but everywhere throughout the world.

We pray that you will join hands with the forces of progress and come out vigorously and unequivocally in affirmation of international freedom under law, of world government for all mankind.

As devotees of a revolutionary tradition, can you, at this critical moment, afford to follow the jingoistic, reactionary line?

Export Market for Wheat

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mr. HOPE. Mr. Speaker, unless this country can maintain a substantial export market for wheat, it will be necessary for a tremendous reduction to be made in wheat acreage in the years ahead. Last year the Secretary of Agriculture put into effect acreage allotments on wheat and farmers were asked to reduce their acreage for 1950 11.7 percent below the planted acreage for 1949. For 1951 acreage allotments will again be proclaimed and the Department of Agriculture is tentatively considering a further reduction of 16 percent in wheat acreage. With a continuation of normal yields still further reductions will be forced unless exports can be continued on a substantial basis.

Because of the light which they shed upon the present situation and because of the constructive criticism of the present policies of the Department of Agriculture with respect to wheat which they contain, I am submitting herewith as a part of my remarks, first, a letter from Mr. Elmer W. Reed, executive vice president of the Flour Mills of America, Inc., Kansas City, Mo., dated February 20, 1950, and addressed to me; and second, a copy of a letter from Mr. M. F. Mulroy, chairman of the agriculture committee of the Millers' National Federation, dated February 15, 1950, and addressed to Mr. Elmer Kruse, Assistant Administrator of Commodity Operations, Production and Marketing Administration.

FLOUR MILLS OF AMERICA, INC.,
Kansas City, Mo., February 20, 1950.

Hon. CLIFFORD HOPE,
House of Representatives,
Washington, D. C.

DEAR CLIFF: As a matter of information I am enclosing a copy of a letter addressed to Mr. Elmer Kruse, Assistant Administrator of Commodity Operations, P. and M. A., who is the actual manager of CCC, as I understand it. It is a letter from Mr. M. F. Mulroy, of the Russell-Miller Milling Co., and chairman of the Agricultural Committee of the Millers' National Federation. It is completely self-explanatory, but it does touch on a question that it seems to me is vital and which also seems to me is in danger of being kicked around among the departments of Government until too late.

As pointed out in a previous letter, what we are doing is sitting on a stock of wheat which includes an exportable surplus of at least 375,000,000 on the present crop, and to maintain our normal carry-over, it should be 75,000,000 more than that—we are doing a lot of worrying about a lot of burdensome surpluses, and yet we are making no move whatsoever to make a sufficient distinction as between our support price in domestic markets and the world price to permit the moving of that surplus grain into world channels. It is indeed unfortunate that that should be so, but I think you will readily realize it is actually the case.

It is all right for us to become independent in our marketing proposals so long as we are supplying the funds with which the commodity is to be purchased, but so long as the other major exporters, and particularly Canada, is daily aggressively pushing the sale of strictly top-quality wheat at prices ranging as much as 40 cents to 45 cents under our price, there obviously is little or no chance for trading so long as the buyer has complete freedom of choice in what he purchases.

Frankly, this is a red flag which the industry is waving being extremely fearful, in fact completely convinced, that unless drastic action is taken immediately to permit the moving of wheat into world channels at competitive prices, we are building surpluses that must inevitably create an even worse situation in wheat than now prevails in some of the other commodities.

I wonder if it is not time for the Congress to take cognizance of that fact?

Yours very truly,

ELMER.

FEBRUARY 15, 1950.

Mr. ELMER KRUSE,
Assistant Administrator of Commodity Operations, Production and Marketing Administration, Washington, D. C.

DEAR MR. KRUSE: Your absence from Washington last week prevented me from answering your letter of February 3 in person. Mr. Smith, Mr. Borton, Mr. Benidt, and Menzies listened to the presentation of our problems.

We are not only interested in an increase of flour exports by an establishment of a wheat price that will permit us to sell in competition with other exporters; we are also interested in the movement of wheat and flour in quantities that will prevent piling up of a burdensome surplus. You can sell wheat to countries receiving ECA funds and to occupied countries without equalizing the price with other exporting countries. You can sell some wheat and flour at premiums over the prices offered by other exporting countries. You cannot, however, sell our wheat and flour in sufficient volume to prevent piling up a burdensome surplus unless our prices, quality considered, are competitive with the prices offered by other exporting countries.

We are going through a period where Canada is gradually taking the export business away from us and this will continue until they will have the major share of the export volume unless we are able to compete with them in all importing countries. It is very important that the subsidy be widened to cover countries not participating in the international wheat agreement and also to

cover countries who complete their quotas under the international wheat agreement. Now when a country completes its quota, Canada only increases their price from $1.80 to $1.96 or 16 cents a bushel while we have to advance our price 53 cents per bushel to Latin-American countries. We are, therefore, practically excluded from all countries not covered by the international wheat agreement and are excluded from countries who complete their international wheat agreement quotas.

All of this means that Canada will build up their export trade at our expense and we will be eliminated from countries who have been accustomed to buying American flour for generations. Your present handling of export under the international wheat agreement is causing a loss of volume on American flour in all countries. We are just too high in price to compete with Canada and they are making headway in every country.

Your policy of basing your computation of the subsidy on the price you can secure from countries using ECA funds or on the price you can secure from countries that will buy limited quantities of American wheat mixtures that probably are reduced as much as possible by including any cheap wheat available is giving Canada the opportunity to increase their export volume.

This year we were sure of a definite volume of exports to ECA countries and occupied countries and next year this volume will be reduced by the amount ECA funds are reduced and by the amount occupied countries can produce at home. Your own figures indicate an increase in the carry-over that is very alarming and if allowed to continue, we will have a repetition of the situation that existed in the early thirties. Two years ago, the carry-over was 196,000,000 bushels, last year it was 307,000,000 bushels, and we are headed for a carry-over of 385,000,000 bushels this year.

The increase of about 24.8 percent in Canadian exports while our exports decreased 37.8 percent must have some significance. Canadian flour exports decreased about 7.5 percent while our flour exports decreased 73.8 percent. I do not have Canadian official figures, but the above figures are very close to what the official figures will show. The difference of 62.6 percent between our loss in total exports and the Canadian record, and the difference of 66.3 percent in the loss on flour exports surely proves that we are right in worrying about Canada gradually taking over our export volume.

Acreage reduction can take care of part of the loss in exports, but it would take a large acreage reduction to compensate for the loss in volume that we are facing. As long as you maintain a support price away above world price levels, you have to use some method to reduce the high domestic prices to a basis that will permit the export of our wheat and flour. Otherwise, you will pile up surplus stocks that will become very burdensome.

Additional storage space is not the answer because we do not need a carry-over of 350,000,000 to 500,000,000 bushels of wheat. Reducing acreage will not reduce the volume of the crop as far as the acreage is reduced. Farmers will first eliminate marginal land and as long as they can get over $2 per bushel for their wheat, they will do a better job of farming which will mean more bushels per acre. There will be more bushels per acre in good years and more bushels per acre in drought years when good farming will be more noticeable.

We would like to set down a basis that we think would be workable and would stop the loss of the export of American flour to all countries:

1. Broaden the base of the subsidy to include all countries. Base the subsidy, outside of IWA countries, on the world price for wheat which is now Class 2 price for Canadian wheat and is about $0.15 higher than the $1.80 IWA price for No. 1 Manitoba at Fort William.

2. Use realistic quality differentials based on the price that can be secured for No. 1 Hard Winter 10 protein as compared to No. 1 Manitoba 13.50 protein. Base the quality differentials on No. 1 Red and No. 1 Soft on the differentials necessary to move these wheats when there is a surplus. When and if these wheats get in short supply, the differentials, of course, would change.

3. Apply price differentials between ports based on general rates and not on distress cargo rates.

4. Base wheat prices on the cost of round lots of wheat at seaboard and not on the price of single-car lots from areas that can only supply very limited quantities.

5. Base the subsidy on prices that can be secured from countries that are not dependent on ECA funds.

6. Base the subsidy on the price that can be secured for enough wheat and flour to prevent piling up a burdensome surplus.

7. Change the subsidy on market changes each day. Avoid the temptation of staying behind the market on upswings and ahead of the market on downswings. Flour and wheat have to be sold on the market price each day and if we are not on the market, then our competitors from other exporting countries will get the business.

Yours very truly,

M. F. MULROY,
Chairman, Agricultural Committee,
Millers' National Federation.

Grasping at Straws

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. HAND. Mr. Speaker, a little more clear thinking such as is exhibited in the appended editorial from a recent issue of the Vineland Times-Journal, will save us many future headaches and many millions, if not billions of dollars. I am including it for the information of the membership of the House:

GRASPING AT STRAWS

How a large portion of the world's population is mired in ancient thinking is illustrated by a brief news article we spotted over the week end, buried far inside one of the metropolitan newspapers.

Says the headline on this article: "Sweden rearming as a buffer state"—and the article itself contains: "Sweden, standing between Soviet Russia and the Atlantic Pact nations, is building up its small Army, Navy, and Air Force into a strong defense. * * * The Swedish Navy has contracted for the construction of two destroyers at about $16,000,000 each. They will displace 2,350 tons and will have heavier armament than earlier types of Swedish destroyers. * * * The Army is reorganizing its infantry units and giving them several new weapons, including two highly effective antitank guns and a rocket rifle."

In this world of atom and hydrogen bombs, guided missiles, supersonic planes, and the other modern creations of man's warped mind, is there any longer such a thing as a buffer state? We don't think so. Scientists have repeatedly warned there is no defense against the super bombs, yet a news story would have us believe that a couple of comparatively small warships, two antitank guns, and a rocket rifle constitute a strong defense. Even if Sweden's current armed force were multiplied tenfold, it could offer about as much resistance to concentrated Soviet might as the average lawn offers to a smoothly functioning power mower.

No criticism of Sweden, particularly, is here intended, for that Scandinavian nation is only a small arc in a circle of folly in which the United States is the largest segment. America, a few days ago, officially began what is known as arms aid to Europe. The cost will be a billion dollars or more this year, with the aim of creating barriers against further Communist expansion. If one Swedish destroyer costs $16,000,000, it stands to reason that a billion or two billion or even five billion dollars doesn't buy very much strength, spread out over 15 European nations. The average businessman understands the meaning of depreciation, and since nothing depreciates quicker than tools of war, it's an easy matter to visualize how this year's billion must be followed by more billions of dollars of American-arms aid in years to come. Today's bomber is obsolete tomorrow. Today's tank is a sitting pigeon tomorrow. Today's radar may be only false security tomorrow.

In attempting to combat communism by feverishly shipping arms to Europe, the United States is only grasping at straws. When we open our hands to see what we grabbed, all we find is a skyrocketing budget—and Russia just as strong and threatening as ever.

A second news story appearing the same day reported how the United States is using far more effective means than armaments to contain communism. Said the second news article:

"Paul G. Hoffman said today that Britain stood to lose $150,000,000 in Marshall-plan aid unless she joined with other European nations in a plan to lower trade barriers."

The United States Economic Cooperation Administration, under Hoffman, has blueprinted a European payments union, which would function as a currency clearing house for all Marshall-plan nations. Backbone of the project is $600,000,000 in Marshall-plan funds allotted exclusively to the currency pool.

In aiding Europe with food, raw materials, and machinery, and by trying to create freer world trade, the United States is employing the only effective means of halting Russian expansion. This aid, plus propaganda beamed on the Voice of America, reaches the people of Europe. Mere arms aid only the junk heaps.

What Chance Has Small Business?

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. ANDERSON of California. Mr. Speaker, it was with considerable consternation and alarm that I read the article, The Federal Snoops Are After Me, in the CONGRESSIONAL RECORD of March 20. The article was placed in the RECORD by our colleague the Honorable PAUL DAGUE, and appears on page A2029.

A careful reading of the article, which I commend to the attention of all my colleagues, will indicate the extent to

UNIVERSITY OF MICHIGAN LIBRARIES

which misguided zealots in the Federal agencies are going to hamper, hinder, and hamstring the small-business men of this country. The Federal statutes are being so badly misinterpreted in so many instances that I wonder how any free young American citizen has the courage to start out building up a business of his own.

Mr. Speaker, I wonder if incidents such as those described in the article are occurring in my district—or yours—or any of the other congressional districts in the United States. If they are, I feel that they should be promptly reported and investigated by the Congress. If the bureaucrats are wrong, let us fire them. If the laws are wrong, let us change them.

Acheson Walks Alone

EXTENSION OF REMARKS
OF
HON. JOHN R. WALSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. WALSH. Mr. Speaker, for several weeks our distinguished Secretary of State, Dean G. Acheson, has been subjected to a serious attack by Senator McCARTHY. I feel at this time that I must speak out in Secretary Acheson's defense. Senator McCARTHY has had ample opportunity to present to the Senate committee evidence of Communistic activities within the State Department, if any exists, and it has become very apparent that he is unable to produce this evidence.

The attack upon Dean G. Acheson and the Department of State seriously affects the entire Nation and this Government. I think the article by Joseph C. Harsch, chief of the Washington News Bureau of the Christian Science Monitor, entitled "Acheson Walks Alone," presents a very clear statement of the situation, and I commend this article to the House of Representatives.

The article is as follows:

STATE OF THE NATION—ACHESON WALKS ALONE

(By Joseph C. Harsch)

WASHINGTON.—On January 25, over 6 weeks ago, Dean G. Acheson, Secretary of State of the United States, made his much-discussed declaration that he would not turn his back on Alger Hiss.

On February 28, 2 weeks ago, Mr. Acheson, in response to urgings from Democrats in the Senate and House of Representatives, explained that his action was not intended to condone any of the deeds of which Alger Hiss was accused and convicted.

But not once in these past 6 weeks has any Democrat in the House or Senate got up on his feet in the Halls of Congress and defended vigorously or prominently the man who holds the highest post in the Cabinet of the United States against the attacks which have continued to come from Republicans against Mr. Acheson's personal position on the Hiss case.

Nor has any Democrat stood up in either Chamber of the Congress and defended the Secretary of State against the implied attacks on him and his policies which are involved in the McCarthy charges of alleged disloyalty cases in the State Department.

Diplomats from overseas watch this proceeding with amazement and bewilderment. They do not understand what it means. Here is the second highest official in the executive branch of the Government—the man who stands next under the President himself. Daily, for weeks, he and his policies have been the target of direct and indirect political attack. Yet the leaders of his own party in the Congress behave just as though he and his policies had nothing to do with them or their party.

This is a condition which no foreign diplomat in Washington can understand in terms of his own homeland. Such diplomats come from one of two kinds of countries—a dictatorship or a parliamentary democracy. In either case this condition would be impossible. Under a dictatorship such an attack on the foreign minister and his policies would be an attack on the dictator, and, therefore inconceivable. In a parliamentary democracy it would be an attack on a leader of the party in power who could be defended by himself in person in the parliament and by all of his colleagues. The whole party would have to stand or fall with the foreign minister.

The situation is already dangerous. No foreign government can possibly know whether Mr. Acheson does actually represent the foreign policy of the party in power. They hesitate to do business with him. They question the permanence of policies which are daily attacked and daily left undefended. It is not overstating the case one iota to say that today the foreign policies of the United States are crippled and ineffective. The State Department is not able to function effectively as a foreign office. It will not be able to function as a foreign office unless or until one of two things happens: either Mr. Truman finds himself a new Secretary of State who will be defended in the Congress by his own partisans against all attack, or Mr. Truman succeeds in obtaining a vote of some kind which would amount to an expression of congressional confidence in Mr. Acheson.

This situation also raises a most serious question—whether any man can function effectively as Secretary of State who is not a political figure in his own right. There are three men in the Cabinet who have political strength in their own right—Louis Johnson, Secretary of Defense; J. Howard McGrath, attorney general, and Maurice J. Tobin, Secretary of Labor. These men are frequently attacked, but they are also always defended. They are defended because they are in politics and have political friends and associates.

Mr. Acheson is a Democrat, but not a politician. He took office as a diplomatic craftsman to Mr. Truman. He has no power to defend himself politically nor to claim defenders in the Congress. If he is to be defended, Mr. Truman must either do it, or arrange for it to be done.

If Mr. Acheson were the diplomatic craftsman of the Department serving under a political Secretary of State the story would be quite different. No politician ever dared attack Cordell Hull or any of his assistants as they now attack Mr. Acheson and his. They never attacked James F. Byrnes as they now attack Mr. Acheson, although the big house cleaning of "security risks" has taken place since Mr. Byrnes left the State Department. A Secretary of State without a political shield is helpless in such a situation as this. It seems axiomatic that Mr. Truman must either be a shield for Mr. Acheson, or find a Secretary of State with the political power to shield himself.

McCloy Must Now Carry Out Nuremberg Sentences

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. DOLLINGER. Mr. Speaker, in my opinion, further delay in the execution of the death sentences imposed by the Nuremberg courts on the top Nazi war criminals will completely destroy any faith the world may still have in American justice. We will be subject to the derision and contempt of all people who remember well the crimes against humanity committed by these Nazi fiends.

Believing that action should be taken at once, I wrote John J. McCloy, the United States High Commissioner for Germany, on February 1, urging that he carry out the sentences immediately. I received a reply from him dated March 7, in which he gave his excuses for the delay. Upon investigation, I found that, on March 9, official notification was sent by the State Department to Commissioner McCloy informing him that he, as High Commissioner, has complete and absolute authority to execute the death sentences. I am accordingly writing Mr. McCloy today pointing out that it is his duty to obey the mandate given him forthwith. I am inserting in the RECORD copies of our correspondence, so that my colleagues may know of the action I have taken.

We must stop coddling these Nazi criminals; we must countenance no further clever delays; we must insist that Commissioner McCloy fulfill the trust placed in him and rid the world of these death-dealing Nazis. I repeat what Telford Taylor, the Army prosecutor at Nuremberg, said:

We have shown these Nazis far greater mercy than any convicted American murderer ever enjoyed. It is time they were hanged.

The letters follow:

MARCH 7, 1950.

Hon. ISIDORE DOLLINGER,
House of Representatives,
Washington, D. C.

MY DEAR MR. DOLLINGER: This will acknowledge your letter of February 1, 1950, concerning the execution of the death sentences imposed by the Nuremberg courts. I have read the excerpt, which you enclosed, from the CONGRESSIONAL RECORD of January 31, 1950, containing an article by John Hohenberg.

In addition to the 16 prisoners sentenced at Nuremberg who are the responsibility of the United States High Commissioner for Germany, acting under the Department of State, there are a number of prisoners who were also sentenced to death for war crimes by military commissions, acting under the authority of the military commander at Dachau. Execution of these latter sentences is the responsibility of the Department of the Army.

Congressional inquiries concerning the sentences awarded by war-criminal tribunals, particularly those of the military

commission referred to above, resulted in a stay of execution of all capital sentences pending the results of investigation of the trials by committees of Congress. Although congressional interest centered in the trials conducted by the military commissions, it was not thought desirable to carry out any death sentences imposed for war crimes by courts for which the United States Government is responsible in Germany, whether at Nuremberg or under the jurisdiction of the Army, at a time when Congress was actively investigating the propriety and validity of the proceedings in any of these cases. Accordingly, both the Department of the Army and the Department of State joined in issuing a stay of execution of all capital sentences.

An additional reason justifying the stay was the impropriety of executing the sentences at a time when petitions were pending for review of decisions of the Nuremberg courts by the Supreme Court of the United States.

At such time as I receive notification that the stay of execution of these sentences has been lifted, I will take such action as is appropriate in the light of the circumstances surrounding each individual case. I am fully aware of the enormity of the crimes for which certain of the defendants at Nuremberg were tried and found guilty. Full consideration will be given to the nature of these crimes in any determination which I am called upon to make as to whether the death sentences will be carried out.

Sincerely yours,

JOHN J. MCCLOY,
United States High Commissioner for Germany.

MARCH 23, 1950.

Hon. JOHN J. MCCLOY,
United States High Commissioner for Germany, Frankfurt, Germany.

DEAR SIR: Your letter of March 7 is before me, explaining your reasons for the delay in execution of the death sentences imposed upon Nazi war criminals by the Nuremberg courts.

I am informed that on March 9 official notification was sent you by the State Department, that you, as High Commissioner for Germany, have complete and absolute authority to execute the death sentences imposed by the Nuremberg courts. The responsibility is now fixed, and rests upon you.

Any further delay on your part will be not only unconscionable, but a violation of your duty, and a betrayal of justice.

In accordance with our democratic principles, the condemned prisoners have had every opportunity to protect their legal rights. They failed to demonstrate their innocence in the Nuremberg court; appeals to the United States Supreme Court have been denied—the Court refusing to review the verdict of the international tribunal. Proceedings brought in the Federal Court of the District of Columbia, the Court of Appeals, have had the same negative results. Congressional investigations have long since been completed—and after months of delays, court actions brought to stall the carrying out of just punishment, and extensive hearings, not one sentence has been changed, and these death-dealing Nazi criminals stand guilty as ever.

I quote Telford Taylor, the Army prosecutor who fought the case before the International Military Tribunal at Nuremberg: "We have shown these Nazis far greater mercy than any convicted American murderer ever enjoyed. It is time they were hanged."

We know, Mr. Commissioner, that the condemned, or persons in their behalf, can keep trying to delay execution by filing writ after writ in our courts. The time has come when you must ignore such futile attempts at delay—every legal avenue has now been closed to such petitioners. If you continue to delay, these men will still be alive many years from now, should you permit the filing of these useless petitions in our courts to take precedence over the mandate given you.

Our coddling and petting of the worst war criminals in history is losing us the respect of the world. Former top Nazis take it as evidence that "all is forgiven" and grow bolder in their efforts to push their way to the top spots in industry and government in Germany. Our entire denazification program has floundered—and we are fast losing our reputation as a Nation which keeps its commitments and covenants, and has the courage to carry out its decrees.

By speedily executing the sentences imposed at Nuremberg, you can help our Nation regain some of its lost prestige. Justice, American justice, will again be respected, and not looked upon with derision and contempt.

You have a duty to perform. Let it be done forthwith, for there are now no justifiable excuses for delay.

Sincerely yours,

ISIDORE DOLLINGER,
Member of Congress.

Hoover Commission Report

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit a copy of a resolution recently adopted by the New England section of the Society of American Foresters relative to that part of the Hoover Commission recommendations which deals with the grouping of all major land functions dealing with soil, forests and grazing, including upstream water management, in the Department of Agriculture:

Whereas the Commission on Organization of the Executive Branch of the Government (popularly known as the Hoover Commission), a nonpartisan body of 12 top-ranking men, gave expert and thorough study to Government structure and functions, and concluded that there has been and is now, wasteful overlapping and duplication in certain conservation, forest, range, and allied functions in the Department of Agriculture and the Department of Interior; and

Whereas the Commission's task forces which studied these phases of Government administration, all recommended the consolidation of these activities and services as has been urged by students of government for many years; and

Whereas the Hoover Commission itself, as did its task force on Agriculture and task force on Public Works, believes it is logical and the best public policy to require that major land functions dealing with soil, forests and grazing, including upstream water management, be grouped in the Department of Agriculture; and

Whereas this New England section, Society of American Foresters, is intensely interested in forestry and forest research, and recognizes that 75 percent of the commercial timber-growing land lies east of the Great Plains and largely in private ownership; that 50 percent of all commercial forest land is in farm woodlots and intermingling small forest holdings; that these lands, when properly managed, yield a harvest as regular and dependable as any other crop; that forest and range activities are based on the biological sciences which have been historically the responsibility of the Department of Agriculture: Now, therefore, be it

Resolved, That the New England section, Society of American Foresters, at its thirtieth annual winter meeting held in Boston February 23–24, 1950, urges the adoption of the Hoover Commission's recommendations that forest and range land activities be retained in the Department of Agriculture, and that similar functions of the Department of the Interior, particularly those concerned with administering crop-producing lands of the public domain and the Oregon and California revested lands, be transferred to the Department of Agriculture; and be it further

Resolved, That a copy of this resolution be sent to the executive council, Society of American Foresters, requesting that similar action be taken in behalf of the society at the earliest possible date, and that copies of this section and parent society resolutions be sent to Dr. Robert L. Johnson, chairman, Citizens' Committee for the Hoover Report, 15 West Forty-sixth Street, New York, N. Y.; to Fred Pace, Jr., Director of the Budget, Washington, D. C.; the members of the congressional delegations of the New England States, and to members of congressional committees concerned.

Low-Income People Pay the Bill

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. HAND. Mr. Speaker, when the day comes that the millions of Americans whose earnings are too low to pay much, if any, direct taxes, come to realize that by a clever system of hidden taxes it is they that are really paying for the extravagant cost of government, then, and only then, will we stop this incredible Washington waste.

I know of nothing more important than to give the people the truth on how they are being victimized. "Know the truth, and the truth shall make you free."

With the consent of the House, I am including in the CONGRESSIONAL RECORD a recent public statement that I made on this subject. I intend doing everything I can to make every man and woman in my district aware of this tax trickery. The statement follows:

WASHINGTON.—"If more Americans realized how much they pay in taxes—direct and hidden—each year, their clamor would force real economy in government," Congressman T. MILLET HAND (Republican, New Jersey) declared today in commenting on a tax study recently released by the American Taxpayers' Association, of Washington.

"Much spending at all levels of government has been permitted simply because too many people feel that they don't pay taxes because they do not own their own homes or make sufficient income to put them in the income-tax brackets," HAND said.

"This is the greatest fallacy of modern times. There isn't an item that any of us buy that isn't loaded to the hilt with hidden taxes. You don't have to be in the income-tax brackets or own a home to be a direct taxpayer. Every time you pay a nickel for a newspaper, every time you buy a loaf of bread, you are paying high taxes, pyramided through every level of government.

UNIVERSITY OF MICHIGAN LIBRARIES

"The old saying about death and taxes was never more true than it is today, and whether you know it or not, you're helping to pay for all the multi-billion-dollar spending schemes that government in all levels concocts," Congressman HAND declared.

Citing the recent study of the American Taxpayers' Association, HAND said that actual case studies of people earning $960, $1,800, and $2,400 a year were made, and that itemized accounts showed that a man earning $960 a year paid $123.08 annually in hidden taxes; a man earning $1,800 paid $243; and a man with a $2,400 income paid $314.76 in taxes.

The hidden taxes were included in rent, excise taxes, licenses, import duties, and taxes included in freight costs.

The association traced various things everyone buys from the first step to the point of sale. It found 78 different taxes on a quart of milk, 151 taxes on a loaf of bread, 100 taxes on an egg, 125 taxes on a woman's cotton dress, 118 taxes on a man's suit of clothes, 154 taxes on a cake of soap, 201 taxes on a gallon of gasoline.

"The study showed that hidden taxes take $10 on every $30 of rent, nearly $7 a year on every telephone, one-third of all normal day-to-day living expenses," Congressman HAND continued.

"On a cotton dress costing $7.85 it was found there were $2.20 in hidden taxes, 206 taxes on a new automobile amounting to from $355 to $466 on an automobile that costs $1,600 to $2,000. One tax study was done on a woman's hat, and it was found that it carried 65 Federal taxes, 43 State taxes, and 41 local taxes.

"Until the majority of Americans fully realize the huge slice that taxes take from their annual incomes, until they realize that no one escapes hidden taxes, there can be but little hope for genuine economy in government. It is too easy to hide taxes on the things everyone buys in order to give the public all the services and things that so many people think they get for nothing from the Government.

"Surveys have shown that, if all the money of the wealthy were confiscated, it would operate the National Government for only 31 days, which shows clearly that it is the average man and the low-income groups that pay the bulk of the tax bill," the Congressman said.

"Not until people generally become truly tax conscious will there be sufficient pressure to effect substantial Government economies," he predicted.

Wildlife Restoration Week

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATE OF NORTH CAROLINA,
GOVERNOR'S OFFICE,
Raleigh.

STATEMENT FROM THE GOVERNOR'S OFFICE

The forests, fields, and streams of North Carolina are capable of producing enough wildlife to supply the recreational desires of every citizen. Nature, if assisted by man, will repopulate areas where wild living creatures once abounded but which are now in a depleted state.

Coming at a season of the year when there is evidence of renewed life on every hand, North Carolina Wildlife Restoration Week and National Wildlife Restoration Week present a challenge for every citizen to actively participate in some constructive measure which will assist our wildlife in regaining its former population. This, of course, offers opportunities for men, women, and children to use a portion of their time and energy in making plantings which will provide food, shelter, and a nesting place where wild animals can reproduce and prosper.

The interest of sportsmen, women's clubs, and all nature lovers in conservation has been encouraging and should be an inspiration to others for furthering the principles of proper management and wise use of this natural resource. It is a pleasure, therefore, to call attention to the period of March 19 through March 25, 1950, as Restoration Week for Wildlife in our State and Nation and to urge that these days be appropriately observed by planting suitable areas for wildlife, and through group and community programs stressing the value and importance of this natural resource. School officials and teachers, together with their pupils, may profitably devote a measure of their time and study to wildlife restoration problems.

The Need for Total Diplomacy

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. ZABLOCKI. Mr. Speaker, today, more than at any previous time in our Nation's history, the United States is called upon to play a prominent and decisive role in the determination of international affairs. The condition of the world is in a very critical stage, and upon our foreign policy may depend the future, even the survival, of the entire western civilization.

In crucial times like these, it is imperative that the free nations of the world pursue a forthright and determined course. Being fully cognizant of the demands of our times, the United States has formed and adopted a sound and constant foreign policy, a policy difficult to pursue because it not only requires patience, steady nerves, and persistent effort, but because, above all, it is based in its entirety upon the confidence, support, and attitude of the American people.

Our foreign policy, endeavoring to effect world peace, is exposed to persistent and unrelenting pressure from outside sources, whose aims are contradictory to those that we intend to realize. In order that it may not waver and crumble under this pressure, it needs the wholehearted backing of every American.

It is, indeed, tragic, therefore, that, for political and other unknown reasons, our foreign policy is also being subjected to internal pressure, instigated by persons who perhaps do not realize the irreparable harm that their actions are causing. Through untimely and indiscriminate accusations hurled at responsible leaders of our foreign policy, they, perhaps unwittingly, undermine that basic confidence which the American people must place in our foreign policy.

The following editorial from the Milwaukee Journal of March 17 casts a timely light upon the gravity of today's crucial state of affairs, and for that reason I believe that it merits serious and sincere consideration of all the Members of this body:

WHAT THE UNITED STATES IS TRYING TO DO

The United States has a definite foreign policy. It is a sound one. Its ultimate aim is to bring world peace. But this does not mean peace at any price. The United States policy is difficult to pursue, because it requires patience, steady nerves, persistent effort.

Most of all, it needs the understanding and support of the American people.

This was the message of Secretary of State Acheson in his major foreign-policy speech at Berkeley, Calif., on Thursday.

This address was directed to the people of this country, even more than to the overseas world. Mr. Acheson was speaking to the "grass roots" of the Nation.

There has been some confusion in recent months about American foreign policy, more at home than abroad. There are many reasons for this. Americans have a long tradition of disinterest in foreign affairs; foreign policy has been a distant and mysterious thing to be dealt with by the President and the Secretary of State.

More serious elements of confusion have entered the picture of late. Worried Americans, disturbed deeply at the horrible possibilities of atomic warfare, unacquainted with the over-all aims of our foreign policy, have advanced demands for disarmament conferences, new peace meetings, high-level conferences with the Russians.

The State Department and its personnel have been under fire on various grounds. Men who should be first in line to support the Nation's strong policy against communism have been weakening the Department's position by continual assaults on the basis of personalities and details.

Senator MCCARTHY'S wild and wholesale charges, as yet unproved, that there are Communists in the State Department, exemplify these tactics—tactics which, in many cases, have resulted in furthering the Communist policy of creating confusion.

As a result of this disturbing situation—one that weakens our international efforts—Secretary Acheson has felt it necessary to "go to the people" in an effort to turn their eyes and minds back to the important things and away from irrelevancies.

He is telling the American people what they must realize unless all is to be lost—that they are the center of opposition to world communism and, as such, are going to be under unrelenting pressure for a long time. He is telling them that agreement with Russia will be reached only after we have built up "situations of strength" which the Russians will respect.

He is telling the American people that in this crisis period of "total diplomacy" they must be steady and patient and must always know the goals ahead. The people must, in fact, realize that they themselves are the greatest "situation of strength" in the free world and that if they falter the democratic world will quickly be submerged.

Mr. Acheson explains, as he has before, that this country is always ready to discuss, to negotiate, to agree with the Russians. We ask only that they agree to the simplest proposals (he listed seven) to lessen world tensions. We ask that they meet us in good faith and that they carry out agreements made.

Mr. Acheson says frankly that he does not think the Russians will bargain in such good faith at this time and expresses hope that if

this country holds to its present policies the time will eventually come when the Russians will be willing to do so. In the meantime, he says, this country does not intend to play any role of "international sucker."

Mr. Acheson is indeed wise to bring his story to the people in language that all can understand. Perhaps it would have been wise to do so before this. The time is past when our foreign policy can be conducted from the mountaintop. Today it must be based firmly in the people—understood by them and supported by them.

We have the utmost confidence that the American people, once they understand completely the policy that we are following in world affairs, will give it their utmost backing. We believe that they have the courage and moral stamina to hold to that course, whatever may be the machinations of our foreign enemies—or the unfortunate undermining policies of peanut politicians at home.

In further reflection upon the irreparable damage caused our foreign policy and the persons responsible for its conduct by the indiscriminate accusations cast upon them, I wish to add at this point another editorial from the Milwaukee Journal of March 21, which, I believe, needs no additional comment:

THE DAMAGE MCCARTHY IS DOING

Ambassador Philip C. Jessup flew back from halfway round the world to answer Senator MCCARTHY's charges that he had an "affinity" for communism. It seems to us that Mr. Jessup proved the falsity of the charges pretty conclusively in his testimony before the Tydings investigating committee.

The Ambassador did not need the enthusiastic letters of confidence that he presented from two outstanding Americans, Gen. George C. Marshall and Gen. Dwight D. Eisenhower, whose loyalty has not thus far been questioned by Wisconsin's junior Senator.

The damage done by the McCarthy charges will not be corrected this simply, however. Throughout the world, the name of Ambassador Jessup has been clouded with suspicion. As he explained, declarations he made for this country while in the Far East will undoubtedly now be questioned. "It is impossible," he declared, "for anyone to estimate the harmful effect that the McCarthy innuendoes have had on the success of my mission and the foreign policy of the country."

In this connection, it must be remembered that Ambassador Jessup is but one individual named by MCCARTHY. The Senator has cast a cloud of suspicion over all of the thousands of State Department employees. He started his present campaign by saying that there were 205 "security risks" in the Department. He then revised this to 57 card-carrying Communists. Later, on the Senate floor, he charged that there were 81 "unsafe" employees in the Department. He has had a month to prove these charges and, to date, has offered no convincing evidence in even one case.

All over the world, the representatives of this country are under this cloud of doubt.

Wisconsin's junior Senator has harmed a number of individuals and this alone is a serious matter. But even more serious is the damage he has done, with his irresponsible and sweeping charges, to the State Department, its morale and its influence the world over. This strikes at the very heart of this country's position and its strength in the world.

It will take a long time to repair the damage that Senator MCCARTHY has done. At a time when our international situation is so grave, the burden on the Senator's conscience should be a heavy one—no matter what, if any evidence of communism in the State Department he still may eventually bring to light.

Resolutions Adopted by the Kansas Livestock Association at Its Annual Meeting, Topeka, Kans., March 16, 1950

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mr. HOPE. Mr. Speaker, the Kansas Livestock Association is a State-wide organization which speaks with authority for the livestock producers of the State. I am sure that the resolutions adopted at its recent annual meeting accurately express the views of its members. Because I believe these resolutions are of interest to the Members of Congress, I include the same herewith under leave to extend my remarks:

RESOLUTIONS

HOLDING TO FREEDOM

There impends today a stupendous threat which so menacingly overshadows the future of our country that we Kansas stockmen, of all shades of political belief, feel it our duty to speak out in unmistakable terms.

This threat lies in the fact that our country, without opportunity for conscious choice on the part of its people, is rapidly drifting toward the consummation of a false concept, contemptible to freedom, the socialized state.

Tokens of this danger are everywhere and undeniable: the growing power and expansion of a wasteful Government; the colossal public debt; the heavy burden of taxation, designed in large part to redistribute the wealth of the people; the ridiculous attempt—by dictating wages, hours of labor, prices, etc., and by innumerable other false expedients—to substitute an artificial economy for the natural economy which alone can function in freedom; the gradual assumption by the state of financial responsibility for every hazard incident to the life, labor, infirmity, and old age of all—hazards which must be personally met and borne by every human being who has the instinctive will to survive and the inherent impulse to be free; the arraignment of economic and social groups, one against the other, in denial of the obvious fact that their interests are identical and can be logically promoted only by application of the Golden Rule; and numerous other kindred concepts, similarly inspired and equally false.

Government produces nothing and has no means by which to support these false and destructive policies except by exacting from its citizens the fruits of their labor. The present semblance of prosperity is only the byproduct of the most terrible and destructive war that ever afflicted the world and is now maintained only by artifice implemented by folly, fear, and dire forebodings.

The course our Government is now taking, unless it is promptly reversed, will inevitably lead to national bankruptcy. In a vain effort to prolong a specious sense of security, more similar expedients will be applied until we all become mere numbers in a completely socialized state: Therefore be it

Resolved, That we, the members of the Kansas Live Stock Association, in convention assembled at Topeka, Kan., March 16, 1950, deplore the fallacious policies that are beguiling our country into socialism, that we censure and condemn those in public office who support or tolerate these policies and that we call on all patriotic Americans to denounce them and to work energetically and courageously for the reestablishment and maintenance of free and competitive enterprise and the restoration of the Republic.

Our decision to take this stand is supported by the firm conviction that the policies we here and now condemn are unrighteous and immoral in that they proceed in shameful denial of the inherent nature of man and in impious contempt of nature's eternal laws.

BRANNAN PLAN

Whereas the farm program proposed by Secretary of Agriculture Brannan to the Eighty-first Congress would promote low market prices for all agricultural products, would subsidize consumers, rich and poor alike, and would eventually necessitate Federal control of all agriculture; and

Whereas the livestock industry cannot be successfully operated by governmental bureau: Therefore be it

Resolved, That we are opposed to the proposed program. We consider it unsound economically and entirely impractical, and we urge Congress to reject it.

DAMS

This association objects to further Federal appropriations to inundate good productive Kansas land by the construction of outsized and unneeded dams until it is proven that soil-conservation methods are ineffective in flood control.

GREAT ATLANTIC & PACIFIC TEA CO.

The Kansas Livestock Association wishes to emphasize its interest in the efficient distribution of beef through retail channels. We oppose action by the Department of Justice against the Great Atlantic & Pacific Tea Co. as contrary to the intent and purpose of the antitrust laws of the United States. Such unwarranted action against the A. & P., other chain organizations, or independent merchants could seriously hamper efficient retail distribution of beef and be detrimental to the common good.

TAXES

That this association sponsor a program of education to demonstrate the disproportionate share of personal property and ad valorem taxes paid by the farmers and stockmen of this State.

FREIGHT RATES

This association wishes to commend the stand taken by the Kansas Corporation Commission in resisting the efforts of the ICC to increase the intrastate livestock freight rates, and urge the corporation commission to continue the fight to prevent further Federal encroachment on rights of the people of this State.

FREIGHT-IN-TRANSIT RATE

The railroads have reduced the cattle feeding in transit charge to $7 per car, but tariff routes are so restricted that the privilege is impractical for many feeders or pasture men.

Railroads should liberalize the tariff routes so as to protect the through rate from point of origin to ultimate destination via the feed-in-transit point.

SLAUGHTER-IN-TRANSIT RATES

To facilitate more economical distribution of meat products to the large consuming centers from the vast producing areas, the railroads should recognize the fact that rail shipments of livestock into the slaughtering center is an integral part of the out-bound rail meat shipment.

We recommend the railroad publish slaughter-in-transit rates in lieu of the present system of assessing local rates on livestock into the slaughtering center plus the local rate on meat products to the consuming center.

BEEF GRADING

In the interest of better utilizing the present grade classifications used in grading beef, and a better distribution of our beef within those grades, and with more descriptive

UNIVERSITY OF MICHIGAN LIBRARIES

names for the lower grades of beef, the following recommendations are made:

That a substantial percentage of present top Choice be graded in Prime; a corresponding percentage of top Good be graded Choice; and that good-quality beef which is now being graded Commercial be graded Good. As the grades Commercial and Utility have no appeal to the consuming public, we urge that these two grade names be changed to descriptive words that would help the consumer recognize the type of beef that would indicate value and economy.

We also recommend that useful beef produced on rations of grass and grain which has a yellow cast be graded according to its merit and not discounted on account of color.

TRUCK TRANSPORTATION

Whereas there is a definite variation in laws and rules governing the regulation of truck transportation in the several States surrounding Kansas; and

Whereas such lack of uniformity is not to the best interests of the shippers of commodities by truck: Now, therefore, be it

Resolved, That the laws and regulations affecting truck transportation be so unified with those of surrounding States as to provide free and economical movement of commodities by truck between the several States.

TRUCK TRANSPORTATION

Whereas the laws governing truck transportation of commodities in the State of Kansas are an accumulation of statutes passed over many years and are therefore not well coordinated; and

Whereas the State has embarked upon a comprehensive highway program, the success of which may be damaged by overweight and overlength vehicles: Now, therefore, be it

Resolved, That the legislative council and the legislative committee of the Kansas Livestock Association should institute a thorough investigation to assure that the statutes will be revised to insure a full protection of the interests of the shipper of commodities, particularly of livestock, and to insure that our tremendous investment in highways will not be jeopardized.

PREDATORY ANIMALS

Whereas the loss to livestock interests from predatory animals is on the increase; and

Whereas the poison known as formula 1080 is effective: Therefore be it

Resolved, That the use of poison 1080 be permitted any place in the State of Kansas where approved by the Predatory Animal Division of the United States Biological Survey, Department of the Interior, and requested by the majority of land occupiers in the area.

GOVERNMENTAL REPORTS

Resolved, That the Department of Agriculture be urged to publish monthly statistical reports on matters pertinent to the livestock industry and that daily market reports be continued and expanded at all principal commodity markets.

LEGISLATION

That the legislative committee of the Kansas Livestock Association be commended for its vigilance in supporting legislation in the best interest of the livestock industry and that it be urged to continue its efforts in this direction.

DR. A. D. WEBER

Among those persons now being considered for the presidency of Kansas State College is Dr. A. D. Weber, associate dean of the School of Agriculture.

Stockmen and farmers throughout the State of Kansas know from personal experience that "Dad" Weber is a scientist, an administrator, and an educator, who with language that every farmer and student understands has pointed the way to practical application of progressive research to the agricultural industry. He has been recognized for his accomplishments both nationally and internationally, bringing honor to his State, his school, and himself.

We know that Dr. Weber, a native of Kansas, a product of Kansas State College, can bring to the entire college of agriculture and applied science the outstanding leadership he has demonstrated in the field of agriculture.

It is the sincere hope of this association that Dr. A. D. Weber be the next president of Kansas State College.

APPRECIATION

Whereas our president, vice president, and directors of the association have spent much time and effort in the interests of our association, without compensation: Therefore be it

Resolved, That we extend to each of them our sincere thanks and appreciation for their efforts in our behalf; and

Whereas the office force has been untiring in its efforts to further the interests of our association: Therefore be it

Resolved, That we extend to them our thanks and appreciation for their loyalty and devotion to their work.

We wish to thank the city of Topeka, Mayor Frank Warren, and other officials for their hearty welcome and willing asistance; to John Morrell & Co., Manager R. M. Owthwaite for the courtesy dinner for our executive committeemen, officers, and friends; to the three national banks of Topeka—the Central National Bank, the Merchants National Bank, and National Bank of Topeka, for the courtesy breakfast to convention visitors; and to the Producers Commission Association for the courtesy breakfast served Wednesday morning, the fifteenth.

We also wish to express our thanks and appreciation to each of those who contributed so much to our program in their talks and discussion, and who gave so generously of their time and efforts to be with us and to help make our thirty-seventh annual convention the success it proved to be.

Also, we wish to thank the Topeka Chamber of Commerce, Mr. John Miller, the Agricultural Commissioner; the Topeka Daily Capital, the Topeka State Journal for the publicity given our convention; and the Capper Publications for sponsoring our dance.

Respectfully submitted,

Richard Robbins, Pratt, Chairman; George Andrews, Kanopolis; Herb Barr, Leoti; J. W. Birney, Bucklin; W. J. Brown, Fall River; C. O. Heidebrecht, Inman; Dan Jackson, Coldwater; Earl Kiehlborn, Cambridge; O. W. Lynam, Burdett; J. Willard Olander, Kansas City; Wayne Rogler, Matfield Green; Conlee Smith, Wichita, Resolutions Committee.

Harbor Projects Are Vital

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mr. SCUDDER. Mr. Speaker, the construction of coastal harbors long has been recognized as one of the basic obligations of our Government toward its people. The continued development of such harbors along the north coast of California is vital to the fishing industry of our State. Such a need is explained admirably in an editorial which appears in the Press Democrat of Santa Rosa, Calif., for March 15, 1950. Under leave to extend my remarks in the RECORD, I wish to include this editorial:

HARBOR PROJECTS WOULD SPEED EMPIRE'S PROGRESS

Since he came to this region about a year ago Col. F. S. Tandy, district engineer of the Corps of Army Engineers, has covered thousands of miles studying the Redwood Empire at first hand and has become well acquainted with its major needs.

Thus, his keen interest in a proposed string of shallow-draft harbors along the north coast indicates their importance to the future development of the empire.

Surveys of harbor sites have been authorized by Congress, and the Army engineers are rushing the surveys ahead at full speed. One result of the harbors would be to open up new fishing grounds, stimulating both commercial and sports fishing.

This is the problem Bodega Bay fishermen, for instance, face at the present time:

Their best fishing grounds lie between the Russian River's mouth and Fort Ross, 19 nautical miles north of Bodega Bay. Good fishing continues northward from Fort Ross.

But to reach Fort Ross from Bodega Bay requires between 3 and 4 hours. Then, at the end of the day, fishermen generally must return to Bodega Bay, losing 6 to 8 hours just in getting to their destination and back.

The daily round trip is made necessary because boats can't enter the mouth of the Russian River, and Fort Ross Cove offers no protection from off-shore winds which prevail during warm months. Furthermore, dangerous rocks ring the cove. A fishing boat can anchor overnight only at serious risk.

The proposed harbors project would clear the rocks from Fort Ross Cove and throw up a protective jetty against off-shore winds. It would also make the mouth of the Russian River an important recreational harbor and harbor of refuge for commercial and sports craft.

Fishermen would be able to fish the waters off northern Sonoma County for weeks at a time, returning each night to Fort Ross Cove to unload the day's catch onto trucks, which would carry the fish to market or to processing plants.

If the projects are approved by the district engineer's office, they will go to the division engineer and then to the Chief of Engineers for final recommendation to Congress.

The many benefits offered by the harbors make their approval by Congress and the authorization of funds to construct them a high-priority goal for the Redwood Empire.

Congratulations, President Benjamin G. Browdy

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. MULTER. Mr. Speaker, on March 8, 1950, I called the attention of this House to the untimely passing of Daniel Frisch the day before. In addition to the tremendous void created by his

death to American public life, the office he held as president of the Zionist Organization of America also became vacant.

We are grateful to providence that the next in command of the Zionist Organization of America was Benjamin G. Browdy, who, during Mr. Frisch's absence from the country and during his illness, performed so ably in his place. On March 19, 1950, the national administrative council of the organization met in special session and unanimously elected Mr. Browdy as president.

Mr. Browdy is not only one of my neighbors, but one of my dear and intimate friends. He has long been an outstanding leader in every worth-while community endeavor. His leadership and abilities are of an extremely high order.

Mr. Browdy, who is also president of the Palestine Foundation Fund, in accepting the presidency of the Zionist Organization of America, pledged himself to support the programs and policies of his predecessor in order to continue to maintain unity in the Zionism movement. His intent to carry on in that way was confirmed by his statement that he would look for advice and guidance to such great leaders in the Zionist organization as Louis Lipsky, chairman of the American Zionist Council; Rabbi Abba Hillel Silver, former chairman of the American section of the Jewish Agency; and Dr. Emanuel Neumann, former president of the Zionist Organization of America.

The affairs of the Zionist Organization of America are in good hands. Under the leadership of its new president it will go forward to new and greater accomplishments.

Your Job Is Being Sold Wholesale by the Democrats

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. PATTERSON. Mr. Speaker, I make further reference to the seriousness of the one-way trade system established by the State Department with the blessing and connivance of a Democratic Congress. We now find that groups of employees are banding together in an effort to stem the flood of imports from slave-labor countries which deprive American workers of employment. Prominent in this movement is Matthew Woll, of the American Federation of Labor, who is alert to the dangers of indiscriminate trade policies. A disproportionate share of the burden is being borne by workers and management of a few industries. Many are facing complete disruption through lessening of their markets. Nothing could be more nonsensical than the advice of free-traders to seek other means of livelihood and to completely abandon American markets in rubber footwear, hats, pottery, watches, and many other lines of endeavor. Complete communities oftentimes depend upon one industry for their survival. Prominent examples in Connecticut are the United States Rubber footwear plant in Naugatuck, which employs more than 3,000 in a town of approximately 18,000 population, and the city of Danbury, which depends largely upon hat manufacturing for the support of its citizens. This problem is real and pressing to our people, and will not be solved by the fallacious and unreasoning policy of granting further trade concessions to foreign countries. I might paraphrase the famous statement of Winston Churchill and say that I did not come to Congress for the purpose of liquidating the jobs of the people residing in Connecticut's Fifth Congressional District. Furthermore, I refuse to stand idly by and watch a Democratic administration pursue this policy of industrial destruction.

I cite as example of the awareness of the results of such a program a resolution forwarded me by the Beacon Falls (Conn.) Republican Town Committee and a news story from the Wednesday, March 22 issue of the Bridgeport Post:

Congressman JAMES T. PATTERSON,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN PATTERSON: At a meeting of the Republican Town Committee of the town of Beacon Falls held Thursday, March 16, it was unanimously voted to write to our Senators and Congressmen asking them to exert their efforts pertaining to tariff changes that will vitally affect and curtail the rubber and canvas footwear industry in which our town is economically interested.

Many of our townspeople earn their livelihood in this industry and tariff changes that are being considered will cause unemployment by allowing similar types of footwear made in foreign countries at very low rates to undersell items made in this country.

Your assistance in this matter will be greatly appreciated. Please feel free to call upon us for further information if necessary. Thanking you for anything that you can do for us, we remain,

Respectfully yours,
BEACON FALLS (CONN.) REPUBLICAN TOWN COMMITTEE,
F. G. MORGAN, *Secretary.*

[From the Bridgeport (Conn.) Post of March 22, 1950]

CZECH IMPORTS HIT HAT CITIES, TARIFF URGED—SLAVE LABOR THREATENS TO MAKE DANBURY GHOST TOWN, AFL CHARGES—PROTEST PLANNED—IMPORTS UP 300 PERCENT FROM BEHIND IRON CURTAIN SINCE WAR

Iron curtain slave labor is threatening to reduce the hat manufacturing city of Danbury to a ghost town, it was charged by an AFL spokesman in Washington today.

With 62 percent of its employment depending on the hat industry and allied trades, the city is being crippled by a wave of imports from Communist-dominated Czechoslovakia, it was charged by Marx Lewis, general secretary of the United Hatters, Cap, and Millinery Workers International Union.

Citing Danbury as an example, Lewis said the American hat worker cannot compete with slave labor and survive. He was in Washington as a member of the executive committee of the National Labor-Management Committee on Foreign Trade Policy.

Labor and management have combined in a demand for tariff walls against foreign imports of long felts for women's millinery which increased 300 percent in 1949.

In Norwalk, where the hat trade is also the largest single industry, Thomas J. Wall, president of the Norwalk Hat Co., asserted that the Czech imports were the largest in 1949 for any single year in more than 15 years and were affecting industry in an alarming manner.

Mr. Wall protested sending good American dollars behind the iron curtain to compete with our workers.

It could not be determined immediately how seriously Czech imports had hit employment in Norwalk, but in Danbury short work schedules were in effect in several plants during an ordinarily busy season.

The American market has been flooded with long felts—now used in women's millinery—from overseas, with many manufacturers finding themselves overstocked with domestic material of short felt type, it was said.

In Washington, the labor-management committee, representing nearly a score of industries which feel they are being unfairly affected by foreign imports, met in closed session to discuss the problems raised by America's foreign-trade policy.

Representing the hat industry with Mr. Lewis is David Harshaw, president of the Hat Institute, Inc., and president of the John B. Stetson Co., whose main plant is in Philadelphia.

"The position of the hat industry," Mr. Lewis said, "is similar to that of the other industries represented in the National Labor-Management Committee on Foreign Trade Policies. It's this," he said:

"A billion dollars' worth of imports won't seriously affect the American economy. But if only a few industries, and especially smaller industries, are made to assume a disproportionate share of the burden caused by such imports, then the situation can be ruinous."

He said it is planned to present the hat industry's problem to a House labor subcommittee set up to study the effect imports are having on American labor and employment.

"Meanwhile," he said, "the United States Tariff Commission is conducting a preliminary survey of the hat industry's problems.

"If that survey shows what we are certain it will show, we shall demand a thoroughgoing investigation," he said.

"It has been suggested by some Government spokesmen that hat workers and others similarly affected try training for other types of work," Mr. Lewis said, and added:

"It won't work. Hat workers have been in the industry too long to be retrained for other work."

National Negro Newspaper Week

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. JAVITS. Mr. Speaker, the vigor and enlightenment of the Negro press is well exemplified by the appended editorial from the New York Amsterdam News of March 4, 1950, on the event of National Negro Newspaper Week. It is

UNIVERSITY OF MICHIGAN LIBRARIES

the most eloquent testimony of the reliance by Negroes upon the validity of our constitutional process, and the sense of justice and fair play of the American people that they are placing their greatest efforts behind the winning of public support through disclosure of the facts and discussion of their implications, the particular function of newspapers.

The editorial is as follows:

OUR MAJOR CHALLENGE

This year's observance of National Negro Newspaper Week, February 26 to March 4, marks the one hundred twenty-third anniversary of the founding of the Negro press by John Brown Russwurm. Newspapers founded, published, and edited by Negroes more than 100 years ago, served similar purposes in their time as the minority newspapers do today. They were and are largely organs of protest, watchdogs of civil and citizenship rights, and reporters of life and activities of their communities. Each Negro newspaper has had to meet the challenge of its own era and attempt to solve the problems of its own time, region, and needs.

The history and service of the Negro press, like those of other institutions, are praised by some and blamed by others. But it is not easy to find another institution in the United States that has given and achieved so much with so little material support from those whom it has served. In the meantime, however, the Negro press has grown in influence, power, and service. Today, its circulation runs into millions of printed copies and many millions of readers, drawn from every walk and activity of life.

President Truman cited the Negro press as a vigorous champion of minorities, and declared: "In recent years it has become increasingly a reporter of the condition of human rights the world over." Gov. James Duff, of Pennsylvania, praised the Negro press as a guardian of constitutional rights. The Negro press can claim with pride the praises and honors bestowed upon it by Presidents and governors; it can also claim much more than they have mentioned.

Champion, guardian, defender of rights, liberties, and privileges, the Negro press has also served as leader, reporter, interpreter, of the cause of Negro progress and the democratic way of life. Its responsibilities are to race, community, Nation, way of life, and to the world. In these days, when the future and welfare of minority groups are so closely related to the welfare of larger groups throughout the world, the Negro press would do well to prepare itself for a larger and more important role in shaping the thoughts and directing the actions and lives of its community of readers.

The decline of Europe, the rise of the United States, the Soviet Union, and the nations of Asia and the Pacific have placed Africa and the peoples of African descent in a new setting and given them a new importance in the economy, government, and defense plans of the world.

A new and larger world view of human problems, their implications and relationships must now take a more important place in the scheme of the Negro press than they have ever taken in the 123 years since the publication of Freedom's Journal.

The so-called Negro problem in the United States is not what it was even 10 years ago. It has lengthened into only one of many vexing problems which a growing Nation of all races, colors, creeds, and nationalities must face courageously.

The role, then, of the Negro press is becoming more and more one of devotion to principals, accurate knowledge of issues and problems, and courageous leadership on local, national, and international levels. Steadfastness of the right purpose will justify and vindicate the causes and purposes for which the Negro press was founded.

Revenue Revision

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. REED of New York. Mr. Speaker, the bill which I am introducing today is a revenue revision bill representing the accumulated recommendations of many years of the American Bar Association, acting after exhaustive analysis and study by its tax section, which is composed of several thousand members of the bar of the country who are particularly interested in the field of taxation.

The purpose of this bill is to correct a great many of the inequities, largely of a technical nature, which presently exist in our vast tax system. The bill is identical with H. R. 7738, introduced on March 16, 1950, by my distinguished colleague on the Ways and Means Committee, Mr. CAMP. Mr. CAMP and I both feel that this legislation is and should remain nonpartisan because it is drawn with a view toward eliminating inequities and promoting a fair and better-administered tax system.

The tax section of the American Bar Association deserves the highest praise for its constructive work in this field. These distinguished lawyers have devoted themselves unselfishly to this task, not in the interest of their clients but in the general public interest of making our tax laws equitable in their application and better in their administration.

Unfortunately, there has been no general tax revision since the Revenue Act of 1942, and as a result there are a great many technical problems which have accumulated during the past 8 years which should be remedied with all possible dispatch. It is unfortunate indeed that these inequities and discrepancies, which are bound to develop in any tax structure as complicated as ours, have had to await correction for so long a period.

The provisions of this legislation do not primarily affect the revenue. The inequities dealt with are not social or economic in their nature, such as, for example, whether one particular group of taxpayers should be taxed more or less than another group, but are technical in character and are generally recognized as inequities by persons familiar with the practical operation of our tax laws.

A detailed explanation of the individual provisions of the bill prepared by the tax section of the American Bar Association was included in the extension of remarks by my colleague, Mr. CAMP, in the CONGRESSIONAL RECORD for March 16, 1950, in pages A1978–1985 of the Appendix. This clear and excellent statement will be of inestimable value to the Ways and Means Committee and to the Congress, and it reflects the high caliber of work which these gentlemen have done.

It is a distinct pleasure to me to join my distinguished colleague, Mr. CAMP, in introducing this nonpartisan legislation embodying the tax recommendations of the American Bar Association. These highly meritorious recommendations deserve the most careful consideration, and favorable action should be taken by the Congress without delay.

United States Urged To Avoid Reds' Smear Tactics in Fighting Communism

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Russell Barnes that appeared in the Detroit News of March 20, 1950:

UNITED STATES URGED TO AVOID REDS' SMEAR TACTICS IN FIGHTING COMMUNISM

(By Russell Barnes)

Japan used thought police to stifle political opposition.

Communists and Fascists destroy enemies of their reigns of terror with anything from death to massive doses of castor oil.

Totalitarian governments generally deal with political foes in special courts, where defendants are stripped of normal legal protections.

While communism is a dangerous menace, extremely difficult to combat in a democracy, such attacks as the one Senator MCCARTHY, Republican, of Wisconsin, has been making on the State Department, raise these questions:

Are we beginning to copy Communist and Fascist tactics in this country?

Is it good American policy to sacrifice traditional freedoms and rights, legal procedures evolved over centuries to protect the individual, and the principle of competition in ideas as well as business, under the guise of fighting communism?

If we continue to smear persons in congressional investigations—where they have no legal protection—condemn people because of associations with individuals or organizations which may or may not be subversive, and see a Communist in anybody who has ever read Marx, is it possible we may destroy the traditional American system and end up with a kind of totalitarianism not too different from communism or fascism?

What chance is there of getting competent public servants when they are made targets for political abuse not based on concrete evidence of misconduct?

QUESTION OF POLICY

Unquestionably there have been—may still be—Communists who occupy strategic positions in Government.

But is it good public policy to destroy American freedoms and rights—debase our system to the deplorable standards of communism and fascism—to capture a few culprits?

Is there any real evidence that Communist subversion handicapped our war effort, or has prevented us from maintaining a decent national standard of living since the war?

Is there any good reason to believe that the Federal Bureau of Investigation, the police, and regular courts are incapable of dealing with the internal Communist menace?

The difficult problem of combating a subversive opposition without sacrificing traditional American freedoms and rights is not

new. We were faced with the same problem when the Nazis and Fascists before the war attempted to build up fifth columns inside the United States.

HUMAN DECENCY

One of the great modern tragedies has been the extent to which democracies have had to cheapen themselves—drop their standards of human decency—to fight totalitarianism.

But how far should methods necessary in war be carried over into the peace, and applied against American people?

In his book Leaves From a Russian Diary, Pitirim A. Sorokin, the Harvard sociologist, comments that one of communism's biggest successes is that it has changed even its implacable enemies into its own image.

"Fighting the revolution, these enemies introduced into their group many traits of the revolution which they are fighting against," declared Sorokin.

The big American problem is obviously how to fight communism, and still preserve traditional freedoms and rights inherent in the American system.

Republican Headline Hunters on a Fishing Expedition

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following editorial entitled "Fishing in the Records," which appeared in the Washington Evening Star of March 22, 1950:

FISHING IN THE RECORDS

The demand that he open the loyalty files of the State Department people accused by Senator MCCARTHY compels the President to make a very difficult decision.

The State Department urges that the files be made available to the Senate subcommittee investigating the complaints. Presumably it feels that the files contain nothing detrimental to the accused individuals, and that the best way to silence Senator MCCARTHY is to let the subcommittee members look at the records.

The Department of Justice and the FBI are strongly opposed to this. They are afraid of the precedent that might be established. They think that if one committee is allowed to see confidential loyalty files it will be very difficult to deny the same privilege to other committees. There is also the problem of leaks. No matter what precautions are taken, there is always a danger that some committee member will tell what he has seen. If this should happen, the FBI fears that its sources of information would dry up, that its effectiveness in counterespionage work would be seriously impaired.

In this dilemma, there is talk that the President is thinking in terms of compromise—that he may let the subcommittee see some or all of the State Department records, but not the FBI files. There is small chance that this would do any good. For Senator MCCARTHY and his supporters would say—and it would seem plausible—that the investigators had been permitted to see only the meaningless files, that the real evidence was in the still-secret files of the FBI. It it worth remembering in this connection that State Department critics already have hinted that incriminating material may have been removed from the State files.

There is still another aspect of this matter which deserves some consideration. The demand that the files be opened is not coming from persons charged with disloyalty. The situation is not that of an accused man demanding to be confronted with his accusers and the evidence against him. It is Senator MCCARTHY, a third party to the relationship between the State Department and its employees, who is calling for the production of the records. And Senator MCCARTHY is in the strange position of saying, in effect: I have made certain charges against these people. The proof of those charges is in the secret files, which I have not seen. But if the subcommittee will insist on having access to the files it will find the evidence.

In other words, this business looks very much like a fishing expedition. And it is hard to see why any one should be permitted to fish in the Government's loyalty files—files which presumably contain everything from valid evidence, pro and con, to the rankest sort of unevaluated rumor and gossip, all collected and filed on the understanding that it would not be made public. The Star has never believed that the Federal loyalty program, properly conducted, was a threat to the reputations of innocent people. But this threat can become a very real one if the files are to be opened at the behest of every Tom, Dick, and Harry who may decide to sound off with sensational accusations and little or no supporting evidence of his own.

Address of Hon. Adlai E. Stevenson, Governor of Illinois

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Gov. Adlai E. Stevenson, of Illinois, before the Illinois Housing Day banquet in Chicago:

The principal task that confronts every public administrator is attracting and keeping in public service enough talented and disinterested men and women to carry on effectively the many activities that comprise government. But I have not, I am happy to say, had to concern myself with the State's responsibility in the all-important field of housing, thanks to Mr. McFayden, the State housing board, and to many of you who are numbered among the 600 Illinois citizens serving without compensation on the 118 local housing authority boards in our State.

And I am glad to have this opportunity, while welcoming our distinguished guests from Washington, to give thanks for you, the soldiers of the line, who have given so generously of your time and energy without pay. I'm proud that Illinois has more local housing boards in active operation than any other State to lead the attack against our hardy, stubborn twin enemies—bad housing and no housing.

And we are thankful to the leaders of the private building industry who have participated in this conference and helped so extensively to break the building blockade during these trying postwar years.

The efforts and devotion to this important task of all you people and of the many public officials working with you is the only assurance we have that one day soon we will be able to substantially overcome the housing shortage that still plagues our State. You are the best hope for promoting and perfecting the teamwork between Government and private builders that long and frustrating experience has shown us is the only ultimate solution of our housing needs.

I'm told we are getting better teamwork and better understanding between public and private efforts. Last year the figures for private-housing construction broke the record. And now the Federal Housing Act of 1949 presents a great opportunity to correct many of the worst conditions throughout the country, and especially in populous States like Illinois, which are prepared to take advantage of its provisions.

I'm proud, too, that not since the passage of that act has any State attempted to do what we have tried to do here at this housing conference today. This is a pioneering effort to mass our forces, to enlarge our resources, to organize, to educate. Why? Because everyone in this room knows that in spite of all the accomplishments and all the selfless good citizenship and effort, the job has not been done and we have not yet provided housing that thousands of our people can afford to build or rent.

And so tonight we hand out no prizes, we distribute no rewards. It is too early. The fight has just begun, and the people will get no comfort out of self-congratulations here tonight.

Rather, let this meeting give evidence that we recognize that there is still an acute housing shortage in Illinois; that we have learned long since that no single group, public or private, can do the job; that only a direct, bold, and sustained drive by all segments of the public, by all agencies of the local community, the State, and the Federal Government can do it.

The formula is so obvious, the tools and weapons now so many and powerful, that such a drive by men of good will and sincere purpose cannot fail.

I could imagine no better earnest of ultimate success in our frontal attack on the menace of slums and bad housing in Illinois than this meeting itself. When public housers and antipublic housers, community leaders, bankers, labor leaders, private citizens, and public officials all sit down together to concert their power and purpose to search out the cause and cure of a widespread public malady, I think we are on the way. That it is a public malady none can deny.

Even a king of England said about 30 years ago: "It is not too much to say that an adequate solution to the housing question is the foundation of all social progress." Since the turn of the century criminologists and penologists have been directing their attention to bad housing as a spawning ground for juvenile delinquency and crime. Wherever housing is substandard, with inadequate sanitation and overcrowded living conditions, families doubled up or divided, normal family life is impossible and the juvenile delinquent and adult criminal are a natural product. The result is that a disproportionately large percentage of the inmates of our penal institutions are drawn from the slum communities of America. Only last Saturday I spent the day visiting the prisons at Joliet and I have most vividly in my mind this disastrous consequence of slum living.

In one section of the city of Chicago, 200,000 people are crowded together into three square miles. From among these 200,000 people, a mere one-twentieth of Chicago's population, come one-fourth of the total homicide and rape offenders and one-eighth

UNIVERSITY OF MICHIGAN LIBRARIES

of all reported robberies. The direct relationship between crime and environment is all too common in American cities. The slums of Detroit produce five times as many crimes, and fifteen times as many criminals per 1,000 of population as do areas with adequate housing facilities.

These experiences are repeated with monotonous regularity in the criminal statistics of a score of other American cities. The total effect reveals a sordid pattern of slum-bred crime for the Nation as a whole. Every town and every city which has a blighted area is supporting a hidden subsidy all the time.

Just as the relation between bad housing and crime is definitely established, so has the beneficial effect of adequate housing become evident in many cities. The rates of juvenile delinquency and adult crime show marked decreases where good housing has been developed on former slum sites. The juvenile delinquency rate for the area now occupied by the Jane Addams public housing project in Chicago, for example, was cut in half when the slum dwellings were replaced by decent housing.

I believe there is no dispute among the sociologists that one of the greatest obstacles to the reduction of delinquency and crime in America is the slum, and that its eradication and replacement with a wholesome community is the most effective positive step we can take.

In short, the housing problem is a tremendous social problem. That is why I believe the money and effort we put into better housing are a sound investment. The housing shortage is not a political issue; its shame is the shame of all of us; its correction is the duty and the obligation of all of us.

Last year, as I have said, more housing units were started than in any previous year. Yet it cannot be overlooked that nearly all of this new supply of housing is outside the reach of a large portion of our population. And it must be remembered also that since the record year of 1925 our population has grown by many millions, and the annual production of our economy is several times larger. So we can only conclude that 1949 was but the beginning of our effort to house America properly and here in Illinois there is much yet to be done. In the poetic prose of the late Justice Cardozo: "The inn that shelters for the night is not the journey's end."

Hence, it is proper on this day, which has been set aside as Illinois housing day, that we consider our position and where we can go from here. The simple fact is that the housing shortage has been with us too long. The highest legislative bodies of the Nation, the State, and even of this very city have long ago formally recognized that it cannot be cured without governmental aid. We have the legal equipment, we have the organization machinery, we have an unexcelled foundation in our local housing boards, we have city money, State money, and now we have this huge Federal assistance program. If we have the will, the heart and the common horse sense, we can do the job without much more debate, consideration and reconsideration.

The aim, as I understand it, of the Federal Housing Act is to encourage, not compete with private housing. It seeks to encourage home ownership, which has been one of the strongest sinews of American life. It provides for the elimination of slums and for making these sites available to private builders. It allows local communities to decide if and how they wish to participate. It provides for an industry-wide study of building costs to find out how the expense of home building can be reduced.

These are all sound objectives which I believe most people approve. But there is widespread objection to the public housing features. You don't have to approve the principle of public housing or the idea of Government subsidies for some at the expense of everyone, to recognize that without public housing, it is generally conceded that only a limited and unsatisfactory answer to the slum problem can be expected. What's more we all realize that the new Federal act, or any Government subsidy, can never be the whole answer—that the housing deficiency can only be met in the final analysis by full-scale private building.

So it would seem to me that the public housing debate is over; that it is an essential step to slum eradication and better and low-cost housing. Our task, then, is to see that every local community in Illinois which wishes to take advantage of the public housing provisions of the Federal law has the opportunity to do so. Seeing that they do have this opportunity is the responsibility of each local housing board and each city administration. Some local housing authorities in Illinois already are taking steps to get projects under way. I hope that every community at least has the opportunity to consider the question fully in the light of its own needs.

I know that there are sharp differences of opinion among the many interests involved in the total housing problem—real estate men, private builders, mortgage bankers, labor, public officials, and housing officials. I know that there are differences of opinion, sincere differences, about the merits and even the need of public housing, about the selection of sites for housing projects and slum clearance. I don't decry such differences. These are an inherent, essential process of public policy formulation. But propaganda attacks against public housing on the one hand, and the private building industry on the other, serve no good purpose; nor do prejudice, hate, and selfishness. Rather, they destroy public confidence in the sincerity and ability of all these groups and agencies to work together.

I am not unmindful of the danger of oversimplification in a matter so complex. And I hope you don't think me one of that not uncommon breed who seems to believe that, to be facetious, by just being voluble the problem at hand is at once rendered soluble. I don't presume to say or know how the money should be spent; what types of dwellings should be built, where projects should be located and slum clearance undertaken.

But I do say that all these differences and all these considerations have been before us for a long time—as long as the housing shortage we are here to solve. The men, the machinery, and the money are at hand. And I feel that I can urge the responsible representatives of the various aspects of the housing field to seek more areas of agreement on a sound and constructive critical plane in keeping with the dignity of the industry they represent and the urgency of the problem they confront. Nothing will be accomplished by name calling, prejudice, superstition, political selfishness, and emotional exhibitionism.

It should be our purpose to encourage the contribution of what is called private or free enterprise in the solution of the housing problem. It should be no less our purpose to encourage the solution of this stubborn social and economic ill by the use of public authority and assistance in those areas where private enterprise cannot or will not reach. There is room for a great and purposeful partnership of which the people of Illinois will be the beneficiary.

For my part I hope we never hear again that grim jest: "America, the land of the free and no homes for the brave." May this day mark the resolution of Illinois to solve its slum and housing problem, to penetrate new frontiers of living, not in spite of one another, but together.

Pacific Northwest, 1960

EXTENSION OF REMARKS
OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Chemical Engineering for September 1949:

PACIFIC NORTHWEST—1960

(By Ivan Bloch)

If the table above is anywhere near right, the Pacific Northwest is going to be quite a chemical center by 1960. Look at some of the minimum predictions: triple superphosphate to go from 60,000 tons in 1946 to 350,000 tons in 1960; that is a hike of 580 percent. Aluminum to jump from 148,000 tons to 1,300,000, up 780 percent; sulfuric acid up 380 percent; acetylene up 580 percent. And these are minimum predictions.

Such expansion seems fantastic, but it's all in the cards according to a report issued last October by the Army engineers. (Editor's Note: "Review Report on Columbia River and Tributaries," a many-volumed work released only for technical review and prepared to justify further hydroelectric development of the Columbia Basin. Its industrial sections were compiled for the Army by a group of technicians and economists under the author's direction while he was with Bonneville. For 2 years, 1945–47, they studied the industrial potential of Washington, Oregon, Idaho, and western Montana. Their forecasts are based on three assumptions: That full employment and full production continue; that no major depressions or wars intervene; that power development is not allowed to lag industrial demand. Incidentally, power shortage has already turned away some would-be manufacturers during the 2 years since the report was written.)

Here is what the report has to say about the future of the chemical process industries in the Northwest, together with some comments on developments since the report was written. These are the high lights.

Aluminum: The report's almost unbelievable estimate for 1960 aluminum production, one and three-tenths to one and eight-tenths million tons, is based on a thorough analysis of potential United States markets. (See aluminum table.) Most of the potential market was allocated to the Northwest on the assumption that adequate power resources will not likely be developed anywhere else.

To match this aluminum reduction capacity the Northwest could use an annual one and nine-tenths to two and nine-tenths million tons of alumina production. Alumina now comes by rail from southeastern plants at Hurricane Creek, Baton Rouge, and East St. Louis. The Northwest could save as much as half the freight bill by building its own alumina capacity, figuring 15 to 25 years to amortize the new plants.

The Northwest has several possible sources of raw material for alumina production: It is feasible to import foreign bauxite. Clays of relatively high alumina content are abundant in Oregon, Washington, and Idaho. There are billions of tons of amorthosite in Wyoming along the Union Pacific Railroad. And perhaps most interesting of all, there are the now well-known laterites (ferruginous bauxites) of northwest Oregon and southwest Washington. These deposits are estimated at 10,000,000 to 20,000,000 tons, averaging 31 percent alumina, 23 percent iron, and 11 percent silica. For the past 4 years Alcoa has been working on the laterites: Exploring, blocking ore, and ostensibly making metallurgical and chemical tests.

There appear to be at least two ways to process laterite ores: (1) A modified Pederson process where ore is smelted in electric furnaces to a high silica pig iron and a calcium aluminate slag; the slag could then be treated by lime-soda-sinter process prior to utilization in a Bayer plant; (2) treatment of the ores as red mud involving lime-soda-sinter processing prior to Bayer processing, with high iron and silica residues providing a possible source of iron for a Northwest iron industry. As to clays, the experimental ammonium sulfate process plant at Salem, Oreg., apparently demonstrated that alumina could be made from Northwest clays, but as far as the experiment was carried, costs were not competitive with bauxite.

Production of these enormous quantities of alumina from bauxite or laterite would require enormous quantities of chemicals like sodium hydroxide, sodium carbonate—and pure calcium oxide; 3 or 4 years ago Alcoa started extensive exploration of some extremely pure limestone a barge haul away in southeastern Alaska.

Magnesium: The future for Northwest magnesium doesn't look as rosy as for aluminum. Compared with Dow's Gulf Coast plant, a seawater electrolytic plant in the Northwest would pay more for fuel and raw materials (like limestone, chlorine or salt, sulfur). On the other hand, electric power and other operating expenses would be less. The report concludes that 1960 might find a modest six-to-twenty-five-thousand ton annual production in the Northwest—if, as the report expects, the 1960 market for magnesium reaches the peak wartime demand.

Phosphorous industry: Sixty percent of United States phosphate rock reserves lie in a belt in southeastern Idaho, western Wyoming, northern Utah and parts of Montana. Yet in 1946 only 8 percent of our mined rock came from there. Two things account for this neglect. First, the extent of western reserves is not altogether known, though estimated at 8,000,000,000 tons of better than 40 percent tricalcium phosphate. And second, the industry and its thinking are focused on eastern markets and eastern deposits; the "distant" west is somewhat terra incognita.

The picture is clearing though. Soil nutrient deficiencies of the 17 Western States were studied and estimated at about 500,000 tons a year of P_2O_5, with which western phosphates began to look more interesting to the fertilizer companies. To meet the interest, the Interior Department has for 3 years been promoting geological exploration, mining development work, research on rock beneficiation, investigation of markets and freight rates, and the revision of certain laws relating to public domain on which most of the western reserves are located. As a result new plants have been established or are being built and many more are in the wind. The report predicts tremendous expansion. (See big table and small phosphates table.)

The report goes into detail on phosphate cost factors. Mining costs would be about the same as in Tennessee, somewhat higher than Florida. Some areas might be strip-mined but most would have to be underground. High-grade rock lies in veins 4 to 7 feet thick and ranges from 30 to 34 percent P_2O_5, or 65 to 80 percent tricalcium phosphate. In these, the rock usually contains less than 2 percent iron and aluminum combined; it contains less silica than Florida rock. Some of the lower-grade rocks (30 to 50 percent tricalcium phosphate) are 75 to 100 feet thick. In certain locations the rock contains vanadium fractions, as V_2O_5, ranging from 0.1 to 0.5 percent. Experimental work by Federal agencies seems to indicate the need for nodulizing prior to charging in the electric furnace. On the other hand, recovery of vanadium fractions may yield juicy byproduct credits.

Estimators vary on the cost of producing elemental, electric furnace phosphorus in the western phosphate area. The report figures $140 a ton, based on 1946 costs and assuming 3 mills per kilowatt-hour for power. Coke costs to a western plant would be somewhat higher than to one in Tennessee; silica rock or gravel (for fluxing) would be about the same; 3-mill power, if it gets down to the phosphate area, would be under Tennessee and much less than Florida.

Phosphoric acid, the report says, could be made in the West by the combustion of elemental phosphorus for $39 a ton for 75-percent acid, or $26 a ton for 50-percent acid.

Triple superphosphate (48 percent available P_2O_5) could be made by electric furnace methods for $31 a ton in bulk, $34.50 bagged (which amounts to $64.50 and $72 per ton of equivalent P_2O_5). Into these costs the report has figured plant investment, labor, power, raw materials and all other costs, except selling and distribution. There is little future for production of ordinary superphosphate or sulfuric acid methods; the long haul from the Northwest to consuming markets precludes all but highly concentrated products. Best bet, says the report, is elemental phosphorus, shipped by tank car to consuming areas and there converted to phosphoric acid and on to fertilizer.

Some angles of the fertilizer story weren't hit by the report: There is a good chance that ammonia production, based on Wyoming natural gas, will come to pass in the near future. Production of concentrated fertilizer by the wet process may come if they recover sulfur from this same Wyoming gas.

Sulfuric acid in 1945, according to the report, the Northwest's two sulfuric acid plants—one at Anaconda, Mont., the other at Du Pont, Wash.—contributed less than 1 percent to the national total (see big table). A growing Northwest chemical industry will push the demand up considerably (see sulfuric acid table) and some expansion has already started. American Smelting & Refining is building an acid plant to recover smelter gas at Tacoma, and Kennecott Copper is expanding its acid plant at Garfield, Utah. Wyoming's natural gas is being developed as a local source of sulfur. Stanolind recovers some 75 tons a day from its unitized gasoline operation at Powell, and Texas Gulf Sulphur is reportedly getting set at Worland to produce 300 tons a day by 1950. Up to now the west had had to rely on imported Gulf sulfur or on smelter gas.

Calcium carbide: Analyzing the markets for calcium carbide, the report finds that over 60 percent of the acetylene made from calcium carbide in the United States in recent years has been used to make synthetic chemicals; in the West the bulk goes for cutting and welding metals. There's no reason, as the report sees it, why the West cannot get into the acetylene chemicals act and push its carbide production up to seventy to one hundred and forty thousands tons a year in or around 1960. (See small calcium carbide table.)

Northwest carbide producers—there are two of them, in Portland—pay more for raw materials than other areas; but on the plus side of the ledger are an important saving on power and, quite recently, discovery of chemical grade limestone near Baker, Oreg. Looking at potential markets for acetylene, the report sees promise for the production of acetic acid and anhydride—these for the rayon industry that could take root in the Northwest's cellulose resources.

Rayon: At present the Northwest sends dissolving wood pulp to the East and brings back finished rayon products. The report thinks the West could now support its own rayon industry; population is growing by leaps and bounds; Los Angeles is the Nation's second largest tire-producing center; and California's textile industry is growing rapidly. California's markets and cotton linters would probably bring the rayon producers there, except that California has a water problem. So rayon will presumably go next door to the Northwest, where there is plenty of pure water, plenty of pulp, and plenty of all other raw materials either on hand or potentially available. The report looks for 68,000–88,000 tons a year from the Northwest by 1960 or so; it even names possible plant locations. (See rayon table.)

Carbon bisulphide: If rayon does go to the Northwest, it will almost certainly create local carbon bisulphide production—around 25,000 tons a year, says the report. (And carbon tetrachloride, dyes, solvents, and insecticides might easily follow carbon bisulphide.) Wood waste for charcoal will be an important asset to Northwest bisulphide producers.

Chlorine and caustic: These are already well established in the Northwest; two plants were built at Tacoma in 1928 and a third went up during the war at Portland. Pulp and paper will continue to be the major outlet but there is a good potential in chlorinated solvents, DDT, rayon, and chlorates. (See chlorine table.) In fact, since the report was written, DDT production started in the Northwest.

Cements: The report's estimated increase in cement production, 60 to 80 percent over 1946, is probably overconservative. (See Portland cement table.) Numerous big new dams will require large quantities of cement, and so will settlement of some 800,000 acres of new irrigated land in the Columbia Basin project in Washington. To meet these demands by dams and population, cement capacity in the Northwest should be increased from 8,500,000 barrels at present to nearly 11,000,000 barrels a year by 1950, according to a recent estimate by a Portland consulting engineer (K. E. Hamblen, before the annual AIME meeting in San Francisco, February 1949).

Two factors may play a part in this potential increase. One is the possible use of Lepol kilns; they seem to save fuel, and transportation of fuel oil is a heavy production expense in the Northwest. The other factor is the possible use of laterites (ferruginous bauxite) to make quick-setting cements; recent work in the chemical engineering department of the University of Washington makes it look feasible. And the competition in aluminous cement is not stiff; there is only one producer in the United States—which may encourage cement people to try another plant of this type in the Pacific Northwest.

Manganese: The report sees a reasonably favorable prospect for electrolytic manganese

UNIVERSITY OF MICHIGAN LIBRARIES

production in the Northwest. Counting chiefly on a growing demand for ferrous and nonferrous manganese alloys it estimates electrolytic production at seven to fifteen thousand tons a year by 1960.

Since the report was written, however, Manganese Products, Inc., of Seattle, has stirred up interest in the production of manganese oxide by a sulfurous-sulfuric acid leaching process. This company's chemists have turned in good laboratory results; and plans are now afoot to give the process a whirl on a commercial scale at the Salem experimental alumina plant. They would convert the plant for the treatment of stock-piled managanese ores from Nevada and possibly some of the siliceous manganese ores of the Olympic Peninsula in Washington. If the new process pans out, the manganese oxide it produces could spur ferromanganese production at existing plants and stimulate a variety of important manganese chemicals, for batteries in particular.

Artificial abrasives: The report forecasts a sizable installation of abrasives capacity in the Northwest—eight to twelve thousand tons a year of silicon carbide and ten to twenty thousand tons of fused alumina. Reasons for this optimism are cheap hydroelectric energy and a rapidly growing market in the metal-manufacturing industries. Since the report was written, Carborundum Co. started its big new silicon carbide plant at Vancouver, Wash., and rumor has it that other producers have been exploring around in the Northwest.

Ten years ago, Pacific Northwest basic chemical industries were generally limited to those for the production of chlorine and caustic, synthetic resins, nonferrous metals, some fertilizer, and a few somewhat isolated products primarily related to agriculture and the forest industries. Since then, enormous strides have been made, largely related to the rapid development of very large sources of low-priced electrical energy from the Federal dams at Bonneville and Grand Coulee on the Columbia River. Today the region produces over one-third of the Nation's supply of aluminum; it has expanded its position in the production of copper, lead and zinc; it has three major ferro-alloy plants, two calcium carbide plants, a powdered-metal plant, several phosphate fertilizer units, more chlorine and caustic capacity, and many other new plants in both metallic and chemical fields. The region's population has grown by leaps and bounds: Since 1940 it has increased 37 percent as compared with 11 percent for the United States as a whole. Its hydroelectric supplies, once derisively viewed as economic monstrosities, are now unable to meet growing power demands of industry, home, and farm.

In general, the outlook for Pacific Northwest industrial development is decidedly favorable, even though it is to be expected that short-term readjustments will occur in line with national trends. However, the relatively undeveloped status of the region's resources—many of which are unique in their importance to national security and prosperity—provide a foundation for wide expansion of industrial and agricultural production through the establishment of new processing and manufacturing plants. These cannot avoid reflecting the most advanced of techniques, ultimately giving the area a highly competitive structure and a lack of existing plant obsolescence. The growing consciousness of the area's industrial and business leaders toward research is another factor which bodes well for future development of the magnitude described.

PRODUCTION PREDICTION

By 1960 the percent column on the far right should look a lot fatter.

Doubled production, or better, is expected of all but 6 of these items.

	1960, estimated Northwest production (thousand tons)		1946, estimated or actual Northwest production	
	Minimum	Maximum	Thousand tons	Percent of all United States
Phosphate rock mined	1,334	2,258	641	7.98
Phosphorus	101	187	------	------
Phosphoric acid	400	625	63	7.38
Phosphates	30	40	------	------
Triple superphosphate	350	550	60	18.62
Ordinary superphosphate	135	225	100	1.27
Sulfuric acid	226	380	60	.70
Calcium carbide	70	140	27	4.74
Acetylene (million cubic feet)	200	650	50	1.03
Acetic acid	4	15	1	.66
Chlorine	85	122	40	3.43
Caustic soda	109	158	46	2.46
Chlorates and perchlorates	4.6	7	4.5	20.45
Carbon bisulfide	25	27	------	------
Rayon	67.5	87.5	------	------
Wood pulp	1,635	2,544	1,740	16.4
Cement	1,500	1,700	927	3.01
Artificial abrasives	18	32	------	------
Aluminum, primary	1,300	1,800	148	36.10
Magnesium, primary	6	25	------	------
Zinc, primary slab	265	340	[1] 212	27.77
Lead, primary refined	130	180	70	20.70
Copper, primary refined	125	175	75	9.54
Antimony, primary	3	5	2.4	13.57
Electrolytic iron	5.4	36	[2] .9	22.5
Electrolytic manganese	7	15	------	------
Rolled steel	400	480	[1] 290	.48
Rolled stainless steel	6	20	------	------
Steel castings	40	50	22	1.52
Gray iron castings including pipe	150	190	75	.73
Malleable iron castings	6	8	------	------
Ferro-alloys	55	100	[2] 30	1.76

[1] 1945.
[2] 1947.

NOTE.—In making 1960 estimates it has been assumed that the differential between minimum and maximum represents the range under conditions of moderate employment.

Phosphates, 1960.—Power demand and phosphorus production

ELECTRIC FURNACE PRODUCTION OF PHOSPHORUS IN NORTHWEST

Consuming industry	Estimated 1960 production (net tons)	
	Minimum	Maximum
Phosphoric acid	800	1,600
Phosphates	15,000	45,000
Phosphate fertilizer	85,000	140,000
Total	100,800	186,600

POWER CONSUMPTION BY PHOSPHATE INDUSTRY IN NORTHWEST

Consuming industry	Estimated 1960 kilowatt demand	
	Minimum	Maximum
Phosphate rock mining:		
Phosphoric acid	[1]	[1]
Phosphates	1,000	2,000
Phosphate fertilizer	8,000	13,000
Electric furnace operation:		
Phosphoric acid	1,500	3,000
Phosphates	24,000	73,000
Phosphate fertilizer	140,000	230,000
Other operations:		
Phosphoric acid	[1]	[1]
Phosphates	1,000	2,000
Phosphate fertilizer	19,400	32,800
Total	194,900	355,800

[1] Small amount is included in electric furnace operations.

Chlorine, 1960.—Markets accessible to Pacific Northwest producers

	Estimated 1960 demand (thousand tons)	
	Minimum	Maximum
Pulp bleaching:		
Pacific Northwest	45	60
British Columbia	15	20
Alaska	2	5
Chlorinated solvents, other chemicals	20	30
Water treatment, sanitation	2	5
Liquid bleach	1	2
Total	85	122

Sulfuric acid, 1960.—Markets in Northwest, exclusive of Utah and southern Idaho

For use in production of—	Estimated 1960 demand (thousand tons) (100 percent basis)	
	Minimum	Maximum
Superphosphate:		
Northern Idaho	12	28
Western Montana	50	57
Along Pacific Northwest coast	12	24
Ammonium sulfate fertilizer at Salem	------	61
Rayon at Tidewater	100	124
Sugar refining	------	7
Alcohol from wood waste	5	8
Chlorine and caustic soda	2	3
Aluminum sulfate	11	14
Explosives	12	15
Others	22	39
Total	226	380

Calcium carbide, 1960.—Markets accessible to Pacific Northwest producers

Use	Estimated 1960 demand (thousand tons)	
	Minimum	Maximum
Synthetic chemicals:		
Pacific Northwest	18	50
California	------	25
Cutting and welding metals:		
Bottled acetylene, Pacific Northwest	9	11
Shop-generated acetylene, Pacific Northwest	7	10
Bottled and shop-generated acetylene, other western States	32	39
Exports	4	5
Total	70	140

Aluminum, 1960.—Outlook for feasible markets in the United States

	Estimated 1960 aluminum requirements (million pounds)	
	Minimum	Maximum
Building products	350	700
Automobiles	285	1,380
Displacement of copper, mostly in wire and cable [1]	250	450
Trucks	211	968
Busses	40	56
Railroad cars	51	88
Aircraft	51	109
Displacement of zinc die castings [1]	34	52
All other uses	2,500	2,500
Total	3,772	6,303

[1] There is some duplication of figures representing displacement of copper and zinc because of the use of these metals in automobiles, trucks, and busses for which aluminum estimates were made without an analysis of metals displaced.

Rayon, 1960.—Annual production of viscose and acetate in Pacific Northwest

	Estimated 1960 production, (million pounds)	
	Minimum	Maximum
Eugene, Oreg. (viscose)	45	50
Longview, Wash. (viscose)	45	50
Puget Sound area, Washington (viscose)	45	50
Willamette Valley, Oreg. (acetate)	----	25
Total	135	175

Portland cement, 1960.—Annual production rates by area in the Pacific Northwest

	Estimated 1960 production (thousand barrels)	
	Minimum	Maximum
Southwestern Oregon	680	760
Northeastern Oregon	375	420
Lower Columbia River area	790	840
Eastern Washington	1,400	1,470
Puget Sound area	4,550	5,130
Southern Idaho	340	380
Total	8,135	9,000

House Lobbying-Activities Investigation

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

AGENDA FOR OPENING SERIES OF PUBLIC HEARINGS IN HOUSE LOBBYING-ACTIVITIES INVESTIGATION

Chairman FRANK BUCHANAN, Democrat, of Pennsylvania, of the House Select Committee on Lobbying Activities, today made public the agenda for the first three public hearings, beginning next Monday morning, in the investigation of all lobbying activities, including those of Government agencies, intended to influence, encourage, promote, or retard legislation.

Four college teachers and two specialists of the Library of Congress legislative reference service will participate Monday and Tuesday in sessions devoted to "The Role of Lobbying in Representative Self-Government." Budget Director Frank Pace, Jr., and Comptroller General Lindsay Warren will appear Thursday morning to discuss "The Role of Government Agencies in Influencing Legislation."

In addition to the chairman the House Select Committee on Lobbying Activities includes Representatives HENDERSON LANHAM, Democrat, of Georgia; CLYDE DOYLE, Democrat, of California; CARL ALBERT, Democrat, of Oklahoma; CHARLES A. HALLECK, Republican, of Indiana; CLARENCE BROWN, Republican, of Ohio; and JOSEPH P. O'HARA, Republican, of Minnesota.

The agenda for the first three sessions, all scheduled for 10 a. m. in the House caucus room, is as follows:

HOUSE SELECT COMMITTEE ON LOBBYING ACTIVITIES—OPEN SERIES OF HEARINGS

1. The Role of Lobbying in Representative Self-Government.

Monday, March 27, 10 a. m., House caucus room.

Witnesses

Dr. Hadley Cantril, professor of psychology and director of the office of public opinion research, department of psychology, Princeton, N. J.; author of the Psychology of Radio, 1936; Invasion from Mars, 1941; Psychology of Social Movements, 1941; Gaging Public Opinion, 1944; Psychology of Ego-Involvements, 1947; Understanding Man's Social Behavior, 1947.

On the principle that Members of Congress by and large seek to represent public opinion in their districts as they interpret it, Dr. Cantril will discuss the factors which shape public opinion and thus, presumably, may influence the legislative process.

Dr. Stephen Kemp Bailey, assistant professor of government at Wesleyan University, Middletown, Conn., author of Congress Makes a Law, 1950.

In the preparation of his book, which traces the birth, evolution, and metamorphosis of an idea for maintaining full employment into the Employment Act of 1946, Dr. Bailey interviewed hundreds of persons in the Congress, in Government agencies, and in various pressure groups for the story of the pulling and hauling which accompanied the development of this single piece of legislation. He will discuss the lobbying process in action on all fronts in that legislative battle in the Seventy-ninth Congress, occurring before the passage of the Legislative Reorganization Act containing the Federal Regulation of Lobbying Act of 1946.

Tuesday, March 28, 10 a. m., House caucus room.

A round-table or panel discussion in which the following experts, after making short, individual presentations on the specific phases of the subject as indicated, will then join informally with members of the committee in further discussion of the general theme of "The Theory of Identification and/or Regulation of Lobbyists by Legislative Bodies in the United States":

Dr. Edgar Lane, instructor in politics, Princeton University: Past Congressional Investigation of Lobbying.

Dr. Belle Zeller, professor of political science, Brooklyn College, Brooklyn, N. Y., author of Pressure Politics in New York (1937) and of numerous articles on State lobbying laws and on the Federal Regulation of Lobbying Act: "How the States Have Approached the Lobbying Issue."

Dr. George Galloway, senior specialist in American Government for the Legislative Reference Service of the Library of Congress, and formerly staff director of the LaFollette-Monroney Joint Committe on the Reorganization of Congress: "The Thinking Behind the Inclusion of Title III (the Federal Regulation of Lobbying Act) in the Legislative Reorganization Act of 1946."

Dr. W. Brooke Graves, specialist in American Government and Public Administration for the Legislative Reference Service of the Library of Congress; author of a special study for the Legislative Reference Service on the Administration of the Federal Regulation of Lobbying Act; now on loan to the House Committee on Expenditures in the Executive Departments as staff director of its Reorganization Subcommittee: "Operation of the Federal Regulation of Lobbying Act."

2. The Role of Government Agencies in Influencing Legislation.

Thursday, March 30, 10 a. m., House Caucus Room.

Witnesses

Frank Pace, Jr., Director of the Bureau of the Budget: The Budget Director will discuss the necessity in a Democracy for the Executive branch of Government to make policy recommendations to Congress in the fields of activity of the various agencies and departments; the machinery established for transmitting these recommendations to Congress, and indicating their conformance to the President's program.

Lindsay Warren, Comptroller General of the United States. The Comptroller General will report on the work of the General Accounting Office, as an arm of Congress, in investigating improper expenditures by Executive agencies or departments, including any designed to influence Congress in violation of the Criminal Code.

"My Country 'Tis of Thee, Sweet Land of Liberty"

REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. McDONOUGH. Mr. Speaker, the Declaration of Independence was a firm and courageous expression of the people of the Thirteen Original Colonies against oppressive, unnecessary, and burdensome taxes, and the unjust, unfair, and arrogant administration of Great Britain under the reign of King George III and his governor generals and power-drunk bureaucrats.

We fought a long and bloody war to prove to Great Britain that we meant what we said in that Declaration of Independence. It made us a respected and a free nation—free from the domination of all foreign powers—free of all the rest of the world, except ourselves.

Our freedom, our liberty, and our independence have made us a great and glorious nation, but the very Government which we have formed, which we have fashioned ourselves to protect us from foreign domination, has been fast becoming our greatest burden, our greatest threat to freedom; yes, our greatest enemy to the liberty and independence we fought for more than 160 years ago.

What have we been doing to ourselves? Where is this freedom and independence we fought so hard to preserve, the freedom and independence in which we took so much pride, which made this Nation so great and glorious both at home and abroad?

Have we allowed the Government of the United States to become greater than the people who created it? Has it become the master instead of the servant of the people?

Are we allowing this power to rise in our midst without realizing it, greater than the power that Great Britain wielded over us under King George III which demanded a Declaration of Independence 160 years ago?

Wheeler McMillen wrote in a recent issue of the Pathfinder:

The powers of government everywhere tend to revert to their ancient uses for oppression. In Russia estimates report seven to twelve million people subjected to forced labor. In the United States everyone is forced to work about 1 week out of every month for government. The difference is only one of degree.

If in our Government the influence of one pressure group or another continues to push spending and taxes upward, the number of slave day per citizen must likewise move upward.

UNIVERSITY OF MICHIGAN LIBRARIES

This is what is happening now; this is not ancient history nor is it a fanciful prophecy of some crackpot. It is a sound and logical appraisal of the condition of our Government today with a public debt of two hundred and fifty-six billion and an annual deficit of five and five-tenths billion we are spending ourselves into subjection of an all-powerful government centralized in Washington.

Have we forgotten the wisdom of Grover Cleveland who said:

> The lessons of paternalism ought to be unlearned and the better lesson taught that while the people should patriotically and cheerfully support their Government, its functions do not include the support of the people.

How different is the trend today with the demands for paternalism of all kinds from pressure groups from the Government with no thought of the loss of freedom and independence of the individual.

Even before the Declaration of Independence Benjamin Franklin said, "They that give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety. He who sacrifices his freedom for security loses both."

Many of those who look to the Government to do for them too many of the things they should do for themselves should heed the sound advice of Thomas Jefferson who said in a message to Congress in 1801:

> Agriculture, manufactures, commerce, and navigation, the four pillars of our prosperity, are the most thriving when left most free to individual enterprise.

False propaganda and deception can delude and frustrate the people of this Nation just the same as it can and does the people of any other nation. Apt slogans and deft similes often carry more weight than sound common sense and logic in political campaigns.

The people of this Nation have withstood many a severe shock which has threatened our freedom and independence and unity in the past. Are we now to become the victims of our own folly? Is it not time to free ourselves from a rapidly growing trend in government that is sapping away our freedom and independence?

James F. Byrnes, a distinguished Democrat and former Secretary of State, said in a recent address at Washington and Lee University:

> We are going down the road to statism. Where we will wind up no one can tell. But if some of the new programs seriously proposed should be adopted, there is danger that the individual, whether farmer, worker, manufacturer, lawyer, or doctor, soon will be an economic slave pulling an oar in the galley of the state.

Are we so blind to our present danger that we will allow our Government to get so much out of the control of the people that it will be too late to correct or remedy the situation?

I believe the American people when thoroughly aroused to the present dangers will fight for freedom and independence rather than submit to servitude of an all-powerful government.

The abuse of power by the Government over the people can always be checked and controlled by the people in the United States because the powers delegated to the Government comes only from and with the consent of the governed. We must be alert to our responsibilities. We must not allow the Government to become greater than the people. We must cherish and guard our liberty and remember that liberty does not come from government. Liberty comes from the limitations of governmental power, not from the increase of its power over the people.

Address by Hon. Lewis Preston Collins, Lieutenant Governor of Virginia

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. ABBITT. Mr. Speaker, on Wednesday, March 22, 1950, at 8:15 p. m., the National Capital Sesquicentennial Commission, recognizing the tremendously vital role of music in our Nation's quest for freedom, in cooperation with the Army Band presented one in a long series of gala special events to commemorate the one hundred and fiftieth anniversary of the founding of the seat of the Federal Government in the District of Columbia.

A series of concerts are being presented by the United States Army Band, each being dedicated to one of the Original Thirteen States in the order of their admittance to the Union. The concert last night was dedicated to Virginia. The Honorable Lewis Preston Collins, Lieutenant Governor of Virginia, representing the Commonwealth of Virginia, was called upon to address the audience and, under leave to extend my remarks in the Appendix of the RECORD, I am including the address of Lieutenant Governor Collins on this occasion:

> Down through the ages man's freedom has come, gone, and then come back again, to evolve a bit higher in its approach to the ideal—always limited, however, in its ascent by the realism of mundane values. It is this eternal quest which is man's supreme epic, clothed at times, in the misery of poverty, war, pestilence, servitude, and all of the repressions, natural and contrived, which have served to retard and to stifle this greatest of human adventures.
>
> The dedication of this freedom-sings program to Virginia is an honor for which Virginia is grateful. It may be said with prideful modesty, I hope, that Virginia, with her Washington, Madison, Jefferson, Mason, Henry, Marshall, and countless others strove worthily in the establishment of a representative democracy with a constitution guaranteeing freedom as defined by a bill of rights indigenous to Virginia. This concept of our forefathers has more nearly provided the guaranty of individual freedom and therefore collective freedom, than any other concept birthed in all history. Thus our Nation, the greatest ever established, has come to live and play its historic part in man's epic quest for self-dignity and divine likeness.
>
> From across the seas and here in our own land the fundamentals which insure freedom are being attacked, the fundamentals which are traditional, historic, and a part of the soul of Virginia. Virginia will not surrender them easily during interims of political pot-valiancy or expediency. We in Virginia yet subscribe to the philosophy that it is the function of Government to protect the individual in his basic liberties from all forms of tyranny and to provide for the individual equal opportunity under Government, striving as best we can honestly through evolutionary processes to solve our economic, social, ethnological, and traditional problems among ourselves in a peaceful manner.
>
> It is not a part of us to lose freedom and liberty by creating a paternalism in government which tomorrow will be the tyrant to destroy the freedom of which we sing.
>
> The motto: "Sic semper tyrannis" is ever appropriate in man's epic quest for freedom, and it is Virginia's motto in the truest and deepest sense, today as always.

Equal Rights Amendment

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks I would like to speak on a matter that may come up for action in this House during this session, one on whom the other body has recently acted. I refer to the so-called equal rights amendment. In the form in which this measure was first brought to the floor of the Senate 2 months ago, it read:

> Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex.
>
> The Congress and the several States shall have power, within their respective jurisdictions, to enforce this article by appropriate legislation.

This proposal has been before the country almost 30 years, since the suffrage amendment was adopted. Some women have been consistently for it, others as consistently against it. I believe that those on both sides of this argument are women of good intention. They have all, in one way or another, in the past 30 years worked valiantly to promote the participation of women at all levels of government, to open up to women full opportunities for education and for jobs that fit their talents regardless of sex, to establish their dignity as persons and permit equal partnership with men in the complicated industrial society in which we live.

But the women who have worked for these goals are sharply divided on the question of how to reach them. They disagree on the consequences of putting into our Constitution a clause which says that "equality of rights" may not be abridged by law on account of sex.

Those who oppose this amendment, in the form in which it first came to the floor of the other body, and as I have quoted it above, are not opposed to "equality" and "equal rights in law" for women. But they do not want to lose for the working women what has been fought for and so painfully secured over the past 75 years—decent hours, minimum wages, sanitary working conditions, and so forth.

On one side, in favor of the original amendment, there is, for example, Mrs. Emma Guffey Miller and the present Minister to Luxemburg, Mrs. Pearl Mesta, both prominent Democrats. Distinguished Republican women also support it, the Honorable Senator from Maine, MARGARET CHASE SMITH, and my distinguished House colleague, Mrs. KATHARINE ST. GEORGE. But just as strongly against the original amendment are Mrs. Franklin Roosevelt, about whose championship of women's advancement there can be no shadow of doubt; Frances Perkins, former Secretary of Labor and now a member of the Civil Service Commission, both Democrats; Dr. Alice Hamilton, the pioneer in the conquest of industrial disease; Maybeth Paige, long a Republican member of the Minnesota State Legislature; and Anna Lord Strauss, president of the League of Women Voters. The Women's Bureau of the United States Department of Labor, which was set up by Congress to promote the welfare of women, has always been against this amendment, and the Labor Department itself, through both Republican and Democratic regimes, has held firmly to the position that the amendment would create new disadvantages and disabilities for women, instead of new opportunities.

For like reasons to those which have decided Mrs. Roosevelt, Frances Perkins, Alice Hamilton, and their colleagues, I, myself cannot endorse the equal rights amendment as I have quoted it. I believe it will destroy the protections for working women—there are now 18 million of them—that have been put on the statute books over the past 75 years. The struggle has been long and hard to get their hours of work shortened from 13 to 8 a day, and, through minimum-wage legislation, to raise their status from sweated labor to decent wage levels, particularly in industries where wages have been notoriously low. These measures have actually created for women workers something like an equal bargaining position with men in industry. As a matter of fact, raising the working standard for women has in many cases given impetus to raising the standard for men. No Federal wage and hour law, for example, was even attempted until the Supreme Court declared minimum wages constitutional for women. These laws have raised women out of the class of drudges whose work could be bought for almost nothing to a place that promises a level of health and decency.

Working women do not want these hard-won rights taken away from them. Their unions are firm on this point. The labor movement, through it two great national organizations, has consistently fought against the damage to working women's rights that would result if this amendment were passed. The amendment would also wipe out differences built up over the years to favor women as wives, mothers, and widows—the right of a widow to live in her husband's house, recognition of a mother's special interest in the guardianship of her children, the primary obligations of the husband and father for family support.

I myself am unwilling to see the hard-won gains of working women taken away from them, and I shall not vote for an amendment which legal experts say will do just this. My own record in this Congress shows my aggressive and consistent interest in the advancement of women. I have worked for equal pay for women—I have introduced a bill to establish this principle under Federal law; I have testified in favor of it before congressional committees. I have stanchly supported all efforts to keep down the cost of living, a subject near to the hearts of all women. I have introduced a bill which would permit working mothers to deduct the cost of a housekeeper from their income tax.

I have, in the interest of removing the remaining discriminations against women, sponsored a bill, the status of women bill, H. R. 2936, to determine where inequalities still exist, and to work out ways of getting rid of these inequalities. The remedy for these things is not in abstract feminist theory, based on the notion that identity of treatment with men is the solution to the special problems of women. The solution is, rather, in a rational and discriminating analysis of where the role of the sexes is the same and where differential treatment is required to create the genuine equality for women for which we are all striving.

The Senate recently debated the equal-rights amendment in the form I have quoted. Many Senators felt as I do, that they were unwilling to risk the loss of women's protections as wives and mothers and workers for the sake of the words "equal rights." The Honorable Senator from Arizona [Mr. HAYDEN] then acted to guarantee that these rights would not be lost. He moved to amend the Senate resolution by adding the words:

> The provisions of this article shall not be construed to impair any rights, benefits, or exemptions now or hereafter conferred by law upon persons of the female sex.

The Senate showed its understanding of the fundamentals of this argument when it voted to support Senator HAYDEN's amendment and attach it to the original resolution. The equal-rights amendment, as amended, passed the Senate by a vote of 63–19. If that measure comes before the House, I shall support it, secure in the conviction that women will not be stripped of the rights and benefits that not only protect them as individuals, but that create, for our whole society, a modus operandi based on reason and a genuine understanding of the complementary functions of men and women in our modern world.

Repatriation of Greek Children

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. FURCOLO. Mr. Speaker, I am again calling the attention of Members of Congress to the plight of thousands of Greek children who have been abducted from their homes.

I include herewith the resolution of the Commonwealth of Massachusetts:

> Resolutions memorializing Congress relative to the repatriation of the children of Greece, who have been removed from their homes in Greece and detained in certain countries.
>
> Whereas the General Assembly of the United Nations has formally announced that 28,000 Greek children have been removed from their homes in guerrilla camps in Albania, Yugoslavia, and Bulgaria, and were forced to fight for guerrilla forces, and were finally sent by said guerrillas to the Communist countries of eastern Europe; and
>
> Whereas the General Assembly of the United Nations has unanimously recommended the return of the children to Greece, has invited all member states and other states in whose territory said children may be found to take measures necessary to implement such recommendation, and has requested the national Red Cross organizations to assist in executing such recommendations and to aid these innocent victims in returning to their homes and their loved ones; and
>
> Whereas some of these communistic countries within whose borders these children are held captive have opposed, with flat refusal, any cooperation with the Red Cross organizations, while others have temporized or given evasive answers in stating their intentions relative to the return of these children to Greece; Therefore be it
>
> *Resolved*, That the General Court of Massachusetts, firmly believing in fundamental human rights, in the dignity and worth of the human being, and in the equal rights of men and women, and of nations large and small, raises its voice in protest at the injustice and inhumanity perpetrated in the abduction and forcible detention, in lands outside their mother country, of these 28,000 children of the Hellenic nation and registers its indignation at the detention of these children under such conditions as evidence a complete disregard of every humane principle concerning family rights and the sanctity of the home; and be it further
>
> *Resolved*, That the General Court of Massachusetts respectfully urges and petitions the Congress to reaffirm the tenets of the United Nations Charter, and to advocate most strongly that the United Nations General Assembly by rightful and lawful action implement its resolution adopted on November 18, 1949, relative to the repatriation of Greek children, so that these children of Greece may be saved from forcible detention and degradation, and be reunited with their people in Greece, thus insuring unto the people of all small nations the rights and privileges set forth in the Charter of the United Nations; and be it further
>
> *Resolved*, That copies of these resolutions be transmitted forthwith by the secretary of the Commonwealth to the President of the United States, to the presiding officer of each branch of Congress, and to the members thereof from this Commonwealth and to the representatives of the United States to the United Nations General Assembly.

UNIVERSITY OF MICHIGAN LIBRARIES

The Reporter States the Case

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. JAVITS. Mr. Speaker, this new magazine has been making a distinguished reputation in the field of helping our Nation plan for and implement its responsibility of world leadership, brought to it by the accident of powerful industrial and social organization rather than by design. Two significant contributions of the Reporter under the editorship of the distinguished Prof. Max Ascoli, are found in the appended excerpts from the January issue. The first is a juxtaposition of Soviet promises and Soviet fulfillment, the second is a timely warning about one of the most dire threats which faces not only world peace and security but the fundamental moral basis of all mankind. It discusses the grave danger of a new variation of the Molotov-Ribbentrop alliance of 1939 which signified the start of World War II, in a new alliance between a united Germany and an aggressively imperialistic U. S. S. R. arising out of the present stalemate and the revival of ultranationalism and former Nazi influence in the western German zones which the United States, Great Britain, and France now occupy:

PROGRESS OF A "PEOPLE'S DEMOCRACY"

THE PROMISE

Yalta, February 11, 1945: "The provisional government which is now functioning in Poland should * * * be reorganized on a broader democratic basis with the inclusion of democratic leaders from Poland itself and from Poles abroad. * * * This Polish provisional government of national unity shall be pledged to the holding of free and unfettered elections as soon as possible on the basis of universal suffrage and secret ballot. In these elections all democratic and anti-Nazi parties shall have the right to take part. * * *"

Potsdam, August 2, 1945: "We have taken note with pleasure of the agreement reached among representative Poles from Poland and abroad which has made possible the formation, in accordance with the decisions reached at the Crimea Conference, of a Polish provisional government of national unity recognized by the Three Powers. * * * The Three Powers note that the Polish provisional government of national unity * * * has agreed to the holding of free and unfettered electrons as soon as possible on the basis of universal suffrage and secret ballot in which all democratic and anti-Nazi parties shall have the right to take part and to put forward candidates, and that representatives of the allied press shall enjoy full freedom to report * * * upon developments in Poland before and during elections."

THE FULFILLMENT

June 21, 1945: A Moscow court convicts 12 of 16 Polish leaders on charges of underground activity against the U. S. S. R.

August 20, 1946: A United States note charges the Government with curtailing democratic activity and with irregularity in a referendum held on June 30.

November 22, 1946: Poland receives separate notes from the United States and Britain recalling the Yalta pledge of "free and unfettered" elections.

January 19, 1947: A general election is held. Results: Government bloc, 394 seats; Peasant Party, 28; Catholic Work Party, 12; others, 10.

January 28, 1947: The United States State Department issues a press release stating that the Polish Government employed coercion against democratic elements, and that the Yalta and Potsdam agreements have not been fulfilled.

October 24, 1947: Peasant Party leader Mikolajczyk escapes from Poland.

February 7, 1948: The Peasant Party joins the Communist coalition.

March 18, 1948: Socialist leader announces proposed merger of Socialist Party into a single party with the Communists.

November 7, 1949: Russian Marshal Rokossovsky named Marshal of Poland and Minister of National Defense.

December 9, 1949: Boleslaw Bierut, chairman of the central committee, United Workers' Party of Poland, writes in the Cominform newspaper: "It is necessary to end rotten liberalism and to be more strict, morally and ideologically. * * * Our conception of a people's front has always been that the working class and its party are the guiding force. Any other conception of a people's front is detrimental and opportunist."

DEUTSCHLAND—THE KREMLIN'S RED HOPE

(By Fred M. Hechinger)

In the days immediately after the war, when the Soviet Union was building up its empire of satellites to the deadpan tune of anti-imperialist propaganda, most United States representatives in eastern Europe were acting like innocents abroad. The Communists charged that they were hatching an imperialist plot; reactionaries at home said they were conspiring with the Communists. Both accusations were, of course, pure nonsense. What really gave Russia a clear field was the naïveté of many American liberals, and the defeatism (often expressed in the theory of "inevitable" war) of many American conservatives. The effect of that mixture was the paralysis of American initiative and an easy victory for Russia in what otherwise might have been a very difficult undertaking.

The American innocents started with the supposition that the magic word "democracy" would fight its own battle. They believed that the promise of free speech and free elections—and an account of the possessions of United States workers and farmers—would be enough to make Democrats of any people and to defeat the totalitarian Communists. Actually, of course, such propaganda offered no remedies for the immediate problems of eastern Europe and no guaranties against its most immediate fear, which remained Germany.

The innocents failed to consider that the word "democracy" could be exploited unscrupulously by others. At Yalta the Russians merely asked that the eastern countries be turned into democracies friendly to the Soviet Union. When the western powers agreed, the U. S. S. R. proceeded to make these nations friendly—i. e., satellite. It did not, however, occur to the United States Government that these countries could well be expected to be friendly toward the west at the same time, and so the United States did not bother actively to court such friendliness.

Active courtship would have included the immediate support of all democratic elements against all totalitarian influences, including the respectable antidemocrats of the prewar days. It would also have involved vigorous backing of essential social reforms. It would, above all, have meant offering eastern Europe security against political, military, and economic domination by Germany. Instead, James F. Byrnes, our Secretary of State, made a public speech in Stuttgart, which, rightly or not, was interpreted by east and west alike to mean that the United States favored the restoration of Germany as the center of European gravity. Liberal elements in the United States Government, meanwhile, ducked out of the problem of abetting social reform in eastern Europe, on the ground that, since the people there had never known a democratic regime anyway, the Soviets might as well do the job.

In those days an American correspondent returning from any of the satellite countries was in a curious position. If he reported that there was still a chance for cooperation with the democratic parties in Poland or Czechoslovakia (before the February 1948 coup in the latter) he was the object of suspicious glances. The iron curtain had been drawn, he was told, and everyone in a responsible position behind it was either a Communist or a fellow traveler.

A vocal minority, powerfully represented in the American press, publicized this viewpoint. These defeatists imagined the iron curtain before it really existed. They gave Russia a green light in eastern Europe by saying in effect that democracy had been written off before it had actually died. The theory of an inevitable iron curtain helped make the iron curtain inevitable, just as the theory of inevitable war helps make war inevitable. Anyone who suggested measures of peaceful cooperation in eastern Europe—even with anti-Communist, democratic elements—ran the risk of being charged with appeasement.

Actually Prague and, to a lesser extent, Warsaw were then still free cities. In Warsaw, I obtained interviews with Socialist and agrarian members of the government, although the Communists had tried to prevent them from talking.

If the United States had attempted democratic infiltration at that stage, it still would have been comparatively easy, and might have been fruitful.

But many United States diplomats objected to dealing with any eastern European party whose political views were to the left of Herbert Hoover's. When Dr. Eduard Benes, confronted by the treason of his own cabinet, was blackmailed into signing away Czech democracy, he was actually the victim of a squeeze-play between Russia and America. If he resisted the demands of the Communists—as he said in a secret address to the Communist ministers—he would have run a real risk of civil war. The Communists were, of course, assured of active support by the Red Army; Dr. Benes had nobody to rely on, except his own party of National Socialists, for the prevalent American formula was "Socialist equals Communist."

Thus the United States, by its lack of realism, made it easier for the Soviet Union to take over the satellites. But the lion's share of the credit must, of course, be conceded to the planning and plotting of the Russian leaders. In their master plan, Germany played the central role from the outset. The tipoff was Russia's violent opposition to the inclusion of France among the occupying powers. At Yalta the Soviet leaders again and again made it plain that they did not want to replace a strong Germany with a strong France. Since no continental power except a strong France could ever hope to neutraliz Germany, it is evident that Russia even then was determined to use a satellite Germany as the most direct means of ensuring Russian control of Europe.

Obviously the small nations of Europe, including the eastern satellites, were going to object to any such project. But Stalin and Molotov made it quite plain at Yalta that the small nations would not be asked what they wanted, nor be told what Russia

planned. (Indeed, Molotov once suggested irritably that the representatives of the United States stop worrying about public opinion and start telling the people what they were to do.) It was not surprising when eastern purges, arrests, and sentences soon began to thin the ranks of the democratic leaders in eastern Europe: They were labeled "Fascists," although most of them were members of the various anti-Communist socialist parties that Americans mistakenly lumped together with the Reds.

All this time—while they were steadily working for the creation of a satellite Germany—the Russians carefully exploited the small nations' fear of Germany and the obvious failure of the Americans to democratize their zone. In spite of the memory of Nazi-Soviet collaboration, this propaganda tune was effective, largely because the German record in eastern Europe was so horrible, the scars left there by the Germans so bloody and painful, and the blackout of Russia's real intentions toward Germany so tightly drawn. But by autumn of 1948 some light began to fall on the Russian intrigue to tilt the power balance.

Reports began to drift in from eastern Germany that the Russians were quietly sponsoring a movement for a strong and unified German nation. To do this without creating suspicion and hostility in the satellite belt, the USSR had to pursue a two-faced, two-voiced policy. Satellite newspapers continued to be fed material which portrayed Russia as the protector of eastern Europe against Germany; simultaneously, Russian-licensed papers in Germany were campaigning for revision of the German frontiers. They were quiet about the eastern Oderneisse line, but they emphatically supported German claims to the Saar, and at every opportunity demanded the withdrawal of the Western powers, particularly the French.

In the course of 1949 it became increasingly clear that Germany—the eastern part at first, the rest later—was being groomed for the role of satellite No. 1. Nazis began to be reinstated in their old positions and promoted to better ones, provided they made no fuss about switching from one dictatorship to another. The people's police became the nucleus for an armed force, and the banners it carried around the cities documented the suspicions of many that the difference between national socialism and national communism was mostly a matter of nomenclature.

While Dr. Benes was being given a state funeral by the Communist government in Prague, newspapers in the Soviet zone of Germany referred to him as a murderer of innocent Sudeten Germans. Apparently the Soviet authorities agreed with those German sentiments. Some well-informed Germans, on the other hand, had noted that Karl Kreibich, chief ideologist for the present Czech régime, used to be a Sudeten German senator; that Evzen Erban, currently Minister of Social Welfare, was at one time secretary-general of a German-sponsored labor movement; and that Vaclav Kopecky, the Minister of Information, had on February 23, 1933, reproached Hitler for his failure to liberate the Sudeten Germans from the Czech republic. (Kopecky had spoken then for the small nations' right of self-determination, a slogan still used widely by Soviet propagandists, although Soviet leaders at Yalta opposed the small countries' rights in the United Nations.) Even within Czechoslovakia, the Communist hierarchy prepared for things to come by admitting into the party so many persons who had collaborated with the Germans that the Communists became popularly known as the immunists.

To explain away the speed-up in the satellization of eastern Germany, the Soviets began to pepper the satellite countries with alarmist diatribes against the west German government. Actually that speed-up became inevitable when the Communist timetable in France and Italy was upset, and especially when the whole structure of satellite solidarity was shaken by Tito's desertion. Tito's attractiveness to satellite Communists who feared Russo-German collaboration became a serious factor for the Politburo to contend with. One way it contended with it was by promoting German aims even more vigorously.

In a gigantic power-political game of this sort, an open switch of strategy calls for new security measures, particularly the protection of the rear. The Kremlin promptly charged Red Army Marshal Konstantin K. Rokossovsky with the defense of Poland. Polish territory thereby became little more than a zone of communications between Russia and Germany, ready to function as such whenever the Russians decide to withdraw from eastern Germany. Few would be surprised if by that time the German "army of liberation" should show up again (it and its commander, General von Paulus, have been missing since Stalingrad) to supplement the people's police with its elite Bereitschaften.

The only reason why no official change of command has taken place in Prague is that the Czech armies were placed under Moscow-dominated leadership in 1948, when practically the entire RAF-trained air force was discharged. It has become an open secret, too, that a young Russian colonel has taken over the intelligence.

The stage was set for the Russians' final move in the maneuvering that started at Yalta with their stand against France. Under Stalin's portrait Otto Grotewohl addressed the east German people as the new chancellor. A personal message from Stalin underlining the special status of the new member of the family was read. An amnesty restored full political rights to almost all Nazis and ex-officers. The Communist press, which had formerly attacked west German reconstruction, now lit into the dismantling program. The peoples' police intensified its recruiting drive, and staged Berlin's first post-Hitler torchlight parade.

By now it was time to tell the satellites and the people of Russia what had taken place; for now the double-face and double-talk had lost usefulness. Those who had flocked around the Kremlin for protection against a reconstructed Germany were told, on November 6, 1949, that their fears were no longer fashionable. "There can be no doubt," said Georgi M. Malenkov, secretary of the Central Committee of the Communist Party of the Soviet Union, "that with the peaceful policy of the German democratic republic and the peaceful policy of the Soviet Union—peace in Europe can be regarded as secured." The new protector of the small satellites therefore was—Germany.

Unquestionably, the satellites have a fair idea of the meaning of this line-up. The Germans announced almost at once that they were about to send trade missions to Czechoslovakia and Poland, and they added promptly that the Kremlin had suggested such action. Unless Prague and Warsaw want to run the risk of being labeled "reactionary" and "fascist" they had better roll out the red carpet.

The eastern countries look with fear on Germany as a rival satellite, but Germany will not regard itself as a satellite at all. Although the new government may speak under the Soviet banner, it will see new opportunity in the role of pawn-turned-master. To German professional soldiers, an army is an army, even if it may call itself temporarily the People's Police. To German industrialists the market of eastern Europe is attractive; the prospect of economic domination there is far more promising than in the Marshall plan area, where the emphasis is on cooperation rather than on supremacy. The war has brought home to Germans the superiority of American industrial power, but they still feel technically ahead of the Russians.

Henceforth the lesser satellites will have more and more occasion to think of the Molotov-Ribbentrop alliance, and what it meant to Poland in 1939. The question remains whether they will also realize that American policy has undergone a rather remarkable change since the early postwar days of bungling. Dr. Benes' Socialists were abandoned to the Russians as unreliable "radicals," but Tito has not been denied American aid despite the fact he plainly calls himself a Communist. Land reforms in Italy have finally been given American approval. Economic "infiltration" into the eastern countries has just been recommended by Marshall plan officials. There are real indications that American policy planners are shedding both impractical idealism and pliant defeatism.

These are vital developments; for if the Polish Socialist and the Czech National Socialist begin to realize that a new link—perhaps an underground alliance—with the west is not a tie-in sale with laissez-faire capitalism, he may at last see an alternative. The United States this time did not insist that Tito hold free elections and declare democracy overnight. Our Government apparently is learning that white and black are unusual colors in the spectrum of European power politics; that various shades of gray must be tolerated to prevent them from turning darker.

Development of the Snake River

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. WHITE of Idaho. Mr. Speaker, one of the greatest developments remaining to be undertaken by our Government is improvement of Snake River between its junctions with Columbia River at Pasco, Wash., and the confluence of the Clearwater and the Snake River at Lewiston, Idaho. For years the Snake River has been navigated during the high-water season between Portland, Oreg., and Lewiston, Idaho. Congress in its wisdom has authorized the construction of a series of multipurpose dams on the Snake River navigable the year round up to Lewiston, Idaho.

Recently I appeared before the Senate Appropriations Committee in support of the appropriation to construct the Snake River Dam at Ice Harbor. My statement made before the Appropriations Committee is submitted herewith for the consideration of my colleagues:

STATEMENT OF HON. COMPTON I. WHITE, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF IDAHO, BEFORE THE SENATE APPROPRIATIONS COMMITTEE, FEBRUARY 22, 1950

ICE HARBOR DAM AND LOCK, LOWER SNAKE RIVER

Mr. WHITE. Mr. Chairman, I appreciate this opportunity to speak before this committee. We have an empire to make in the Columbia and Snake Rivers in the Northwest, that needs the irrigation water, electric power, and building material of all kinds in the Columbia Basin.

UNIVERSITY OF MICHIGAN LIBRARIES

Chairman McKELLAR. You want a multiple-purpose project; is that it?

Mr. WHITE. Multiple-purpose dam.

Before proceeding further, I would like to present for the record a statement covering this subject.

Chairman McKELLAR. Without objection, it will be placed into the record at this point.

(The statement referred to is as follows:)

"Mr. Chairman and gentlemen of the committee, this statement is made in behalf of the Ice Harbor dam and lock on the lower Snake River, and is the first of four dams authorized by Public Law 14 of the Seventy-ninth Congress, approved March 2, 1945. It has been approved by the United States engineers, the Bureau of the Budget, and is the only authorized multipurpose self-liquidating project in the entire Northwest for which appropriations have not yet been made and construction started.

"As I understand it, the principal objective of rivers and harbors legislation is to improve navigation and prevent floods; and the Snake River dams meet those qualifications more perfectly than any project in the Pacific Northwest, in addition to supplying sufficient power to liquidate the entire cost.

"FLOOD LOSS IN COLUMBIA RIVER

"The annual estimated flood loss in the Columbia River is $26,000,000, and in the severe flood of 1948 the property damage was estimated at $100,000,000 in addition to taking approximately 50 lives. Nothing has been done since that tragic flood to give any assurance that such a flood would not recur.

"The Snake River is the largest tributary of the Columbia, supplying slightly more than one-fifth of the main annual run-off of the Columbia River. It rises in northwestern Wyoming, travels the entire State of Idaho, irrigating some 2,000,000 acres on the way, and before joining the Columbia is joined by the Salmon and Clearwater Rivers of Idaho. The confluence of the Snake and Columbia Rivers is 140 miles below Lewiston, Idaho, and it is often the floodwaters of the Snake which created flood hazards in the lower Columbia River in the vicinity of Portland, Oreg., and Vancouver and Longview, Wash.

"LOCATION OF LOCKS AND DAMS

"The four authorized dams and locks on the Snake River are between the confluence of these two rivers and Lewiston, and will contribute materially toward controlling these floodwaters. These dams would also contribute greatly to navigation by providing slack water between Lewiston, Idaho, and the Columbia River and on down to the mouth of the Columbia River at Astoria, Oreg., a distance of 495 miles.

"This is not an entirely new navigation project, but merely the authorization to finish a project which is already 90 percent completed, because navigation between the Pacific Ocean and Lewiston has been carried on for exactly 100 years. We merely want channel improvements that will remove some of the hazards so that navigation for this entire 495 miles can be carried on at all seasons of the year with a greater degree of safety and economy.

"River navigation from the Pacific Ocean to Umatilla Landing, Oreg., is already a reality and the completion of the McNary Dam will provide slack-water navigation to the mouth of the Snake River and the four authorized dams on the Snake River, of which Ice Harbor is the first to be constructed, will provide slack-water navigation for the 140 miles from the mouth of Snake River to Lewiston, Idaho.

"The savings to farmers and businessmen by the reduction of freight rates on the Columbia River from Umatilla Landing (site of McNary Dam) are already tremendous; and since 75 percent of the potential river tonnage in and out of this inland empire is above McNary Dam, these four Snake River dams will increase the potential tonnage 300 percent. Fully 90 percent of this potential tonnage would not, under any circumstances, move over the railroads because freight rates would be prohibitive. Much of this would be in the shape of Government-owned timber, low-grade ores, lime, and phosphate from Government-owned land on which the Federal Government would receive substantial returns.

"NEED FOR RAW MATERIALS SHIPPED BY RIVER

"Most of these raw materials will be needed to improve the farms and build the towns which will spring up on the nearby Columbia Basin project where the Bureau of Reclamation is preparing to irrigate 1,250,000 acres with waters from the Grand Coulee Dam.

"In addition to contributions to flood control, navigation, irrigation, and reclamation, Ice Harbor dam and lock, upon completion, will produce 260,000 kilowatts of hydroelectric power so sorely needed in the Pacific Northwest, and also increase the firm power at down-river projects like McNary Dam and Bonneville Dam by smoothing out and keeping uniform the river flow.

"I will leave it to the United States engineers and others to explain the details of this project, and to assure you that the fishing industry will be adequately protected by fish ladders similar to those which operate so successfully to carry salmon over the Bonneville Dam on the way to their spawning waters. But I want to say to this committee that no other project under consideration so perfectly combines flood control, navigation, irrigation, and reclamation as the Ice Harbor Dam and lock.

"While the benefits to navigation, reclamation, and flood control would alone justify this development, the hydroelectric power developed at Ice Harbor will return to the United States Treasury 85 percent of the entire cost of this project.

"AN EMPIRE IN THE MAKING

"We have an empire in the making on the Columbia and Snake Rivers in the Northwest that needs irrigation waters, electric power, and building materials of all kinds. In the area around the confluence of the Columbia and Snake Rivers at Pasco, Wash., and the immense territory where the Clearwater and Salmon Rivers flow into the Snake River at and near Lewiston, Idaho, we have between the main lines of the transcontinental railroads, the Northern Pacific Railway on the south and the main line of the Great Northern Railway on the north, there are 1,125,000 acres of fertile land in the Columbia Basin that is soon to be watered by the construction of a reclamation project. This project has cost our Government for the construction of the Grand Coulee Dam, the storage reservoirs, and diversion canals over $200,000,000.

"Thousands of farm families are eagerly awaiting the completion of this project to move into the sagebrush land and add another western empire to the fast-growing western communities. Productive farms, towns, and cities will spring up, prosper, and grow in this new farming area.

"Up river from Pasco and Lewiston in a drainage of the Snake, Clearwater, and Salmon Rivers there is a vast area containing a great abundance of undeveloped natural resources, mostly in Government ownership, potential waterpower, timber, lime, building stone, iron, copper, lead, zinc, and antimony—all awaiting development and cheap water transportation to market.

"Complementary to the Columbia Basin development now nearing completion, our Government has spent vast sums to improve the lower Columbia River for navigation by constructing locks at Bonneville, Celio Canal at The Dalles, and the McNary Dam near Umatilla Landing. The completion of the McNary Dam will open the Columbia for navigation to the mouth of the Snake River at Pasco. This will give an outlet to the wheat and farm products of the Walla Walla and Pasco countries, but the wheat and farm products of the rich Camas Prairie and large farming country surrounding Lewiston, together with all the vast industrial resources of central Idaho and eastern Oregon above Lewiston, is still awaiting development and cheap water transportation to market.

"Congress has recognized the need for the utilization of this natural river highway to float the building materials so aboundant in central Idaho to where it can be used in building the towns, cities, and farmsteads down river on the Columbia Basin project; and the transportation of the farm and manufactured products to coastal markets, by authorizing the construction of the necessary navigation and multipurpose dam on the Snake River between the mouth of the Snake River at Pasco and the confluence of the Clearwater at Lewiston.

"Money, $12,000,000, for the construction of the first of these dams at Ice Harbor has been authorized but has been left out of the appropriation bill now under consideration.

"I most earnestly urge that the item for the construction of Ice Harbor Dam be restored and the appropriation be made so that construction work can be started without further delay."

EXPANDING DEVELOPMENT OF SNAKE RIVER BASIN

Mr. WHITE. In supplement of what my good neighbor and friend, Senator MAGNUSON, said about the use of power, the need of power in this country, in the first place, we have two of the greatest atomic-energy plants in the United States, one at Hanford, and the other one building now in Idaho. They are going to be great consumers of power.

Now, as to the need for aluminum, the power generated on the Columbia River and its tributaries in the Northwest is the main dependence of our Government in processing aluminum for national defense. You will recall that during the war, bauxite, the raw material from which aluminum is made, was brought from South America to concentrating plants located in Alabama and Louisiana, where it was reduced to alumina (aluminum-oxide), and then these concentrates had to be shipped all the way across the United States to plants in the Northwest where the needed hydroelectric power was available.

We have been all through that in wartime, and we know that it is absolutely essential that we have power and plenty of power to manufacture aluminum for our airplanes and supply the atomic-energy plants in Idaho and Washington State.

We are now dealing with one of the best means in the United States to bring power supply for the defense of our country.

In addition to that, I want to point out to you gentlemen on this map, which embraces half the State of Montana, the whole State of Idaho, Oregon, and Washington, what the Columbia River means to our great country. We are now finishing up a $200,000,000 development in the Columbia Basin. We built first the Grand Coulee Dam to supply the power, and then we constructed the storage reservoirs. We constructed the diversion dams or canal, reservoirs to bring water to this Columbia Basin on 1,200,000 acres of land.

It is just a start in the development. There will be cities, towns, farmsteads, roads, and streets that must have material. We have that material close at hand.

A little way up the Snake River we have, at Lewiston, Idaho, the biggest sawmill in the world. The Government owns this vast area of national forests that is full of mineral deposits, and I have taken the trouble to indicate to you on this map the kind of metals or minerals we have. They include

gold, silver, lead, copper, zinc, antimony, tungsten, mercury, molybdenum, cobalt, manganese, phosphate, iron, and portland cement.

We had just above Lewiston a cement plant that is making commercial cement. We have limestone, building stone, and timber. Everything in central Idaho is mostly in Government ownership. The outlet to this treasure house, this storehouse of the Nation's wealth is down the Snake River and on down the Columbia.

We have made a wonderful improvement in the Columbia River for navigation. We built the locks at Bonneville. We have improved that rugged place where the salmon are having so much trouble getting over the dam.

UMATILLA LOCK, M'NARY DAM, COLUMBIA RIVER

We are now building a lock at Umatilla, at the McNary Dam. This is nearing completion, which would bring transportation all the way up to the confluence of the Snake River and the Columbia at Lewiston. That would drain all that vast area of timber country, mining country.

And there we have also the wonderful Kansas prairie with all this wheat.

We need this dam. It is the greatest development to come to our country, to be built in this country. This series of dams in the Ice Harbor project will open up the country, as has been done in the Southern and Northern States.

I have here a picture of a drawbridge showing you that at Lewiston in high water they navigate all the way up to Lewiston. Boats have already gone up that river. It is nothing new, but we simply want to make it a year-round propostion.

Then we also have here a picture of a barge taking oil up the river and bringing back wheat. Then we have here a picture of grain elevators that run wheat down to the boats.

We are right in the initial period of development in the Northwest. With the people flocking out here to settle on this land, with the 1,200,000 acres now just in the eve of settlement, we need this Ice Harbor Dam for power, for navigation, and also to supply water to the thirsty land.

I am not going into the details of what has been done. Ice Harbor is the only authorized dam in the United States for which no appropriation has been made. The money was dropped out of the appropriation bill and we are asking you at this time to restore it. If it is restored, we will be on our way with one of the best projects in the United States, in my opinion.

I thank you.

Chairman McKELLAR. Are there any questions, gentlemen?

We are very much obliged to you, sir.

Behind the False Front of the Central Arizona Project

EXTENSION OF REMARKS
OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mr. POULSON. Mr. Speaker, an experienced buyer takes nothing for granted. He ignores window dressing and gingerbread, and he looks behind false fronts. Whether his contemplated purchase is a horse, a house, or an irrigation project he applies this principle of operation.

I have gone behind the scenes of the proposed central Arizona project, H. R. 934, and what I have discovered, Mr. Speaker, I hesitate to describe as astounding, for that is an inadequate word.

The concealed facts of this proposed project are nothing short of alarming. They present a serious threat to the stability of our national economy.

The State of Arizona has asked us, the Congress, to buy the largest reclamation rescue project ever proposed. The original cost would be somewhere close to a billion and a half dollars. When I say that the State of Arizona has asked us to buy this project, I mean just that, because we would be spending Federal tax money for it, and there would be no chance that this Government might ever be reimbursed.

However, Mr. Speaker, I shall not deal here with either the technical or financial infeasibility of this proposed project. That already has been done to a great extent, and it will be done to a greater extent in the near future.

Today I propose to take this House of Representatives on a short tour behind the scenes of the Central Arizona Project and to recount the shocking facts I have uncovered in my investigation.

I intend to charge, and to prove my charges, that:

First, the proposed central Arizona project is a land speculator's heaven on earth.

Second, that water is wanted in the project area primarily to save thousands of acres that were rushed into production during the war.

Third, that these thousands of acres were irrigated only to take advantage of high wartime prices; that it was known then that the water being used would soon be exhausted; and that these lands could have no adequate water supply without depriving other lands long developed.

Fourth, that hundreds of pumps were installed to take out underground water when warnings already had been issued that such mining of water would place established irrigation areas in dire jeopardy.

Fifth, that for years a wanton waste of underground water continued, but even so only a wartime shortage of materials prevented the installation of hundreds of additional pumps.

Sixth, that the entire project is designed to bring fortunes to big landowners.

Seventh, that these big landowners and speculators will not pay any of the cost of the project, but would receive it as a gift.

Eighth, that there is no water in the Colorado River available for the proposed Arizona project. That the Arizona promoters are attempting, not only to raid the National Treasury but to take water for their nefarious scheme from California's legal share of the Colorado River. They are seeking to have this Congress repudiate contracts between the United States Government and the State of California, contracts which years ago awarded to California the share of Colorado River water upon which the economic security of 5,000,000 persons now depends.

The term "rescue project" as I have used it here is not mine. It is Arizona's own description of the proposed project. The Arizona promoters are deceitful in their use of the term. They do not tell the whole story of the "rescue." They have dressed up their plan and given it a fine glossy coat. But when one lifts the hood and looks inside the truth is revealed.

Mr. Speaker, the truth is that the central Arizona project is designed to "rescue" wartime speculators, to continue their fortune making, and to make it possible for more speculation, all at the expense of other States.

For some time now we have been drenched in the propaganda of the Arizona promoters. We have heard their pitiful plea that unless they get their project civilization will be set back. We have been given terrible pictures of ragged and hungry men, women, and children trudging desert roads, their once charming homes and fruitful acres turned bleak with the curse of devastating drought. The tragic plight of Europe's displaced persons was not to be compared with the terrible conditions of Arizona's homeless, driven to wandering because they had used up all water God had given them.

That, gentlemen, is all unadulterated hog wash.

Now, what was this desert land worth before the speculators began "mining" water for it, for the purpose of making millions during the war?

Well, in 1940, ordinary unirrigated farm land adjacent to an established Arizona reclamation project was worth at the most about $50 an acre. With water on it the value of this land immediately rose to $300 an acre.

This was land outside established projects but within the area of the potential central Arizona project. Land more remote from a known, dependable underground water source was worth less.

To get water on this desert land, underground wells and pumps had to be installed. What did one of these installations cost? It cost all the way from $18,000 to $30,000.

Well you might ask right here how a farmer could afford such investments? I shall tell you. He could afford them, and the banks would help him, because the return on the money invested was swift and certain. Crops grow the year round in this area, and with wartime prices for agricultural products the investment was quickly paid off.

This was no long-time gamble. This was sure money, and big, certain profit.

But what was happening meanwhile to the underground water table? It was going down steadily, and there was no supply to replace it.

Who cared? Who cared about the immediate years to come? Not the Arizona speculators. Not the Arizona banks. Not even the Arizona government, which sold State lands willy-nilly, cashing in while the sun of inflation brightly shone.

There was no law in Arizona governing the taking of water from underground basins. Anybody could sink wells and pump water out, and the State did not care. Sink the wells and pump out the water, get the cash, and to hell with the future. That was the program.

UNIVERSITY OF MICHIGAN LIBRARIES

All during the war, when they were cashing in and getting rich by spending their capital water, the Arizona promoters, the State officials, and the big landowners had a slick idea up their collective sleeve. Even as they drove down more wells they were working out the plans for the so-called central Arizona project.

"Don't worry, boys," they said. "Sink all the wells you want. Don't think about the future. We've got that all worked out. What we've worked out is a dilly of a scheme. It'll be like shooting sitting ducks.

"Now, listen close. Here's the racket. We're going to take the water we need away from California. We'll be desperate, see. We'll be drowning in a sea of sand, not water. Our land is going back to desert. That's what we'll yell. Save us. Save our kiddies from this awful fate. The Congress will go for that. You know, people in distress. The dry well and the dust in the eyes stuff. Never mind about what California will do. We'll get the water, because California ain't using it all right now, and water should go where it can be used right now, not in years to come. Never mind that California has built projects to use this water in the future. Didn't we tell you what to do with the future?

"What an idea, eh? So go ahead and pump, boys. Pump day and night. California and the United States Treasury will pay the bill."

In some respects the psychology of the Arizona schemers must be commended. For instance, they joined up with the Bureau of Reclamation, each putting out some money, to concoct a report on the proposed project. This was just dandy with the Bureau.

Today in the Bureau of Reclamation we find a group of men who have one paramount idea in mind. That is to perpetuate themselves and their policies. To do this they must have immense, long-range projects, projects that will take a generation to construct, and they must have absolute control of those projects. For, by controlling these projects they control the people, their lives, and their economy.

What happened? The Bureau of Reclamation issued a report advocating the Arizona project, but despite its craving for power the Bureau found it necessary to leave open a hatch door or two for a possible escape. Using a weasel's pen, the Bureau buried some qualifying phrases and statements deep in its report. The Bureau admitted there might be no water for the proposed Arizona project because California challenged Arizona's claims to the Colorado River water. If the contentions of California were correct, said the Bureau, there would be no dependable water for the Arizona diversion.

That fact did not stop either the Bureau or the Arizona promoters from asking Congress for more than a billion dollars to build a project for which there might be no water. Not at all. The Bureau and Arizona went right ahead.

Get the water first, and then let California squawk.

During the period of wild expansion and wanton pumping Arizona had no law governing the taking of water from underground basins. Anybody who had some land could sink wells and pump all the water they wanted, and the State did not care a hang. Sink the wells and pump the water, get the cash. That was the program.

Let us look at the record:

In the Bureau of Reclamation report on the Arizona project we find this on page R–6:

> There being no statute to control pumping from the ground-water basins in the State of Arizona, exploitation of the ground-water resources followed with increasing rapidity. * * * As a result of district and private drilling operations, the number of irrigation wells in the central Arizona project area increased from about 400 in 1920 to 750 in 1930, and to more than 1,100 in 1940. Since then, intensive drilling has taken place and by 1946 about 1,700 wells were used as a source of irrigation water.
>
> * * * during the period of 1940–44 the average annual pumpage exceeded the safe annual yield of the ground-water basins by an estimated 468,400 acre-feet a year.

In the Bureau's report History of Reclamation the following statement may be read:

> Beginning in about 1935 pumping over the entire area increased at an alarming rate.
>
> Soon after 1935, concern was being expressed over the gradual but continual lowering of the water table. It had become apparent that the ground-water supply was not inexhaustible. This seems only to have stimulated competition and the race was on for the water stored in the several underground reservoirs. Irrigation wells were drilled and pumps installed in all districts.
>
> * * * individuals and irrigation organizations vied during and after the war for the services of the limited number of well-drilling outfits.

A. L. Bartlett, president of the Pinal County Farm Bureau, told the Eightieth Congress in 1947:

> During the last 6 years the yearly draft on ground water has increased to such an extent that water requirements for the area now under cultivation are drawn from reserves in ground-water supply, the draft being greatly in excess of the amount recharged into the ground-water reservoir.
>
> About 1940 it became apparent that the safe yield of the basin was being overdrawn. With the beginning of the recent war period the bringing in of new land continued at an increased rate and with the intensive crop program practiced during the past 6 years the yearly draft on ground water has increased to such an extent that water requirements for the area now under cultivation are drawn from reserves in ground-water supply.

J. H. Moeur, president of the Arizona Reclamation Association, and an official of the National Reclamation Association, told the Seventy-eighth Congress in 1944:

> The underground water now being pumped for irrigation is largely in excess of the recharge to the different underground basins, and hence the underground-water supply is being rapidly depleted. If present practices are continued, serious difficulties will be encountered.

At the same hearings Ray Killian, secretary of the Roosevelt Water Conservation District, said:

> During the past 5 years the water table has lowered an additional 20 feet on the average throughout the district.

And J. H. Sossamon, of the Queen Creek irrigation district, testified in the past 6 years the underground-water level in his area had dropped over 20 feet, and that this "shows we are drawing water in that district beyond replacement of the underground flow. If it is to be continued, some of the land will have to go out of cultivation."

John W. White, a grower of the Eloy area, stated:

> All I have to say is our water level is dropping very rapidly * * * and if we keep on pumping water out in my estimate there won't be any there in a couple of years.

I might cite many more statements of this kind, but these will serve to illustrate that Arizona well knew what was being done, and that Arizona continued to plunder her own water treasury without abatement.

The State government of Arizona knew, too, and cooperated in the plundering.

In substantiation of this charge, I shall refer to the records of the Eloy and Maricopa areas in the Pinal unit outside the San Carlos project.

The certificates of purchase issued by the State land office in Phoenix for these sections were inspected. From these certificates a compilation was made of all land purchased from the State by private parties during the years 1939 to 1947, inclusive.

From the county assessor's office of Pinal County data were obtained that showed which of these lands were irrigated by pumps during these same years.

Let us look at the totals.

In the year 1939, in these areas, 32,532 acres were irrigated by pumping underground water.

In the year 1940 a total of 24,054 additional acres were brought under pump water.

In the year 1941, when we entered the war, 18,446 new acres were brought in.

The new acreage brought under pump water in 1942 was 17,067.

New materials for wells and pumps, as well as well-drilling labor, became scarce, and in 1943 only 7,029 new acres could be added, irrigated from underground wells. The new acreage for 1944, for these reasons, was only 6,388.

But in 1945, the year the war ended, material and labor became more available, and the dream of the central Arizona project was forming in the minds of the speculators and big landowners. In 1945 a total of 25,566 new acres were cultivated by pumps. The total of new acreage increased even more in 1946—to 28,067 new acres.

I have already presented evidence to show that this reckless expansion and profiteering was carried on in the face of knowledge that the underground water would soon be exhausted. That, as I have said, did not stop either the speculators or the State government from continuing their program of destruction.

So, in the years 1939 to 1946, a total of 159,149 acres were added to the draft on a constantly diminishing reserve. This was done deliberately, with knowledge that there were no surface streams to replace the accumulations of geologi-

cal ages that were being mined by the pumps put down in these 7 years to irrigate that 159,000 acres of desert. A hundred and fifty-nine thousand acres were thus brought into irrigation in just this one unit of the project to take advantage of high prices and with no regard for the future.

But this Eloy-Maricopa unit is just a small part of the story.

Let me read a few words about Pinal County expansion from Arizona's own propaganda book on the central Arizona project. It is called Presenting the Central Arizona Project to You, and on page 67 the Pinal County Research Committee states that in 1936 only 75,000 acres were irrigated in that county, and continues:

In 1941 there were 110,000 acres of land irrigated, and in 1946 approximately 300,000 acres were under cultivation and irrigated principally by pumped water. * * * Water was withdrawn from underground reservoirs at a rate of 188 percent of the 1940 withdrawal.

On Arizona's own figures, the expansion from 1941 to 1946 was thus 190,000 acres. This was desert land, known to have no surface water supply. Until 1948 there was no State statute which might effect control over the sinking of new irrigation wells. A landowner could install as many pumps as he needed, regardless of the fact he might be contributing to the destruction of the underground basin beneath an entire area. Underground basins must be replenished the same as water in the radiator of an automobile; otherwise production stops.

The Arizona speculators and big landowners are continuing to destroy their underground reserves. Now this is where the central Arizona project steps in to save them.

They want 1,200,000 acre-feet of water from the Colorado River that does not belong to Arizona, that belongs to California. They are demanding this water admittedly to "rescue" their lands.

No, they do not want to stop pumping. They have invested immense amounts of money in pumps costing all the way from $18,000 to $30,000 each, and they have invested money in lines and stations to bring power to those pumps. They do not want to abandon this huge investment, even if they made it to make a killing in the wartime boom, and even though many of them have got back their investment several times over.

This is what they want:

They want the Colorado River water primarily to replenish the underground basins that they deliberately overdrew for wartime profits. They want this water in other areas to supplement the pumped water by flowing to their fields on the surface, and then going into the underground basins.

They want this water to "rescue" their wartime speculations.

Mr. Speaker, they want water that belongs to California to perpetuate a scheme born of the vicissitudes of war and nutured on wanton destruction and plundering.

Years ago the water Arizona seeks from the Colorado River was awarded to California by Federal contracts. And believing in the sanctity of these contracts, the people of California have obligated themselves to pay debts amounting to more than half a billion dollars for projects to bring Colorado River water to their cities and farms.

These Federal contracts are instruments of Federal law. Are we—the Congress—going to repudiate these instruments which we once sanctioned? Are we going to destroy these contracts to give water to a group of land sharks and water brigands?

Are we going to condone a gigantic project that is conceived of misrepresentation and humbug?

Are we going to take from 5,000,000 people in southern California the economic security we once gave to them? Are we going to jeopardize the future of millions of people, billions of dollars' worth of industrial developments, and more billions of dollars' worth of agriculture in California, for a handful of landowners in Arizona?

Are we going to hand these Arizona despoilers $1,500,000,000?

I ask you, look into this rescue project as I have done. I know that you will close the glossy book of Arizona propaganda and say, as I have said:

"This fantastic scheme will be defeated."

Mr. Lie Forgets

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. DINGELL. Mr. Speaker, in the Washington News of yesterday, March 22, 1950, I find reduced to its simplest and understandable language a classic example of straight thinking at its best, by Ludwell Denny.

The eloquence of Trygve Lie addressing the B'nai B'rith delegates was so impressive as to confound the average listener and even lead him to believe that a solution was being offered for the Russo-American deadlock.

It required the penetrating and analytical mind of Ludwell Denny to point out the obvious fallacies of the United Nations Secretary. Mr. Denny most ably points the way, and the only way, to an understanding rather than appeasement.

The article reprinted herewith speaks for itself and I commend it to the membership of this House, especially the members of the Committee on Foreign Affairs:

MR. LIE FORGETS

(By Ludwell Denny)

Nothing will come of United Nations Secretary-General Trygve Lie's proposed 20-year program for American-Russian conciliation, in the judgment of diplomats here.

In suggesting negotiation which requires honest give-and-take by both sides, Mr. Lie specified "I do not mean by negotiation surrender or appeasement by either side." But it is pointed out here that unless Russia surrenders on her policies of aggression, subversion, and obstruction, any settlement would involve appeasement.

Mr. Lie distorts rather than clarifies the situation. His premise that the struggle is between the United States and Russia, and that they are both at fault, is fallacious. Doubtless Mr. Lie thinks this is a sign of his nonpartisanship or neutrality. But, regardless of his intent, this helps Russian propaganda.

The conflict is not essentially between the United States and Russia, but between the UN—the entire non-Soviet world—and Russia. The United States, as the major democratic power, carries most of the burden of defense. But our Nation, being farther away and stronger, is in less danger than weaker Europe and Asia.

The issue is not that Stalin is in conflict with some exclusive American policy, but rather that he is violating all the major allied agreements and treaties.

Mr. Lie in asking the United States to negotiate with Russia on a basis of honest give-and-take, apparently is forgetting three things:

In the allied agreements, in the satellite treaties, and in the UN Charter—all of which Stalin is now breaking—the western powers did the giving and he did the taking. In effect they gave Russia most of eastern Europe and the strategic points of China. They gave him extra representation in the UN; they gave him veto power with which to paralyze or kill that body.

There is nothing left which the United States can honestly give Stalin, even though it got something in return. Any such deal between Washington and Moscow would inevitably be at the expense of others. Washington has neither the lawful authority nor the moral right to legalize Stalin's violations of international agreements. Washington lacks the power—as well as the will—to sanctify Stalin's aggressions.

For legitimate negotiations there is no need of a Lie plan or any other. The facilities already exist in abundance. There are American and allied representatives in Moscow, and Soviet diplomats in the allied capitals. There is the UN, which is directly involved, as the proper seat of negotiations.

It is Russia that has walked out on the UN—not the United States nor its allies.

Housing Act of 1950

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mrs. KELLY of New York. Mr. Speaker, it was a great disappointment to me to have the House of Representatives, by a vote of 155 to 108, wipe out of the Housing Act of 1950, title I, or the new cooperative section. This was accomplished by the combined vote of the Republicans and the southern Democrats. The final vote on the bill, shorn of this new feature, was 361 to 10. Disregarding a special appeal from President Truman, from the American Legion, the Veterans of Foreign Wars and organized labor, the bill's objectors did not waiver in their opposition. The Republicans and southern Democrats voted title I out of the bill. It is important to note that they offered no substitute nor any provision that would afford housing for the middle-income families. Are there no middle-income families in their

UNIVERSITY OF MICHIGAN LIBRARIES

districts? Or could it be that their desire to kill every Administration bill transcends their responsibility to their districts?

The President, in his 1950 State of the Union message, wisely asked Congress to pass a Housing bill designed to supplement existing housing legislation in order to provide relief and assistance for the forgotten class of our citizenry, the middle-income group—those who earn between $2,800 and $4,400. This group comprises one-third of the national population, the backbone of the Nation. What benefits them, benefits our Nation.

By the use of housing cooperatives and similar nonprofit organizations, title I would have provided good housing for middle-income families at a monthly cost which such families could afford to pay. These cooperatives or similar nonprofit organizations would have made possible a savings in management and operation not generally attainable in the case of rental projects operated for profit. Opponents of this bill claimed it was socialistic. They overlooked the fact that cooperatives are widely used by those in the high income brackets and this they do not consider socialistic. Title I was an endeavor to encourage free enterprise to invest capital, guaranteed by the Federal Government. No subsidy was involved. Safeguards were provided against the use of cooperatives for speculative purposes. They combined the best features gained in the course of 15 years of experience in two of our successful agencies administering governmental assistance to private enterprise and to housing—the Federal Home Loan Banks and the Federal Housing Administration.

The action of the House of Representatives in destroying the cooperative housing feature of this bill was a blow, not to the Administration, but to the people of the United States who rightfully looked to Congress for a solution to their housing problems.

Study Indicates Mail, Pets, Milk Ride Rails at Expense of Passengers

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wall Street Journal, Pacific coast edition, for July 6, 1949:

STUDY INDICATES MAIL, PETS, MILK RIDE RAILS AT EXPENSE OF PASSENGERS—CARRIERS' PLEAS FOR HIGHER FARES, FREIGHT AND EXPRESS RATES MAY BE AFFECTED—LOTS OF RED INK IN 1948

(By M. M. Diefenderfer)

WASHINGTON.—The man in the parlor car may be paying part of the fare for the pet dog, the can of milk, and the bag of letters in the head end of his passenger train.

The head end is the front section of railroad cars separating the locomotive from coaches and pullmans. It carries mail, express, packages, pets, milk, and cream—everything but people.

Interstate Commerce Commission economists believe the head-end load is dead beating on passenger fares. If they're right, it means train passengers are bearing more than their share of the costs of running these trains.

Preliminary findings of a confidential study now under way at the ICC bear out the theory that charges for nonpassenger items don't always cover costs of carrying them. If the finished study shows people are more than paying their way at today's passenger rates, it will have far-reaching effects on the costs of sending anything by rail—either in freight cars or faster passenger trains.

WOULD AFFECT ICC DECISION

Immediately, confirmation of these thoughts would dampen the likelihood that 60 eastern railroads will get the 12.5 percent increase in passenger fares that they're seeking. But all railroads might get more mail pay from the Government.

The ICC's Bureau of Transport Economics and Statistics expects to finish its study on the costs of carrying people and things on passenger trains before hearings begin in Brooklyn July 13, on the eastern roads' fare rise proposal. These railroads do more than half the Nation's passenger-train business.

The ICC study is the first ever to be made to break down passenger train costs for the 132 class I railroads—those doing a gross business of $1,000,000 or more annually. Though the roads report fully on revenues receive from each of 20 types of services offered on passenger trains, they make no effort to allocate the costs of each of these.

When its study is completed the ICC hopes to be able to pin point, at least for its own purposes, the comparative cost of carrying a person, a truck, a letter, or a can of milk on a passenger train. There is no plan at present for making the findings public.

But with such ammunition, the ICC experts, who approve all rail charges, can decide what part of the traffic should bear added costs of running the railroads.

PASSENGER SERVICE DEFICIT

In 1948, the railroads said their passenger train services ran $560,000,000 into the red—a record deficit. Though passenger-train revenues more than paid current operating expenses, there wasn't enough to pay the passenger service share of the general overhead expenses of running a railroad—roughly 24 percent of the total.

Head-end traffic makes up about one-fourth of total passenger-train income. The ICC study is expected to show that the costs of these services are more than a fourth of total expenses.

In 1948, for instance, the Nation's passenger-train services took in $1,435,000,000. Train tickets for passengers accounted for $962,600,000. Head-end income ran approximately $336,400,000 with mail service bringing in $198,900,000; express $116,600,000; milk delivery $14,500,000; baggage $2,600,000; and freight $3,835,000.

The rest of the income is from dining-car and buffet services, operation of hotels, restaurants, parcel rooms and baggage storage, telephone and telegraph services, and similar miscellaneous items.

In only 3 years out of the past 13 has the passenger-train service turned up a profit for the Nation's railroads. These were the peak war years 1942 through 1944, when passenger service made an average annual profit of $250,000,000. In the following 2 years, passenger trains paid their way but failed to turn a profit. The $560,000,000 deficit reported for 1948 is more than double the stiffest loss for the six prewar years from 1936 through 1941.

BEARING ON FOUR PROBLEMS

The cost figures now being worked up by the ICC are expected to have significant bearing on at least four problems now being mulled by the regulatory agency. These are:

Railroad mail pay: The railroads are asking for an 80-percent increase over the 1946 mail-pay rates. ICC in December 1947, granted a 25-percent temporary mail-pay hike, effective retroactively to February 1947 and continued to study further rises. It agreed to make its final adjustment also retroactive to February 1947.

If the full 80-percent requested boost had been in effect during 1948, passenger-train revenues would have been $129,000,000 more—and the deficit about one-fourth less. In 1948, mail revenues accounted for a little less than 14 percent of passenger-train income. If ICC finds carrying the mail accounts for more than 14 percent of operating expenses, it may order the Post Office Department—and it has the authority to do this—to pay the railroad more—up to the 80-percent increase—for the job.

Freight rates: Shippers protest that freight is bearing more than its share of the burden of supporting the railroads. They oppose the carriers' current plea for a new 13-percent hike in general freight rates over the 1948 level.

These shippers say their freight rates are being raised to help offset losses on passenger-train service. The ICC is now completing its report on this 13-percent freight rate boost; the findings of the passenger-train cost study are expected to have a hearing on the freight-rate decision, especially if ICC experts find some passenger-fare services aren't returning their share of costs.

WANT HIGHER FARES IN EAST

Passenger fares: The eastern railroads want to boost their fares from the present 3 cents per mile in coaches and 4 cents per mile in parlor and sleeping cars to 3.375 cents and 4.5 cents, respectively. The fares east of the Mississippi and north of the Ohio are already a half cent higher than those charged on western and southern roads.

An ICC expert points out that if the cost-study proves to ICC's satisfaction that passengers are already paying their share of the expenses, the rate-setting agency won't burden the traveling public with increased fares to pay for the losing head-end services. Passenger revenues this year are already expected to be 12.8 percent below the 1948 level, due to a slow-down in train travel. ICC thinks higher fares, if not fully justified, may divert more travelers to other forms of transportation.

Express rates: The Railway Express Agency's dilemma is certain to be affected by the cost study's conclusions, say ICC insiders. In the wake of three rate rises since December 1946, express volume has more than halved, dropping from 231,000,000 shipments in 1946 to an estimated 100,000,000 shipments this year and 35,000 REA workers have lost their jobs.

Now the railroad-owned-and-operated agency is asking for another 10 percent increase in rates. At the same time REA claims it will be forced out of business unless the Post Office Department puts much stiffer rates on parcel post and cuts back drastically the 70-pound maximum weight for parcel post to the 11-pound maximum set by Congress in 1913. Their argument is that the Government is handling a large part of the package-carrying business which should go to the Railway Express Agency.

Volunteer Firemen Risk Their Lives To Serve Others Unselfishly

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. BOGGS of Delaware. Mr. Speaker, from the floor of this House during the past 2 years I have frequently spoken on behalf of the hundreds of thousands of volunteer firemen throughout America.

On those occasions I have directed attention to the unselfish services which the volunteer firemen render in their respective communities. I have repeatedly called attention to the fact that volunteer firemen serve the public without remuneration and with great inconvenience to themselves. I have pointed out that they answer the call of the fire siren at all hours of the day and night and in all types of weather. I have also stated, Mr. Speaker, that in order to protect the property and save the lives of others they consistenly endanger their own lives in their devotion to duty.

As a single example of the foregoing, Mr. Speaker, I direct attention of the Members to the sacrifice and suffering of my personal friend, Guy H. Bowdle. Mr. Bowdle is an independent businessman in Dover, Del., and is a member of the Robbins Hose Co., of which I am also proud to be a member.

As a volunteer fireman Guy Bowdle recently responded promptly to the call of the fire siren in Dover. As the speeding fire engine on which he was riding swerved sharply around the corner he was thrown to the roadbed. Almost miraculously he avoided death but suffered a broken vertebra. This painful and serious injury has incapacitated Guy Bowdle for some time to come.

Mr. Bowdle is a young married man with two children. He is an overseas veteran of World War II. He is an active participant in public and community affairs. He typifies, Mr. Speaker, the hundreds of thousands of American citizens throughout this country who unselfishly serve as volunteer firemen.

As a part of my remarks I include the following editorial from the March 9, 1950, issue of the Index, which is published in Dover, Del.:

"GREATER LOVE HATH NO MAN"

Guy H. Bowdle, Dover industrialist, lies in bed at his home, suffering from a broken vertebra caused by his falling from a fire truck en route to a burning building. Guy, a much-liked man in this community, was not receiving, or hoping for, any remuneration whatever for his efforts when the accident occurred. He was acting in his capacity as a volunteer fireman in the organization here, known as Robbins Hose Company.

That the fireman is not dead, instead of suffering from such a painful injury, is due to a miracle. He fell as the truck, in which he was rushing to the blaze, swerved around a corner at a street intersection, and it would have been no extraordinary occurrence for him to find himself beneath the wheels of a fast-traveling motor vehicle, which would have crushed the life from his body.

It is our opinion that Guy Bowdle is a martyr to one of the noblest of causes—volunteer fire fighting for the protection of the life, limb, and property of our citizens—and we call upon all of our hero-admirers to write to him, or, better still, call upon him at his bedside and let him know that we really and truly appreciate the efforts of one who becomes critically injured while endeavoring to help his neighbors and friends.

Guy Bowdle didn't actually die for his friends, but he didn't miss doing so very much, and we would like to quote this biblical verse in giving this daring young man his just dues: "Greater love hath no man than this, that a man lay down his life for his friend."

Maybe, after a great deal of seeing with our own eyes the hardships they suffer, all of us will more fully appreciate the efforts of our fire-fighting young men. We sincerely hope so.

Should We Dye Farmers Blue?

EXTENSION OF REMARKS
OF
HON. CECIL M. HARDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mrs. HARDEN. Mr. Speaker, under permission to extend my remarks, I should like to call to the attention of my colleagues in this House an editorial appearing in the current issue of the Farm Journal. The editorial further explains the Farm Journal's recommendations for a new, long-range agricultural program for this Nation. I commend it to the attention of every Member. The editorial follows:

SHOULD WE DYE FARMERS BLUE?

No permanent solutions to the farm-surplus questions are going to be found by passing laws about surpluses. Man-made laws cannot change nature's laws.

Permanent solutions will come with new crops, with new uses for farm products, with feeding more of these products to livestock, with better methods, and with a larger buying population. But they do, naturally, come slowly.

Meanwhile nothing will stop Government from trying still further stopgap measures. It has been trying them for 20 years. They have varied from killing pigs and plowing under cotton to coloring potatoes blue. Some farmers have benefited from some of these temporary measures; and there is still the widespread illusion that Government can find all answers.

Many of these patchwork programs have tended to guarantee that more surpluses will be produced.

The best good sense in agriculture, it seems to us, ought now to turn resolutely toward two purposes. After 20 years of expediencies, farmers surely must be ready to demand more aggressive action toward ways to stop creating surpluses. That is number one.

Number two is to look for the least harmful and dangerous of the expediencies yet to be tried. If we are determined to patch with more baling wire, let's at least use the best wire.

Every sign indicates that a determined effort will be made to turn the Brannan plan into a major 1950 campaign issue, both in farm and city districts. Whether or not the plan wins votes, such strategy will push agricultural policy further than ever into the political mire. We don't think farmers want that to happen.

The farm program which Farm Journal supports calls for no miracles to be passed by Congress. We have proposed—and have supported by a series of how-to-do-it articles—a vigorous tightening up in feed and livestock production methods, so that animals can eat and store some of the surpluses; and then can be sold at prices which will bring farmers profits, but permit consumers to buy meat, milk, eggs. Promotional campaigns should then persuade consumers to eat more animal products.

We have urged that research funds be multiplied, so that new crops and new uses can step up the profitable opportunities in the farming business. We have urged cutting government down to the size the country needs, so that incentives to improve will survive.

We shall gladly support other measures when we find others that make sense, if they are needed, even though they may be temporary expediencies. But not the kind that clearly will lead to worse expediencies, and to perpetual surpluses.

We believe that agriculture in America can lead rather than lean; that it can influence labor and industry to produce more rather than less; that it can support a reasonable government, rather than have to be supported by government; and that it will not be necessary to dye farmers blue to accomplish these things.

The Aspiration for Freedom

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Friday, March 24 (legislative day of Wednesday, March 8), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a talk entitled "The Aspiration for Freedom," delivered by Mr. Beardsley Ruml before the American Association of School Administrators in Atlantic City, N. J., on February 23, 1950. Mr. Ruml is famous throughout the country as psychologist, educator, financial authority, businessman, and philosopher. He and I have been associated in many common interests and enterprises, among others the Committee for Economic Development which he is now serving so notably as vice chairman of the research and policy committee. In this speech Mr. Ruml gives us important new insight into the meaning of the word "freedom." This is indeed the most important word of our times. The attainment of freedom is the principal goal of the world's peoples. In this brilliant discussion Mr. Ruml calls upon his lifetime of experience as scholar and social scientist and as an active leader among men of affairs to provide us with a better understanding of the requirements of freedom and how our social institutions can contribute increasingly to the supreme ideal of promoting its attainment.

I am informed that the manuscript will exceed the two printed pages allowed under the rule without a statement of

UNIVERSITY OF MICHIGAN LIBRARIES

cost, and that the estimate is 2¾ pages at a cost of $225.50.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ASPIRATION FOR FREEDOM

For us in the United States, but not for us alone, the word "freedom" comes down the years as a symbol of ends and means, as a rallying cry for effort and sacrifice, as an organizing principle of human faith and aspiration.

From time to time, freedom has been the central issue in conflicts about religious worship, governmental forms, political parties, industrial organization, education, race, the pressures which make the familiy in institution. Freedom appears as "liberty" in the Declaration of Independence. The battle cry of freedom was raised in our Civil War in the last century. The four freedoms—freedom of worship, freedom of expression, freedom from fear, and freedom from want—set the elementary goals of the freedom-loving nations everywhere in the world.

The power in the insistent demand for freedom has cracked open religious institutions, upset dynasties, inspired revolutions, and armed tens of millions of men and women in its defense.

Yet for a long time in our ordinary everyday affairs, human freedom had been somewhat taken for granted in the land of the free. In principle, the dignity of the individual was accepted as a matter of course. But word of mouth acceptance of doctrines pertaining to human freedom and the relegation of its protection to the courts left us insensitive to practices by which these doctrines were being undermined. World War II aroused us to the dangers in this neglect, and the doctrines on which human freedom rests have taken on new strength and new meaning.

The freedom-loving nations were as little prepared for the moral struggle of World War II as they were to withstand the sharp edges of the blitz. They reached back into their honorable traditions and found good doctrines which they have put to use. These doctrines were dusty but in excellent condition, and they proved to have the power to inspire men to effort and sacrifice.

Our denial of the comprehensive and explicit blasphemies of the Axis turned out to be the affirmation of insights of great antiquity, and of the human doctrines of the American and the French Revolutions. The ambiguities and contradictions of World War I and of the political struggles of the 1920's dropped into place before the sweep and clarity of this new conflict for the possession of the human soul.

The ancient doctrines of freedom were proclaimed by the leaders of the freedom-loving nations. The heat-of-war violence and the early searchings of doubt as to victory gave to these doctrines a life and urgency which transcended to casuistry of political and literary formalism. Today, faced with the impact of Soviet imperialism, the conditions of men in the freedom-loving nations are being tested again in terms of these ancient and new-living doctrines. Many obvious and easy reforms are being made, others more difficult are being projected.

Whatever the future may bring, the humane ideals of personal freedom have become active official doctrine. The people will continue to believe that the true road leads toward freedom; and, with ups and downs, the people will follow according to their understanding and their intuitions.

What is freedom? Why is freedom so much desired?

The meaning of freedom has varied from time to time and the stated purposes of freedom have changed with the objectives of those who have invoked it. For some, freedom has meant the condition of man in a state of nature. For others, at the opposite pole, it has meant a range of human activity guided strictly by the dictates of reason. At times, freedom seems to imply mere equality under the law. At other times, freedom asserts the elevation of human rights to a position above man-made statutes.

Today we have our contemporary concept of what freedom is and what it is for.

Today what people want when they demand freedom is a condition under which they can realize with reasonable completeness the potentialities as persons that inhere in their capacities as individuals. The demand for freedom is a demand for fulfillment, for survival, for growth, for life, not in the material or biological area alone, but also in the realm of mind and spirit.

Within an accepted system of values, the individual human will fight for his freedom as he would fight for his life, indeed, it is his life for which he fights. Whether the protest against restraint be directed toward religious orthodoxy, hereditary autocracy, unequal suffrage, industrial decisionism, or bureaucratic regimentation, the emotional fury and the reckless disregard of material welfare reveal the struggle for what it is—a fight for survival in which no price is too great to pay to save what has been embraced as the essential core of freedom.

Just as plants and animals of the same species have common, irreducible necessities for their growth, so too do human beings have in common minimal conditions for the realization of the fullness of themselves as persons. These minimal conditions define the common content of freedom, and as our knowledge of what is useful and good for human development grows, our conception of what freedom requires grows along with it. And just as different animals and different plants require different foods and temperatures and ways of movement for their unfolding, so different individuals find different circumstances helpful for the meeting of their needs.

Since the demand for freedom is a demand for conditions that favor the achievement of full richness of personality and individuality, the specifications necessarily change from time to time and from person to person. It becomes clear why so little is required by many, and so much by a few. The demand for freedom reflects the culture of time and place and person, the things that seem worthwhile, and prevailing notions as to the nature of the personality.

In general terms it is therefore apparent that there exists the most intimate relation of dependency between freedom and education. But recognition of this relationship in general terms takes us only part way in giving to citizens, professional educators or laymen, who are deeply concerned with education, the perspective and the intuitions necessary to make substantive contributions in shaping today's education to respond to today's requirements in the preservation and advancement of freedom.

Accordingly, the balance of this paper will be devoted to a detailed analysis of certain aspects of the problem of freedom, which I hope may be of some practical use.

This analysis, which does not pretend to be comprehensive, falls into three parts. (1) The feeling of freedom; (2) the fact or freedom; and (3) order and consent as related to freedom.

No attempt will be made to make specific application to educational policies or to school practices although certain general inferences will be obvious.

THE FEELING OF FREEDOM

The will for survival is the impulse to freedom. But to understand freedom itself we must go beyond mere recognition of the impulse. When we go deeper we find that freedom has two distinguishable phases, the feeling of freedom and the fact of freedom. We shall observe that the feeling and the fact of freedom may exist independently one of the other. This separability of fact and feeling causes many misunderstandings about the problem of freedom, since, to satisfy our aspiration for responsible individuality, we must have both. One alone is not enough.

The feeling of freedom is a state of mind. It is a sense of power to make a choice between alternatives. It is a feeling of power to impose one's own will on the direction of events. The individual feels that his own uncoerced act has made events what they have become, and that he might have made them different had he decided differently.

The basis for the individual's feeling of power lies in his prevision of the consequences for the future that reside in his yet-to-be-taken choice between alternative actions. And it is in the feeling of power and in the feeling of the possibility of power over the course of events that we find the source of awareness of one's own personal dignity and worth-whileness. In this wareness we have the feeling of freedom.

Three conditions are required for the existence of the feeling of freedom. First, in the period of choice the future must enter into the conscious present as an influence on a decision yet to be made. Second, at the time the decision is being made the individual must be aware that the decision is being made, and the degree of the feeling of freedom is related in some degree to the keenness of this awareness. Third, the feeling of freedom depends on whether the area of choice is felt by the individual to be adequate for the act. To put it another way, it depends on whether the act is felt to be coerced by circumstances or by the laws of man or of nature.

Let us examine these three conditions for the feeling of freedom in more detail.

The first condition requires that, in the period of choice, the future must enter into the conscious present as being formative with respect to a decision yet to be made.

To feel free we must be able to see the consequences of what we are about to do. There is no feeling of freedom in blind choice, nor in decisions made merely to get on from one moment to the next. If we see the future which we are about to influence as a long one, our feeling of freedom has more significance to us than if that future is short. If we can see the consequences of our choice clearly, our feeling of power is greater than if the outcome is uncertain or unclear. If the events we determine seem important to us, we feel our free act to be more important than if the events seem trivial. In any case, we cannot feel free unless we are aware of a possible future which our present decision is intended to influence.

The second requirement for a feeling of freedom is that, at the time a decision is being made, the individual must be aware that a decision is being made.

People make decisions with varying sense of the imminent act of will. The sense of the act of will must be keen if the feeling of freedom is to be strong. The degree of keenness is lowered by fatigue and by the stress of emotion. It is lowered also by habit; by repetitive decisions, no matter how important, on questions which are familiar and the solution of which has become more or less routine. The human animal would have a hard time making his way in the world if every free decision were accompanied by acute consciousness of the act of choice. On the other hand, the dark of unconscious adaptation and of depersonalized judgments, expressed under conditions of fatigue or routine, must be illumined by occasional moments of explicit awareness of responsible choice. Without such moments there can be no feeling of power and no individual dignity. Clarity of apprehension of the act of will in the moment of decision is necessary if we are to have the feeling of freedom.

Finally, the feeling of freedom depends on whether the area of choice is felt adequate for the act; that is, whether the act is felt to be coerced. All decisions are made within

a frame of order. As we shall point out, this frame of order is determined by the laws of nature, by habit and custom, and by man-made rules. As long as the desired objective can be attained by the choice of alternatives within this structure, the individual feels uninhibited by coercive restraint. The feeling of freedom will, therefore, exist when the area of choice is wide enough to permit achievement if the correct decisions are made.

The feeling of freedom does not require unlimited discretion. Indeed, without a structure of order, the system of decision becomes amorphous and freedom vanishes. Decision involves a choice of alternatives within a system of pressures that gives rewards and imposes penalties. These pressures give significance to the act, but the act itself remains free. The pressures not only do not limit the sense of individual power, but they define the scope of risk, reward, and penalty. Accordingly, they give meaning to effort, success, and failure in determinations made freely by the personal will.

It follows from these three conditions that the feeling of freedom may exist under conditions of extreme regimentation and restraint. Once an individual accepts for himself the inevitability and propriety of the human and natural laws that bind him, once he limits his aspirations to achievements that can be had by successful decisions among alternatives within this frame, his feeling of freedom may be complete. All that is needed beyond this is present awareness of a future which is attainable, and clear consciousness in the moment of decision.

For this reason the feeling of freedom is not enough. Unless the fact of freedom is associated with it, the feeling of freedom can become, in the hands of the ambitious, an instrument for the degradation of their race. The illusion of freedom without the reality will be unstable, since, sooner or later, new leadership will arise to release the basic impulse to freedom. If such leadership does not arise from within, it will penetrate from without—today more easily and rapidly than ever before. Then, through education, compromise, or revolution, the march toward freedom will be resumed.

THE FACT OF FREEDOM

The feeling of freedom, being a state of mind, is largely determined by inner, subjective influences. The feeling of freedom exists authentically for one person under circumstances that would cause another to feel enslaved.

The fact of freedom, on the contrary, exists in the relations of the external world of things, persons, and events to the individual. As we have said, freedom is a condition in which people can realize with reasonable completeness the potentialities as persons that are inherent in their capacities as individuals. Obviously, these conditions are not the feeling which an individual may have about his world, satisfied or dissatisfied though he may be.

The individual cannot know completely the conditions that are necessary to assure him the fact of freedom. He may know, in part, the range of potentialities that are inherent in his capacities, and he may have some notion as to the circumstances that are required in order that he may achieve them. But he does not know all, nor can he. Nor are there experts who can specify the extent of possible human advancement. The science of physiology and psychology are incomplete and, in spite of great progress which can be expected in the future, they will doubtless remain so. The best that can be done is to draw on the intuitive and scientific wisdom that is at hand, and to establish in our society the institutions and practices which will give the known conditions for the fact of freedom. As our wisdom grows, the established conditions for the fact of freedom must grow as well.

Three conditions determine the extent to which the fact of freedom exists.

The first condition is a healthy and developed body and mind to serve as instruments of the will. The second requirement is the opportunity for responsible choice, for making the decisions through which the unfolding of the personality can in fact be achieved. And the third requirement is that the individual must have access in large measure to the natural world, to climates, soils, minerals, and seas, and to a normal human society of which he is a part.

First of all, a healthy and developed body and mind are indispensable if the will is to be well served. Many of the essential conditions for proper development of body and mind must be established in infancy and early childhood. The individual must learn to eat what is good for him, and he must have the opportunity to do so. Useful habits and skills must be acquired. He must be able to use a language, to speak, to write, and to read. A man who is illiterate cannot realize his potentialities, and therefore he is not free. A man who knows only one language is less free than one who knows more. He must have facility with the use of numbers. He must be at ease with ordinary social usage so that he can manage the conventionalities that will give him access to the social world which he needs to become a person fully himself.

The requirement of a healthy and developed body means the protection of the individual from accident and disease. It means access for all to resources for the repair of bodily injury and the treatment of sickness. It means a minimum of food and shelter, particularly for growing children.

The requirement of a healthy and developed mind is no less important than that of a healthy body. Here the influence of the home, the school, and the church will be crucial. The role of the political party, the social club, and the trade union will also be important in enlarging or limiting the mind of the individual as an instrument for his freedom. As citizens, we want each of these agencies to promote reason and to reduce ignorance on the part of the people over whom they have influence.

Our second condition for the fact of freedom is that of presenting the individual with events and issues where there is both opportunity and necessity for responsible choice.

Let us see what this condition has to do with the fact of freedom. Clearly, a healthy body and a mind of reason are nothing more than the instruments which make freedom attainable. Freedom itself resides in the act of will; and the value in freedom is the growth of the individual person through acts of will in moments of decision involving responsible choice. The fact of freedom is not attainable in a world in which there are no decisions to be made. The opportunity for full realization of what is potential in a personality depends vitally on the nature and scope of the situations in which the individual acts responsibly.

Acts of decision, to be of value for the growth of character, need not be important acts in a public or historic sense. Many authentic choices of a minor character are more fruitful for personal development than are the grand decisions in which the pressure of events and the numbness of conscience produce an automatic and meaningless response. The decisions that count are those in which the individual feels himself free, and for which he is prepared to be judged.

Not only must the individual feel free, his act being consciously his own, but the consequences of the act must be subject to moral, intellectual, or aesthetic evaluation. Was the act good or evil, wise or foolish, beautiful or ugly? These questions make decision difficult, and, as a result, freedom is sometimes a burden.

The third condition for the fact of freedom is access to the natural world. Given all the other conditions, unless the richness of nature is at hand within the area of choice, the unfolding of human talents will be restricted. The material and social world, as it presently exists, sets the boundaries of external stimulus and inspiration.

No one person, to be sure, will have the full measure of his contemporary world at his disposal. But most people could have more of it than they do have if it seemed to them important to make the effort to get it. Everyone can share vicariously in a world larger than his own through the medium of the arts. The arts, the sciences, and commerce have opened doors which for our fathers were closed. In this fact, our generation has an unparalleled opportunity for freedom, but even this opportunity will seem meager to the generations which follow us.

Why should the fact of freedom be set beside the feeling of freedom, equal with it and indispensable? What importance has the fact of freedom to one who feels himself free? Whose business is it? Why should people—why should I—carry an unwelcome burden in the fact of freedom if I can feel free within whatever binds me? And, particularly, if others do not want for themselves the fact of freedom, why should I assume any responsibility for them or for the conditions of their voluntary life?

There are two answers to these questions. First, no man can be free in a company of slaves, however well-contented they may be. He cannot be free because they will not permit him to be free. His words and acts will be a constant irritation to the easy conventions and superstitions of the mob and of its leaders. Having no conscience and no faith in human dignity, the unfree will restrain the free by violence if they are powerful enough to do so. Accordingly, the choice for the free is either to assume responsibility for securing the fact of freedom for all or to amass the force necessary to defend his own freedom against the unfree.

In the second place, it is good that other men should be able to achieve, for themselves, the fullness of personal development and responsibility which one desires for oneself. It is good that they should have this opportunity, whether they wish it or not; and they must not prevent others from enjoying it, even by persuading them that they do not want it. The justification of our aspiration for freedom lies, in part, in our purpose to bring freedom to others and to contribute, in the measure of our own capacity, to the emancipation of the human spirit everywhere.

ORDER AND CONSENT

We live in an orderly universe. The only unorderly element in it is the human will. There are some who do not believe in human responsibility or in the possibility of freedom. They include the human will with the rest of the universe, as determined exclusively by the impersonal laws of nature. For them there is no freedom, only order; only the illusion of freedom; no men, only animals. We must act on belief in human responsibility and the possibility of freedom in a world of order.

The order of the universe comes from three sources—(1) natural law, (2) habit, and (3) the rules of governments.

1. Natural law gives us day and night, the four seasons, rain in summer and snow in winter, the energy in oil and the nutriment in grain. It gives us the generations of men and the instincts of men, the compulsions of anatomy and physiology. It gives us the possibility of habit.

2. Habit is order imposed on protoplasm. The capacity of protoplasm to acquire habits comes from its nature, from natural law. The habits which it acquires, it acquires from its environment.

UNIVERSITY OF MICHIGAN LIBRARIES

Habits may be acquired by plants, animals, and men. Wind, rain, and sun will affect the pattern of movement of branches and leaves. The training of horses for work and for amusement is the adaptation by habit of the inner animal to the outer world.

The habits of a man, like those of an animal, are order imposed on an already ordered protoplasm. Note the structure of man with legs and arms, and neither tail nor wings; the tensions, hungers, and sluggishness of his body; the sense organs he has, and those he has not; the endowment of organization in nerve, bone, and muscle, resulting in reflexes, instincts, and special talents and sensitivities. These are the orderings and the limitations of his nature.

Habit follows nature, superimposing order upon order. From the moment of birth, and before it, adaptation to the outer world begins. As adaptation continues, as the same situations occur over and over again, the response becomes certain, efficient, and unconscious.

Our behavior is ordered in part by our natural endowments, in part by habit, and in part by conscious choice, according to the uniformity and the frequency of particular experiences. But, fortunately for us, we are not required to pass attentively over the same ground, over and over again. Habit steps in to relieve us of that burden.

3. After natural law and habit, the rules of the rule makers give additional form and certainty to our expectations. When rules are wise, they are consistent with natural law. After rules have been operative for some time, they are assimilated and made effective as habits. When they have become habits, they seem as natural as natural law itself.

Rules differ from habits in that they always have their origin, at some time—perhaps long ago—in the decision of a rule-making agency. Rules are the pronouncements of the human will for the control of the human will. They display the insight and blindness, the generosity and greed, the care and carelessness of the human source from which they came.

The order arising from natural law, habit, and the rules of rule-makers gives us such certainty as we possess concerning expectation of the future. Certainty of expectation is indispensable to the full exercise of freedom. Our decisions and our choices always relate to actions whose outcome is in the future. We must have some assurance that if we decide one way, the outcome will be so; if we decide the other way, the outcome will be another. Without order in the universe, there could be no such assurance; and without assurance, without prevision of the consequences of choice, freedom of choice is meaningless. Freedom and chaos are incompatible.

The fact of order in the universe does not, therefore, preclude freedom, it gives freedom its moral significance.

The operations of natural law are generally accepted as limitations to which we must accommodate ourselves. But we need not conform to these limitations with complete docility. We can fight natural law with natural law. A lens can help us see, an electric current can help us hear. We have no wings, and yet we fly. We have quinine, and the recurrent chills and fever of malaria do not recur. For most of us, the limitations arising from natural law appear necessary and valid, and we do not raise the futile question whether they are desirable or not. The intrepid and dissatisfied scientist and inventor sees in these limitations to challenge and solves the problem, using natural law to his purpose. We all gain by this extension of our area of choice, not necessarily in the feeling of freedom, but in the fact of it—since through activity and experience we can become what otherwise we might never have been.

Consent to the existing structure of order is necessary to the feeling of freedom; and without the feeling of freedom, choice is irresponsible and the growth of individuality inconceivable.

Most people accept the order of the world that comes from natural law and habit. But the rules of the rule makers, if they are unwelcome, seem less necessary. They are man-made orders for the ordering of men. To be acceptable when they are imposed, they must be valid; they must be imposed with the consent of the governed. Minorities must concur, at least for the time being, in the decision of majorities. Otherwise, even though the laws of men be necessary and desirable in the building of order and certainty, they are unacceptable in a free society since they have been imposed by one will upon another will, without the latter's consent and without acquiescence in their essential validity.

The consent of the governed is sometimes consent to the rule itself, but, more often, it is consent to the rule making of some recognized authority which decides what seems best. Ordinarily, we cannot know enough about the complicated issues and essential facts to know, for ourselves, whether or not a rule is proper. We must depend on those who make the rules to study the whole situation and to legislate and to administer fairly in the best interests of all. Rule by consent is usually consent to the rule maker's authority, and from this follows, naturally, acquiescence in the rules themselves.

THE ATTAINMENT OF FREEDOM

In the United States the national state is committed fundamentally to the ideal of human freedom. It is committed by the declaration of its independence, and by the bill of human rights which reserve to the individual liberties which even the dominant governing power may not infringe. Its history, its internal dissensions, its conflicts with external national powers—all confirm the constant, if irregular, march toward the goal which inspired its beginning. The ideal of freedom is not merely a statement expressed in various forms in declaration, constitution, and the speeches of public leaders; but it is deeply embedded in the mind and culture of the people. The obvious imperfections in our attainment of this standard are overwhelmingly regarded as deviations from a norm, and not as the repudiation of the ideal. And, generally speaking, the country is committed to the elimination of these imperfections as rapidly as education, insight, and the orderly processes of rule by consent permit.

Now, in our own time, although common moral objectives have not yet been generally accepted, the moral issues of freedom have been drawn again. The issues are old ones, centuries old. Are human beings, all human beings, human? Are they created equal in their rights to life, liberty, and the pursuit of happiness?

Are they entitled to achieve freedom? Do they stand, as persons, above race, sex, creed, and nationality? Are the governments which are instituted among men—governments public and private—ends for themselves alone? Or are they the means of providing a frame of order within which the dignity and worth of each human personality may be actualized through responsible freedom of choice?

It is clear that human freedom in an absolute sense can never be attained. Freedom will always be relative, a matter of more or less. The life impulse to freedom will constantly drive toward more and away from less, even though it be toward a goal which constantly recedes as it is approached and is better understood. There can be no day when it will be said that human freedom has been finally won. Accordingly, we strike, not for a moment of victory that will divide the past from the future, the dark from the bright, but for an expanding opportunity for each and all of us to grow over the years in human stature. The obstacles along the way are ignorance, superstition, and the love of arbitrary power. These obstacles can be minimized by science and education, by spiritual insight revealing the worth and dignity of man, and by a rule of order established and administered with the consent of the governed.

In a country like the United States, so deeply committed to the ideal of human freedom, the various organizations and agencies—public and private—must safeguard and advance the ideal of human freedom. Imperfections and inadequacies are tolerated, but they are not excused. Repudiation of the ideal of freedom is neither tolerated nor excused. Governments may not legally infringe the rights of the people. Church, family, trade union, business, and education will be judged more and more explicitly by the aid they gave to the struggle for freedom.

And as the requirements for freedom are better understood, our social institutions will be tested against increasingly severe standards for individual growth and development; and each institution, according to its own nature, will contribute increasingly to the supreme ideal in promoting the attainment of human freedom.

A Salute to the Salvation Army

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Friday, March 24 (legislative day of Wednesday, March 8), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial entitled "A Salute to the Salvation Army," written by my old friend, Mr. Harry H. Schlacht, which appeared in the New York Journal-American of March 10. This editorial was printed on the seventieth anniversary of the Salvation Army, that fine organization which for the past 70 years has been exerting its efforts in behalf of the poor and the friendless. I think Mr. Schlacht's editorial is a well-phrased tribute to this organization.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A SALUTE TO THE SALVATION ARMY

(By Harry H. Schlacht)

Anniversaries have a threefold meaning. They speak of the past with its inspiration. They speak of the present with its challenge. They speak of the future with its possibilities.

Today we salute the Salvation Army. It is 70 years young. It is an army of peace. It is an army of salvation. It is everybody's army.

It is salvation to all whom it serves. It is salvation to all who serve through it.

They are in the truest sense good Samaritans. They do not pass on the other side of the street when there is someone who needs a helping hand within sight or sound.

They do their Godly work without regard to race, color, or creed.

This uniformed army of salvation is not only ceaselessly fighting to succor hungry

and shelterless bodies but they fight for the souls in these bodies as well.

Where there's need—there is the Salvation Army.

It preaches the fatherhood of God. It preaches the reward of righteousness. It preaches the spiritual truths of the Scriptures.

It teaches God is love.

The Salvation Army is a living monument to the thousands of the most devoted and consecrated humanitarians the world has ever known.

They proclaim and exemplify through songs, word, and deeds the revitalizing message of the Scriptures.

They go out after the people. They go out into the streets. They go out into the darkest places. They go out with drums and tambourines. They search out the fallen, the homeless, those in need—for "a man may be down but never out."

The Salvation Army has achieved immortality in the practice of the spirit of Christianity.

It is a spiritual lighthouse. Its lights never go out. Its workers serve 'round the clock. Its workers serve through the calendar.

In times of war and in times of peace, they have served us well.

No sacrifice is too great.

Their welfare work among our fighting men has aroused the highest commendation of our Nation.

We are the army behind the Salvation Army. We must answer their appeal for funds. We must subscribe to their appeal for $1,292,000.

May our response be quick and generous.

May we remember today Gen. William Booth, the founder of the Salvation Army.

May we help to build today a stronger foundation for our civilization of tomorrow.

May the seventieth year of the Salvation Army prove to be only one of the many milestones on the road of its blessed service to fallen humans.

Wildlife Restoration Proclamation by the Governor of West Virginia

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Friday, March 24 (legislative day of Wednesday, March 8), 1950

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the RECORD a copy of a wildlife restoration proclamation issued on the 7th of this month by the Honorable Okey L. Patteson, Governor of the State of West Virginia.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

STATE OF WEST VIRGINIA,
EXECUTIVE DEPARTMENT,
Charleston.

A PROCLAMATION BY THE GOVERNOR

Whereas a national observance of Wildlife Restoration Week was inaugurated 11 years ago by Presidential proclamation; and

Whereas various citizens, individually and through their organizations interested in conserving our country's soil and minerals, its forests, waters, and wildlife, have continued such an observance from year to year; and

Whereas West Virginia, more than many other States of the Nation, has been abundantly blessed with these resources, a consideration which renders this program worthy of our most serious attention:

Now, therefore, I, Okey L. Patteson, Governor of the State of West Virginia, do proclaim the week beginning March 19, 1950, to be Wildlife Restoration Week in this State. I deem it my duty, furthermore, to advocate the education of our people in every way open to us to the vital necessity of preserving and increasing our wildlife, through proper use of the soil and through the enforcement of the conservation laws, and to urge public cooperation with all State agencies charged with this most important phase of our program for living.

In witness whereof, I have hereunto set my hand and caused the great seal of the State to be affixed.

Done at the capitol in the city of Charlestown, State of West Virginia, this the 7th day of March, in the year of our Lord, one thousand nine hundred and fifty, and in the eighty-seventh year of the State.

OKEY L. PATTESON,
Governor.

The Individual Rights and Liberties of Workingmen

EXTENSION OF REMARKS
OF
HON. THOMAS H. WERDEL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. WERDEL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to have included therein the remarks of Robert N. Denham, General Counsel, National Labor Relations Board, before Town Hall at Los Angeles, Calif., on February 6, 1950, which remarks were based on his familiarity with the operation of the Taft-Hartley Act since it was enacted into law by the Eightieth Congress. His views, spoken on this occasion, present to many uninformed persons the efficient operation of the act since its inception, and the protection it affords the workers who are covered under it.

His remarks follow:

During the past 2½ years, the outpouring of words concerning the Taft-Hartley Act probably has been exceeded by no other single topic—public, political, or private—in the memory of any of us. We've heard the law condemned as vicious, as a union-busting device, as the slave labor law, and as a general menace to the welfare of organized labor. Then, too, we've heard it hailed—and I've done my share of it—as a great balance wheel in our structure of labor and industrial relations, and as one of the things that protects our national economy by its influence on, and stabilization of industrial peace, but we've heard little on the topic of what the Taft-Hartley Act means to the individuals of the Nation, both those who are immediately and directly touched by its operations, and those who feel its impact only indirectly.

Those in the first class are the workers who, according to the critics of the law, are enslaved by it. Those in the second class are the farmers, and most of the public who pay for and consume the products that this enslaved American labor turns out; and, believe me, when that labor fails to produce, the impact of such loss of production can indeed be tragic to those who are indirectly affected by it. It is then that this second group of individuals comes into the foreground. When things are going along smoothly, and production is uninterrupted, and prices are within reasonable reach of most people, little thought is given to this second group, to whom the Taft-Hartley Act probably is little more than a name until some sort of industrial wreck occurs, and then it is expected to serve as a rescue squad.

But the relation of the Taft-Hartley Act to the individuals who are the employees described in the act, are naturally the first ones we think about when we begin to attempt to appraise the relationship between the individual and the Taft-Hartley Act.

To get a fair picture of this relationship, it probably is desirable to make a short backtrack in the area of labor relations, searching for a clear concept of the reason for the things we have before us. Of course, labor relations in some form, have existed almost since the beginning of time, when one man was a boss, and the other was a slave or a servant. I don't think we have to go back that far. Let's confine ourselves to our own life span, or reasonably near it. Strikes are not new. We had them here, I think, in Philadelphia in the latter part of the eighteenth century. History gives us little as to the form or type of labor organization of that time, but there definitely was something, for the strikes seemed to be well timed and intelligently led.

A few weeks ago, I happened to come across some old copies of Frank Leslie's Illustrated Weekly Newspaper, published, I think, in 1883. The papers were rather startlingly illustrated with what seemed to be wood cuts, and I was interested to note that the disorders in the field of labor in those days were just about the same kind of things we have to contend with now. There were pictures of strikers emptying milk out of wagons and letting it flow down the gutters; there were pictures of strikers overturning and burning streetcars (they used horse cars then, you know); there were illustrations of mob scenes during the then-current coal strike; there were empty and idle machine shops, and companies of militia acting as escorts or guards for the horse cars that were the subject of the dispute—all were reminiscent of some of the things that we've seen here in these United States during our lifetimes. Of course, the organizations of labor at that were sketchy, where they existed at all, but they at least reflected the thing that labor now has found, that in unity there is strength. They began to learn the lesson of the application of economic force in support of their demands, the hard way, because then there was no protection for the workingman who was unwilling, quietly and meekly, to just take anything the employer handed out.

From the late eighties of the last century up to the late twenties of this century, the whole history of the United States was one of rapid, prosperous industrial growth, unprincipled competition, and political domination by a not too scrupulous class of capitalistic entrepreneurs, who wielded their powers ruthlessly and without regard to the human, economic, or social rights of anyone else. Those were the days of laissez faire, and of the public be damned.

In those days the workingman had no legal and but very little economic protection. Organizations of workingmen were successfully prosecuted as conspiracies. Federal injunctions against concerted activities by labor organizations or groups of workingmen appear to have been available to employers almost for the asking. The social chasm between the employer and the workingman became progressively wider and deeper, and seemed to be more and more impossible of being bridged. It was because of these conditions that the Norris-LaGuardia Act that banned injunctions against labor organizations was placed upon the books in the early

UNIVERSITY OF MICHIGAN LIBRARIES

thirties of this century, and other legislation was passed to protect labor organizations from prosecution as conspiracies. It was at about this time that a general realization began to assert itself among the American people that the individuals who have to work for their living have basic freedoms that are entitled to protection. The core of this freedom is the right of such persons freely and without restraint to join openly with his fellow men in concerted efforts to protect his economic conditions and to improve them. One of the important arms of this freedom is the right of the workingman, individually or collectively, to withhold his services in support of his efforts to obtain adequate pay for what he does, and to be furnished with appropriate working conditions. Just as surely, of course, that freedom means that, while those rights exist, the exercise of them will be protected, and that there also exists the right to refrain from doing these things and to be protected in so refraining.

By 1935 these freedoms were not only being withheld by all too many employers, but attempts to exercise them were heavily penalized. To be sure employees are not the only ones who have these freedoms and rights, for employers had and have their basic rights and freedoms also, and are equally entitled to protection in the exercise of them. However, in both cases, these basic rights are never unqualified. In exercising them, they must be accommodated to the basic rights of the rest of society and to the national welfare. When these rights and their exercise are not fairly balanced, they become menaces, but so long as they are reasonably balanced and honestly exercised, they become the fundamentals of the economic freedoms of the workingman and his employer as well.

The possession of these basic rights and freedoms by an individual is meaningless, unless there exists a way of halting violations of those rights by forces that are superior to the individual himself. One of the primary functions of our Government is to protect the individual against such violations of his rights.

It was because these rights were being invaded or denied by all too many employers, that the Wagner Act was passed in 1935. I hardly need point out that the basic principle of the Wagner Act was that the employee must be protected in his exercise of the right freely to join with other employees to set up labor organizations for the purpose of collective bargaining with their employers. It was designed to protest no one except the workingman, and in doing so, to promote the principle of collective bargaining.

To implement those principles, that act pointed out what we now know as unfair labor practices, as the means most frequently adopted by employers to defeat them; and authorized the National Labor Relations Board to prevent the commission of such unfair labor practices by the issuance of cease and desist orders directed to the employers involved. These are of the nature of injunctions, but may not go beyond the unfair labor practices as described by the law.

It's perfectly obvious, after observing how large a segment of the American people fall within the statutory definition of employees, that the collective bargaining contemplated by the law would have to be carried on by the organizations of employees that would exist for the benefit of and be controlled by the employees whom they represented. Certainly that was the indicated intent of Congress in framing the Wagner Act.

However, after the Wagner Act became firmly established, it took only a short time to reverse that concept, and to develop in the field of labor organizations, the philosophy that employees existed for the benefit of the labor organizations, and that the labor organizations had a vested interest in them. While an employee was protected against unfair labor practices perpetrated by the employer, he was afforded no protection against being imposed upon from any other quarter, including his own labor union, and, realistically, he had little freedom of action in many of the unions that sprang up under those new circumstances.

The Wagner Act gave the individual employee no protection, for instance, against coercion on the part of so-called representatives of labor organizations, who sought to force him to become a member, or to cooperate in strikes and other similar activities. The closed shop, which made membership in a union a condition precedent to getting employment, was an accepted instrumentality of the labor organization, under the Wagner Act, by which it forced employees into their unions, and was another form of coercion. Early in the game, the general attitude of too many of these organizations toward those who did not care to join the union, or to participate in the union activities, became progressively more arrogant and, in many instances, impossible.

I know of numerous cases where windows were broken, where bottles filled with paint were thrown through windows into homes, there to spatter their contents over walls. It is a common technique among some of the more lawless elements, and it still is practiced. Of course, these things may not have been done by the unions, but it is interesting to note that it is always a nonunion man, or the fellow who wants to work while the other fellows are striking for whatever cause it may be, who is on the receiving end of this type of conduct. Men have been beaten up because they wouldn't support the union; their families have been intimidated, and that, too, is going on even today, although some progress has been made to stop it. In short, the employee under the Wagner Act was in a position where, if the union decided it wanted to make it tough for him it could do anything it wanted to, and he had no recourse except to look to the civil authorities. The Government offered him no protection under the labor laws.

Under the Wagner Act the employee never had a chance, by virtue of any of the election processes, to rid himself of an unwanted union. If, at an election, the majority of those who voted, voted in favor of the union, then the only way the employees could get it out of the picture was to induce another union to come in and file a petition for an election, and then either vote for no union or switch from the old one to the new one, which, too frequently, was a case of going from the frying pan into the fire. In other words, he was stuck with it. If he sought to get out—if he sought to clean house in the union—if he sought to do any of the things which were, or at least should have been, his rights in this so-called democratic organization, he frequently found himself in the bad graces of the controlling officers of the union, and generally it was not very long then before some excuse was found to deprive him of his good standing in the union and of his job. He had no protection in that, either.

To be sure, the individual working under the Wagner Act was protected against being fired or otherwise mistreated by his employer because of association with, or membership in, a labor organization, or because of his efforts to bring about the introduction of such an organization into the plant. He was likewise protected in making his free choice of an organization for purposes of collective bargaining; and was protected in the right to insist that the employer freely and in good faith bargain with that representative on matters pertaining to wages, hours, rates of pay, and other conditions of employment. But he wasn't protected against being called out on a sympathy strike because his employer happened to do business with somebody down the line who was engaged in a dispute with the union. And he wasn't protected against long and expensive days of idleness growing out of strikes that were the result of some interunion dispute as to whether this union or that union had jurisdiction over a certain piece or type of work, and one of these unions was forcing strike idleness on all the workers, by putting up a picket line to force the employer to assign that work to the picketing union. There wasn't any way by which he could be protected against that terribly wasteful procedure, for, believe me, when those situations occurred, and the picket lines went up, he just couldn't go through, because if he did it would mean his membership standing or his being blacklisted, possibly forever, in his trade. Those are some of the things that the individual had to take under the Wagner Act. Neither the labor organizations nor their members seemed to realize there was another and better way to accomplish their economic independence. They still were living in the recollection of the old jungle warfare in which they had been raised.

The Wagner Act was practically a blank check to every labor organization to indulge itself without restriction or restraint, under the protection of a Board which gave every appearance of operating under a mandate to administer it in such fashion as to give the labor organizations all the breaks and to hold the feet of the employers to the fire on all possible occasions.

At any rate, that's the way the thing worked out, and as a natural result, the labor organizations became more and more demanding for their own account, and more and more audacious; and less and less considerate of the rights of society as a whole, and of the rights of individuals, in particular.

The next result was inevitable, for just as public opinion demanded the passage of the Wagner Act in 1935, in order to curb the conduct of the employers that had become progressively less and less excusable, so, in 1947, public opinion swung in the other direction, and demanded, not that employers be released from their obligations and responsibilities under the Wagner Act, but that the labor organizations, also, be forced and required to accept and recognize responsibilities on their part, for their misconduct that had been playing just as much a role, during the past 12 years, in the creation of industrial unrest, as the conduct of employers had done during the preceding time. Conscientious employers were demanding that the basic rights and freedoms of their employees be recognized and that the abuses of the unions be restrained. After many weeks of hearings, to which, I might add, the labor organizations of the United States contributed little or nothing, the Eightieth Congress put together a law which represents the first effort to bring about a balancing of the economic forces of industry and organized labor, and an equalization of the relations of the individual workman, the organization representing him, and the employer, one to the other.

The Taft-Hartley Act is built around the rights of the individual. It is not social legislation. It is purely regulatory legislation, growing out of abuses in the past, and out of the lessons taught by the fact that legislation, designed to protect one class or group at the expense of another, is bound to create only more turmoil, when its beneficiary is allowed to treat that legislation as his personal license to disregard the rules and conventions of society and the ordinary things which govern our relations, one with another, throughout this democratic Nation of ours.

I want to give you one little illustration of what this represents. In 1945, when the Wagner Act was the controlling legislation, three workers of a small plant in Kentucky were active in attempting to bring a labor organization into that plant. The other employees apparently did not want a union, so, when these persons approached the plant the next morning, they were met by a group of employees who told them they could not

enter the plant and work there. One of the three attempted to go in, regardless, was pushed around a good deal, and received some minor injuries, and, with this show of force, all three left the plant and quit their jobs. A charge was filed with the Board against the company for violation of the law and the company was required to reinstate those three persons into their jobs, and pay them whatever loss of pay they had incurred. The theory was that the employer owed a duty to these three union sympathizers to protect them against their fellow workers in the exercise of their statutory privilege to attempt to join or form a labor organization.

In 1947, after the Taft-Hartley Act had been passed, an almost identical episode occurred at Hagerstown, Md., except that in the second case, the gang that beat up the fellows that wanted to go to work were striking union employees. The victims were nonunion people who had no sympathy with the strike and wanted to work. Under the Wagner Act, there would have been no protection whatsoever for those nonunion people. Under the Taft-Hartley Act there is, and the union was held responsible. In other words, the basic right not to join a labor organization is as fully recognized and protected under the Taft-Hartley Act as is the right to participate in union activities. To take the labor picture back to the Wagner Act days, would take away from the individual many of the valuable rights he has today.

I want to run down, then, as fast as I can, some of the things that the Taft-Hartley Act means to the individual; things that he never had before the Taft-Hartley Act came on the books; things that were denied to him under the Wagner Act.

As I indicated a moment ago, the present law recognizes that the individual must have the right, not only freely to choose a labor organization to represent him, but the right to refrain from making such a choice, and also the right to get rid of that labor organization if its representation proves to be unsatisfactory. Under the Wagner Act, he could do none of these, but under the present law, the employees themselves may petition the Board for what we call a decertification election, and unless there is a valid contract in effect which would be a bar to any election, the Board normally will hold an election at which all the employees represented by that union in that plant will have the privilege of either confirming their selection of the union involved, or repudiating it. If they repudiate it, the union loses all representative authority, and the employees and the employer will neither be permitted nor required to hold another election in that plant for a period of 12 months.

I have pointed out that if a union, in the course of an organizational program, attempts to coerce an employee to become a member, the general counsel will entertain a charge to enjoin the union from continuance of such conduct. This extends to threats during a union organizational campaign as to what the union can and will do to persons who do not support them, after they succeed to getting into the plant.

I have spoken of the closed shop. Under the Wagner Act, the individual had little to say about this. The negotiators almost invariably demanded it from the employer—and usually got it. Thereafter, the employees joined the union and made sure they kept in the good graces of its leaders, for it was easy to merit their disfavor, and that often resulted in being expelled from the union—and fired from the job. Now, that is not possible. Now there is no closed shop—the most that can legitimately be found in any contract is provision for a union shop, and then, one can't be fired if he loses his good standing in the union for anything beyond his failure to pay dues. He doesn't have to be a union member in order to get a job. He does not have to go near a hiring hall, and the employer, who tries to require a union clearance, is himself guilty of an unfair labor practice. No; once again, the individual has acquired his basic rights and freedoms. He has been freed of his fear of the union bosses, for—at the very most—his only duty to them is to keep his dues paid. So long as he does that, they can't touch him—now. In fact, if he is expelled from the union for some cause other than nonpayment of dues, the employer not only is not required to fire him at the request of the union, but, if the employer should do so, both he and the union are guilty of an unfair labor practice, and the individual affected is entitled to come to the Board and file a charge which would be processed in regular order against both of them. All of which means that while the employee has, and did have under the Wagner Act, the right to file charges against an employer if he has been discriminatorily treated because of his membership or nonmembership in a union, he now can also file similar charges against the union if the union has exerted pressure upon the employer, as a result of which he has received discriminatory treatment, and require that such treatment be stopped in both directions.

Under the Wagner Act, it was entirely possible, and in fact in many places it was the practice, to incorporate in contracts, provisions for an automatic check-off. In such cases, very frequently, the employer and the union members had little to say about it at all; the contract provided for the check-off, and that was that. That provision was often a standard one found in many contracts, and the result was that the individual had his dues checked off and paid in whether he liked it or not. Many of the contracts would provide for check-off of assessments, fines, and other financial obligations, as well as the regular periodic dues. Today, the individual is protected and no check-off of any sort will be permitted without the written authority of the employee. He may make it as broad as he likes, to include all financial obligations, but no check-off may be made to be irrevocable for a longer period than 1 year. In other words, a check-off authorization may recite that it is irrevocable, but at any time after the end of a year from the time that it is signed, the employee may ask to have it revoked, and thereafter further check-off deductions may not be made. None of these rights and protections are found in the Wagner Act.

In the secondary boycott that I told you about, where an individual's employer may find his place picketed because he refuses to stop doing business with some person down the line who has a direct quarrel with the union, such an employee has no alternative. He must observe the picket line or lose his membership. Before the Taft-Hartley Act, there was no way he could avoid this loss of working time, but, under the Taft-Hartley Act, such a secondary boycott is prohibited. On the filing of a charge, the general counsel is required to seek an injunction to avoid such losses, both to the employer and the individual.

Under the Wagner Act, jurisdictional strikes, where one union was claiming the right to a job and the other was contesting that right, were regular performances that cost the working men of the country millions of dollars in lost wages each year. Today the Taft-Hartley Act provides machinery for the prompt and efficacious determination of those disputes, and provides, also, where circumstances warrant, that the general counsel may seek, and the courts may issue, injunctions to restrain picket lines or other media for obtaining the stoppage of work while the dispute is being determined. Again, the individual is being protected.

To be sure, labor organizations don't like this law because it requires them to recognize and adhere to the ordinary tenets of a highly civilized society. They say that the Taft-Hartley Act restricts their liberty. It doesn't restrict their liberty; it expands their liberty but restricts their license, and is, I think, an outstanding example of the propriety of wholesome regulation as defined in a statement by Daniel Webster that "Liberty exists in proportion to wholesome restraint."

In opening these remarks, I commented upon the fact that there are two types of individuals whose relationship to the Taft-Hartley Act will bear analysis. I've only been able to mention a few of the high spots that reflect the influence—beneficial influence, if you please—of the Taft-Hartley Act on the individuals who are directly affected by it. I may say I have found no one who has yet been able to point to any detrimental influences of that act upon individuals or on unions. It may have restricted indefensible license, but it has placed additional safeguards around the basic rights of both of them.

The individuals that are the public are entitled to even more thoughtful consideration. The power of a labor organization and the opportunity it has, by exercising that power, to cripple or destroy a segment of our economic structure is tremendous. The Taft-Hartley Act contains a number of elements that are designed to protect the individuals who make up the general public against these abuses.

The Norris-LaGuardia Act was designed to protect labor organizations from the harassment of employer-sought injunctions. I agree heartily with the general principles of the Norris-LaGuardia Act, but the Taft-Hartley Act has recognized the fact that, in many instances, labor's power has grown to the point where an abuse of it can bring about widespread loss, damage, and public distress, and that provision must be made to prevent abuse of this power where such abuse takes on the form of unfair labor practices that are set out in the statute. In short, that there still are destructive abuses that should be stopped at the threshold of their practice.

I am not going to dwell on the coal dispute. It has already received enough publicity so that I believe the general public, if they do not know what it is all about, at least have some decided opinions on it. But I do want to point out one other thing that is currently in the picture.

One of the things that the Taft-Hartley Act does not tolerate is violence and misconduct on the picket line. It does not permit mass picketing, or interference in any way with the exercise by employees or officials or the public, of the right to go and come from the premises of any employer, or the stoppage of the conduct of that employer's business, even though the union may be conducting a strike and having a picket line to advertise it.

Down in Carlsbad, N. Mex., are three potash mines. Those three mines are the source of 85 percent of all the potash that is used in the United States of America, and the demands for potash are such that by working 24 hours a day these mines have been just able to keep abreast of the current consumption. As you know, potash is one of the vital component parts of commercial fertilizer. Because production is restricted in such a fashion, there is no stock pile. When the potash production ceases, the manufacture and mixing of fertilizer is stopped, and 60 percent, I am told, of all of the plantings in the United States depends upon fertilizer; and 70 percent of all the fertilizer used in the United States is consumed between the first of January and the middle or latter part of April of each year. That means 700,000 tons, incidentally.

On the 19th of November of last year, the Mine, Mill, and Smelter Workers Union, which represents the employees in these three mines, went on strike as a result of being refused a 256 pay increase. They shut down the mines and they formed mass lines of pickets at the gates of the plant so that

UNIVERSITY OF MICHIGAN LIBRARIES

even the maintenance men, belonging to two different unions, who wanted to go through, were turned back and not allowed to get into the mines. Needless to say, all others were turned back, too. The matter went on, and eventually came to our attention. About 3 weeks ago, we obtained an injunction from the Federal court to prevent mass picketing or other interference with any of those persons who desired to go to work, or otherwise do business with the company. At first, there wasn't a great rush to go back on the job, because the production workers were the strikers, but maintenance men returned immediately, and within 10 days or so, production had been resumed, with potash coming out at about 50 percent of the normal rate, or maybe a little better. Many of the strikers had returned, and after the injunction had been in effect 2 weeks, the company advised the union and the strikers that a certain date which, if I recall correctly, was 2 weeks ago today, would be the time when other persons would be hired to replace the striking production men. I was advised just the evening before I left Washington that during that day the striking union had offered to return to work en masse if the company would just stop hiring replacements and would put those men who had been replaced on a preferential hiring list so that they could go to work in the next vacancies that should occur. By now, I take it, the mines are in full production. The injunction's efficacy was excellent. Potash is again being produced, and the farmers of the United States, solely because of the existence of the Taft-Hartley Act and its injunction provisions, stand a reasonable chance of getting their supplies of fertilizer again this year. Had there been no Taft-Hartley Act, and had the Wagner Act continued on the books as it was, the mines would still be closed unless, of course, the operators had surrendered to the union and met their demands. Had this happened, 60 percent of the agriculture of the United States for 1950 would have had to be planted without benefit of fertilizer. But the law has pulled us over that hump, we hope. I use that one illustration of the relation of the Taft-Hartley Act to the farmer and to the public at large—there are many others, but time does not permit. In short, the individual that makes up the public finds protection here.

I wish I could go on and on and on. I like the Taft-Hartley Act. I think it is, basically, the biggest step forward this Nation has ever made in doing something to insure stability of labor relations. But it must be understood, and the individuals must understand, that they are the people who are affected by it. The individuals, in the main, who stop and think, are not complaining. The labor leaders are, and it is they who are making the noise about it, but the benefits to the individuals who work and to the public cannot be brushed off lightly.

But, best of all, our great American public and our labor of the country are made up of sane, intelligent, sound, loyal persons, who, I have all the confidence in the world, will do the right thing in the end. The Taft-Hartley Act has given them an opportunity now to clean house; it has given them an opportunity to throw out the Communists who have infiltrated into so much of our labor movement as well as into other places throughout the structure of the Nation. That's another thing that the individual has gained. The chance to throw them out. Thank God, we now have procedures that make the Commies who are officers of the labor organizations, stand up and be counted, and as that happens, a great house cleaning is going on.

The individual has a tremendous stake in this law, more than he has ever had in any current law. I just hope he will protect it.

Thank you.

Social Security Versus Railroad Retirement Tax Rates and Monthly Benefits—A Comparison

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Friday, March 24 (legislative day of Wednesday, March 8), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD as exhibit E a table presenting a comparison of social security and railroad retirement taxes and benefits under present and proposed legislation. On several previous occasions I have presented comparative statements on this subject. This table summarizes and picks out the high spots from the other exhibits I have previously presented.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

EXHIBIT E

FOUR TIMES 1½ PERCENT EQUALS 6 PERCENT

One rail worker pays 6-percent railroad-retirement tax. One industrial worker pays 1½-percent social-security tax. Therefore, one rail worker pays as much tax as the combined tax of four industrial workers.

Social security provides four industrial workers and their families with retirement and survivor benefits as compared to railroad-retirement benefits received by one rail worker, for whom there are no family benefits until after his death.

Social security versus railroad retirement tax rates and monthly benefits—a comparison

	Social security, 1950	H. R. 6000 social security, proposed	Railroad retirement, 1950
Tax rate (percent)	[1] 1½	[2] 1½	[2] 6
Cost per month	$3.75	$4.50	$18.00
Cost per year	45.00	54.00	216.00
Maximum retirement benefits possible to 1 worker and his family:			
Old age	$45.60	$64.40	
Wife	22.80	32.20	
Husband and wife	68.40	96.60	
Dependent children	[3] 16.60	[3] 53.40	
Total	85.00	150.00	$144.30
Maximum retirement benefits possible to 4 workers and their families	85.00 85.00 85.00 85.00	150.00 150.00 150.00 150.00	
Total	340.00	600.00	
Maximum survivor benefits possible: Widow and 3 or more children or 4 or more children, of 1 deceased worker	85.00	150.00	
Maximum survivor benefits possible to 4 families of 4 deceased workers [4]	85.00 85.00 85.00 85.00	150.00 150.00 150.00 150.00	103.32
Total	340.00	600.00	

[1] On $250 maximum earnings per month.
[2] On $300 maximum earnings per month.
[3] Prorated equally.
[4] 4 widows and 12 or more children, or 16 or more children.

Source: Rail Pension News, published by the National Railroad Pension Forum, Inc., Chicago, Ill.

The above exhibit E has been submitted to the Senate Finance Committtee now holding hearings on H. R. 6000 for their study and consideration that rail workers should receive the same ratio of increases in benefits now proposed for those covered by social security and has been submitted by Mr. Thomas G. Stack, president of the National Railroad Pension Forum, Inc. (a voluntary organization of union and nonunion rail workers), March 1950.

Mysterious Disease, Multiple Sclerosis

EXTENSION OF REMARKS
OF
HON. CHARLES W. TOBEY
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Friday, March 24 (legislative day of Wednesday, March 8), 1950

Mr. TOBEY. Mr. President, several days ago I made an appeal to the Senate Appropriations Committee to authorize funds for research on one of the most dreaded of all diseases, multiple sclerosis.

Much too little is yet known as to what this disease is and what it does to its victims. Therefore, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Mrs. Amy Nichols, of Dedham, Mass., a victim of this disease. This story tells, vividly, what multiple sclerosis is and what it does to its victims numbering more than 250,000 in this country.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"Let's keep it quiet," were the whispered words of the well-meaning friend who helped me from the office of the doctor who first diagnosed my puzzling, paralyzed condition. I was too dazed then to question her advice, as she continued, "Don't talk about it or you'll only get false notions."

I staggered home, with the voice of the doctor ringing in my ears as he reluctantly told me I had a disease that would probably trouble me all my life and was incurable. To console me he pointed out that it was not fatal. "A person can live with it as long as can the present-day diabetic, that is, a normal life span," he said. While I was fearfully considering his words, I was aware that he had not yet pronounced the name of the malady. Perhaps it was like leprosy or some other unthinkable disease. When the doctor finally said, "Multiple sclerosis," it sounded harmless. Little did I then know that I was afflicted by a disease that strikes twice as many as does polio.

Yet I was soon to note that, just as at the mention of leprosy, tuberculosis, and cancer so, also, at the mention of multiple sclerosis suddenly would fall a hush-hush atmosphere as though this disease were unclean or bore a moral stigma, it was a secret.

Against this fact of secrecy I rebelled, almost as much as against the disease itself. I didn't want to keep it quiet as my friend advised. False notions or not, I wanted to cry out to the world against this insidious crippler that fells so many of us early in life. Like all the many thousands of us, victims of multiple sclerosis, I was aghast that everyone seemed to be conspiring to keep it a secret.

It may be multiple sclerosis that has struck that young man or woman within a few blocks of you who is forced to spend the remainder of a long life within the confines of

four walls. To all appearances there is no deformity; there is no evidence, such as misshapen limbs, to indicate the victim's inability to ambulate in a proper manner. Yet, at best, there is a dragging of leg after leg as though each were attached to a leaden weight. And there is disturbance of the sense of balance that produces a wavering in the laboring gait. There is likely, also, to be distorted vision, faulty and uncertain manipulation of the fingers, and slurring speech. Was this prospect confronting me?

With dogged determination I found and observed many fellow victims. I discovered that among the men discharged from the armed services following World War II were some who were suffering from the initial attacks of this crippling disease. They survived a war only to be stricken by this tragedy. Many were married or were about to be married when this cruel development changed all that. For, except in rare cases, a victim of multiple sclerosis cannot expect to be able to earn a livelihood. I say "expect" because the instability that is part of multiple sclerosis is not compatible with the usual forms of regular employment.

There is nothing static about multiple sclerosis, as is the case of an amputated or ordinary paralyzed arm or leg. Today might be the end of a remission, as periods of alleviated symptoms are called, and tomorrow might be the beginning of an exacerbation, when the symptoms are aggravated. No one can tell when or why these irregular, erratic cycles occur nor how much deterioration takes place.

Several factors beside the name difficulty may account for the public being so long unaware of this disease. Multiple sclerosis, is not usually considered fatal. Though the victim may lose, gradually and insidiously, his power of locomotion, his sense of equilibrium, his control over the direction of his limbs, the dexterity of his fingers, his sense of touch, his continence, his good vision, his clear speech, his strength; or any or all of these; yet it isn't considered fatal.

Another factor which may account for the public's ignorance of multiple sclerosis is that there is usually no pain, as pain is usually described. The mental anguish at the loss of the powers described above does not constitute pain, it is true; but, oh, what suffering. The mental anguish felt when one learns that she failed to recognize, with her faulty vision, a friend who greeted her, or when made conscious of one's weaving gait, by a whispered "She must have had one too many," does not constitute pain, it is true; but oh, what suffering. The mental anguish felt when one sees that very little is being done to delve into the mysteries of this disease, does not constitute pain, it is true; but oh, what suffering. As you know, the sensation from being pinched is pain. One does not seriously object to a playful pinching, however vigorous, but if that same pinching were to continue, for an hour, a day, a month, ad infinitum, would you not cry out as if in pain? If you sit too long in one position and a leg or an arm goes to sleep, you voice a complaint. If that feeling were to last interminably, wouldn't you complain more loudly? When one of your fingers or a toe feels numb, or it calls attention to itself by the sensation commonly described as "pins and needles," is that not painful? When that sensation involves all of the fingers, and all of the toes, and if it were moreover to continue with scarcely a let-up, would it not make you miserable and cry out in pain? Just suppose you attached to each of your shoes a heavy weight; would you be happy to drag yourself about with these handicaps for life?

There is in addition to such discomforts described above an unrelenting fatigue, heaviness of body, extreme exhaustion, that tortures the multiple sclerosis victim. Despite all of these symptoms there is a desperate compulsion to keep afloat in the face of an increasing erratic paralysis.

This is the mysterious disease—multiple sclerosis. These are the tortures that over 250,000 of us are enduring today in this country.

Sumner Pike

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, March 24 (legislative day of Wednesday, March 8), 1950

Mrs. SMITH of Maine. Mr. President, one of Maine's most illustrious sons is Hon. Sumner Pike, of Lubec, Maine, who is now the Acting Chairman of the Atomic Energy Commission. The Portland Press-Herald in an editorial has stated a very good case for changing his acting status as Chairman to that of permanent Chairman. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PIKE'S PEAK

When we suggested a month ago that Sumner Pike of Lubec would make an excellent chairman of the Atomic Energy Commission, of which he is now acting chairman, we did not do so on the basis of his Maine nativity.

Two strong arguments support this recommendation. First, Commissioner Pike is the only holdover from the original five, and therefore the group's only link between its important formative years and current operations.

Secondly, the Maine man has a rare knack for imparting atomic data in a manner to be understood by the nonscientist. Furthermore, his good humor and sharp wit make his impartations palatable, but we don't seriously commend these to the President for consideration.

At Harvard University last week end we were privileged to spend a number of hours in conference with Pike, Dr. Shields Warren, biochemist of the AEC and others connected with the Commission. Newsmen from a number of New England papers heard Pike do what he is so good at, heard him bring a very difficult subject down to the level of a layman's mind.

Pike, for instance, in describing a rather complicated atomic process, would say that it was like "winnowing blueberries." At another time he discussed a certain type of explosion, saying that so many units of something-or-other were released "per unit of bang." And so on, for several entertaining and educational hours.

Those who heard him were once again impressed by his abilities to understand and to explain, his nonpartisan approach, his enthusiasm for his job. His listeners couldn't learn all there was to know in one night, but they learned enough to give them a better grasp of the problem when writing about it in New England newspapers.

The Lubec man has served the Government in several capacities, but never before has he served so brilliantly. He has now reached a peak which has brought great satisfaction to his home State and certainly a measure of satisfaction to the man himself. In naming a chairman for the all-important Atomic Energy Commission, President Truman would do well to select a man with Sumner Pike's variety of qualifications.

What if Mills Produced Billions in Surplus Goods?

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, March 24 (legislative day of Wednesday, March 8), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "What if Mills Produced Billions in Surplus Goods?" written by Herman A. Lowe, and published in the Philadelphia Inquirer of March 24, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT IF MILLS PRODUCED BILLIONS IN SURPLUS GOODS?

(By Herman A. Lowe)

WASHINGTON, March 23.—Picture, if you can, Pennsylvania's factories turning out far more goods than they know the public will buy.

Picture them striving to increase production, knowing that the Government will guarantee them a profit for any surplus above what the public absorbs.

Picture Congress building warehouses to hold this surplus and giving it away free to foreign countries. And picture you, the public, being taxed for the cost.

Absurd? Ridiculous? Impossible?

Then add this final absurdity—Congress voting more money to build more factories to produce more surpluses to sell to the Government at a profit—with you being taxed for that, too.

Unfortunately, it is not impossible at all. Not only can it happen here; it is happening here. Just substitute the farm-support program for Pennsylvania's factories and you have the whole picture.

Citing chapter, verse, and United States Government statistics, JOHN J. WILLIAMS, of Delaware, told his colleagues in the Senate the other day that in 18 months "we have produced in this country approximately $7,500,000,000 worth of agricultural commodities more than we have consumed, all of which have been purchased with the taxpayers' money."

"Of that amount," continued Senator WILLIAMS, "nearly $3,500,000,000 worth of agricultural commodities have been given away at home and abroad, while the remaining $4,000,000,000 worth are at the present time deteriorating in our bulging warehouses and caves."

Senator WILLIAMS quoted sober fact and backed it up with the black and white figures. Congress is thoroughly familiar with the situation.

Yet, on the same day that WILLIAMS was making his statement, this headline appeared on page 1 of a Washington newspaper: "Farmers fail to cut crops as United States asks. Report on plantings indicates big yields under price props."

The article went on to explain that farmers were disregarding the Federal request for smaller crops of price-supported crops and were heading for another year of huge surpluses in potatoes, grains, peanuts and other things. Thanks to the law which guarantees them price supports, the farmers will be able to sell their surpluses to the Government at a profit.

Thus you have the absurdity under which farmers now grow crops not for use—but merely to sell to their Government to store.

DIGITIZED BY MICHIGAN LIBRARIES

or destroy, or dump in Europe. With the taxpayers picking up the check, of course.

That is the situation which would be so ridiculous if it were to happen to Pennsylvania's factories.

And your Government has been constructing additional bins and warehouses in which to keep the unwanted surpluses it is required by law to buy.

What is more, Congress is now in the process of making a law to give the Commodity Credit Corporation another $2,000,000,000 so that it can buy and hoard or dump still more surpluses in the next couple of years.

But then there is the ultimate absurdity referred to above. The Government has more than $1,000,000,000 of the taxpayers' money already tied up in surplus cotton—a full year's supply of the stuff. The Department of Agriculture has ordered acreage restrictions to hold down production this year. Congress is now balking these restrictions.

It is making a law to increase this cotton acreage by 1,200,000 acres. Everybody in Congress knows the cotton grown on this land will be surplus cotton which must be purchased by the Government and hidden in a warehouse.

There is a huge surplus of peanuts. The Government is stuck with $25,000,000 worth which it was required to buy and hold off the market. The Department of Agriculture sought to restrict peanut acreage to hold down that growing surplus.

Congress is pushing through a law to permit the rise to an additional 100,000 acres this year to grow whole peanuts, plus an unlimited amount of land for peanuts to be crushed for oil.

It is equivalent to the Government building extra factories in Pennsylvania to manufacture surplus goods.

That's what's going on in Washington with the Nation $250,000,000,000 in the red, with a multibillion dollar deficit for this year, and with another multibillion dollar deficit already predicted for next year.

But, really, the factory owners of Pennsylvania shouldn't worry. They ought to rip out their machinery and rent the buildings to the Government as storage space for surplus persimmons and artichokes.

Hon. Arthur Vandenberg, of Michigan

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, March 24 (legislative day of Wednesday, March 8), 1950

Mr. CAIN. Mr. President, the New York Times of this morning carries an editorial which expresses the hope that ARTHUR VANDENBERG will soon return to take his seat in the Senate. The Times wishes to have the Nation hear again from the missing voice. I think this is a wish which is shared by most of us at home and abroad. I join with all Senators in compliment to the Times for its reference to one of the great Americans of his day. The Senate will benefit in every way when ARTHUR VANDENBERG answers again to his name. May everybody's good wishes add speed and strength to his recovery.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MISSING VOICE

It is devoutly to be hoped that Senator ARTHUR VANDENBERG will soon be well enough to resume his seat in the Senate. The size of the place he occupied in that body, and his immense usefulness to his party and his country, were never so evident as in his absence in a time of critical debate. Without him the Republicans seem leaderless and uncertain. Even the Democrats miss the clear, authoritative voice that rises above the buzz of party politics to define American policy to the world. For Senator VANDENBERG's distinction is that he has given leadership to both parties in the development of foreign policy, and more than any other American has lined up behind it the massive popular support that has been our greatest asset in the postwar years.

This leadership is lacking today. There is no real question of continued support of the bipartisan policy sponsored by the Senator from Michigan. This is, after all, American policy; it is safe because it grows out of our basic interests and involves our national honor and good faith. Congress will grumble and try to pare down, but our commitments under the Marshall plan, the Atlantic Pact and other international engagements will be fulfilled. But we have to go forward from there, and where the vision, experience, and good-tempered statesmanship of Senator VANDENBERG are needed is in hard transitions like the present, when new issues arise and policy has to evolve to meet fresh tests and changing conditions. The wish for his speedy recovery is a wish not for him alone but for the country he serves so well.

Czechoslovakia Way Ahead in the Hat Game

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. PATTERSON. Mr. Speaker, the Bridgeport (Conn.) Post is performing an excellent service in calling public attention to the damage being done to domestic industries through excessive importation of finished products. A striking example is the hat industry, which employs almost 6,000 people in two cities in Connecticut—Danbury and Norwalk. The Danbury concerns are now on a 3-day week, and spokesmen for the Norwalk industry state that they "wonder where the next year's business is coming from." Indicative of the Democratic administration's callous disregard for the workers' welfare is the remark attributed to ECA spokesmen before the Senate Foreign Relations Committee that "the American worker is fortunate in that he may receive unemployment-compensation benefits." That is typical of the attitude which this group has. They are far more interested in helping foreign nations, and in the process, dragging the American standard of living down to correspond with that of other countries less fortunate.

I predict that the American citizens earning good wages and the ones with great amounts of capital invested in domestic industries will not look kindly upon those who foster this program.

Editorial and news excerpts from the Bridgeport Post follow:

HAT INDUSTRY SPEAKS UP

An American Federation of Labor official has made the charge in Washington that slave labor behind Czechoslovakia's iron curtain is threatening to turn Danbury into a ghost town. Norwalk feels the same way.

Imports from the Communist country are crippling the hat city's industries, declared Marx Lewis, general secretary of the Hatters' International Union and a member of the executive committee of the national labor-management committee on foreign-trade policy. This committee now in session represents nearly a score of industries which feel they are being unfairly treated by the amount of foreign goods being allowed to come into the United States.

The union spokesman said that American hat workers cannot possibly survive against slave-labor competition. And of course they can't, with foreign wages and transportation costs so low. What labor and management want in this case is a tariff wall against foreign imports of felts which 300 percent in 1949.

Thomas J. Wall of the Norwalk Hat Co. says last year's imports from Czechoslovakia exceeded any year's importation for more than 15 years, affecting the industry in an alarming manner. In other words, United States dollars are being sent beyond the communistic iron curtain to provide competition for United States industries, an unexpected version of communism versus capitalism.

This is an amazing revelation. Czechoslovakia is today nothing more than a puppet state, a satellite taking its orders from Moscow. Soviet Russia has been trying openly, for at least 5 years, to cripple our economy. There is every reason to believe that Czechoslovakia is playing its part in the Kremlin's attempt to injure American industry.

Within the year, it is fully expected in Washington, that Czechoslovakia, with the other puppets, will be incorporated into the Soviet empire, to become provinces of the totalitarian domain. Are we going to continue to do business with such a nation to the detriment of our own people, our own industries?

There are other industries similarly affected, among them the shoe and leather industry, which has already complained of the dumping of cheap Czech shoes into the American market. These United States industries have a real fight on their hands to convince Congress and the Tariff Commission of the dire need for protection against the old bugbear, cheap production from abroad. And this time it is cheap production from a nation which is forced by its rulers to be an economic and political enemy.

IMPORTS CREATING HAT TRADE SLUMP—DANBURY HAT PRODUCTION CUT TO 3,000 DOZEN IN 3-DAY WEEK

The combined impact of Czech iron-curtain importations and a general decline in business has tumbled Danbury's hat-making production from a capacity of 30,000 dozen for a 5-day week to 3,000 dozen for a current 3-day a week schedule, it was reported today.

Approximately 3,000 hat workers are employed in 14 main plants in Danbury and lack of business has forced the 3-day a week program, according to available statistics.

Union and plant officials who describe the situation as "very serious" declare that a hatless fad in various sections of the country is accentuating the critical situation in the hat industry.

In Norwalk, second largest hat-producing community in Fairfield County, a total of approximately 2,750 persons are employed in

12 companies. That does not include those employed in fur companies which provide hat materials.

Plant officials report business prospects are "not healthy" and that the imports from Czechoslovakia plus a decline in domestic sales are causing great concern.

"We are beginning to wonder where our next year's business is coming from," one official declared.

Warren S. Smith, secretary of the hat institute, trade association for America's hat industry, declared that the hat industry has dropped 1,500,000 man-hours since 1942 and that 1,300 workers have been forced out of the trade in the past 5 years.

He attacked the State Department's policy of insisting on imports at the price of the hat industry, but maintained that many other industries in Connecticut are being hurt by the trade-exchange program under the Marshall plan.

"Traditionally, we have imported a great deal of raw material from abroad," Mr. Smith said. "Now we are being forced to accept the finished product in competition with our own workers."

He declared that Czechoslovakia and Italy are the major competitors who have been fed ECA dollars to drive American firms out of business.

"Let them furnish the raw material," he asserted. "Let us provide the finished job."

Sacrifice of a city like Danbury "is a pretty steep price to pay on the altar of helping countries abroad," he declared.

SHOE MANUFACTURERS HIT CZECHOSLOVAKIAN IMPORTS

BOSTON, March 23.—The New England Shoe and Leather Association charged today that some 1,000,000 pairs of shoes will be imported from Communist-dominated Czechoslovakia into the United States this year.

Executive Vice President Maxwell Field reported that the association has asked the Treasury Department to investigate so-called dumping of the shoes in violation of the Antidumping Act of 1921.

Field added that the State Department also has been requested to advise the association of its policy permitting importation of the shoes from the iron-curtain country.

The association official stated that in the month of January alone 58,018 pairs of shoes were imported from Czechoslovakia. This, he said, was more than half of the total brought to the United States during the entire year of 1949.

Preservation of Wildlife

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, March 24 (legislative day of Wednesday, March 8), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement relating to preservation of wildlife, made by Gov. James H. Duff, of Pennsylvania, on March 15, 1950.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Many people think of the woods, the waters, and the wildlife of the Commonwealth of Pennsylvania solely from the viewpoint of pleasure and recreation, but these resources have a much deeper significance.

Barren hillsides cause a rapid run-off of waters producing destructive floods. This, naturally, leads to complete dislocation of the industrial economy so necessary to the interests of the Commonwealth.

In Pennsylvania, our reforestation program is outstanding. This program must continue in an effort to lessen the destruction caused by floods, and by replanting our barren hillsides to slow up the run-off of water.

To increase our awareness of these great natural heritages, and of the part they play in our daily lives, Pennsylvania has set aside for special observance various weeks of the year when conservation is uppermost in the minds of all of its citizens.

Beginning March 19, in conjunction with the National Wildlife Restoration Week, we will again observe Pennsylvania Wildlife Restoration Week.

This observance should have the wholehearted support of conservationists, nature lovers, sportsmen, farmers, schools, and all civic-minded organizations by stressing the value and importance of restoration of forests, waters, and wildlife to the Commonwealth.

One of the ways that this can be done is for each of us to rededicate himself to the national conservation pledge: "I give my pledge as an American to save and faithfully to defend from waste the natural resources of my country, its soil and minerals, its forests, waters, and wildlife."

Tangled Economics, Dangerous Politics

EXTENSION OF REMARKS
OF
HON. CHARLES W. TOBEY
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, March 24 (legislative day of Wednesday, March 8), 1950

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Tangled Economics, Dangerous Politics," published in the Christian Science Monitor of March 23, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TANGLED ECONOMICS, DANGEROUS POLITICS

As economics, the United States present farm program makes no sense. As politics, it can be understood but not supported.

As economics, the aim is for Government to help prevent waste and distress due to vagaries of weather and the farmer's inability to stabilize output as other producers do. Unstable agriculture can spell food shortages and lack of markets for the rest of the community.

But today the program as operated has produced such weird economic effects as these:

The Government, already holding $4,000,000,000 worth of farm products for which it can find no market, is asking authority to throw in $2,000,000,000 more.

The best chance of saving any of this is through one or more major crop failures—normally a disaster.

Citizens are paying millions to have surplus food destroyed so they will be unable to buy the rest of the crop at lower prices.

Government asks the farmer to cut production and pays him for surpluses; it urges diversification and rewards resistance to diversification.

What was intended as a floor to prevent disaster has become a cushion even for inefficient farmers.

These are some of the reasons the program makes no sense as economics. Here are some of the factors which make it understandable politically:

Both parties believe the farm vote can decide the next election, as they feel it did the last. Few Congressmen are independent of the farm vote.

Politicians are aware that American farmers have suffered a 20-percent loss in income since 1947 and expect the loss to be greater this year. For many individuals this average involves heavier losses.

A vested interest in Government aid has been created. And, as with tariff protection, conditions quite adequate for efficient producers spell distress to the inefficient or unfortunate.

Congress has been trying to taper off crop subsidies by setting dates in advance for curtailing payments or restricting acreages—restrictions that become delusive if per-acre production can be doubled. Indeed, the whole process is delusive. For when a date approaches, a new one safely farther away is substituted. So the old mañana game goes on.

Department of Agriculture experts figure what acreages will produce adequate supplies, but in the end politics decides what the farmer can plant. Acreages are increased according to the strength of voting blocs—and skill in logrolling. Wheat Congressmen help peanut Congressmen, and both help cotton Congressmen, so all get their acreages—and surpluses—increased.

As economics, it doesn't make sense. As politics, it is understandable, but deeply dangerous. For it permits special interests to override the welfare of the Nation as a whole. It is an abuse of representative self-government which weakens and discredits democracy at a time when democracy needs strength and prestige to meet totalitarian competition.

How shall Americans find a way out of this jungle of tangled economics and dangerous politics? Let special-interest groups recognize that their own larger interest depends on the welfare of the whole Nation. The good of one must be related to the good of all. In addition, let the ordinary citizen recognize that he has a large-enough stake in the general welfare to insist on this basic rule.

Wildlife Restoration Week

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. MADDEN. Mr. Speaker, it is very necessary that all of our State governments exert every effort to preserve our fast-dwindling natural resources upon which the future of America's soils, waters, and wildlife depends.

The following is a proclamation issued by Gov. Henry F. Schricker, of Indiana:

PROCLAMATION—WILDLIFE RESTORATION WEEK, MARCH 19 THROUGH 25, 1950

To All to Whom These Presents May Come, Greeting:

Whereas the fact that all life is dependent on soil and water cannot be stressed too much or too often; and

Whereas nature has perfected a marvelous system for building productive soils and for maintaining them, and man can work with this system and keep soil and water productive while utilizing the products for his use.

Digitized by the University of Michigan Libraries

He cannot abuse these resources without destroying productivity and quickly decreasing the quantity of products available to him; and

Whereas productivity of our soils and water has been reduced at an exceedingly rapid rate. Vast areas of land have been and are still being mined of their fertility which can only be slowly regained by natural processes; and

Whereas there is great need for more intelligent planning of developments to secure the greatest possible values from all resources; and

Whereas the National Wildlife Federation in sponsoring Wildlife Restoration Week is doing much to teach the fundamentals upon which the future of America's soils, waters, and wildlife depends. The continued growth of human population in this country forces us to give increasing attention to conservation of all natural resources as human utilization places increased demands upon them. Until every American is aware of his vital dependence upon natural resources and acts intelligently to manage them, there will be need of such educational efforts:

Now, therefore, I, Henry F. Schricker, Governor of the State of Indiana, do hereby proclaim and designate the week of March 19 through 25, 1950, as Wildlife Restoration Week in Indiana, and do earnestly appeal to all of our citizens to recognize the importance of the problems of conservation of these assets in wildlife and to work with one accord for their proper protection and preservation, and to reflect upon America's riches of natural resources and the importance to our future well-being of perpetuating them.

In testimony whereof, I have hereunto set my hand and caused to be affixed the great seal of the State of Indiana, at the capitol, in the city of Indianapolis, this 6th day of March 1950.

HENRY F. SCHRICKER,
Governor.

Robespierre From Wisconsin

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Marquis Childs, from the St. Louis Post-Dispatch of March 22, 1950:

ROBESPIERRE FROM WISCONSIN
(By Marquis Childs)

Under the glow of the television lights Senator MCCARTHY is beginning to look pale and a little flustered. The material he is offering as evidence of his charges is so very thin that even he himself seems to lack confidence in it.

His strategy is to spread it out for as long as possible so that it will reap the largest harvest of headlines. It probably contributes to the campaign to remove Dean Acheson from the office of Secretary of State. And certainly it contributes to the uncertainty, the fear, and the suspicion that undermine the hopes for a positive, constructive American foreign policy both at home and abroad.

But, in my opinion, that is not the greatest disservice MCCARTHY is performing. What he is doing that is most dangerous and most reckless is to extend and confirm the technique of the indictment by association and smear.

You don't have to watch the process very long to understand what it is. It is the technique of the revolutionary tribunal, those fantastic mock courts that came into being in the holocaust of the French Revolution. It bears some relation to the methods of the purge trials in Soviet Russia. The whole approach could hardly be more directly at variance with the Anglo-Saxon concept of equal justice under law that has slowly and painfully evolved through the centuries.

A TALE OF TWO CITIES

Rereading Charles Dickens' thrilling novel, A Tale of Two Cities, you get some idea of what those revolutionary tribunals were like. Victims by the thousands were hauled before so-called courts. If it could be shown in any remote way that the individual had had contact with any aristocrat for whatever reason, the clamor for his blood went up and he was carted off to the guillotine.

Whether this 10-cent store Robespierre from Wisconsin knows it or not, what he is helping to do is break down law and order. The Senator can reply, of course, with the easy and cynical good humor that is natural to him that his victims are, after all, not guillotined.

But the smear can destroy, too. Denials rarely catch up with the original accusation. They are usually found back among the want ads while the charge itself has blossomed in big headlines on page 1. Few victims have the aggressiveness, the spunk, and the resources of Judge Dorothy Kenyon.

The investigation committee itself has a lot to answer for. The method of procedure should have been carefully mapped out before any evidence was presented. It is difficult to see why Chairman MILLARD TYDINGS should at the outset have given MCCARTHY his choice of presenting the charges in public or in closed session since this opened the way for public accusation with the accuser hiding under the cloak of legal immunity.

HICKENLOOPER RECALLED

A precedent existed for orderly procedure. That was in the inquiry conducted by the Joint Senate-House Atomic Energy Committee into the charges brought by Senator HICKENLOOPER, of Iowa.

HICKENLOOPER had a list of 27 employees of the Atomic Energy Commission whom he considered in the doubtful category. The names of those individuals were not spread across the front pages. Under Chairman MCMAHON they were thoroughly reviewed in closed session.

Long before the last case was reached, it was apparent to virtually all committee members that the charges raised were insubstantial. Attendance at the closed sessions fell away to the chairman and one or two others.

But the important point is that reputations were not subjected to lynch law. Elemental justice was observed. If at any time the Atomic Committee had agreed that an individual case warranted a public hearing, then the hearing would have been held. There was no inclination to keep back information to which the public was entitled.

SECOND-HAND EVIDENCE

It was too much to expect that MCCARTHY himself would show a sense of responsibility. Virtually all the material he has produced thus far has come out of the files of other investigating committees, including the notoriously irresponsible California Un-American Activities Committee. Or it is read out of newspapers and magazines.

This seems to me to call for something more than a mere political exchange between Republicans and Democrats. The Senate, under the Constitution, has the power to make its own rules of conduct and to compel its members to live up to those rules. This would be a good time to try to define senatorial responsibility by a new rule.

Wartime Excise Taxes Should Be Repealed

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. ANGELL. Mr. Speaker, I introduced H. R. 7382 which has for its purpose the repeal of the wartime excise nuisance taxes. These taxes were levied during the emergency of the war in order to secure funds for financing the war as well as to utilize to the fullest for the prosecution of the war the materials and the manpower of the Nation. A commitment was made at the time that at the ending of the war these taxes would be repealed. The war has now been over for nearly 5 years and the administration refuses to give the green light for the repeal of these taxes. They are a brake on the wheels of industry and are slowing down our productive enterprises and are one of the causes for the heavy unemployment we now have, which approximates five million.

I include as part of these remarks an excellent article showing the need for the repeal of these taxes, entitled "Struggle for Tax Reform," written by Beardsley Ruml, of New York, which appears in the Washington Post of this date:

STRUGGLE FOR TAX REFORM—A COMMUNICATION

The intense struggle for wartime excise-tax repeal should have been unnecessary. The wartime excises were designed to check specific kinds of consumption in wartime, with resulting reduction of production and employment. These taxes have no place in time of peace.

Except for the uniformed opposition of the Treasury and the support of the Treasury by the President, the wartime excises would have been repealed long ago. Not only are they punitive and discriminatory; they are harmful to specific industries and communities and weigh heavily on the general level of employment. The continuance of the wartime excise taxes is inconsistent with the clear mandate given by Congress to the administration in the Employment Act of 1946 to use its powers to maintain a high level of production and of employment.

But the struggle for the repeal of these taxes, unnecessary though it should have been, has served a useful purpose. It has developed economic research under the sponsorship of the National Committee for Wartime Excise Tax Repeal. In this research, Leon Henderson and his associates have shown that the net loss of revenue to the Government as a result of repeal will be far less than the country and Congress has been led to believe. These economic studies demonstrate that the net loss from the repeal of all wartime excise taxes and tax rates, except on gasoline, tobacco, and alcoholic beverages, will not be more than $1,150,000,000, and it may be substantially less.

The Committee for Economic Development, working entirely independently, has shown how wartime excises can be repealed, and how, without any new sources of revenue and with only moderate reductions in projected expenditures, the budget will be balanced with high levels of productive employment and will show a surplus besides.

These exhaustive studies of the National Committee and the CED, when taken together, give to the public a way of judging the merits of over-all wartime excise-tax repeal. The conclusion is inescapable that over-all repeal is possible and desirable. No evidence has been made available to the public, by the Treasury or otherwise, to controvert this conclusion.

The struggle has therefore resulted in demonstrating that both justice and prudence argue for over-all repeal.

Beyond the urgent and specific necessity for wartime excise-tax repeal, the struggle has brought sharply to public attention three reforms in basic fiscal policy that are long overdue. These three reforms when they are at last adopted will have an importance for the country's economic welfare even greater than excise-tax repeal itself.

The three reforms to which I refer are the following:

1. Let the Federal deficit or surplus be measured by the cash-consolidated budget instead of the administrative-control budget.

2. Let tax rates be set to balance this budget at agreed levels of high productive employment instead of by guessing what national income is likely to be a year or more away.

3. Let Federal disbursements for capital items that pay income to the Federal Government be funded instead of causing needless and burdensome tax levies on consumption, investment, and employment.

These reforms mean a basic change in Federal fiscal policy. They are a first long step in attaining built-in stabilizing fiscal measures at points where they will do great good. They bring debt management back into the economic picture so that it can be used as in the war as a stabilizing force for high employment. They eliminate the hocuspocus of impossible business forecasting from the crucial job of setting tax rates. Above all, they make the test of surplus and deficit in terms of the hard realities of cash intake and cash outgo instead of the esoteric and inconsistent definitions of the administrative-control budget.

I have heard these reforms characterized as bookkeeping reforms—implying that they are of negligible importance. The importance resides in the ideas that underlie the bookkeeping and in the new and impersonal influence on high production and high employment these stabilizing reforms will bring.

The struggle for excise-tax repeal has been necessary to get excise-tax repeal. But it has served a deeper purpose in bringing out of the library and laboratory for public understanding fiscal reforms which, when adopted, will serve the people well for years to come.

BEARDSLEY RUML.

NEW YORK.

Operation of Price-Support Program

EXTENSION OF REMARKS

OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. LEFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an article by Mark Sullivan which appeared in this morning's New York Herald Tribune.

I think this article is very timely right now due to the action taken by the House yesterday when considering H. R. 6567, regardless of political parties. This bill requesting $2,000,000,000 more to increase the borrowing power of the Commodity Credit Corporation went through with such apparent ease that those of us from the East, who likewise have a good many farmers who need assistance, become very much alarmed. Unless I am misinformed, we already have a couple of years' crops of grain in storage bins throughout the Grain Belt. This extra money gives the Commodity Credit Corporation the privilege of continuing what has been going on in the past, which is the building of more grain-storage bins and again filling them with this year's grain crop. I should think some effort should be made to force the Commodity Credit Corporation to move these old crops, turn the stored grain into cash so the present funds they have would be revolving funds, like they were originally supposed to be. If this were the practice, of course, grain prices would break and our farmers in the East would, for a change, have the advantage of some cheaper grains to feed our cattle and poultry. This, in turn, would give the consumer a break on poultry products and milk. If our Western and Southern Representatives gave a little more consideration to this very important agricultural segment in the East, it would help considerably in reducing the grief we presently have here with both our farmers and our consumers. I personally know enough about grain, especially corn, to realize that it cannot be carried over indefinitely without considerable waste.

Mr. Sullivan's article gives you some idea of what the Department of Agriculture is costing the American taxpayers in personnel alone. Add to this the dollars involved from the support-price program, it is most discouraging to those of us who represent a large segment of the taxpayers who are bearing the brunt of this ever-increasing program. All we need now is something like the Brannan plan which would call for a staff in the Department of Agriculture probably twice as large as the present staff, along with the billions of dollars involved, and the farmers would be under complete control of the Federal Government and the backs of the taxpayers would be broken.

The article is as follows:

AGRICULTURE DEPARTMENT IS PORTRAYED AS "AT EVERY UNITED STATES DINNER TABLE"—MARK SULLIVAN SAYS OPERATION OF PRICE SUPPORT MAKES IT GOVERNMENT WITHIN GOVERNMENT

(By Mark Sullivan)

The Department of Agriculture is a government within the Government. It enters every home in the country, stands beside every citizen as he eats his meals, and every member of his family. It determines or conclusively influences the price of nearly every form of food. In doing this the Department goes a second time into the home of a large class of citizens, the farmers. To them it in many cases pays large amounts of money to buy large quantities of their crops and keep them off the market, in order to support the price. Or for the same purpose, it makes nonrecourse loans to farmers. In a great many cases, and increasingly lately, the Department enters farmers' homes for a different kind of purpose, to inform them of the number of acres it has allotted to them for planting various crops.

A RECENT DEVELOPMENT

Such extensive control over such a fundamental aspect of the people's lives as food, is an immense exercise of the power of government. In the United States until recent years, such exercise of the power of government has not been practiced except in time of war. Introduction of it here in peacetime, during the 1930's parallels the practice of totalitarian governments such as Communist Russia, and during the last five years Socialist Britain.

The extent of the part played by the Department of Agriculture in Government and the lives of the people is suggested by the widespread scope of the operations and the number of its employees, not merely in Washington but throughout the country. Not all the employees are engaged in the function of price support; a large portion work in such activities as soils and seeds, insect and plant-disease prevention, and the like. But price support is a very large activity of the department, and the most dynamic one; and introduction of it has paralleled an immense increase in the number of employees.

The Department of Agriculture has branch offices in States and in hundreds of county seats. A recent report of the Hoover Commission on Organization of the Executive Branch of the Government, cited results of a sampling inquiry. It showed in one cotton county in Georgia 47 employees of field services of the department working with 1,500 farmers. In a fruit and grazing county in Washington State, 184 employees of the department were working with some 6,700 farmers. A dairy county in Maryland had 88 employees attached to field services working with fewer than 3,400 farmers. In the CONGRESSIONAL RECORD recently, Representative HOEVEN, of Iowa, gave the total number of employees of the department:

"A full-time staff of 59,556 employees and 12,274 part-time employees, or a total of 71,830. * * * In addition there are 137,037 people serving as State and county committeemen either on a per diem basis or at no salary * * * thus in all there are 208,867."

BASIC LIST EXPANDED

That number of employees is an enormous increase. The Hoover Commission report says that the number 20 years ago was only 22,000. And this expansion in the number of employees goes parallel with, and is almost wholly caused by, expansion of the Department's functions and activities. In this is potent significance.

A characteristic of such a government function as price support, is automatic expansion having almost the force of a law of nature. When price support was begun in 1938, the number of crops supported was six, called basic—wheat, corn, cotton, rice, tobacco, peanuts. By additions from time to time the number of crops supported either in their original form or as prepared for market is today nearly everything produced on a farm.

With price support practiced about nearly all crops, large power is conferred by Congress on the Department of Agriculture. In recent laws and pending proposals, the Secretary of Agriculture is given discretion about the figure at which price support may be extended to a crop and whether or not to support a crop under given conditions. Expansion in cost of price support is shown by the Department's recent request to Congress for authority to borrow $2,000,000,000 from the Federal Treasury, additional to the some $5,000,000,000 which originally was supposed to be enough.

The Ellen Knauff Case

EXTENSION OF REMARKS
OF
HON. F. D. ROOSEVELT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. ROOSEVELT. Mr. Speaker, on March 7, I placed in the RECORD an editorial from the New York Times on the civil liberties implications of the case of Ellen Knauff. This morning, the publisher of the St. Louis Post-Dispatch continued his praiseworthy efforts to awaken the Nation's conscience about this matter. The Post-Dispatch editorial which was carried as an advertisement in the Washington Post today is an excellent summary of the developments in the Knauff case. Moreover, our esteemed colleague, the Honorable FRANCIS E. WALTER, of Pennsylvania, chairman of the Subcommittee on Immigration of the House Judiciary Committee, has just announced that his group will hold hearings on the Knauff case, beginning Monday morning. His action is indeed gratifying to all those concerned about protecting our civil liberties. What may be most important about this case is the emergence of what we may hope will be a growth of congressional action in defense of civil liberties. We have, perhaps, tended to place too much reliance for that on the executive and judicial branches of the Government. Congress, which is closest to the people, ought properly to lead the fight against arbitrary action by administrative officials.

Following is the text of the St. Louis Post-Dispatch editorial in the Washington Post of March 23, 1950:

(For the information of official Washington the St. Louis Post-Dispatch publishes, in the form of an advertisement, an editorial from its issue of yesterday, March 23:)

FOR A REVIEW OF THE ELLEN KNAUFF CASE

This editorial has to do with the perplexing case of Ellen Knauff to which the Post-Dispatch has devoted many news articles, editorials, and cartoons in the past 2 months. The case of this German war bride of an American combat veteran is as important as it is puzzling.

The Attorney General's summary order to exclude and deport Mrs. Knauff, who is held at Ellis Island as a risk to this country, puts her rights as a human being into head-on conflict with what the Department of Justice says is national security.

The question is: Under the Bill of Rights, which protects aliens as well as citizens, does not this little woman, many of whose relatives were killed in Hitler's persecution of Jews, deserve to know the specific charge against her?

Is she not entitled to a fair hearing on that charge? Should not this former employee of the RAF in England and the American Army of Occupation in Germany be confronted with specific accusations? And cannot these constitutional guaranties be accorded to her without disclosing really vital sources of information, and without endangering the Nation?

This conflict embraces a basic issue in democratic government. It is also an issue full of human emotions. For if Ellen Knauff cannot be admitted to the United States, then her husband, Kurt Knauff, must give up his country in order to live with his wife. How could a choice be harder?

WHAT A COMMISSION COULD DO

Because we think this case deserves more attention than it has received, the Post-Dispatch herewith reviews the case step by step and recommends the appointment of a commission of perhaps three distinguished citizens to look into the facts—in secret, should that be necessary. If the Attorney General is justified in excluding Mrs. Knauff without holding a hearing and without telling her why, such a commission could check the circumstances and report this conclusion to the country as a considered judgment.

So far the necessity for excluding Mrs. Knauff has not been made clear. Unless it is made clear, there will always remain the strong possibility that the exclusion was not necessary to national security, but was a cover-up to hide a bureaucratic mistake.

The Post-Dispatch does not say that the Department of Justice may not have facts which make it unsafe to admit Mrs. Knauff. There may be in her past an act which would prove her to be untrustworthy. But the haste with which the immigration officials tried to get her on a boat and started back to Germany suggests also the possibility that she may be the victim of a system which is trying to avoid a confession of error.

TWISTS AND TURNS OF 2 MONTHS

Here are the twists and turns of the case in the last 2 months:

January 16: The Supreme Court, by vote of 4 to 3, upheld the exclusion order, in a decision by Justices Vinson, Reed, Burton, and Minton. Justices Jackson, Black, and Frankfurter dissented vigorously. Justice Jackson denounced the plea of the Attorney General that evidence must be secret as abhorrent to freemen. Describing the procedure as dangerously wrong in principle, he said: "I should direct the Attorney General either to produce his evidence justifying exclusion or to admit Mrs. Knauff to the country." Justice Frankfurter, alarmed by the greater hazards of the informer's tale, without any opportunity for its refutation, said that "considerations of national security, insofar as they are pertinent, can be protected by a hearing in camera."

January 18: The Post-Dispatch printed a leading editorial, entitled "The Case of Ellen Knauff." The editorial predicted that this ruling will some day be reversed. It described the spectacle of Justice Jackson severely criticizing the conduct of one of his successors in the office of Attorney General, Tom Clark, now a Justice, as one of the most unusual in Supreme Court history.

February 3: Senator WILLIAM LANGER, North Dakota Republican, introduced a bill proposing that the Attorney General be directed to cancel any outstanding order of exclusion. The bill also proposed that Mrs. Knauff be permitted immediate entry into the United States. In accordance with custom, it was expected that hearings would be held before any further steps were taken to return Mrs. Knauff to Germany.

REVERSAL BY IMMIGRATION OFFICIALS

February 10: Representative FRANKLIN D. ROOSEVELT, JR., New York Democrat, made public a letter to Attorney General McGrath expressing concern over the grave civil-liberties questions involved. Representative ROOSEVELT said that he was disturbed because Mrs. Knauff was denied a hearing before a board of special inquiry to which she might have presented evidence which would have cleared her of whatever charges there are against her. Representative ROOSEVELT, who is vice president of President Truman's Committee on Civil Rights, proposed that the Attorney General reconsider the wartime Executive regulation under which aliens may be barred without hearings.

February 15: William Farrell, Immigration Service Director of Information, said that Mrs. Knauff's deportation was being stayed in accordance with practice as a courtesy to Congress. This was a recognition of the bill introduced by Senator LANGER. It also seemed an assurance that no hasty attempt would be made to return Mrs. Knauff to Germany before hearings on pending legislation.

February 23: Immigration authorities arrested Mrs. Knauff in New York and returned her to Ellis Island where she had been held for 8 months before release on bond. Prior to this, the immigration officials had brought pressure on Senator LANGER to persuade him to withdraw his bill. Senator LANGER agreed to withdraw.

DEPORTATION STAYED BY COURT

February 27: Watson B. Miller, Commissioner of Immigration, announced that Mrs. Knauff would be deported on the following day. Asked why there was this break with the custom of staying deportation until action on a bill, Commissioner Miller said exceptions were made "in cases we believe may involve internal security or espionage." Mrs. Knauff was ordered to the Army Transport *Gen. Maurice Rose* in New York, Senator LANGER changed his mind and announced that he would not withdraw his bill. This followed a conference with Representative ROOSEVELT who told Senator LANGER that if LANGER withdrew his bill, he (ROOSEVELT) would introduce a bill to the same purpose.

February 28: New York District Director of Immigration Edward J. Shaughnessy declared: "There has to be a finality in every case. This one has dragged on long enough. She is not the type of person wanted in this country. And that is all there is to it." With Judge Learned Hand presiding, the United States Court of Appeals at New York stayed Mrs. Knauff's deportation until further court action March 6. The Immigration Service returned Mrs. Knauff from the pier to Ellis Island. The ship sailed without her. President Truman and Secretary of State Acheson were presented with Post-Dispatch editorials and news articles on the case.

March 1: Representative ROOSEVELT announced the introduction of an amendment to the passport laws to guarantee a hearing for "any alien who has arrived in this country." He asked Attorney General McGrath and Immigration Commissioner Miller to postpone deportation of Mrs. Knauff until his measure could be considered. He told the Department of Justice he was deeply concerned with the fundamental issue of "securing the most protection for our civil-liberties tradition that is consistent with national security."

March 6: Presiding Judge Hand and Judges Frank and Swan of the Federal Court of Appeals at New York, agreed to review the Attorney General's deportation order. In agreeing to this review, the court rejected the vigorous arguments of David McKibbon, chief of the civil division of the United States Attorney's office in New York. This review was expected to halt deportation proceedings for several weeks.

A THIRD BILL IS INTRODUCED

March 7: Representative FRANCIS E. WALTER, Democrat, Pennsylvania, chairman of the House Judiciary Subcommittee on Immigration, introduced a private bill to require the Attorney General to cancel the exclusion order. Representative ROOSEVELT told the House that the Knauff case raised a civil liberties question that is "serious and immediate." He commended the Post-Dispatch, the New York Times, and the New York Post for their interest in the case.

March 16: Mrs. Knauff's lawyer, Gunther Jacobson, proposed to the House Judiciary

Subcommittee, through a letter to Representative WALTER, that she be subpenaed for a hearing. He wrote that he is "convinced the Government has no evidence against this young woman and that she is entirely innocent of any political activities."

Such is the confused and contradictory record of the perplexing case of Ellen Knauff in the 2 months since the Supreme Court's narrow decision against her admission as a war bride. From this record, no ordinary citizen can be sure that national security is at stake. Neither can the citizen be sure that human rights are not being ignored.

LET THE DOUBTS BE REMOVED

The Post-Dispatch, therefore, proposes the appointment of a commission of eminent citizens to investigate the facts and report to the country. We do not presume to nominate the panel from which such a commission might be chosen. However, we believe it would be reassuring if the commission contained men of the stature of former President Hoover, General Eisenhower, and General Bradley, former Secretary of State Marshall, former Secretary of War Stimson, President Conant of Harvard, Bishop Oxnam, and Cardinal Spellman.

We believe that a commission of citizens of this distinction, if called on to review the facts, would take the assignment for the important civic responsibility which it would be.

If the Department of Justice has a convincing case against Mrs. Knauff, let that be made plain, let the case be ended, and let her be returned to Germany.

But if there is no convincing case, let the country be so informed, the exclusion proceedings stopped, and Mrs. Knauff admitted to the United States as the wife of a former GI under the War Brides Act.

The Post-Dispatch urges the President, whose executive authority is involved throughout this case, to lift the issue to its highest level. We urge him to say, in effect, with all the prestige of his great office, that Ellen Knauff deserves better than star-chamber treatment at the hands of the United States Government.

Many Americans would applaud Mr. Truman were he to do so. It would be an act characteristic of the President's best qualities.

Can We Learn From the British?

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. MULTER. Mr. Speaker, an interesting article appeared recently in the New York Times magazine dealing with the British health service. I believe that the British medical program offers many lessons to those of us who are interested in improving the quality and availability of medical care in this country. The author of the article, David M. Heyman, is president of three medical-care organizations—the New York Foundation, Health Insurance Plan of Greater New York, and Public Health Research Institute of New York City. He recently returned from a study of Britain's health service. The article is as follows:

BRITAIN'S HEALTH PLAN: THE LESSON FOR US

(By David M. Heyman)

England has now had socialized medicine for 18 months. The most ambitious and far-reaching phase of the Labor Government's entire program, the health plan is a critical testing ground of the viability of the welfare state. Few programs today are so keenly observed by the rest of the world as this historic effort to make the medical care of a people a national rather than an individual responsibility.

Is the plan working? If so, how successfully? Where lie its weaknesses and its merits? Can we in America profit from the experiment?

To find the answers to these questions I spent almost a month in England last fall. As a frank advocate of some form of prepaid—although not compulsory—health care for our own citizens, I surveyed the British plan with sympathy, if not, in many instances, with enthusiasm. I talked with interested officials, from Aneurin Bevan, Minister of Health, who directs the program, down to general practitioners and patients. In what follows I shall give what I believe to be the merits of the system, the faults, and the extent to which we in this country can learn from Britain in formulating a health program to meet our own needs.

Before discussing the plan, I should like to point out that its lessons for us come at a psychologically propitious time.

President Truman's compulsory health insurance plan demonstrates, regardless of its faults, that the problem of the Nation's health is becoming increasingly a matter of public concern. One need not agree with the President's plan to admit that health security is as important as social security; that good health is no less a concern of the Government than good schools and good housing. The issue is how best to achieve this objective within the framework of the American democratic tradition. England—despite her mistakes—can teach us much.

THE ADVANTAGES

To understand the drastic measures which the British Government took when it launched its national health service in July 1948, one must know something of the problems involved. The Labor Government inherited a population that had suffered from inadequate medical care, by and large, for a generation. The war, with its great need for physicians and existing health facilities, its austerities and disruption of personal habits, and the depression years which preceded it, bequeathed a vast backlog of persons in need of everything from new teeth to new stomachs.

The Minister of Health launched a full-scale attack on this problem along the entire front. Overnight, the British people found themselves embarked on a revoluntionary cradle to grave program. If food and clothing were short and taxes high, good health could be had. Moreover, it was free—or so it seemed.

The enthusiasm with which the plan was greeted is illustrated by the story of a working man stumping his district for a Labor candidate in a recent by-election. "Why, if it hadn't been for 'Nye' Bevan," he said, yanking a set of dentures out of his mouth and waving them proudly before his audience, "I wouldn't have had these yet."

The most positive aspect of the program is its impact on the mind of the man in the street. The average person has lost his former anxiety about payment of medical bills, and there is no longer a financial barrier which deters people from seeking medical advice when needed. The net result is that people do not wait until they are seriously ill before going to a physician, and many diseases are nipped before they advance beyond medical aid. Given time, this will raise the level of physical well-being of the English people higher than it has ever been. The ambitious nature of the act has created many weaknesses, but they are mainly administrative and financial. Psychologically, it has been an undeniable success.

A second great advantage of the act is its gradual redistribution of physicians geographically. As in the United States, many sections of the country were poorly served in terms of the ratio of medical personnel to population. At best, England's national average of one doctor to 2,200 persons (compared to 1 to 1,500 in the United States) stretched medical care very thin. Today, by refusing licenses to new physicians in areas that are declared overdoctored, the Ministry of Health is indirectly forcing doctors into counties and towns that need them.

This is undeniably hard on many physicians, but the Government argues that it is also undeniably good for the underdoctored areas. Young physicians have swallowed this bitter pill and made the best of it.

The third point in favor of the plan is its direct subsidies to medical schools, research groups and local health authorities. The British Medical Research Council, which was organized in 1913 and operates under the protection of the Privy Council, has always had an excellent reputation. The new plan has offered no political interference, while strengthening the research work financially. Nor have medical schools undergone any modification, with one exception. Before the war, about half of the students were from medical families and the remainder came from other sections of the upper classes. Today more and more students are applying from the middle- and lower-income groups. For the first time medical schools can afford to take them in substantial numbers without loss of quality. Local health organizations likewise no longer find it necessary to scrimp. John Bull is footing the bill.

THE DISADVANTAGES

Except from the doctors themselves, one hears few complaints about the operation of the act. Nevertheless, it is obvious to a visitor—and it is becoming evident to the Government—that the health plan has many defects. The main ones are these:

The plan has attempted to do too much too fast. The Government is in the paradoxical position of having made good too literally on one of its chief campaign promises. It is immersed in a gigantic cooperative effort without the necessary period of preliminary trial and error by which such movements usually succeed. The doctors, generally speaking, are overworked and underpaid.

Their patients, in many cases, do not get the individual attention they should have. A physician may take up to 4,000 persons on his panel; far too many, medical authorities say, to permit him to give the best service. This situation will be corrected as the country turns out a higher proportion of doctors to the population, but such a solution is years away. In the meantime, the plan runs the risk of foundering on the shoals of its own ambitiousness.

The plan has proved too expensive. The original estimate for the first year was £152,000,000. It has actually cost more than twice that—well over £300,000,000, or about 10 percent of Britain's total budget. One reason for this is that the average Briton is under the impression that the service is free. Because he pays for his share in general, rather than specific, taxes he has no idea of its costliness. As a consequence, malingerers and hypochondriacs have abused the system by needlessly taking up the doctor's time. Common sense in minor complaints has given way to demands for treatment. Since drugs were also free until the Government began charging a partial payment last October, the chronic pill takers enjoyed

Digitized by the Internet Archive LIBRARIES

an unprecedented field day. "I am appalled," Aneurin Bevan has said, "at the amount of medicine going down British throats."

The plan is too complex and unwieldy. At the local level, for example, there are four distinct administrative units: teaching hospitals, regional hospital boards, local executive councils, and local health authorities. Each unit administers a different phase of the program and there is frequently a lack of coordination among them. The preventive and curative aspects of medicine, for instance, are separated, although they are actually part of one over-all problem.

The effect, moreover, has been to create an enormous amount of paper work for the doctor. He finds himself in a baffling new world of regulations, previously reserved for members of the armed forces and civil servants. And it is slowly dawning on him that he is a civil servant with very little local authority. At best, he finds it hard to keep up his traditional relationship with patients.

A further result of this administrative complexity has been to create an organization far too complicated for efficient operation. Medicine, unlike insurance and social security, is not merely a bookkeeping operation but a skilled form of personal service. Whether public or private, it will always be expensive. Efficiency, therefore, is a paramount factor in holding down costs.

In England the incentive for the participants in the program to make it efficient is largely lost. Instead of following an already established pattern that existed in the fields of public housing and health—Government subsidies to locally administered groups—the plan sets up a cumbersome apparatus which has made for considerable waste.

The plan has inequities, both for the doctor and the patient. Dentists, who are paid on a "fee for service" basis, have profited beyond expectations; in fact, the Minister of Health has twice reduced dental fees. Physicians, on the other hand, receive a "capitation" fee or annual retainer of 18 shillings a year—$2.52 at the present rate of exchange—for each patient on their panel. Although this is a much sounder method, the rate at present is too low for the average doctor, compelling him to accept more patients than he can satisfactorily serve.

One result of this difference in method of payment is that as much money has been spent by the Government for the care of eyes and teeth as for general medicine. Obviously this is quite out of balance and should be corrected.

But a more serious fault of the plan has been its consolidation of an already dangerous trend—the overspecialization of medical practice. Previously the general practitioner held appointments in rural hospitals. With the nationalization of hospitals he has been pushed out and his morale has sunk correspondingly.

I believe it would have been better to have left the hospitals, both voluntary and public, in the hands of the local health authorities. Not only would local administrative units have been more careful of costs—since they provide part of their own funds through local taxes—but there would be a closer relationship between the curative and preventive services. Also, the Government would have been wise to encourage group practice—specialists and general practitioners working together. Instead, it has further compartmentalized an already specialized profession.

In fairness, it should be said that many of the foregoing draw-backs can, and no doubt will, be corrected. Nevertheless, they compel serious consideration by any nation contemplating a public-health program.

THE LESSONS FOR US

Any attempt to set up a prepaid health plan in the United States must begin with the realization that Americans show no indication of favoring outright socialization of medicine. The British, obviously, wanted such a plan. No program can be enacted—let alone succeed—until it has the support of those whom it is intended to help.

My inferences, therefore, are based on the assumption that we in the United States do not wish to take the drastic step that Britain has. On the other hand, I believe equally that Americans want some change, and that this is toward voluntary prepaid medical care. To put it bluntly, medicine in this country—especially its specialized branches—is gradually pricing itself out of the market. Some way must be found to make the great resources of modern medicine available to all, and at a minimum cost.

The fundamental lesson that we can learn from Britain is that some form of prepaid health program can equalize the disaster of sickness, just as insurance equalizes the disaster of fire, theft, and accident. Whatever we may think of the details of the system, it has proved that the old private-fee doctor relationship is not sacrosanct. None of the dire things predicted by opponents of this act has come to pass; British medical research and teaching are as good as ever, and medical care as good as it can be considering the structural weaknesses of the plan. Were the Conservatives to come into office, I am convinced that they would not abolish it, although some modification would undoubtedly be made.

A second important lesson is that whatever we do, it should be done only after thorough study of our specific problems, and with adequate preparation for meeting them. It would have been better for England to have proceeded in a series of coordinated moves over a period of time rather than to go forward on all fronts at once. Britons are paying the price of a program that in too many respects was hastily conceived and inadequately planned. We must not make the mistake of trying to do too much too quickly.

A third lesson is that a federally administered plan would be insufficient and virtually unworkable. If the program is unwieldy in Great Britain with its 50,000,000 population, how much more true this would be here. Federal support—financial and technical—of local or area-wide groups is distinctly feasible. A national program, controlled from Washington, is not.

Already we have ample precedent for the kind of Federal-local partnership I have in mind. Public housing, financed jointly by National and city governments, yet autonomously administered by local authorities, is one example. Public-health grants to States are another. The Rural Electrification Administration, with its aid to farmers' cooperatives, is a third. In all these cases, localities participate by paying part of the costs, and assuming most of the responsibilities. Only in areas that are too poor to take part should the Government step in directly, and then only for a period long enough to get the program under way.

One final lesson which we may draw from England is her failure to encourage group practice. National health centers, which might have represented a step in this direction, have had to be postponed for financial reasons. In the United States, the inertia of the medical profession is much the same as in England. Doctors are individualists. Local health authorities, by providing clinics or centers, can overcome this by making group practice attractive. Moreover, since the physician's earnings under a prepaid-care system would in no way be adversely affected by group practice, and should even be improved, he would have every incentive to cooperate.

I am not underestimating the resistance that a majority of physicians and many laymen will offer to prepaid medical care. Yet when such plans are actually gotten under way, it is surprising how unimportant most of the objections become. In New York City the health-insurance plan—a community-sponsored nonprofit institution which I helped organize in 1946—has enrolled almost a quarter of a million members.

At first we had difficulty recruiting enough doctors to serve our patients. County medical societies were actively hostile, and one society refused to let its members participate on penalty of dismissal. Such blind opposition has largely evaporated, and at present there is a waiting list of physicians who would like to join.

Why? Except for the high-priced specialists, they make as much money as they could in private practice, and without the trouble of having to render a single bill. Members, likewise, have discovered that the care they receive is just as good as that which they enjoyed at the hands of a private practitioner. In fact, except for the method of payment, the relationship between doctor and patient is virtually the same, for the member may take his choice of physicians from among the panel serving his group. And the cost is within the range of virtually every family—$103.68 a year if the insured pays the entire premium; $51.84 if (as is the case with members presently enrolled) his employer pays at least half. This covers every type of medical care except long continued care of tuberculosis and mental patients.

Whether other communities copy the exact structure of this plan is not important. What is important is that our health security be based on workable, democratic principles, fair to doctor and patient; that it continue to encourage initiative among doctors and not interfere with the advances in medicine that have given us a fuller and longer life. Government and the medical profession must become partners in achieving this aim.

Although our Government is now doing a good job in financing medical research through grants-in-aid to both private and quasi-public institutions, substantial Federal aid is required in other areas—particularly in medical education. Many of our teaching hospitals operate at a loss. Facilities for training physicians are badly distributed and in some sections of the country inadequate. The national Government should make direct subsidies to improve the quality of medical education, and also perhaps in the form of scholarships to promising students.

A second area in which governmental aid is needed is that normally served by local health agencies. The United States Public Health Service already does this to a degree, but there are still many sections—particularly rural—insufficiently covered by this program. Federally built health centers and clinics in "underdoctored" regions would do much to attract young physicians who normally resist settling in areas where the facilities are as poor as most of the patients.

The final step—perhaps the most critical of all—should meet the necessity of encouraging, through the lending of technical assistance and funds, the formation of organization to give medical care on a prepaid, group practice basis. As in the health insurance plan described above, the operation of such a plan would be financed by the participants. Nevertheless, the sizable sums needed to get the system going will in most cases have to come from outside.

Experimentation along these lines, I am convinced, will in time help us arrive at a national program, locally controlled, that will suit the needs of the American people as individuals. The alternative is a costly and unnecessary depletion of our human resources, unthinkable in a Nation as prosperous and great as ours.

The Lull Before the Storm

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. MILLER of Maryland. Mr. Speaker, on May 3, last year, I made the statement to this body that the advocates of socialization will not long confine themselves to the field of medicine should they conquer it; that all professions had best prepare for attack.

Developments during the intervening months have certainly borne out the statement, which, at the time, was really a platitude. We have met and temporarily repulsed some of these schemes.

A couple of weeks ago, this body rejected the bill that would have been a start toward the socialization of libraries by the narrow vote of 164 to 161.

Resistance to the bill, which would have meant Federal aid for mining, the following week, was a little stronger. It was voted down 167 to 144.

Last Wednesday the defeat of the cooperative middle-income-housing measure by a margin of 63 votes was a decided reverse to the advocates of statism.

But, Mr. Speaker, we must not be lulled into a sense of false security by recent successes.

The reversal of the trend may be only temporary. Certainly the socialistic planners are neither discouraged nor idle. They are quietly marshalling their forces for an all-out drive at the most favorable time for their next major objective—socialized medicine.

Mr. Oscar R. Ewing and his ilk are plugging away tirelessly toward their goal. It is to be regretted that taxpayers foot the bill for much of this propaganda. Let us not forget that the drive for compulsory health insurance got under way in Europe away back in 1883. In England, Lloyd George started it for a small group of low-income manual workers as long ago as 1912. These people are patient and tenacious. Look where they are today in Britain.

I understand that now medical personnel there are paid upon a per capita basis. In other words they get a certain set amount per annum for each patient, the maximum number of patients limited, of course, by the Government. The dental profession, I am informed, balked at this basis of payment and held out for a time for what is known as a grant-in-aid. That is a system whereby the government sets a fee for each kind of service but the dentist is permitted to make his regular charge and the patient pays the difference between the government rate and the dentist's bill. This system is now in operation in several countries but the British Government refused to go along and forced their dentists to take a fixed rate for each type of operation. That represents a long advance since 1912. We must be alert or we will find too late that something of the sort has happened here. If the American medical profession loses its freedom, so will their patients and so will those who follow other trades and professions. As of yore, we cannot long endure part slave and part free.

Unemployment Problem

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. LeFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an editorial taken from the March 18 issue of the Poughkeepsie New Yorker.

Mr. Speaker, the unemployment picture surely does not look too rosy with some 4,700,000 persons presently out of work. President Truman's economic advisers believe we can still maintain a healthy economy should that figure increase to 5,500,000. Many are predicting that by late fall, we will have at least a million added to the present list of unemployed. In the face of this situation, I can see no reason for the delay in reducing our war emergency excise taxes. The idea taken by some that before reducing these taxes we must make up this loss in revenue by increasing other taxes to me seems beside the point. Previous experiences in our country and more recent experiences in Canada prove quite definitely that a fair decrease in taxes results in a greater increase in business, which would more than offset the loss of excise taxes. Now is the time to come to the rescue of business. Day after day we read of many leading retail stores having considerable decline in sales due largely to the excise taxes. We must work not only to keep employment up to at least the present figure, but we must do everything to encourage business expansion to take care of the approximate 600,000 new workers coming into the labor market each year.

Prof. Joseph S. Davis, of Stanford University, recently forecast a population growth of 50,000,000 in the United States within the next 50 years. I understand his estimate is a very conservative one. Our present population is close to 152,000,000, and, therefore, according to Professor Davis, our population will exceed 200,000,000 by the year 2000. This all goes to show that the United States is still a vigorously growing Nation. Our strength is in our people and the quality of our people. This growth of population means we must look ahead to take care of larger school enrollments and an expansion in business to take care of the increase in labor.

The editorial referred to follows:

GROWTH NECESSARY

Heavy unemployment used to be considered one of the hallmarks of depression, but that day seems to be passing.

According to Government figures, some 4,700,000 persons were out of work in mid-February. Offhand that sounds like a pretty sizable pool of jobless, but the economists don't view it too seriously.

For the whole country the unemployed represent around 7 percent of the labor force. Less than half the total have been out of work for as long as 2 months. Most of these are people moving from job to job.

The picture isn't so rosy, of course, in certain specific areas. Latest Federal data show 43 distress regions where unemployment is at least 12 percent. Only 39 were in this category the previous month.

Yet despite these black spots and the rather high national total of jobless, the outlook for business is not bleak. Most experts today are predicting prosperous activity for the remainder of 1950 and perhaps throughout 1951, too.

President Truman's economic advisers maintain their general optimism even though they believe United States unemployment may go to 5,500,000 this summer and possibly keep on rising into the fall and winter.

They are banking on the continuance of heavy demand in many basic fields. Market studies support their confidence. Not the least encouraging factor is the uninterrupted rise in the United States population. It is on this that many businessmen found their plans for expansion.

This very gain in population, however, accounts in part for the paradox of swelling unemployment in the midst of prosperity. Every year about 600,000 new workers start hunting for jobs. Industry must grow at least as fast as the population to absorb this steady stream.

To aggravate this problem, industry now is stepping up its productivity. That is, the output per man. Productivity rose pretty constantly in the decades up to World War II, but then slacked off. In the first postwar years, it was down below prewar levels. But in 1949 it picked up again. About 3 percent fewer workers were needed to turn out approximately the same goods and services as were produced in 1948.

If this productivity trend continues, and that is considered both likely and desirable, then more and more goods will be made by fewer and fewer workers in the years ahead. Obviously that can only add to unemployed rolls unless industrial expansion offsets this factor.

So, while economists are cheerful, they are also keenly aware of the need for promoting industrial growth to make job room for the millions of new workers and technologically unemployed.

And there is even talk of restoring some kind of pump-priming WPA at an early date, to cushion the effect of the often painful adjustments necessary. We have only recently been introduced to the idea of unbalanced budgets in prosperous times, now we may see a job-making WPA side by side with an industry producing at record rates and employing more people than ever in history.

Government Personnel Offices

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. POULSON. Mr. Speaker, every Member of the House knows that the Federal Government has more than 2,000,000 employees on the pay roll today. Their salaries alone cost the taxpayers more than $5,000,000,000 annually.

UNIVERSITY OF MICHIGAN LIBRARIES

Now every single one of these agencies has a personnel office. I want to call the attention of the House to some startling facts in this connection.

A survey of major agencies which employ 1,800,000 persons, showed that they had a total of 23,430 employees in their personnel offices alone. The annual salaries of these 23,430 personnel workers amounted to $76,000,000.

This means that there is one personnel worker for every 78 employees and that the average cost is $42 per employee served. Even more ridiculous is the fact that in some cases there is 1 personnel worker for every 38 employees.

Now listen to this—the total annual salary costs of personnel workers in all departments is now six times what it was in 1940. Where do we stop? Next we will have superpersonnel experts to take care of the personnel experts who take care of the pampered Government employees who in many cases do nothing more than draw their salaries.

And all costing the taxpayers millions yearly.

Arming of the Arab States

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

MARCH 22, 1950.

Hon. DEAN G. ACHESON,
Secretary of State,
Department of State,
Washington, D. C.

MY DEAR MR. SECRETARY: For some time I have been concerned about the arming of the Arab states, especially Egypt, Iraq, and Jordan, by the British Government, and I have also been receiving hundreds of protests in this connection from my constituents.

I am not at all surprised at the growing apprehension at this alarming situation. Last autumn I had the privilege of visiting several countries in the Middle East. I talked with many well informed persons there. I spent considerable time in Israel, and also traveled in Egypt, Syria, and Lebanon.

It is no secret that the Arab states, smarting from the humiliating military defeat in their conflict with Israel, are preparing for another series of invasions into Israel, and the starting of a second war. British airplanes, tanks, rifles, are flowing into Arab states in large numbers. Arab newspapers carried stories of the importation of these military weapons, and of the ultimate sinister use of these munitions of war.

It is sheer nonsense to offer as an alibi that these Arab countries need these weapons for security. Security against whom? Russia? Does anyone in his senses believe that these Arabs, who were defeated on the battlefield by tiny Israel, could resist invasion by Russian forces, if such invasion occurred? It doesn't make sense.

Are the allies, and Britain in particular, arming Arab states as a bulwark against communism? Have we forgotten that the Arab leaders were wined and dined and financed by Hitler, in plotting against the allies, and especially against Britain, when England was facing disaster? Israel, alone, of the Middle East countries can be depended upon to thwart the expansion of communism.

Arming the Arabs has naturally stimulated a competitive military race. The Israeli Government is forced to spend a larger portion of its budget for military defense against the possible second invasion by Arab troops. The Arab States, too, are thus encouraged to make excessive expenditures on military weapons, money which could better be spent to improve the standard of living of the poor natives.

Worst of all, Mr. Secretary, is the danger that this foolish policy of arming the Arabs might very well lead to a conflagration in the Middle East. Once started, that flame might spread and naturally provide the Communists with an opportunity to aid in overthrowing orderly government. Communists thrive on war, distress, and confusion. Witness China's disintegration and surrender to Communist influence.

It is no sound answer to say that Israel can also import arms. Even if licenses were more freely granted to export arms from the United States, it still is no answer. The United States should use its influence directly upon the British Government to cease her policy of arming the Arabs. If England refuses to listen to reason, then our Government should use its influence in the United Nations to prohibit such shipment of arms. It is the duty of the United Nations to thwart such sinister policies; and it is our obligation to make presentation to the British Government, indicating our desire to preserve peaceful relations in the Middle East. We owe it to Israel to be freed from the constant fear of attack.

I hope I may have a reply from you on this subject as courageous and constructive as was your recent San Francisco speech.

Respectfully yours,

ANTHONY F. TAURIELLO,
Member of Congress.

State Department Representatives Abroad

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, March 24 (legislative day of Wednesday, March 8), 1950

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "I Don't Like Drunks and Fools Representing Me," written by Robert C. Ruark, and published in the Washington Daily News of March 24, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

I DON'T LIKE DRUNKS AND FOOLS REPRESENTING ME

(By Robert C. Ruark)

NEW YORK, March 24.—Sometime back I got a boat for Africa and found it loaded with various State Department appointees to positions of delicate trust in the Near East—the oil country on which our future rests.

The boat was also loaded with the Arabs and Egyptians with whom our people must work. The Arabs and the Egyptians almost died laughing at our people.

One executive was an alcoholic. Another, a military attaché, was so flagrantly homosexual that he regaled strangers at the ship's bar with teary tales about his inability to write his boy friend everyday. Still another was so stupid that he made obvious love to an obvious floozie in the deck chairs—and him with a wife and two children aboard.

When a drunk is in charge of one set of papers and a homosexual is in charge of another and the fool reigns over still another, you don't need spies. Any half-stupid private detective, for 10 bucks a day, can catch any or all in compromise, and sock him for whatever you wish.

Later on I visited one legation that was a beaut. The military attaché was just about charming enough to wear a hostess gown in public. The head man was married to a French woman in a place where French are despised. Nearly everybody I met seemed to be either drunk or worse.

The cultural attaché was married to one of the most pathetic of women. She was a violent alcoholic. She was known to have got drunkenly ill at table at a state function. She hung around bars and picked up strangers—sailors, soldiers, and the natives. She was a joke with whatever ship 't port.

This is pitiful. This is pathetic. But she was, to my knowledge, condoned for over 2 years, although the time came when she was no longer asked to state functions. But her husband hung onto his job as our public representative abroad. For all I know he still has it.

I do not blame this poor dame, nor censure her husband, nor place any personal fault on the drunk, the fool, or the homosexuals. But I sure don't like the idea of having them represent me abroad. Especially in places that swarm with spies. The blame is on the permission of one man to rig a whole hierarchy of misfits in the State Department, and on our failure to recognize the rottenness and cut it out after the big sinner was caught and fired by President Roosevelt—a long, long time ago.

The State Department is largely a lip-service organization—much front, for advertising, and deeply involved in the welfare of our world. It seems awful dumb to put up with drunks and perverts and the husbands of town characters and fools and knaves when all espionage and checkmate diplomacy turns automatically to the weak link.

Indiana's Ku Klux Klan Disgrace

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. MADDEN. Mr. Speaker, the following editorial by H. B. Snyder, of the Gary Post-Tribune, reveals the sentiment throughout the State of Indiana regarding the almost extinct Ku Klux Klan. All of the officials, politicians, and persons identified with the Indiana Ku Klux Klan of the 1920's were convicted of crimes or have been reduced to disgrace in their respective communities or have disappeared to parts unknown.

AN UGLY CHAPTER COMPLETED

Release of D. C. Stephenson from the Michigan City penitentiary and his departure from the State will close the record on one of the most disgraceful periods in Indiana history—the era of the Klan.

The period of the Klan's rule in Indiana was brief, though the hooded order left its mark on the State for many years. A quarter of a century after Stephenson's conviction, a Governor is able to release him from

prison without setting off a major political scandal. That could not have happened even a few years ago. It has taken 25 years to eliminate the Klan as an ugly factor in our political life.

There have been many unsavory stories about Stephenson's trial and conviction. The prisoner was never able to establish them satisfactorily in a court of appeal. His release comes presumably on the basis of time served in the penitentiary and his record as a convict.

Recently there have been reports of a resurgence of the Klan in some of the Southern States, notably Georgia and Alabama. There have been incidents of night riding and violence. But also, and quite contrary to the situation a quarter century ago, there has been stern action against the night riders. There are State laws now to curb the Klan, and there is enforcement, even if it's not all that it should be.

We doubt that there will be any Klan revival in Indiana. Hoosiers certainly should have learned their lesson in the twenties. And the release of Stephenson now, bringing back to mind the disgraceful political events of 25 years ago, should increase our resolution that it shall not happen again.

The parole of Stephenson should write the last line in the record of Indiana and the Klan. But though the record is completed, it should not be forgotten.

Rearmament of the Arab States

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

AMERICAN ZIONIST COUNCIL,
WASHINGTON BUREAU,
Washington, D. C., March 22, 1950.

Hon. ANTHONY F. TAURIELLO,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: We are enclosing herewith a copy of a letter from the Department of State, received by Senator HENRY CABOT LODGE, JR., of Massachusetts, relative to the rearmament of the Arab states by Great Britain, with the sanction of the Department of State.

It is interesting to note that said letter from the Department of State confirms the shipment of arms to the Arabs. However, it assumes an optimistic view of the situation.

Mr. McFall places complete reliance on the existing armistice agreements between Israel and its Arab neighbors. He, therefore, excludes the possibility of a violation on the part of the Arabs. The views of the Department of State, as stated by Mr. McFall, represent a manifestation of a naive faith in face of the existing tension in such an unpredictable section of the world as the middle eastern area, where nothing should be taken for granted.

One does not have to be a trained diplomat to appreciate that, should the Arab states resolve to carry out their military threats against Israel and begin a "second round," the damage will be done and it may too late for the Security Council to stop the conflagration. It may even ignite other sections of the world. No guarantee is offered by the Department of State against the renewal of the war by the Arabs; there is no pledge that, should a war of revenge against Israel break out, the United States would offer immediate military aid. At best, the views of the Department of State are speculative; it is a gamble with the lives of a people who have already suffered so much.

Verily, one should regard as dangerous the placing of a revolver in the hands of a potential murderer. Israel, against whom threats are constantly being made by the Arabs, is entitled, at least, to the opportunity of being placed in a position of complete preparedness for self-defense. Israel is anxious to avoid an arms race when the country is faced with so many internal financial burdens, but such an arms race is being forced upon Israel by the unprecedented shipments of arms to the Arabs, with the approval of the Department of State.

It is alleged that the middle eastern region is strategically important for the West in its cold war and, therefore, the rearmament of the Arab states is the logical sequence of that policy. If this be true, then it appears rather strange that the State of Israel, which is also a part of the middle east, is excluded from that policy. Israel is the outpost of democracy in that section of the world and, in case of an invasion by a third power, Israel, indeed, can be relied upon even in a much broader sense than the Arabs, as a faithful and cooperative ally of the West.

An equitable and realistic approach to the situation seems to dictate a course of action, on the part of the United States and Great Britain, whereby arms would be made available to Israel in the same manner as they are being made available to the Arab states. Thus, a balance of armament between Israel and its Arab neighbors will be established.

This is the basic issue.

There is tremendous concern about this question, and it is not limited to Americans of the Jewish faith. You will recall that recently, Messrs. William Green, president of the A. F. of L., and Philip Murray, president of the CIO, visited President Truman, protesting the rearmament of the Arab states.

As you well know, American Jewry is raising millions of dollars through the United Jewish Appeal, for the immigration and rehabilitation of the tens of thousands of DP's who are entering Israel, where they come in search for peace and security.

Israel needs peace even as one needs the oxygen of the air.

We sincerely trust, Congressman, that, consistent with your official duties, you will deem it proper to follow up this issue on the floor of the House. It is a principle which is in perfect harmony with the American policy of the pursuit of peace among the nations of the earth.

Please accept our deep appreciation for your sympathetic cooperation.

Cordially,

ELIHU D. STONE,
National Vice President,
Zionist Organization of America.

P. S.—We are also enclosing a reprint from the CONGRESSIONAL RECORD giving all the information on this problem by the Honorable JOHN W. MCCORMACK.

High-School Essays on World Citizenship

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith an editorial from the Lyons Daily News, published at Lyons, Kans., which contains a copy of a letter from Mrs. J. L. Blair Buck, president of the General Federation of Women's Clubs of Washington, D. C., to Mr. S. H. Jones, managing editor of the News, together with Mr. Jones' reply. I especially commend Mr. Jones' reply to the attention of Members of Congress.

FEDERATION REPLIES

This writer several times recently has criticized the assignment of the theme subject World Citizenship to high-school youngsters by the Federated Women's Clubs. His comments have been relayed through federation channels to Mrs. J. L. Blair Buck, president of the General Federation of Women's Clubs, Washington, D. C., and from her today we receive a letter.

In the belief that the letter may be of interest to a good many local persons, both members of Federated Clubs and individuals otherwise concerned, we print it, herewith, together with an open letter in reply:

"DEAR MR. JONES: Several recent editorials from your newspaper have been sent to me. They have criticized severely the program of women's clubs in providing essay contests among our high-school children on the subject of world citizenship.

"You have evidently been too busy locally to care about what is taking place in other parts of the United States or you would know that many highly intelligent and patriotic Americans are attempting to find some way of preventing the cold war that we are at present fighting with Russia from turning into a hot war. So many thinking people have considered that a third world war might be prevented by strengthening the United Nations and developing it into a form of limited world government that there are now before our Congress six resolutions on the subject of world organization.

"The General Federation of Women's Clubs in convention assembled in 1948 adopted a resolution on the subject of world federation. Since that time an active program of education has been carried on in our member clubs, urging the study of the various proposals for world organizations as a method of preventing a third world war. We are naturally interested in having our children aware of what it would mean to be a world citizen should any of the proposals for world government be adopted. We want our young people, as well as our members to make up their own minds on the basis of knowledge of the subject and not on the basis of ignorance. We are not interested in what you call 'packaged thinking.'

"Very sincerely yours,

"MRS. J. L. BLAIR BUCK."

"DEAR MRS. BUCK: I am happy to have your letter, and equally happy to reply. It gives me an opportunity to explain the difference between what I stand for and what those two words 'world citizenship' stand for.

"In the first place, I note with considerable interest your reference to wide interest in a limited world government. It is unfortunate, if that is what the federated clubs meant for youngsters to consider, that they did not assign that as the subject of the themes. There is a world of difference.

"For some years, as a newspaper man, I have been much in sympathy with the programs of various organizations embracing theme writing by youngsters on the subject of American citizenship. I would have been in sympathy with efforts to instill in our children a greater consciousness of the benefits of world mindedness or even a world alliance,. But world citizenship, never. And for these reasons.

"Actual world citizenship cannot be had without actual world government. Anything

CONGRESSIONAL LIBRARIES

else would be a mere alliance of nations, or world tolerance, or world mindedness. An actual world government would necessitate the subjugation of all the governments, including this grand one of ours, to the will of the majority.

"I can think of no quicker, no more certain way of surrendering our American heritage than that.

"America right now is pouring out billions of dollars of its wealth and substance to the other nations of the globe. The American people, including myself, are going along on the idea. Because we are doing it willingly we are proving that we are the most world-minded, most generous people the world has ever known. Surely nothing of the kind has ever been done in all of world history.

"But should we become part of a world government this would all be changed. We would be doing it, no doubt, but it would no longer be on a voluntary basis. The part we play would be dictated by the will of a majority, and it might or might not be our will.

"I think it is most unfortunate—or was it by design?—that the word 'limited' was not made a part of the theme subject on world citizenship. My daughter might then have written a theme based upon the limitations that could be inserted, to protect her American heritage As it was, she was given no such choice, if she was to write favorably upon the subject assigned.

"In assuming that I have been too busy locally to know everything that is going on in America, I fear you were entirely right. I further fear there are quite a number of things going on which, if I knew about them, would disturb me a great deal. Any movement to trade my own or my daughter's American birthright for a mess of pottage would be one of them.

"I hope, Mrs. Buck, that you are, as you say, not interested in packaged thinking. I hope, more than that, that you have not helped to package this batch.

"Quite sincerely,

"S. H. J."

State and Municipal Employees and Teachers Should Be Excluded From Federal Social Security

REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. JENKINS. Mr. Speaker, in the last few days of the last session of Congress, the House passed H. R. 6000 which is known as the social security bill.

The policy of the Social Security Board as set forth by the word and action of Mr. Altmeyer and those who dictate policy has been to bend every energy to bring under Federal social security all workers wherever they are and whatever they do. They want to socialize every worker in the country if they can.

Following this policy they did all they could to bring under Federal social security all State employees and all county and municipal employees such as courthouse employees and policemen and firemen and also school teachers.

I opposed this policy as vigorously as I could when the bill was before the Ways and Means Committee and before the House. With the help of those on the committee who agreed with me we were able to prevent a complete blanketing under the Federal social security of these groups which I have just mentioned. However, we are not able to strike out of the bill all reference to these employees as I should have liked to do. The bill when passed contained a provision that if a State through the proper authority petitioned the Social Security Administration to have any or all of these groups included under Federal social security, the Federal Board would have authority to enter into an agreement with such State to extent social security to such groups.

This cannot be done, however, until after the Governor certifies that a written referendum vote has been taken at which all affected workers have had a chance to vote and that not less than two-thirds of the voters in such referendum vote in favor of including their positions and services under the Federal social security. In other words, if one-third or more of the workers involved voted not to be included under Federal social security then they would be excluded.

One of the principal objections to this system is that mayors and governors and others wielding political pressure should they be in league with the Social Security Board might pressure these groups into giving up the retirement systems that they have built up and of which they are justly proud.

This bill, H. R. 6000, is now pending in the Senate of the United States. I understand that there is a strong sentiment in the Senate in favor of eliminating these objectionable provisions from the bill. Interested groups such as State, county and municipal employees, and school teachers should let their wishes be known to their Senators.

I hope the Senate strikes these objectionable provisions from the bill.

Your Government at Work in the Orient

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. MILLER of California. Mr. Speaker, the United States Philippine War Damage Commission has done an outstanding job in carrying out the expressed will of the Congress in its work of rehabilitation in the Philippine Islands.

The Philippines are a long way from Washington. The Republic of the Philippines, our staunchest of allies, is without the same caliber of representation in Washington as is evidenced by the staffs of experts representing European countries that come here to ask our help and favor. One good and sufficient reason for this is that the war-ravaged Philippine Republic cannot afford the luxuries of missions to America. They choose to conserve what funds they now have and to use them in an effort to rebuild their country and their economy.

Mr. John A. O'Donnell, who has done a fine job as a member of the War Damage Commission, recently delivered an address, Your Government at Work in the Orient. In this he tells you some of the problems that confronted the War Damage Commission and some of the stubborn problems that confronted the Philippine Republic.

This document should be preserved in the CONGRESSIONAL RECORD, and I commend it to your reading.

YOUR GOVERNMENT AT WORK IN THE ORIENT

Imagine yourself confronted with the problem of establishing the headquarters of a large Federal agency, 11,000 miles from Washington, D. C., in a foreign country and with a staff which numbered only 16 percent citizens of the United States. What would you do and how would you do it?

The problem was a real one to the three commissioners of the United States Philippine War Damage Commission, an independent Government agency. Its headquarters are in Manila, with regional offices strategically located throughout the Philippine archipelago. It maintains a staff of over 900 employees, only about one-sixth of which are American citizens.

Created by the Philippine Rehabilitation Act of 1946, this Commission is performing a function unique in history. Its purpose is the adjudication and payment of private and public claims for war damage caused in World War II and it is the first time that the United States or any other country has paid the citizens of another nation war damage remuneration on such a scale.

This act was intended as a manifestation of good will on the part of the United States toward the people of the Philippine Republic to whom we gave independence on July 4, 1946. Not only had friendly relations existed between the two countries for nearly half a century, but this was the only American territory that suffered heavy damage during the war. The Filipinos remained steadfastly loyal and underwent great suffering during the Japanese occupation. With the end of the war and the granting of independence to the Philippines, it was vital that this struggling republic received aid to rehabilitate itself in order that it might assume the position it deserves among the nations of the world.

As required by the act, two Americans and one Filipino were appointed as members of the Commission. The Americans were Frank A. Waring, the chairman, and John A. O'Donnell. The Filipino member appointed was Judge Fancisco A. Delgado.

The first problem facing these men was to arrange housing for the American personnel being brought to the Philippines and office space for the staff to be recruited. Anyone involved in the deployment of nonwar agencies from Washington before and during the war is aware of the problems involved in uprooting and transferring personnel, even for just a city to city move within the United States. Magnify these problems a thousand times and you have some idea of the task confronting the Commission. According to General Eisenhower, Manila was one of the most war-devastated cities in the world, second only to Warsaw. In the closing months of 1946, housing was next to impossible to locate. Office space was extremely scarce. Food was far below American standards. The country was in the throes of severe inflation and prices were several hundred percent above prewar level. There was no public trans-

portation. Communications were exasperatingly slow and the electric power system temperamental to say the least.

Arrangements were made with the Manila Hotel to provide housing in temporary barrack buildings in the hotel compound. The barracks were originally constructed by the Navy, and while extensive alterations were made, to put it simply, they were still barracks. A special rate for food was agreed upon and while neither the quarters nor the food could be called homelike the first obstacle had been hurdled.

The American personnel began arriving in November 1946. Nearly a hundred persons were flown to Manila in three flights through a charter arrangement with Pacific Overseas Airline. The cost per person, Washington, D. C., to Manila, was less than the minimum first class steamship fare from San Francisco to Manila, without taking into account rail fares, time in transit, per diems, and other expenses which would have been involved in rail and water transportation.

Meanwhile, plans were under way for the construction of a housing compound in Quezon City, a suburb of Manila. Upon the completion of this project, the majority of the married personnel were moved there. This compound is not only attractive, but provides safe play space for children, adequate room for adult recreation and a dust-free, cool retreat after the noise, heat, and dust of the average Manila workday. Two new downtown apartment houses were also leased upon their completion and these provide accommodations for the unmarried personnel and those with grown children. Employees received these quarters in lieu of the rental allowance provided under Bureau of the Budget regulations.

Next came the problem of office space. Fully 90 percent of the prewar offices and Government buildings were partially or completely destroyed. The Commission was faced with the task of competing with thousands of others who were looking for space. The Aguinaldo Building in downtown Manila was finally rented but the facilities and location were not good. Later, a compound containing eight two-story steel Navy buildings was obtained. These buildings provide large offices with good lighting and ventilation. There is a modern cafeteria where relatively low-cost food is served. A former Navy nurse operates a first-aid room. The facilities of the cafeteria and the dispensary are available to all employees.

Originally, the Commission borrowed an old Army bus to transport its employees to and from work. It had definitely been through the war and was not a very reliable means of transportation. It frequently broke down and the problem of getting employees to work was constantly arising. As soon as possible, busses were purchased and now handle the transportation of the American personnel.

Naturally, unemployment was at a peak never before seen in the Philippines. The Commission received 10,000 applications for approximately 1,000 openings. Among its first decisions was the determination that veterans, both Filipino and American, would be given preferential consideration for employment. Physical handicaps were not to bar applicants if their qualifications were otherwise satisfactory. Furthermore, the civil-service lists of the Philippine Government were to be studied to find eligible candidates for positions.

As soon as the first Americans reached Manila, the Commission began the recruitment of Philippine personnel. These employees have performed creditably and with a high degree of initiative and intelligence. To cite one example, the head of the division responsible for the recording of all incoming claims arrived at his desk one morning to find that his staff had been at work all night. They did it on their own initiative to catch up on the backlog of tabulation that had occurred, not through any fault of their own, but because the tabulating machines could not keep up with the load. This and considerable other overtime has been performed on a strictly voluntary basis.

A willingness to place Filipino personnel in key positions has been demonstrated and they hold such positions. The Commission maintains an internal promotion policy and considers all current employees whenever a better position is to be filled before it employs anyone from the outside. It has been interesting to note the keen competitive spirit of the Filipino employees—always striving to move ahead, yet never sacrificing quality for quantity.

In drafting the Philippine Rehabilitation Act, the Congress wisely recognized the economic problem which contronted the Commission with respect to personnel and exempted it from the obligations of the Civil Commission Regulations and the Classification Act of 1923, as amended. The Commission has sought to adhere closely to the civil service regulations insofar as they may be made to apply efficiently and economically. It has adopted several measures for the betterment of personnel and has been able to maintain most satisfactory employee relations.

As might be expected in such an overseas operation, there has been some turn-over of personnel, but the percentage has been relatively small. Several American employees have resigned and returned to the States but this was to be expected, for no one who has not lived and worked in a foreign country, especially the tropics, can visualize in advance what his reaction will be. On the whole, the Commission has been most fortunate in the choice of its American personnel.

Living allowances are paid under the same regulations as those which provide for rental allowances. The salary scale is relatively high, for both Philippine and American personnel. It was arrived at by the Commission after an exhaustive survey had been made of the Philippine Government agencies, business firms, etc., and living costs were found to be four and five times higher than before the war. Also, the agency is a temporary one, its life being definitely limited under the act which created it. Many of the American staff made personal sacrifices to go overseas and help the Commission do the job assigned by Congress. The payment of adequate salaries to Filipino personnel has instilled in them a sense of pride and has tended to remove temptation to succumb to pressures from those seeking favored treatment on claims. The Commission believes that decent incomes reduce temptation by relieving employees of the normal possibility of financial straits.

A grievance procedure that permits an employee to take his complaint to the Commissioners themselves has been adopted. The procedure for involuntary separations provides a complete safeguard for the employee. Charges of unfitness must be reduced to writing and forwarded to the employee through the Personnel Division. The employee has five working days in which to answer the charges and if his answers are not satisfactory to his office director, the employee may appeal in person to the Commission.

Numerous other measures have been adopted for the promotion of harmony among the employees. Among them is the fact that Philippine holidays as well as those celebrated in the United States are observed.

The Commission is now in the sundown of its existence and is required by law to complete its work by April 30, 1951. There is no question but that this goal will be attained. The task has not been an easy one but the Commission is justly proud of the record it has made. Over 1,250,000 private-property claims were filed and approximately 1,200,000 have already been liquidated. Funds have been allocated for the rehabilitation of schools, hospitals, government buildings, waterworks and irrigation systems. This record has been achieved only through teamwork and the splendid employer-employee relationship which has been established and maintained.

Home Rule for the District of Columbia

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. ABERNETHY. Mr. Speaker, under unanimous consent, I include in the RECORD an editorial which appeared in the Washington News on March 21, 1950, on the subject of Home Rule for the District of Columbia. The editorial follows:

HOME RULE SHAM

Hypocrisy is fast becoming a Government policy here as it has in varying degrees in other countries. In its campaign against the Kefauver bill for home rule in the National Capital, the Washington Board of Trade has issued a pamphlet briefly emphasizing palpable frauds the bill contains. The principal one is:

"SEC. 404. The Congress of the United States reserves the right, at any time, to exercise its constitutional authority as legislature for the District of Columbia by enacting legislation for the District on any subject, whether within or without the scope of legislative power granted to the District council by this act including, without limitation, legislation to amend or repeal any law in force in the District of Columbia prior to or after the enactment of this act or any provision of this act."

The pamphlet asks: "Is that home rule?" It proceeds to remind Washingtonians that the bill permits the District to elect nine members of the proposed council, but lets the President appoint the other two; and that it lets persons temporarily living here, but retaining citizenship elsewhere, to vote here as well as in their own cities upon all municipal questions, including throwing the District into bonded debt to the extent of $80,000,000.

When the same measure was called the Auchincloss bill in the last Congress, this newspaper pointed out that, as a home-rule instrument, it was a fake. It still is. Its real purpose is to reorganize the municipal government under the domination of a city manager. But it would surrender no fraction of the present Federal control of our home community.

The pamphlet also stresses that the Kefauver bill would not give either the national franchise or national representation to the District. It still would leave our people voteless on national issues and candidates.

Many opponents of the bill favor national representation but object to local suffrage. That is not our position. We believe Washington should be fully enfranchised both nationally and locally—in the American tradition. But national representation is not home rule. The News believes thoroughly in genuine home rule, but insists that a home-rule bill which would impose a form of local government dictated by Congress is a sham.

CONGRESSIONAL LIBRARIES

We first should be given local autonomy and then be permitted to decide for ourselves whether we want a city manager or a mayor and city council like other large cities in the United States.

Mission in Washington

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an eloquent sermon entitled "Mission in Washington," by the Reverend Franklin D. Loehr, of Florence, Mass.:

MISSION IN WASHINGTON

Scripture: Luke 10: 25-37; Hebrews 11: 1-40.

WASHINGTON, D. C.

Rev. FRANKLIN D. LOEHR,
Florence, Mass.:

House Foreign Affairs Committee planning meet privately January 18 to decide action or inaction on Atlantic Union resolution. Senate leaders, administration also, formulating policy now. Urgently need you in delegation seeing congressional leaders, State Department, White House, January 17 to 23, inclusive. Committee tentatively planning anniversary dinner 23d. Could you be present any or preferably all these days? Please wire our Washington office, 1111 Seventeenth Street NW.

OWEN J. ROBERTS.

For 10½ years I've been waiting for that telegram.

Ten and one-half years ago—in the summer of 1939—I first came across Clarence Streit's book, Union Now. That's the year it was first published, and I thank a kind providence for bringing me to it immediately.

For I had been bothered, for years even before that, with the evident inadequacy and deterioration of the peace-keeping machinery of the world. The League of Nations was going utterly to pieces, and Hitler was becoming daily that serious threat to history that he turned out to be. I was wondering, with all the radical urgency of youth, wondering if it were possible to build a peace that would be strong and good—or if, perhaps, peace were impossible of human attainment, and war a permanent curse on the human race.

By an act of will and instinct I refused to believe such a pessimistic fatalism; and even, with the help of the Naperville Youth Council, worked out an ambitious idea of our own—the Fellowship of the Fourth Circle. We had stenciled armbands for our meetings, a silhouette cross with five circles on it; and a special salute—hand up and then out; "We love God, and the Samaritan is our neighbor." We signed up members, wrote cards to our Congressmen, and did what we could. But we were so few and small and far away, and the problem was so big.

Then Clarence Streit's book appeared, called Union Now. (It became later a book-of-the-month.) Here was a master mind, one of the most brilliant political thinkers of this or any generation. Moreover, he had had a ringside seat: Mr. Streit was New York Times newspaper correspondent covering the League of Nations for 10 years, 1928 to early 1939. Here was the depth of historical analysis, the wisdom of man's political past, applied with stark realism to the practical need of our generation's growing world community. Here was the answer, in sweeping outline, tying past and future together in challenge to the fluid present; in practical detail outlining with compelling logic, the course of promise, and the start we could make right now.

It was only a book, but it stirred people. There were others who felt even as I, as they read it. Within 10 days of its publication a group of early readers, mysteriously drawn together by the magic of that book, met in New York City and founded an organization. It was a small group, and most of them had never seen each other before; but then and there they united, with the purpose of federating the free peoples of the world defensively, economically, culturally. The well-tested pattern to start with is our American Federal Union which united 48 States and brought us the strength, the peace, and the prosperity which we have known.

This was to be a nucleus for full world government as soon as possible. The plain facts of life in 1939 (and in 1950) said it was impossible to unite all nations immediately into a real world government, for some nations were on the rampage, and the last thing they wanted was effective government on the world level, because that was the one thing that could check and hold them—1939 wasn't too different from 1950 in this respect, was it? But a dozen or so plain citizens met in New York City that day in April 1939 and formed there—as disciples of Clarence Streit's idea—an organization to save the world. Such was the beginning of Federal Unionists, Inc., that movement which, though never enrolling millions, has permeated every State in our Union, every democratic nation of this globe. The Federal Union concept has so guided and established the thinking of practical men about freedom and peace that its humble leader, Clarence Streit, in this year nominated to receive the Nobel Peace Prize. (That's a bit of inside news which isn't out yet to the general public—that Mr. Streit, who spoke from this pulpit on Sunday morning, March 27, 1949, has been put up this year for the Nobel Peace Prize.)

I joined the movement as soon as I found out about it, sometime in the summer of 1939—and I've been working for it ever since. The summer of 1941 I was asked by the Federal Unionists in the Chicago area to set up the Chicago office, really the midwest regional office of Federal Union; my Naperville church granted me a 4-month leave of absence, June through September, to do so. We made the front page of the Chicago Tribune, and were even picketed on one occasion by We, the Mothers, Mobilize for America, Inc. I preached the first Federal Union convention sermon in Cleveland in 1941, and traveled from Westover Field to Chicago in 1944 to preach the fourth convention sermon.

During the war I gave out upward perhaps to 400 copies of that famous book, Union Now. When soldiers came in with that most poignant of all the questions they asked the chaplain: "Chaplain, what's the use? Will we have to do it all over again? Will my little boy have to go to war?" I did not send them empty-handed away. I had an answer: "No, we don't have to do it all over again—your little boy need not be condemned to go to another war, in his day; there is a way." And I put in their hands this solid, constructive book, Union Now.

And civilians wanted to know, too, as well as soldiers, if there is any real hope for peace—any practical way to establish law and order among nations, government in the world community, adequate to cope with problems and situations and persons like Hitler and Stalin, before they plunged us all into war. So I was asked to speak, again and again—more than 300 times, on this topic, an average of better than twice a month for all these 10½ years since first I found and read the book. And a dozen, a hundred, a thousand others were doing likewise.

And all the time we were planting seeds, idea seeds, to grow in the minds of thoughtful people. Streit resigned his good job as ace foreign correspondent for the New York Times, and without any backing but God and his own faith, set out to bring to the world this gospel for its twentieth century economic and political salvation. And I watched him, and prayed, and did the little things I could in the little corners where I found people willing to listen. And I met a lady in the Washington delegation this week, a lady from Chicago who looked at me and said, "You're the man who spoke on Federal Union at a tea party in Evanston one afternoon back in 1941. I was there, and I came up afterward and said, 'What can I do about it? Have you a membership blank? You'll need people, and you'll need money for this,' and I've been in it ever since. Just because of that talk you gave at a tea party in 1941." And then she introduced me to her husband, who was a colonel in the Marines during the South Pacific action.

So finally, Federal Union began to get places. Prominent people, people who could do something about it, began to listen seriously. And postwar events have built up tremendous pressure. The end of the war did not bring peace. The atomic bomb suddenly hung over us. Russia continually prods us to do something ourselves to make this a united free world, as we would have it, or to be absorbed in the dark night of her united slave world. Men in positions of leadership found world events crowding them, and their conscience pushing them, and the old props they'd leaned on going out from under them. Federal Union was growing, quietly gathering strength.

Then came a letter, a confidential letter, to only a few of us, from Federal Union headquarters. A new attack was in the making to carry this Federal Union idea at last into the arena of political action. Big names would general the attack, men whose very presence would make those who guide this Nation sit up and listen. Owen J. Roberts, Justice of the Supreme Court of the United States of America, head of the American legal section at the Nazi War Crimes Court in Nuremberg. Owen J. Roberts would come back and be active chairman of the political action group, for he felt that in Federal Union could be built an era of law and peace among nations.

Will Clayton, former Under Secretary of State for Economic Affairs, would be a vice chairman; Robert Patterson, former Secretary of War in the President's Cabinet, would be another vice chairman, perfectly representing how Federal Union is the greatest and logical answer to both our national defense and to our economic problems. Elmo Roper would be treasurer, and men of national prominence would form the national council.

We were now moving into political action, with a powerfully led Atlantic Union Committee introducing a resolution into Congress. Influential members in both the House and the Senate, Walter Judd, of Minnesota, Estes Kefauver, of Tennessee, Raymond Baldwin, of Connecticut, and several dozen more—would request the President of the United States to invite the other nations who had signed the North Atlantic Pact with us, to send representatives to explore the forming of an actual union—of these North Atlantic Pact countries and such other countries as the convention might invite—to form a union of free peoples; to safeguard our liberties, and unleash our economic powers, raise the standard of living, and bring about that enlargement of

citizenship whereby we can claim and establish the world as our common free human habitation.

Two weeks ago, this telegram came. The first blows have been struck. The resolutions have been introduced into both Houses of Congress. The preliminary hearings are coming up. We'll have a chance to talk to some high officials in the State Department, and in Congress and Senate. We'll have a few minutes with the President. Will you come to help us? Brother, would I? This was the telegram I'd been waiting for, working for, 10½ years.

The next question was primarily a local one, asked only at the parsonage: How much money was in the tithe account? The telegram didn't ask that. We asked it. For this trip had to be at our own expense. Delegates came from 17 States—Oregon, Mississippi, Florida, Illinois—most of them farther away than Massachusetts. All of us had given money to Federal Union and to the Atlantic Union Committee—had given again and again, to support its offices, spread the good word of peace and prosperity through the federation of the free. Now we were asked to dig down again—for we must pay our own way to Washington.

Here is where a tithe account comes in so handy. If you deliberately set aside 10 percent of your income to use for religious and charitable purposes, and keep books on it, then it is not a question of "Do we have the money?" for something that comes up like this, but rather "Shall we use the tithe this month this way instead of sending off to those other good causes on the list?" With us, the Federal Union work for a better world has always been at the top of the list in the tithe account, right alongside the church. It might use up the balance for January, and for February, too, and even March. But when you have a tithe account the money is there. So I went to Washington.

It would have been interesting, this mission in Washington, even if I had not had 10½ years back of it. Tuesday morning our delegation saw Congressman KEE, chairman of the House Foreign Affairs Committee. I missed that—didn't arrive until Tuesday noon—but the delegates who were there "did well by our little Nell," and Congressman KEE has scheduled full hearing for the Atlantic Union resolution, probably in February.

At the luncheon Tuesday noon we were briefed by experts on ways of approaching our Congressmen and Senators. I saw both Congressman FURCOLO and Congressman HESELTON Tuesday afternoon, and both listened with interest. Both knew something of the proposition, wanted to know more about it, and expressed themselves as in sympathy with its purpose and essence. I believe both Congressman FURCOLO and Congressman HESELTON will stand up to be counted for the Atlantic Union resolution when the time comes to stand up and be counted.

I saw about a dozen Congressmen and Senators during my 3 days in Washington, and talked with the secretaries and assistants of over a dozen more, for whenever there wasn't anything else scheduled we delegates were calling on Represntativs and Senators. Some of the Federal Union delegates were influential, like Ed Orgill, Tennessee publisher; he gave a special luncheon for all his State's Congressmen, and had a powerful Atlantic Union talk for them. Others had enough prestige and weight to command attitude by their very presence: Mrs. Robert Low Bacon, for instance, whose chauffeur on Friday could drive her right up to the White House steps. Me? I just walked in anyway, into office after office up there on Capitol Hill; walked in and said that the people back home had sort of a sad feeling of betrayal, a sad feeling that the persons we'd entrusted with the peace had somehow muffed the job so far, and what was the use of this new hydrogen-helium atomic bomb, which will only bring us a few more years of time at best; what's the use of it if we don't do anything with the time it brings? And, after all, wasn't that what the war was for, to bring us another chance at making peace? And what had we done with that chance? It takes billions of dollars to buy time. It takes millions of lives to buy another chance. Let's do something about it.

And let's do it soon—now—this session of Congress. For look at the deterioration of the political situation this past year—all assisting communism: (1) The devaluation of money in European countries has wiped out $25,000,000,000 and more in private capital. That's just $25,000,000,000 closer to communism—for communism is trying to wipe out private capital, too; (2) the incredible loss of all China—a historic bungle of the first magnitude, which history will charge squarely against America; (3) the atomic bomb in Russian hands. All these underscore the urgency of the need, and the fact that, as Mr. Streit has been patiently pointing out for 10½ years, anything short of union is not enough.

I told Senator SALTONSTALL it would mean so much if he'd come out now for the measure. I thanked Congressman CHRISTIAN HERTER, who has come out publicly for it. I had 5 minutes with Senator PAUL DOUGLAS, of Illinois, cover man and feature of Time magazine for January 16 (I broke into politics working for him, 8 years ago—and his first wife came from Northampton)—and he, too, is deeply worried about the loss of China, and the Russian bomb, and the currency devaluation. I spent 20 minutes with the administrative assistant to Senator TAFT, pointing out two things: (1) that Atlantic Union is the finest answer anyone has come up with to our international political and economic problems; and (2) that if BOB TAFT came out for Atlantic Union now, he would plug the greatest gap in the public opinion of him—his lack of an adequate, effective foreign policy. And when I rose to go Senator TAFT's assistant kept me there and asked more questions, and said "You have convinced me," (I think he was very nearly convinced before I came.) * * * That isn't TAFT, of course, but it is someone very close to him.

I walked in offices of Congressmen from Minnesota, Wisconsin, Illinois, New York, and several more, spreading the Gospel. I found a Congressman of North Dakota whose daughter I had met 21 years ago in my high-school days, and I used that, too, to open a door for Atlantic Union. I talked with secretaries and left literature in the offices of "the distinguished Senator"—(that's what they call each other)—from Michigan, Iowa, Maryland, Florida, Arkansas, Rhode Island, Georgia, New Jersey, Wisconsin, and Texas.

It was all very presumptuous of me, yes. But everywhere I was well received—partly because I was the pastor of the Florence Congregational Church of Northampton, as I proudly announced to each one I called on—and partly because I spoke for the Justice Roberts and Clarence Streit Atlantic Union resolution about which they wanted to know more. I gave them Mr. Streit's article showing how the various world government resolutions, now before the Congress, can be brought together into one—and why to insist on every nation being in it at the start is unrealistic, for Russia is vetoing and walking out on United Nations doings just as it is. If we try to force the United Nations into effective world government we'll probably not strengthen it, but rather blow it to pieces, thus destroying the one bridge we do have between the Russian and the non-Russian worlds.

Yes, we of the Atlantic Union delegation rang up quite a mileage total, tramping those lovely marble floors of the Capital buildings in Washington, D. C.; and it is a beautiful capital, and we Americans may well be proud of it.

And in between the personal calls came the exciting events—Press conference in the Capitol Building itself Wednesday morning, with Senators and Congressmen and Mr. Justice Roberts. And a Washington cocktail party Wednesday afternoon from 4 to 7 in the Metropolitan Club. * * * I've never before in my life invited people to a cocktail party. But every Congressman and Senator that was talked to Tuesday and Wednesday, by arrangement of our Atlantic Union delegation, got an invitation to this cocktail party—and if Atlantic Union goes over, I figure the Lord will forgive me.

You've heard of those Washington cocktail parties, haven't you? Well, they're just about what you've read. They have all sorts of fish eggs on little crackers to eat, and a dozen different things to drink. How did I make out? Well, I had one ginger ale—with nothing in it—and one coca-cola with a cherry, a green olive, and two bits of lemon peel in it. And the conversation I best remember was with Anatole Visson, who is head of the Time-Life Diplomatic Bureau in Washington, and who said that the only thing worse than a ginger ale was the second ginger ale. (That's why I switched to coca-cola the second time up.) One admiral, one Senator's young wife, and several others got just slightly happy—which made me feel that I'd really seen a Washington cocktail party, now.

Then everybody was invited out to the Streit's apartment, to fill up on sauerkraut, frankfurters, and potato salad—and review the events of the day. Mr. Justice Roberts told of his conference that afternoon with JOE MARTIN, Republican leader in the House, who is very worried about the world situation, and very interested in Atlantic Union, and who kept Mr. Roberts there a full hour talking it through. Then each of us in turn reported his bit.

Well, that's about all there was to it, excepting that Wednesday noon, just because I happened to be standing around the right place after the press conference, I was one of four that went along with Mr. Justice Roberts and Mr. Streit to luncheon. And Thursday we all as a delegation had 20 minutes, with Senator ELBERT THOMAS of Utah, head of the special subcommittee of the Senate Foreign Relations Committee (he did most of the talking, but Justice Roberts smoothly pinned him down about the full hearing for Atlantic Union, soon). And Friday we all went to the White House and shook hands with the President, and heard him tell us that he saw "nothing but good" in the Atlantic Union proposal, "nothing but good." And if you want your hand to shake the hand that shook hands with the hand of the President, just come through the west aisle after church. And if you're a Democrat, you may shake it twice.

MISSION IN WASHINGTON

You know, I was grumbling, about 20 minutes to 4 Tuesday morning as the alarm clock rank and I had to get up, after 3 hours' sleep, and drive to Springfield to catch that 4:55 early morning train. I wondered why anyone was fool enough to leave a warm bed at that ungodly hour, and spend a good chunk of his own money to go on a mission like that.

And then I remembered how the young men I served as chaplain just four short years ago, were called out of bed at 20 minutes to 4, and at 20 minutes to 3, and at any time during the night or day. And their mission was not to ride a warm, safe train for 8 hours, but to fly a cold, dangerous bomber for 8, 10, 12 hours—to fly it in the 69-below-zero

CONGRESSIONAL LIBRARIES

cold of 20,000 feet altitude, and to fight their way through enemy skies to perform their mission. And then I thought of how the eleventh chapter of Hebrews—we read it in our Scripture today—applies not only to Noah and Abraham and Moses, and the rest of the Old Testament heroes of the faith, but also to our boys in the war. They, too, "obtained a good report through faith"—they did their part, kept the faith—but "received not the promise." All that our boys could achieve was not peace but another chance for us. "God having provided some better thing for us"—not better as being more virtuous than what they did, but as being the finishing half of the job—"that they without us should not be made perfect."

And thinking of my boys, our boys, and of the unfinished half of the job, which is ours to do, my grumbling ceased. And I went my way, accompanied, perhaps, on my mission to Washington, by the prayers and blessings of those whose missions of danger bought for Washington and for America, the chance, the mission, we have today.

Great Seal of the United States

EXTENSION OF REMARKS
OF
HON. CHRISTIAN A. HERTER
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. HERTER. Mr. Speaker, I have received a letter from Mr. George J. Hulme, of Boston, Mass., asking that attention be called to the fact that the great seal of our country is officially mistreated. His communication reads as follows:

MY DEAR CONGRESSMAN: Inasmuch as our national ensign—Old Glory—has seven red stripes and six white, I submit there can be no real warrant ever to reverse the order of said stripes on the shield part of that great seal.

As a designer and engraver of wide experience, I have engraved that insignia on various articles, notably, among others, a dozen silver cigarette boxes given to Harvard professors by United States Navy officers taking communications instruction during the war. Even commercial interests seem more concerned about being correct than does official Washington, although the State seal of Illinois shows the shield striped correctly, as also do the figureheads of Admiral Dewey's *Olympia*, the sunken *Maine*, and other United States ships of that type.

If you will examine the seal on the reverse of a $1 bill, you will notice the shield is striped: six red and seven white. This is perhaps the most glaring fault. Of course, I am aware of a general public indifference regarding heraldic design, but since we do use such things they should be correct.

Many times I had considered writing our late President, but deferred because of succeeding crises of larger importance demanding his constant attention. Now I am prompted to try again because of the multiplying and, to me, somewhat irritating examples of official recruiting posters, painted tanks, etc., displayed hereabout.

Yours sincerely,

GEORGE J. HULME.

P. S.—When President Franklin D. Roosevelt was here for the wedding of his son, John, I noticed the seal emblazoned on his official automobile was wrongly striped. The eagle's head was turned left (sinister) too. You may recall the late Secretary Knox having that head—with much ado—turned right (dexter).

Hold on to Your Hats!

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. SADLAK. Mr. Speaker, competition is a wonderful thing and it has unquestionably resulted in more and better goods for more people. Our higher standard of living was brought into being in just this manner. It cannot be denied that we wish to maintain this high standard. Certainly we desire to have others attain the same degree of success in theirs. But, by no stretch of the imagination can we accept a situation which would compel our adopting a course leading to a lowering of our standard of living at a level comparable to other countries. A free flow of trade makes a joke of the meaning of competition. What good is that type of trade when it begins to displace our own workers? How can we compete with cheap labor and still keep our workers on the job?

We are only in the early stages of the suffering to come from the effects of growing imports. The threatening shadow of increasing unemployment looms larger with each foreign product coming to this country. We cannot lightly dismiss this danger. Connecticut industries and industries throughout the Nation are beginning to feel the pinch resulting from the injurious trade policies which can be laid directly at the door of the State Department.

Particularly affected at this time is the hat industry of Connecticut and to bring this matter into sharper focus for the attention of all who are concerned about employment of our workers and our standard of living, under leave to extend my remarks, I wish to include the following article from the columns of the Bridgeport Post of March 23, 1950:

IMPORTS CREATING HAT-TRADE SLUMP—DANBURY HAT PRODUCTION CUT TO 3,000 DOZEN IN 3-DAY WEEK

The combined impact of Czech iron-curtain importations and a general decline in business has tumbled Danbury's hat-making production from a capacity of 30,000 dozen for a 5-day week to 3,000 dozen for a current 3-day-a-week schedule, it was reported today.

Approximately 3,000 hat workers are employed in 14 main plants in Danbury and lack of business has forced the 3-day-a-week program, according to available statistics.

Union and plant officials who describe the situation as very serious declare that a hatless fad in various sections of the country is accentuating the critical situation in the hat industry.

In Norwalk, second largest hat-producing community in Fairfield County, a total of approximately 2,750 persons are employed in 12 companies. That does not include those employed in fur companies which provide hat materials.

Plant officials report business prospects are not healthy and that the imports from Czechoslovakia plus a decline in domestic sales are causing great concern.

"We are beginning to wonder where our next year's business is coming from," one official declared.

Warren S. Smith, secretary of the Hat Institute, trade association for America's hat industry, declared that the hat industry has dropped 1,500,000 man-hours since 1942 and that 1,300 workers have been forced out of the trade in the past 5 years.

He attacked the State Department's policy of insisting on imports at the price of the hat industry, but maintained that many other industries in Connecticut are being hurt by the trade exchange program under the Marshall plan.

"Traditionally, we have imported a great deal of raw material from abroad," Mr. Smith said. "Now we are being forced to accept the finished product in competition with our own workers."

He declared that Czechoslovakia and Italy are the major competitors who have been fed ECA dollars to drive American firms out of business.

"Let them furnish the raw material," he asserted. "Let us provide the finished job."

Sacrifice of a city like Danbury is a pretty steep price to pay on the altar of helping countries abroad," he declared.

SHOE MANUFACTURERS HIT CZECHOSLOVAKIAN IMPORTS

BOSTON, March 23.—The New England Shoe and Leather Association charged today that some 1,000,000 pairs of shoes will be imported from Communist-dominated Czechoslovakia into the United States this year.

Executive Vice President Maxwell Field reported that the association has asked the Treasury Department to investigate so-called dumping of the shoes in violation of the antidumping act of 1921.

Field added that the State Department also has been requested to advise the association of its policy permitting importation of the shoes from the iron-curtain country.

The association official stated that in the month of January alone 58,018 pairs of shoes were imported from Czechoslovakia. This, he said, was more than half of the total brought to the United States during the entire year of 1949.

Granting of Statehood for Alaska and Hawaii Is Simple Justice

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. ANGELL. Mr. Speaker, the people of my district and the Northwest generally are very much in favor of granting statehood to the Hawaiian Islands and to Alaska in the interest of simple justice. I include in these remarks a leading editorial entitled "In Simple Justice," which appeared in the Oregon Journal in its issue of March 19, which is an excellent presentation of the merits of this proposal:

IN SIMPLE JUSTICE

This is a plea to the Senate of the United States of America.

It is a plea for simple justice for more than 60,000 second-class citizens, who are first-class people, the American residents of the Territories of Alaska and Hawaii.

It is a plea for fulfillment of solemn promises made by the people of the United States 38 and 52 years ago, respectively, to the

people of Alaska and Hawaii—promises conditioned upon attainment of economic and political maturity; promises that have been violated for at least 30 years.

It is a plea for action at this session of the Congress—action that will be a telling demonstration to the world that the United States of America means what it says when it subscribes to the doctrine of self-determination—for its people as well as for the peoples of other lands.

The House of Representatives has already acted. In rapid succession, it has approved statehood for Alaska and Hawaii. It has said in effect that the foremost exponent of democracy, the United States of America, can no longer afford to cling to the outmoded system of colonialism. It can no longer subscribe to a system of taxation without representation. It has shown a willingness to give congressional recognition to plebiscites in both Territories expressing an overwhelming desire for statehood. It has finally accepted the fact, brought out repeatedly by congressional investigating committees, that both Alaska and Hawaii have met all the conditions of statehood.

NOW UP TO SENATE

The House has been actuated by enlightened self-interest, it is true. It has acted belatedly, but it has acted. And the Senate of the United States, in all fairness, can do no less.

The arguments for statehood for Alaska and Hawaii are so overwhelming that further congressional delay is inexcusable.

Let's take Alaska first.

This vast land, one-fifth the size of the United States, twice the size of Texas, the Union's largest State, was acquired from Russia in 1867 for $7,200,000 in gold. There was considerable outcry against Secretary of State William H. Seward who negotiated the deal. Alaska was called Seward's folly.

No one could foresee then, that the United States had acquired one of the richest and most strategic regions on earth for 2 cents an acre. But recognition came when gold was discovered in the adjoining Klondike 30 years later—gold that was to bring great wealth to America—almost $1,000,000,000 worth to date, in fact.

What is more important, Alaska has almost limitless wealth-producing resources that while scarcely touched to date are nevertheless producing approximately $150,000,000 every year or 20 times Alaska's original purchase price.

Alaska's fishing industry has produced $1,000,000,000 to date. Its annual salmon pack alone is valued at approximately $75,000,000. Its mines produce $15,000,000 a year. Its infant lumber industry is taking out $5,000,000 worth of timber annually. Its tourist business is running $25,000,000 a year. Its agriculture is considerable and growing.

Alaska has great deposits of coal, oil, tin, copper, lead, silver, and platinum. Its fur industry is third in importance. It has some of the greatest hydroelectric streams in the world. One site is said to be as good as Grand Coulee, mightiest power plant on earth. And its great spruce and hemlock forests are said to be capable of producing 1,000,000 tons of newsprint a year.

Alaska is not only one of the key bastions of national defense, it may soon become the air crossroads of the world in these days of transpolar flight.

And how has this great rich land fared politically?

Since it attained Territorial status in 1912 it has fared very badly indeed. Its repeated petitions for statehood and the long succession of bills providing statehood have been kicked around by the Congress, ignored or buried in committee. The answer has been either an outright "no," or "not yet" or "wait until you can afford it."

NO POLITICAL POWER

Alaska has a Territorial legislature. True, but its powers are greatly limited. It can be overruled by the Congress or by the Territorial Governor, who is appointed by the President of the United States. Its judges are appointed. Its Delegate to the Congress has no vote. It is ruled in large measure by Federal regulations, promulgated by Federal agencies operating in the Territory. Ninety-eight percent of its land is federally owned.

Thus Alaska's 95,000 people—about 35,000 of them Eskimos and Indians—have to pay Federal income taxes like residents of the United States (about $20,000,000 a year now), but they cannot vote for President, they cannot vote for Congressmen. They are dependent upon a Federal Congress and a Federal bureaucracy 5,000 miles away. They are disfranchised.

Alaskans are in no better position than were the American Revolutionaries who fought a war over taxation without representation. They have been neglected, frustrated, exploited by absentee owners. They have borne the brunt of war, bought bonds to help pay for it, without having a word to say about it.

To be blunt, they have been getting a raw deal.

Now take Hawaii.

It's ironic, when you come to think of it. But statehood has been the ambition of the Hawaiian islands (formerly the Sandwich islands) for almost a century—since 1853 when the Hawaiian monarch Kamehameha III participated in the negotiation of a treaty under which the islands were to be admitted to the American Union as a state.

Statehood was requested by the commission through which annexation of the islands was brought about in 1898. And statehood has been petitioned at least 30 times since then and is again petitioned by half a million residents.

Like Alaska, Hawaii is one of the richest most desirable bits of territory on earth. Now, since the war its eight inhabited islands export $180,000,000 worth of agricultural products annually—including approximately $100,000,000 worth of sugar and $75,000,000 worth of pineapple.

The islands produce almost every type of tropical fruit, vegetables, and plants, including bananas, sisal and coffee. They boast one of the largest cattle ranches on earth—a 500,000-acre spread.

The islands also constitute one of the choicest tourist spots on earth, attracting about $40,000,000 worth of travel business a year.

Hawaii, crossroads of the Pacific by sea and air, is also one of America's principal military outposts, one that bore the brunt of the first treacherous Japanese attack of World War II.

FULL LOYALTY PROVED

For the record, the Territory of Hawaii sent 33,144 of her sons to war among them two Japanese outfits which helped win the tough Italian campaign and became the most decorated outfit in the American armed forces. And Hawaiians bought more E bonds during the war than did residents of any State—$531 per capita as compared with Oregon's $420, Washington's $407, and California's $385. Yet some have had the nerve to charge that Hawaii's polyglot population—36 percent Caucasian, 33 percent Japanese, 15 percent Hawaiians and the rest Chinese, Filipinos, and Puerto Ricans—has no sense of patriotism or loyalty to the United States.

Why have these people of Alaska and Hawaii been denied full citizenship? Why is statehood withheld?

We have heard all the stock arguments and frankly we don't know.

These arguments go something like this:

Both Territories lack contiguity, the diehards say.

Think of allowing Alaska with fewer than 100,000 people and Hawaii with only fewer than 600,000 people 2 Senators each, as many as New York and California have with their 20,000,000 people, not to mention 1 Representative for Alaska and at least 2 for Hawaii. 'Taint right, they say.

If you give statehood to Alaska those Eskimos and Indians will run it. What about that? they ask. And if you give statehood to Hawaii, those Japanese, Chinese, and Filipinos will run it. Either that or Harry Bridges will run it or the Communists will run it or the big bad sugar and pineapple kings will run it.

There is this, however: While certain well-entrenched business people in Hawaii have given lip service to statehood, their hearts are against it. At one time their objection was to possible local domination of the islands by people of Japanese ancestry; lately, with the long longshore strike fresh in mind, it is fear of the infiltration of those in labor circles who have ideas in common with Harry Bridges.

To be quite frank, these arguments are very thin indeed. They are the arguments of cheap politics, special interests, and intolerance. The facts belie them.

The charge of bloc voting by racial groups is not sustained by on-the-ground congressional investigators such as Senator GUY CORDON, of Oregon, chairman of the Senate Subcommittee on Territories and Possessions, and Representative HOMER ANGELL, ranking member of the corresponding House committee.

ECONOMIC MATURITY SHOWN

The contiguity argument is meaningless in these days of fast transportation and in light of the strong ties of tradition and trade with the mainland.

Both territories have demonstrated their political and economic maturity.

They have shouldered the responsibilities of statehood without receiving the benefits of statehood.

They have met the crucial test of loyalty in war.

Despite their cosmopolitan make-up, they are unified American communities in the best American tradition.

Hawaii, for example, pays more Federal taxes than any one of 14 of the States—around $100,000,000 a year. It has more people than Arizona, Nevada, Vermont, or Wyoming.

Alaska has more people today than had most of the other 26 American Territories when the were admitted to the Union. Oregon, for example, had only 52,000 people when it was admitted in 1859.

Who, besides the people of Alaska and Hawaii, wants to see them given statehood?

Well, almost everyone, it appears.

OFFICIALS FAVOR STATEHOOD

The President of the United States, for example. The last three Secretaries of the Interior, Messrs. Ickes, Krug, and Chapman, Governor Gruening of Alaska and Governor Stainback of Hawaii, too. Every congressional investigating committee since 1937. The governors of every State, by resolution at national conferences. Almost every editor in the country, from the smallest weekly to the Oregon Journal and the New York Times. The people of the United States in national polls. The House of Representatives in 1947 and 1950.

Let's put it this way.

No responsible person acquainted with Alaska and Hawaii doubts that in size, population, economic resources, political history, and experience and in the loyalty and caliber of their peoples these great Territories are ready and qualified for admission as the forty-ninth and fiftieth States of the Union.

No one, that is, with the possible exception of certain eastern and southern Senators

who for reasons obscure still hold out on almost 700,000 of their fellow Americans.

There is hope, nevertheless, that even they may now come to the conclusion that Alaska and Hawaii have served their apprenticeship.

In simple truth, our Alaskan and Hawaiian neighbors have been second-class citizens too long.

National Grange Opposes Central Arizona Project

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. POULSON. Mr. Speaker, under permission to extend my remarks in the RECORD, I include a letter received from the legislative counsel of the National Grange which certainly speaks for itself:

NATIONAL GRANGE,
Washington, D. C., March 22, 1950.

Hon. NORRIS POULSON,
House of Representatives,
Washington, D. C.

DEAR MR. POULSON: This letter is written in response to telephone requests by members of the Committee on Public Lands for the views of the National Grange on the proposed Bridge Canyon project of the Colorado River.

It is our judgment that the authorization of this project at the present time is unjustified for the following reasons:

1. Since the President by Executive order January 3, 1950, has set up a Water Resources Policy Committee to study the problems and suggest policies of the Federal Government's part in watershed planning, priority of water usages, methods of testing economic feasibility, needed changes in legislative policies, and means of preventing past shameful duplication and waste in watershed development, we believe decisions on all major plans, and especially the Central Arizona project, should be held up pending the report of this Commission December 1, 1950.

2. There is no other major watershed in the United States where the use of water for irrigation power and other purposes is as important to the welfare of the watershed as in the Colorado watershed. As yet there hasn't even been a pretense of a careful, over-all study of the comparative economic uses of water of the Colorado River in all its possible alternative uses. Until a careful study of the best potential use of the water resources of the river is made, no one will be able to judge soundly and wisely on such a piecemeal project as is proposed for the Bridge Canyon. Such a project, if built, or if construction is begun, would establish irretrievable priority of water use that may or may not be the best possible use of the water. From the evidence presented, the Bridge Canyon irrigation use appears to be indeed among the most wasteful of possible uses of the resources of the river.

The National Grange at its last annual session stated that "We recognize the urgent need for coordinated development and use of resources on major watershed areas"; and we recommended that a watershed board be set up for each major watershed to coordinate the watershed planning and development and thus forestall just such uncoordinated, wasteful projects as the proposed irrigation portion of the Bridge Canyon project appears to be. We therefore believe that this project should not be authorized until it can be adequately studied and fitted into its rightful position in an over-all watershed plan of development for the Colorado.

3. We are also opposed to authorizing this project involving the fixing of water usage rights between States which is still in bitter controversy. In our 1948 annual session we passed a resolution opposing the assignment of the use of water in controversy between States until the dispute had been referred to the Federal courts and adjudicated by them. In stating this we are aware of the amended provisions of the bill but fear that if the bill were passed appropriations might also be passed and irretrievable commitment of water might be made or wasteful construction might be started.

4. We are also opposed to authorizing the irrigation portion of the Bridge Canyon project because it is reported that the actual cost of putting the irrigation water on the land would be over $1,700 per acre. If this is true, it is in violation of our policy as passed by the last annual session of the National Grange, that we are opposed to "approving any project for expenditure of funds unless a sound appraisal shows benefits in excess of costs." This applies both to a project as a unit and any integral part of a project. We are quite certain that the irrigation portion of this project does not meet this important policy of requiring that benefits from the proposed works must exceed the cost of them.

We woud like to see both new authorizations and new construction of such major resources development held to a minimum pending an effective balancing of the Federal Budget and pending the development of an over-all plan of watershed development and administration that will prevent such uncoordinated authorization or commitments of vast sums as are involved in the Bridge Canyon project.

Very sincerely yours,

J. T. SANDERS,
Legislative Counsel.

Does the Kefauver Bill Really Provide for Home Rule?

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mr. TEAGUE. Mr. Speaker, the Washington Board of Trade, which is made up of the hundreds of businessmen in Washington, D. C., has prepared a booklet regarding the present home-rule controversy which has periodically presented itself to the Congress. I believe serious consideration should be given to the arguments of these businessmen in their opposition to the Kefauver bill, as certainly the individual businessman of a city has the interest of his community at heart. These men are not trying to inject any racial or other issues in this matter, but are simply stating the facts as they see them, and as they concern Washington, D. C.

Under leave to extend my remarks in the RECORD, I wish to include the booklet entitled "Does the Kefauver Bill Really Provide for Home Rule?"

DOES THE KEFAUVER BILL REALLY PROVIDE FOR HOME RULE?

HAVE YOU READ THE 119-PAGE KEFAUVER BILL? (S. 1527, 81ST CONG.)

It is entitled "An act to provide home rule and reorganization in the District of Columbia." It is hailed by some as a sort of present-day bill of rights for local citizens.

DOES IT PROVIDE HOME RULE?

The board of trade and many other citizen groups think not. For example, this home-rule bill clearly states that Congress can enact, repeal, or amend any law affecting the District no matter what the proposed city council or the citizens decide to do. Is that home rule?

NO REAL HOME RULE IS POSSIBLE UNDER THIS SECTION OF THE KEFAUVER BILL

"Reservation of congressional authority

"SEC. 404. The Congress of the United States reserves the right, at any time, to exercise its constitutional authority as Legislature for the District of Columbia, by enacting legislation for the District on any subject, whether within or without the scope of legislative power granted to the District Council by this act, including without limitation legislation to amend or repeal any law in force in the District of Columbia prior to or after the enactment of this act or any provision of this act."

DOES IT CONFER AMERICAN CITIZENSHIP RIGHTS ON PERMANENT DISTRICT RESIDENTS?

No—emphatically no. Proponents of the bill promise much but actually the bill proposes nothing in this respect. District residents are given neither a vote for President and Vice President, no representation in the Congress. These rights are definite prerequisites to workable home rule. Without them, this and other so-called home-rule bills are meaningless delusions likely to be detrimental to permanent District of Columbia residents.

This pamphlet lists a few of the many objections to the Kefauver bill. The Washington Board of Trade hopes it will stimulate careful thinking by many citizens.

The Kefauver bill provides that registered voters in other places may vote in the District if they have lived here 1 year.

This means that thousands upon thousands of people voting and giving primary allegiance elsewhere would vote in the District. This group might well be the deciding factor in any election or referendum. The board of trade does not believe this provision is conducive to good government or fair to permanent citizens? Do you?

The Kefauver bill provides for an 11-person District Council; 9 elected at large, 2 designated by the President of the United States.

The two members appointed by the President would not be responsible to the voters. This clearly provides the means whereby the President and the Senate could affect the action of the District Council, despite the retention of absolute power over the District as noted in section 404. This provision waters down even the negligible amount of self-government offered to the people of the District. The board of trade does not construe this to be a reasonable feature of home rule. Do you?

The Kefauver bill provides that the District Council may only propose laws which would be subject to acceptance by the Congress and the President.

In other words, the District Council would exercise no more power essentially to legislate for the District than the present Board of Commissioners. The Kefauver bill does not provide for District Representatives in Congress who would protect our interests. Therefore the board of trade believes this offers only hope of confusion and bickering

and certainly no more home rule than there is today. Do you?

The Kefauver bill provides for appointment by the Council of a District Manager.

While many smaller cities have and like the city-manager system, it has never been tried in a city of Washington's size. There are compelling reasons for believing it would not work here. The board of trade objects to this unwarranted experimentation. Do you?

The Kefauver bill provides that the District Manager may reorganize or abolish many agencies of the District government, shall appoint or dismiss department heads and shall possess extensive other powers.

The board believes this concentrates an undesirable amount of power in one person—the Manager. The bill abolishes the job of practically every important District official. New department heads would be selected by the Manager who would not even be required to consult the Council in many cases. We believe this is unwise, unfair to present efficient officials, and dangerous in its implications. Do you?

The Kefauver bill provides that bonded indebtedness up to 5 percent (approximately $80,000,000) of the assessed value of property may be incurred when approved by a majority vote in a referendum.

First, the District has been debt-free for many years. There is a serious question as to whether the cash basis of operating should be dropped in favor of a system of deferring costs and paying interest. Second, the board of trade looks with grave misgivings on any proposal by which 1-year resident voters in other jurisdictions, intending to leave the District, could participate in creating such debts knowing they would not be required to help pay them. We do not believe permanent citizens should be responsible for an $80,000,000 debt voted by others. Do you?

The Kefauver bill provides for the elimination of many boards and commissions such as the Recreation Board, the Board of Public Welfare and places the power now exercised by them in one person.

While some streamlining and reorganization of the District government is needed, this bill goes too far. The board of trade believes it would actually lessen citizen participation in some agencies, and abolish some boards and commissions which have been established after lengthy experience clearly shows the necessity for them. Do you?

The Kefauver bill provides for a Federal payment amounting to 20 percent of local revenues.

On the surface this appears to be wonderful. But remember that actions of one Congress are not binding on those which follow. Many experts on the District of Columbia-congressional relationship confidently forecast rapid reduction if not elimination of the Federal payment if Congress passes this bill and appears to divest itself of control, hence responsibility to the Nation's Capital. The board of trade believes that it is a valid forecast. It is clear that this city cannot cover all its expenses with more than 50 percent of its property tax-exempt. We believe passage of the Kefauver bill will mean lessening or elimination of the Federal payment, and higher taxes for local residents. Do you?

One of the principal arguments used by many in support of the Kefauver bill is that it would relieve the Congress of much petty work and permit its Members to give additional time to pressing national and international issues. This is pure speculation and is no more valid than the belief of many others that Congress will spend just as much time on District affairs if the Kefauver bill is passed as it does now. Remember, every legislative proposal passed by the District Council must be referred to the Senate and House District Committees. If it be true that the past is prologue, then it may be expected that each proposal will be reviewed and debated in detail as bills are now. There is no valid reason for concluding that if the Kefauver bill is passed Congress will cease investigating education, crime, hospitals, parking, and other activities of the District. The board of trade believes that passage of this bill would not save much, if any, congressional time but that it would cause endless argument and bickering about the relative responsibilities of Congress and the Council which would necessarily be injurious to the welfare and progress of the city and harmful to its residents. Do you?

HOME RULE AS OPPOSED TO THE KEFAUVER BILL PROVISIONS

It is evident that S. 1527 contains no real home rule. The board of trade reaffirms its position that there can be no home rule for the District of Columbia until its residents are first accorded representation in the Congress and a vote for President.

Congressional lawmaking for the Federal District is a full and proper exercise of powers stipulated in article 1, section 8, paragraph 17[1] of the Constitution of the United States. This will always be, although the process may be camouflaged in the Kefauver bill and others. While the constitutional provision will not be changed, a supplemental provision can be enacted which will give the citizens of the District of Columbia these fundamental rights: Representation in the Congress; the right to vote for President and Vice President. This will be accomplished by the Neely and Teague joint resolutions. The board of trade supports these. Do you?

Modern Diplomacy

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. MULTER. Mr. Speaker, the following article from the New York Herald Tribune of March 19, 1950, although brief, contains a sad commentary on the state of diplomacy and international relations in our day. The story speaks for itself and needs no extensive comments or observations. It reads as follows:

NONSECRET DIPLOMACY—AN AMERICAN IN MOSCOW CAN'T EVEN GET CONFIDENTIAL, SAFELY, WITH WIFE

WASHINGTON.—Suppose you were a second secretary at the American Embassy in Moscow. You could tell your wife what was going on at the office only if you did one of two things:

1. You could motion her into the bathroom, turn on the water full force, and then tell her what you wanted to say.

2. You could go for a walk, wait until you hit a broad place in the street, make sure no one was directly on her heels, then tell her. The precautions would be necessary because of listening devices in your home. Besides that, there would be Russian guards at the doors of your office and your apartment. They would report on when you left and entered, and where you went. They would report on who called on you, whether Russian (practically never) or people of other nations.

In Moscow you take for granted that the Government has tapped all your phone lines. Usually when you dial your number you get nothing. You hang up, dial your number again, and get it right away. The American joke is that it takes the Russians that long to hook up their recording machines.

Your servants would be secret police. You have to hire Russians because someone who speaks Russian has to get to the markets at the crack of dawn before all the food runs out. The Government sends your servants to you, and they are all trained as spies, fingerprint experts, and rifiers of desk drawers.

That's what Americans are up against when they are assigned to Moscow, or the satellite nations, by either the government or by business concerns.

There is little room any more on such a job for a pair of striped pants. Today's diplomat is much better prepared if he knows how to write code, how to duck a bullet, and, if need be, how to send one. Diplomats have become the front-line men in the cold war.

Restrictions differ, country by country, in the nations that the Communists have grabbed, but they are all slowly approaching the Russian pattern of espionage.

In Rumania, for example, restrictions have not gone so far as in Moscow—but there is an added worry for that reason. Americans have tried to keep up friendships with decent, democratic Rumanians. But now that is beginning to mean that these Rumanians finally disappear.

[1] (The Congress) shall exercise exclusive legislation in all cases whatsoever over such District (not exceeding 10 miles square) as may, by cession by particular States, and the acceptance of Congress, become the seat of Government of the United States.

Congress and the Hoover Commission Reports

EXTENSION OF REMARKS

OF

HON. HENDERSON LANHAM

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. LANHAM. Mr. Speaker, under leave to extend my own remarks in the RECORD, I am including therewith an address entitled "Congress and the Hoover Commission Reports" delivered March 16, 1950, before the Society for the Advancement of Management by my distinguished and able colleague on the Committee on Expenditures in the Executive Departments, Congressman CHET HOLIFIELD, of California.

I am sure it is encouraging to all to see the progress that is being made toward the adoption of the Hoover Commission reports. Mr. HOLIFIELD, as chairman of the subcommittee on executive and legislative reorganization, has himself given a long and exhaustive study to the whole problem posed by the Hoover Commission reports. Moreover, he has had a very able staff constantly at work on the problem. His report on the progress toward the adoption of the recommendations made by the Hoover Commission, I am sure, will be of interest to all readers of the CONGRESSIONAL RECORD.

Personally I am very much interested in adopting all of these reports that after careful study seem to promise a more

responsive, a more efficient, and a more economical executive department.

CONGRESS AND THE HOOVER COMMISSION REPORTS

In discussing the subject of Congress and the Hoover Commission reports, I propose to confine myself to a very brief survey of what has been accomplished up to this time, to an enumeration and brief discussion of the results which it seems to me Congress has a right to expect from the work of the Hoover Commission and the publication of its report, and finally, to a few concluding remarks on the outlook for the future of executive reorganization in the Federal Government.

In consideration of the fact that the members of this organization are already quite familiar with the story of the establishment and functioning of the Hoover Commission, it is unnecessary to dwell upon this background material. Suffice it to say that, according to the best available analysis, there were 331 recommendations contained in the entire series of reports. Some of these were of very great importance, while others would be regarded as of relatively minor significance. The Bureau of the Budget estimated that, out of the total number of 331 recommendations, 122 could be made effective by administrative action, and 82 by reorganization plan; 105 would require substantive legislation, while the remaining 22 could be put in effect by appropriation legislation. Thus approximately two-thirds of the recommendations fell within the field of executive action, one-third in the field of legislative action.

ACCOMPLISHMENTS TO DATE

During the first session of the Eighty-first Congress, substantial progress was made in translating these recommendations into governmental policy, and I predict that much more will be accomplished along this line before the adjournment of the second session. More actual reorganization has been accomplished already than has ever been achieved before in any like period of time in the history of the United States. Testifying before the Senate Expenditures Committee last week, former President Hoover, in response to a question from Senator O'CONOR, stated that in view of the tremendous demands made upon the time and energy of the Members of the Congress, it was his feeling that "astonishing progress has been made up to date." In transmitting his 21 reorganization plans to the Congress earlier this week, President Truman took occasion to remark that, "when these plans become effective, we shall have acted on almost half the proposals made by the Commission on Organization."

The measures adopted during the first session included a number of major pieces of legislation and six reorganization plans. (Of the eight plans originally submitted, one was disapproved and one was superseded by legislation.) Together these actions affected nine different principal functions or agencies of the Federal Government. When one adds to this the very significant actions of the Executive branch in making the recommendations of the Hoover Commission effective, it is clear that there is a good deal of reason for optimism regarding the final result. Substantial progress has been made in reconstructing the Federal budget along the lines of a performance budget, as recommended by the Commission. The President's Advisory Committee on Management Improvement has been set up. The Administrative Management Division of the Bureau of the Budget is now hard at work on a program involving the cooperation of all departments and agencies of the government, in this field of management improvement.

General management: Definite progress has been made with regard to a number of specific problems in the field of general management. First and foremost among these comes the Reorganization Act of 1949, Public Law No. 109, which directs the President to prepare and transmit to the Congress reorganization plans by which agencies may be regrouped, coordinated, consolidated, or otherwise altered—with certain limitations—to promote economical and efficient administration. This basic enabling legislation permits the exercise of Presidential initiative in reorganization activities; under it, plans may be submitted by the President at any time when Congress is in session, up to April 1, 1955. Each such plan will have the effect of law after 60 days unless a constitutional majority of either House of the Congress disapproves.

Reference has already been made to improvements in budgeting and to the management improvement program. In this same general area, mention should be made of the progress achieved in carrying out the Hoover Commission's recommendations regarding the centering of responsibility for top management in the heads of departments and the chairmen of commissions, and for the establishment of administrative under secretaries in all major departments. A beginning was made last year when by legislation, provision was made for an Under Secretary of Defense and for four additional assistant secretaries in the Department of State. By reorganization plans, administrative responsibility was centered for the first time in the Chairman of the United States Civil Service Commission and the United States Maritime Commission. Of the plans submitted earlier this week, Nos. 1–6, inclusive, transfer to the heads of six departments the functions and powers now conferred by law on subordinate officials, while Nos. 7–13, inclusive, fix responsibility for the day-to-day administration of seven regulatory boards and commissions in the chairmen of these bodies rather than in the members collectively.

Reorganization Plan No. 4 of 1949 was designed to improve the staff assistance to the President by transferring the National Security Council and the National Security Resources Board to the Executive Office of the President. The first of these agencies assesses and appraises the objectives, commitments and risks of the United States from a national security point of view, and considers policies on matters of common interest to the departments and agencies concerned with national security, while the latter was established to advise the President concerning the coordination of military, industrial and civilian mobilization. As President Truman stated when he submitted this plan to Congress, it is highly desirable that these agencies created for the purpose of advising and assisting the President in his work should be located in the Executive Office of the President, under his immediate supervision—as the Hoover Commission recommended.

General services: The Federal Property and Administrative Services Act of 1949, Public Law No. 152, established in the Executive branch of the Government an agency called the General Services Administration—again in accordance with a specific recommendation of the Hoover Commission. This law deals with the housekeeping functions of the Federal Government, including the purchase, utilization, storage, and disposal of property, the keeping of official records, the management of buildings, and performing other internal services, all of which are now for the first time brought together under one central management. The new agency absorbed a number of previously existing and widely scattered organizations, some previously enjoying an independent status, others attached to one or another of the executive departments and agencies.

Although this agency has been in existence for a period of less than 9 months, it has already made real progress not only in organization, but in the development of plans for the more effective discharge of its responsibilities in the future. In its report covering the first 6 months of its existence, the GSA stated:

"During the period covered by this report, efforts of the Administration have been concentrated upon developing an effective organization and comprehensive program for accomplishing basic objectives. Progress made in merging the functions of the constituent agencies, in defining new functions, and in developing policies, plans and programs are set forth herein."

Aside from the problem of organization and carrying on prescribed immediate duties, the main tasks of this period consisted of making plans and initiating studies and surveys.

There are, as you know, 21 reorganization plans that were transmitted to the Congress by the President early this week. Although the plans recently proposed will not become effective for almost 2 months, it is worth noting that plans Nos. 15 to 18, inclusive, and plan No. 20, relate to the General Services Administration. I merely wish to point out that the submission of these plans shows the desire of the administration to cooperate with the Congress, using the instrumentalities at hand, to develop and perfect the organization and powers of the General Services Administration. At the same time, the Congress itself is proceeding to strengthen and improve this legislation by proposing the insertion of additional titles dealing with the subjects of traffic management and records management. From the point of view of both the application of sound principles of management, and economy in the transaction of the public business, no more important step has been taken in recent years than the establishment of this government-wide service agency.

Personnel management: Mention has already been made of improvements in budgeting and in departmental management, as well as in the procurement and property management field. Significant improvements have also been made in the field of personnel management. The first of these was the enactment, very early in the first session, of legislation designed to increase the salaries of the President, the Vice President, and the Speaker of the House of Representatives (Public Law No. 2). This was followed later by the Executive Pay Raise Act of 1949 (Public Law No. 359), which increased the rate of basic compensation of the heads of executive departments to $22,500 with corresponding increases for other top-ranking executive officials.

These measures proved to be but the initial steps in a comprehensive program of salary adjustments covering all major divisions of the Federal service. The Classification Act of 1925 was completely revised and rewritten in the form of the Classification Act of 1949 (Public Law No. 429). Further pay raise legislation included Public Law No. 167, creating professional and scientific positions at increased rates of pay; the Career Compensation Act of 1949, providing pay increases for members of the armed services; and an act providing annual pay increases for postal employees (Public Law No. 428).

The substance of Reorganization Plan No. 5 of 1949 which made effective another important Hoover Commission recommendation has already been referred to—namely, that in Federal administrative boards and commissions, the Chairman should be vested with executive and administrative responsibility. This step would result in a significant improvement in administration without interfering in any way with the bipartisan character of these boards when dealing with regulatory problems of a judicial or quasi-judicial nature. Plan No. 5 provides that the President shall from time to time desig-

nate one of the Civil Service Commissioners as presiding head of the Commission with the title of Chairman. The Chairman shall, in turn, appoint an executive director under the classified civil service. The old titles of President of the Commission, Secretary of the Commission, and Executive Director and Chief Examiner were abolished.

National defense: At least two important laws were enacted relating to the Department of National Defense. The first of these, Public Law No. 36, provides for the Office of Under Secretary of Defense as a first step toward a better organization of the armed forces. This is in line with the general recomendation of the Hoover Commission that there should be an under secretary in all departments, to function in the place of the head of the department when the latter is absent, and to assist him when he is present in the handling of a vast quantity of administrative detail which centers in the office of the head of any large department or agency.

Another act, Public Law No. 216, changed the designation of the National Military Establishment to the Department of Defense, and toward the end that the unification of the services might in fact become a reality, to clarify and strengthen the responsibility and authority of the Secretary of Defense, giving him full control over the organization and administration of the Department and authorizing him to delegate authority to subordinates. Included in this legislation were important provisions designed to improve the budgetary and fiscal practices of the armed services.

Commerce: Reorganization Plan No. 7 of 1949 provided for the transfer of the Public Roads Administration from the General Services Administration to the Department of Commerce, thereby carrying out a specific recommendation of the Hoover Commission. There were three major reasons advanced in support of this change: the fact that the Department of Commerce is charged by its organic law with the responsibility for promoting transportation; the fact that the General Services Administration would have been handicapped in the servicing of executive departments and agencies by the responsibility for the performance of an irrelevant function; and the fact that neither the Federal Works Agency which had previously had supervision of the Public Roads Administration, nor its successor, the General Services Administration was the major Federal agency for the carrying on of construction work or for the administration of grant-in-aid programs affecting State and local governments.

Among the new plans just submitted, at least two have an important bearing on the Department of Commerce. Under plan No. 5, this Department, along with five others, is given a new Administrative Assistant Secretary. Under plan No. 21, the functions of the Maritime Commission are transferred to the Department, where they are reconstituted in a Federal Maritime Board and a Maritime Administrator. This action is significant because it moves one step further in the direction of centering responsibility for national transportation policy in the Department of Commerce—a move which the Hoover Commission strongly recommended.

Foreign affairs: Public Law No. 73, designed to strengthen and improve the organization and administration of the Department of State, centralizes in the Secretary of State responsibility for the conduct of foreign affairs. It laid the groundwork for the integration of the Foreign Service and other personnel in the State Department, and for the complete internal reorganization of the Department, both of which are in accordance with specific recommendations of the Hoover Commission. Through administrative action within the Department, this reorganization is now far advanced.

Labor: Reorganization Plan No. 2 of 1949 was intended to strengthen the Department of Labor by transferring to it two, if not three, major labor programs—the administration of the public employment offices, of the unemployment compensation system, and of the veterans' placement program. The Bureau of Employment Security is responsible for two of these functions, while the third was partly in the Department of Labor. The transfer of this Bureau, long located in the Federal Security Agency, brought together in the Department of Labor two closely related functions, neither of which—by common agreement—can be fully and effectively administered except in cooperation with the other.

This move toward the rebuilding of the Department of Labor is carried further under the terms of Reorganization Plans Nos. 14 and 19 of the 1950 series. The first of these, for the purpose of coordinating the administration of labor standards under various statutes relating to Federal construction and public works or to construction with federally financed assistance or guaranties, authorizes the Secretary of Labor to prescribe appropriate standards, regulations, and procedures with respect to these matters and to make such investigations concerning compliance with and enforcement of labor standards as he deems advisable and desirable. The purpose is to assure consistent and effective enforcement of such standards.

Plan No. 19 carries out a specific recommendation of the Hoover Commission by transferring from the Federal Security Agency to the Department of Labor the Bureau of Employees' Compensation and the Employees' Compensation Appeals Board and their functions. In support of this plan, the President says that it "is a further step in achieving the general objective of the Commission to strengthen the Department of Labor by bringing within it labor functions which over many years have been scattered throughout the executive branch."

Post office: In addition to the postal salary bill previously mentioned, the Congress enacted Public Law No. 91 providing for a research and development program in the Post Office Department. This, too, is in line with the Hoover Commission recommendations. The post office is a business undertaking of gigantic proportions. Its methods of operation have not kept pace with its own requirements; it has usually operated at a deficit. This legislation will make possible the development of new methods and procedures which should, in time, greatly improve the efficiency of the service and enable it to operate on a sound financial basis.

Reorganization Plan No. 3 of 1949 represented one more step in the direction of centering authority and responsibility in the head of a department or agency. This plan transferred to the Postmaster General the functions of all subordinate offices and agencies of the Post Office Department, and authorized him to delegate appropriate functions to subordinate officers within his organization.

Regulatory commissions: Reorganization Plan No. 5 of 1949, based upon the same principle of centralizing administrative authority and responsibility, applied the Hoover Commission recommendation to still another agency, the United States Maritime Commission. The plan makes the Chairman of the Commission the executive and administrative officer of the Commission and vests in him responsibility for the appointment of its personnel, as well as for the supervision and direction of the activities of such personnel. This plan had also the effect of restoring an arrangement that had existed from 1942 to the end of the war when, under the First War Powers Act, the Chairman of the Commission had been vested with this authority.

In trying to consider these plans both from the point of view of the basic administrative problems involved and of the Government agencies concerned, one encounters certain difficulties. A given plan may have to be mentioned, for instance, in two or three different places. Such is the case with plan No. 21 of 1950, which transfers the functions of the Maritime Commission to the Department of Commerce. On the basis of this section, it appears that plan No. 6 of 1949 was but a preliminary move, planned to prepare the way for the more important change now proposed. Both plans, however, have been in harmony with the Hoover Commission recommendations.

Under the heading of regulatory agencies, there arises also the question of the establishing of authority in the Chairman, in each individual agency, as distinguished from having the authority over day to day operations dispersed among the members of the board or commission. Reference is made again to Reorganization Plans Nos. 7–15, inclusive, in the 1950 series, under the terms of which this change is provided for in seven agencies, the Interstate Commerce Commission, the Federal Trade Commission, the Federal Power Commission, the Securities and Exchange Commission, the Federal Communications Commission, the National Labor Relations Board, and the Civil Aeronautics Board.

WHAT CONGRESS EXPECTS

I have been asked specifically to comment on what the Congress expects from the Hoover Commission report. Of course, I cannot speak for the Congress as a whole. In the presence of the distinguished Senator from Vermont, I can at most reflect the point of view of the House. Even there, I am reluctant to assume that the suggestions I am about to make reflect more than my own personal views.

As I see the situation, Congress may well expect six specific results, some immediate, some long range, some of major importance, others less so, as a definite result of the Hoover Commission report and the widespread public discussion which this report has aroused.

1. I expect that all of the recommendations contained in the Hoover Commission report will in time be carefully studied and evaluated, and that those which as a result of such examination and analysis are found to be in the public interest will, by appropriate means, be adopted and put into effect. This, in itself, will be a great accomplishment, and one which has never before been possible in the whole history of the American Government. The significance of this fact should not be overlooked or underestimated. The report is of such comprehensive character that a careful study of all of its recommendations must of necessity involve an examination of the structure of the entire executive branch of the Federal Government.

2. Since this examination and modernization of the structural machinery of the Federal Government will be completed within a reasonably short space of time, I assume that insofar as the decisions made are wise and are supported by the facts, we will have a far more efficient and orderly governmental structure by—let us say, 1952—than we had in 1947 when the resolution creating the Hoover Commission was passed by Congress.

3. In the consideration of the Hoover Commission recommendations in both Houses of the Congress, every effort has been and is being made to obtain the views of the executive agencies concerned before final decisions are made and legislation is enacted. On the basis of this cooperative procedure with regard to legislation, the Congress expects—and I believe it has a right to expect—the full and complete cooperation of the executive departments and agencies in the enforcement of the legislation growing out of the Hoover Commission recommendations. It is up to the agencies to put forth a sincere

effort to carry out the will of the Congress and to make the legislation work.

4. I believe that, over the years, financial savings in substantial amounts will be realized as a result of structural and procedural improvements growing out of reorganization. While I do not accept second place to any man in my desire to have public funds spent honestly, economically, and in the best interests of the citizens who pay the taxes, I assert again now, as I have done on many occasions in the past, that economy, as such, is not the major purpose of reorganization. Economy is a byproduct, but an almost certain byproduct of better organization and of more efficient administrative practices and procedures. No one has expressed this point of view better than Prof. Rowland Egger, of the University of Virginia, who said a few months ago in an address before the National Tax Association in Boston:

"The attempt to sell administrative reorganization legislation on the basis of tax reduction, however honorable the motives and however laudable the hopes of those who support administrative reorganization for this reason, is a snare and a delusion; the venality of the American people has been grossly overestimated. It has, of course, established relationships and provided managerial equipment which in the routine operation of the Government has permitted the Executive to reduce unit costs, to increase efficiency, and to raise administrative standards."

"But," he continues, "the legal basis for the systematic planning of revenues and expenditures, as well as the continuous reappraisal of operations has been on the books since 1921, and the machinery of executive management has been in existence since 1939."

5. Even if this particular effort at reorganization had not already accomplished so much, and if it did not bid fair to accomplish so much more, it would still have made a significant contribution in arousing a widespread interest in and discussion of the problems of executive reorganization. For the first time in our history, there appears to be some comprehension of the fact that reorganization is a continuous process. We cannot reorganize the Government now and proceed to forget about the problem. However well we may succeed in doing the job now, there must be constant vigilance if we are to keep our reorganized Government reorganized. This may now be possible, with Committees on Expenditures in the Executive Departments established in both Houses of the Congress, and with a sustained effort to maintain, and to guide and direct the widespread popular interest in the subject which now exists.

6. Finally, this effort at reorganization of the executive branch of the Federal Government has stimulated a great deal of activity at the State and local levels. There have been established so-called "little Hoover commissions," in more than half of the States and Territories. The excellent reports of the Puerto Rican commission and of the Connecticut commission have already been published; the latter is now before a special session of the State legislature for consideration and action. The reports of many of these groups will be considered at the regular sessions of the legislatures in 1951.

CONCLUSIONS

Many bills relating to reorganization are now before the several committees of the Congress. Speaking for the House Committee on Expenditures in the Executive Departments and for my own Subcommittee on Executive and Legislative Reorganization, I can say that we have bills on traffic management and records management which will receive serious attention, and a revised bill to establish a temporary commission to study the entire field of intergovernmental relations in the United States, all in accord with Hoover Commission recommendations. The final approval of this legislation and of the 21 reorganization plans recently submitted by the President—for I am confident that all or nearly all of them will be approved—will pretty well complete the action necessary to carry out the Hoover Commission recommendations relating to over-all management in the Federal Government.

Nevertheless, our task of reorganization will not be complete. There are still a number of important matters of a highly controversial nature upon which no action has yet been taken. It is well to remember that, in a government as large as ours, the task of reorganization cannot be completed in a few months, or in a year or two. It is a continuous and never-ending task, requiring the constant and long-term effort on the part of both the administration and the Congress. So far as the Congress is concerned, this task is the particular responsibility of the Committes on Expenditures in the Executive Departments, and I can assure you that these committees intend to carry through in the discharge of this responsibility.

As a matter of procedure, it has seemed reasonable to clear out of the way first those aspects of the reorganization recommendations on which there already existed a basis for general agreement. There has been no disposition to "duck" the controversial issues, although obviously their solution will require more time. The Hoover Commission itself was faced with a limited period of existence, and with a definite obligation to make recommendations regarding most of the important questions which came before it. Its members were not always able to agree among themselves; its reports are in fact heavily loaded with dissents and qualifying or interpretative notes and comments inserted by its members. The Commission had not continuing responsibility for carrying out its recommendations and making them work in the day to day process of administration. The Congress and the administration do have this responsibility.

The controversial issues will be taken up, each in due time, for the Congress is now alert to the importance of a comprehensive reorganization and, I believe, is in a disposition to follow through. On the basis of the record up to this time, there is already substantial evidence of an intention on the part of both the administration and the Congress to follow through on reorganization. When the President's reorganization plans of 1950 are considered in relation to those submitted in 1949, it is plain that he is moving farther in the direction of a sound administrative organization, and building on the foundation that has already been laid. Similarly, the measures now before the Subcommittee on Executive and Legislative Reorganization will, when enacted, strengthen and improve the legislative basis of the Federal administrative structure and encourage sound management practices.

Time was when the science of management was largely the intellectual property of groups such as the Society for the Advancement of Managment. Gradually its principles came to be applied in the actual conduct of affairs, at first in private affairs, later in the public business, although because of differing major objectives, the application is not always the same. I believe that you now have, on the basis of what has happened during the last 12 months since the Hoover Commission reports were made public, substantial evidence that these questions of administrative structure and scientific management are now understood and acted upon by Government people, in both the executive and legislative branches. I am convinced that this concerns with problems of administration in Government will increase.

Your organization and others like it will view with satisfaction and pride these developments in the management field, a field in which you have been pioneer. Few pioneers live to see the fruition of the plans for which they worked. You, I believe, will have that experience. I am happy to participate on the legislative level with you in proving to the world that democracy can be efficient, that democracy can solve its administrative problems without endangering its basic freedoms.

Repeal of Wartime Excise and Amusement Taxes Requested

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. BOGGS of Delaware. Mr. Speaker, during the past several weeks I have received messages from approximately 8,000 citizens of the State of Delaware, requesting the repeal of the amusement tax on movie admissions.

I have, of course, received a considerable volume of correspondence from residents of Delaware requesting that early action be taken to repeal most of the other war-imposed excise taxes.

On several occasions during the past few months I have publicly stated that I favor the reduction or elimination of such excise taxes.

Mr. Speaker, with special reference to the approximately 8,000 messages I received pertaining to the repeal of the amusement tax on movie admissions, I wish to state that I had hoped and intended to answer each of these requests with an individual letter. As a matter of fact, I started to do so and more than 500 personal letters were sent by me to those who had requested repeal of the amusement tax. By that time, however, the volume of such requests had become so great that it was no longer possible for me to write individual letters at this time because of the pressure and volume of other congressional work. Consequently, I am taking this means to let all of those to whom I could not at this time write know that their messages have been received and that the matter of repealing the amusement tax is receiving my careful attention and support.

Especially for their information I wish to include at this point the letter which I did send to some 500 Delaware citizens and which I had intended to send to all of the others. This letter follows:

This will acknowledge with thanks the card which you recently signed, requesting that every effort be made to repeal the amusement tax on movie admissions.

I am glad to have this expression of your views and to say that I have publicly recommended on several occasions the reduction or elimination of wartime excise taxes, of which the amusement tax is one. Furthermore, members of my party in the Congress have made serious efforts to amend the excise tax laws but have thus far been unsuccessful because of opposition from the party in power.

I shall continue to do all that I can to obtain action on this matter. However, with

our Government running more and more in the red, I am sure you will agree that any reduction in taxes should be accompanied by substantial reductions in Federal spending.

Also as a part of my remarks, Mr. Speaker, I wish to include the letter which I sent pertaining to this matter to the distinguished chairman of the Committee on Ways and Means. That letter follows:

MARCH 23, 1950.

Hon. ROBERT L. DOUGHTON,
Chairman, Committee on Ways and Means, House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: Thus far I have received approximately 8,000 messages from citizens of Delaware urging that the amusement tax on movie admissions be repealed.

On several occasions I have publicly recommended the reduction or elimination of wartime excise taxes, of which the amusement tax is one.

In an extension of remarks in the House of Representatives on February 14, 1950, I stated in part, "I urge that in the interest of small businesses and of continued employment that final action on the subject of excise-tax adjustments be brought about at the earliest possible moment."

It is reasonable to assume that in addition to the approximately 8,000 citizens of Delaware who have sent messages requesting the repeal of the amusement tax on movie admissions, there are other thousands within the State holding the same point of view. Consequently, on behalf of all of those citizens whom I have the privilege to represent, I again urge that remedial action on the matter of wartime excise taxes, including the amusement tax, be taken at the earliest possible date.

Sincerely,

J. CALEB BOGGS.

I wish to state again, Mr. Speaker, that I sincerely hope that favorable and conclusive action will be taken on this matter at the earliest possible date.

A Farewell to Sean Nunan

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mr. LYNCH. Mr. Speaker, on this day, the Honorable Sean Nunan, who is retiring as Minister of Ireland to the United States, departs from New York homeward bound. Mr. Nunan first arrived in this country 31 years ago, and with short interruptions, has served Ireland and her people in various capacities during all that time. Seldom has it been possible for a foreign diplomat to know and understand the American people so intimately and so completely as did Sean Nunan.

As a young man, Mr. Nunan played an active part in the historic Rising of 1916 in Ireland, when Irish patriots rebelled against British tyranny and proclaimed an Irish Republic, which today has become a reality after more than seven centuries of struggle. For his part in the Rising of 1916, Mr. Nunan was sentenced to penal servitude for life by the British, but was subsequently released as a result of the general amnesty of 1918.

In the general elections of 1918, when the candidates for Parliament campaigned on a platform calling for an independent republic, 79 seats were won by the full self-government candidates as against 26 for the opposition. The popular vote was 1,211,516 for self-government against 315,394, making it almost a 4 to 1 choice on the part of the people. As a consequence of this vote, the Irish members of Parliament assembled in Dublin and created the Dail, the first Irish Parliament to sit since 1800, when Great Britain abolished the Irish Parliament. Mr. Nunan was appointed clerk of the Dail, having served as director of elections at this time.

Seeking funds for the new republic, Eamon De Valera came to the United States in an effort to finance a $6,000,000 loan through the sale of Irish bonds. Mr. Nunan served as secretary to Mr. De Valera and aided in making successful this sale of bonds throughout the country. Since Mr. Nunan could not obtain a passport from the British to travel here, but would have been returned to prison instead, it was necessary for him to work his way over in the stokehold of a ship. These Irish Republic bonds all bore the signatures of Mr. De Valera and of Mr. Nunan. In later years these bonds were paid off in full, together with interest in the total sum of 25 percent.

During 1922 Mr. Nunan returned to Ireland where he participated in the treaty discussions and served in the ministry of home affairs. The following year he returned to the United States where he was later joined by Miss Nan Ryan, a native of Tipperary, who came over to be his bride. The Nunans have one son, Dr. Seamus Nunan, who is a graduate of the Georgetown University school of medicine, and who is at present a resident physician at Providence Hospital here in Washington. Dr. Nunan is remaining in America and will become an American citizen.

Over a period of 10 years, Mr. Nunan engaged in various activities, principally the brokerage business in New York, until he was appointed to the Irish Foreign Service as Consul in New York in 1932. In 1938 his government called him to serve as First Secretary of the Irish Office in London, which post he held until 1941. He then returned to the United States along with Mr. Frank Aiken, Irish Minister for Defense, on a mission to obtain arms and munitions for Ireland. Mr. Nunan remained as counsellor in the Irish Legation in Washington until 1946, when he was appointed Consul General for Ireland in New York. The following year, 1947, Mr. Nunan was named Minister of Ireland to the United States and has remained here in that capacity until this time. Sailing today for Ireland, Mr. Nunan will assume the post of Assistant Secretary of the Department of External Affairs in Dublin, where he will head the divisions of political affairs and public relations.

Throughout his years of service in this country, Mr. Nunan has traveled extensively and has acquired countless friends for Ireland in almost every State in the Union. His kindly disposition, sincerity of purpose, and loyalty to his friends has endeared him to all who have had contact with him. His unswerving devotion to the cause of Ireland has made him an outstanding champion in the fight to regain for Ireland her sovereignty over all 32 counties of the Emerald Isle. He has constantly denounced the continuing occupation of the six Northeastern counties of Ireland by the British and toiled and labored unceasingly for the day when this last hallowed spot in Ireland, whence came so many of Ireland's great heroes and patriots, may at last be joined with the rest of Ireland and the fictitious border be removed. Few causes have had a greater champion than has the Irish question in Sean Nunan, for he has never failed to call attention to the partition imposed but 30 years ago by the British Parliament in London, nor to demand vigorously the elimination of this unwanted and unasked-for boundary.

In leaving, Mr. Nunan bids farewell to hosts of friends throughout the United States, friends who will long cherish their association with him and, as a result of his gentle influence, continue to carry on for him his determined fight for the freedom and independence of all Ireland—from our distant shores. In returning to Ireland, Mr. Nunan brings back to his people a knowledge of the American people which is both thorough and unique, and I am sure that his vast experience in the United States will be helpful in expanding the close ties which have held our two countries throughout the years. Moreover he can convey directly to the Irish people the assurance that the freedom-loving people of the United States will cooperate fully in Ireland's efforts to end the partition of their country and reestablish throughout all 32 counties the democratic principles of liberty and justice for all. We wish Mr. Sean Nunan every success in his new position and bid him godspeed on his journey.

Justice Down South

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. MULTER. Mr. Speaker, the charge is often made that whenever an act of intolerance or injustice is committed in any of the Southern States it is immediately brought to public attention in order to embarrass the South. My view is that wherever bigotry and intolerance of our fellow men is practiced, in any part of our country, it should be exposed. Every effort should be made to eliminate the cancerous growth of hatred and prejudice wherever it shows its ugly head.

It is deplorable that some of those who claim to represent the South encourage intolerance and bigotry by their words

or deeds, thus further inflaming the situation. These people fail to realize that there is a stirring of new ideas in the South which are making gradual, though slow, progress in the practice of the true principles of brotherhood.

I am happy today to bring to the attention of the Members of this House, and through them to that of the American people, that it is not all prejudice and injustice in our Southern States. There are forces there—and these forces are growing stronger from day to day—who are teaching by example a better understanding of our problems and their solution. The South is no longer stagnant, it is moving forward.

I am glad to commend to you the following editorial from the New York Herald Tribune of March 20, 1950, which compliments two of our Southern States for a new chapter in justice there:

JUSTICE DOWN SOUTH

Let us, for a change, speak well of Mississippi. An all-white jury convicted a white man last Thursday of the murder of three Negro children. The bestial crime was committed in January, and justice moved with utmost speed. The jury deliberated only an hour and a half; the punishment was a mandatory sentence to life imprisonment. The district attorney's peroration included these words: "Mississippi is coming out from the dark shadows of yesterday. Do your duty as Mississippians." This the jury did, in solemn awareness that all men, black or white, are entitled to exactly the same protection of law. Mississippi has done an excellent job, and the rest of the country applauds.

More light is also breaking over Georgia. On the same day that the Mississippi jury acted on stern duty, a Federal judge in Atlanta demonstrated that Negroes have the same rights as any other Georgians. A sheriff and his deputy were each sentenced to 12 months in prison and fined $1,000 for delivering seven Negroes to a masked mob for beating. The crime was that the Negroes had been deprived of their constitutional right of equal protection under law. The course of prosecution was admittedly difficult; Federal entry into such cases has been seldom attempted. The current case was first tried last year at Rome, Ga., and ended in mistrial when the jury deliberated without result for 50 hours. But the government returned to the civil rights assault, and this time the jury convicted 2 of the 10 defendants. Appeal to the Supreme Court is in prospect. But meanwhile it is perfectly evident, on the basis of 1 week's news from Mississippi and Georgia, that something vital and different is stirring through the South.

Address of Hon. Clifford P. Case of New Jersey

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. HESELTON. Mr. Speaker, under the unanimous consent granted to me to extend my remarks, I take pleasure in inserting the following remarks of Representative CLIFFORD P. CASE of New Jersey at a presentation of the Myth That Threatens the World, Waldorf-Astoria Hotel, New York City, Sunday evening, March 19, 1950:

To discover more effective ways to establish and maintain a peaceful world is the deepest concern of Congressmen as it is of all thinking people.

Among many proposals that have been made in Congress is House Concurrent Resolution 64. It was introduced on June 7, 1949. It is sponsored by 112 Members of the House.

It reads as follows:

"Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that it should be a fundamental objective of the foreign policy of the United States to support and strengthen the United Nations and to seek its development into a world federation open to all nations with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation, and enforcement of world law."

The resolution, you will have noted, does not say what specific steps should be taken to reach its objective. Nor does it fix a time for its accomplishment. Some people, therefore, may think it of little consequence. Believe me, they would be quite wrong. It is not a little thing to say—and mean—that a world federation with power adequate to preserve peace through the enforcement of world law should be a fundamental objective of American foreign policy.

If that objective is realized, in certain areas at least, we would be subject to a government in which we would not have a controlling voice. It has many other implications, not all of them desirable. Among them, I believe, would be a tendency to freeze the status quo. For example, those nations which suffer under totalitarian rule would find it harder to throw off the yoke, for any revolt would have to be undertaken without help from outside.

These are not little things.

Individual liberty and the institutions essential to it are very precious. To preserve them scarcely any price is too high to pay. Before we risk them there is scarcely any other risk we ought not to take first. For myself, only the belief that another war would unleash forces capable of destroying all life on this earth justifies my urging world federation as an ultimate objective of our foreign policy.

And no one ought to buy the world federation idea lightly or on the ground that those who doubt or oppose it can do so only on selfish or stupidly chauvinistic grounds.

No one ought to buy it with the idea that it will be a quick short cut to lower taxes or a lessening of Government controls over certain areas of business enterprise.

It would be far better that the idea of world federation should be stopped dead in its tracks than that it should be accepted by the American people on any false basis.

We do believe, of course, that our proposal will, at least, increase the hope of avoiding either surrender or a total war in which our smallest concern would be confiscatory taxes and total controls. But there is no cheap, quick, or easy way to win the fight for peace in a decent world. And anyone who believes that such a way exists deludes himself. Anyone who persuades another that such a way exists weakens, by so much, our will and stamina for the long, tough, expensive fight.

It may seem strange that one who believes that world federation should be a fundamental objective of our foreign policy should speak as I have just spoken. But I could not do otherwise. For if the American people should embrace the idea of world federation lightly, and without clearly understanding its implications, they will not really have accepted it at all. And it would be disastrous if the American people should become so dazzled by the prospect of an easy way to peace, through world federation or any other big solution, that they falter in the steady support which our Government must have in the struggle which we face.

All, or at least the great majority, of the sponsors of our resolution have been and still are strong supporters of the major elements of our foreign policy.

We support our Government in its support of the United Nations. Our resolution declares expressly that the United Nations should be supported and strengthened. Indeed, it is the United Nations which we would seek ultimately to develop into the World Federation.

We support, also, the Marshall plan, the North Atlantic Alliance, and the point-four program. We recognize how essential all these and many other specific measures are for the creation, in the words of Mr. Acheson, of a state of facts or a situation upon which international agreements with real meaning can be based. Specifically, we recognize the need for such measures for the creation of that state of facts or situation on which the greatest of all international agreements, that of World Federation, can be based.

But we feel most strongly that all such measures and others like them, useful and necessary as they are, are not enough. We feel that even Mr. Acheson's recently announced "total diplomacy," as we understand it, is not enough. No combination of military, economic, or political measures will of itself suffice. A great moral objective is also necessary. We know that we have such an objective. But we believe that the idea of World Federation under law will give that objective increased strength and meaning.

Leadership in this matter must come from outside the Department of State.

To my regret, the Department, up to now, is opposed to our resolution and to the other related proposals which have been made. Its opposition to our resolution is based, as I understand it, on two broad grounds. First, it fears that overemphasis on a single institutional change would detract from the steady efforts for peace which must be made in many fields and on many fronts. Second, it doubts whether the American people understand the idea and its implications and whether, if they did understand it, they would support it.

I fully appreciate both of these points as I think I have already made quite clear. And the Department is right in its position that we can have no foreign policy which is not the product of the thinking and the desires of the American people themselves.

But it does not follow that these and all similar proposals should be dropped. It follows, rather, that they should be most fully and vigorously discussed throughout the length and breadth of the land so that our people can reach, and then register, a fully informed opinion upon them. And I am confident that when the American people make up their minds we can safely accept their decision.

But leadership in this matter must come from somewhere. And one of our major purposes in introducing the resolution was to stimulate public discussion and to attract public support. We are encouraged by the progress which has been made thus far.

The sponsors of the resolution in the House are the largest bloc ever to sponsor any foreign policy measure. They include a majority of the members of the Committee on Foreign Affairs. It is entirely likely that the resolution will be favorably reported to the House during this session.

In the Senate, a companion resolution was sponsored by 22 Senators and the Foreign Relations Committee established a special

subcommittee to study it and other proposals having related objectives. This subcommittee held several days of hearings in February and plans to hold further hearings soon.

These activities have already attracted substantial attention on the part of the public. We hope this will be greatly increased as we move further along in the legislative process. And in all this the help of United World Federalists and other Nation-wide organizations has been, and will continue to be, of enormous value.

I emphasize again that our resolution would not interfere with or hinder the continued prosecution of any aspect of our foreign policy of which I am aware. It would in no way weaken our efforts or dissipate our energies.

On the contrary, we deeply believe it would give our foreign policy added vigor and effectiveness. It can help provide, here at home, the sustaining power which the American people must have for the accomplishment of the task which confronts us. It can add to our efforts everywhere an increased strength of moral purpose which is essential if the forces of democracy are to succeed in the struggle for the minds of men.

That is why, after long and very serious thought, I have made the basic decision to support the resolution, urging the development of the United Nations into a world federation open to all nations with powers, limited, but adequate to preserve peace.

Effect of Taxation on Our Mineral Resources

EXTENSION OF REMARKS

OF

HON. CHRISTIAN A. HERTER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. HERTER. Mr. Speaker, in February of this year at the New York meeting of the American Institute of Mining and Metallurgical Engineers, Mr. Granville S. Borden presented a paper entitled "Effect of Taxation on Our Mineral Resources." While the complete paper is too extensive to be fully included here, I felt that the ideas contained in it were of sufficient importance to ask Mr. Borden to prepare a more condensed version. He has done so in the form of a legal brief called A Suit for Delineation of Boundaries Between the Plaintiff, Taxation, against the Defendant, Mineral Resources, and presents the case as follows:

I. NATURE OF THE CONTROVERSY

In the Constitution of the United States and in the constitutions of the several States, the people have delegated to their legislators the powers to levy taxes upon them. Notwithstanding certain constitutional limitations upon these powers, such as due process clauses, and equal protection clauses, the power to tax is the power to destroy. These legislators, in whom these powers to tax are vested, can aggravate inflation; they can cause depressions; they regulate our standards of living; they can destroy free enterprise; they can tax special groups and give the proceeds to other groups or foreigners; they can levy excises which will regulate any type of activity; they can, by devious means, confiscate and expropriate; they can, through discriminatory taxes, engender civil strife; they can make us vulnerable to foreign aggression; and last but not least, as shown later, they can convert our mineral resources into waste.

Who are these artisans of our destiny? They are our fellow citizens, whom we elect to make our tax laws. They secure these jobs by your vote and mine except when our votes are neutralized by fraudulent stuffing, purchasing and miscounting by political machines.

What guaranties do we have that these lawmakers will represent us honestly and intelligently? We have merely the right to petition, remonstrate and to strive to educate. Under our representative form of Government, it is our privilege and duty to howl and complain if we feel that our destinies and security are not being developed properly. If this is done collectively, the activity may be called lobbying, but this is our only recourse and it is one of the main adits into democracy. Correspondingly, as members of this institute, as men who can qualify as experts in the sciences dealing with mineral resources, it is our privilege and duty to petition, remonstrate and attempt to educate our lawmakers when we demur to the policies of taxing mineral deposits which we believe are discriminatory and unsound.

Every legislator, whether serving in the Federal or a State Congress, has among many other duties two conflicting duties. On the one hand, there is the obligation to impose nondiscriminatory tax burdens on our mineral resources; on the other hand, there is the obligation to encourage, stimulate and even in certain instances subsidize exploration, development and production. The performance of each task contravenes the obligations to perform the other task. Where is there a satisfactory compromise?

This is the crux of our problem. There are broad differences of opinion. The answers should not be derived by guesswork nor from pure political considerations. The answers should be distilled out of a knowledge of the profound complex factors involved.

Bear in mind that there are only a few of our lawmakers who have had the opportunity to learn how men prospect and explore; how they meet with disappointment; how infrequently they hit the jackpot. Only a few of these lawmakers know about the impact of tax increases on our mineral resources. Nevertheless it is their tax votes that spell prosperity or depression for the mineral producer; it is their tax votes which can change prosperous mining communities into ghost towns or vice versa.

Although many of our legislators have had no experience in the business of finding, developing and producing our fuels and our basic natural raw materials from the earth, the presumption seems sound that they are curious and interested in these activities; that they welcome instruction, especially from qualified experts when given in good faith and with the intent to promote justice and equality for all of our people.

II. QUESTION PRESENTED

Now in the light of all these circumstances, what should our membership do? Certainly we can not afford to be apathetic. We should complain to our legislators and demand equality when taxes jeopardize our vitality; we should commend them for wisdom and integrity when they are worthy of such commendations. We should strive to instruct them in the impact of taxation upon our mineral resources to the end that they, through their votes, can construct barriers inside our mineral resources to prevent irreparable damage from trespassing by taxation. We can as individual citizens offer instructions and training to our tax-law makers. If our institute should sanction the practice, the membership can act through the committees of the institute.

There are many facts which every lawmaker should know as he surveys the traverse of taxation through our mineral resources. Some are of broad general import; others relate to current specific problems. Some seem elementary; others are quite complex and technical. Some of these facts are recorded herein where they may be available for assignment to our tax-law makers.

The balance of this brief is a discussion of 12 points that every tax-law maker should know.

III. WHAT EVERY TAX-LAW MAKER SHOULD KNOW

A. General principles

1. Every tax-law maker should know that the magnitude of our mineral resources varies inversely with the magnitude of the taxes levied upon them.

Mineral resources are natural deposits containing valuable ingredients which can be exploited profitably. When the proceeds from the disposition of the valuable ingredients of any deposit are inadequate to meet the costs of production, the deposit loses its label as a mineral resource. It is converted into waste. As taxes on mineral resources are increased, more marginal deposits are converted into waste. For example, if the recoverable grade of ore is $10 per ton and the production cost is $9.50 per ton, this ore becomes waste if the State imposes a severance tax of $1 per ton.

2. Every tax-law maker should know that many additional levies on our mineral resources have effected net losses in revenue to the Government which imposed them.

As the tax rates increase, mineral resources decline. When the burden becomes too heavy, mines and quarries are shut down; ghosts invade our mining camp; men lose their jobs; suppliers lose their trade; stockholders lose their dividends; processors and refiners lose their raw material; and Uncle Sam and the State lose their taxes on the profits of the operator, the wages of labor, the royalties of the owner, the profits of the tradesmen. Furthermore, there is a loss of potential revenue from the discoveries which would have been made under thriving operations.

Not only does the loss of revenue ensue from the reduction in yield of income tax, but every increase in tax on the mineral resources effects some reduction in the fair market value of the deposit. With this decline in value there are proportional declines in the yield of: (a) the ad valorem tax of the State, and (b) the State's inheritance and gift taxes and (c) the Federal estate and gift taxes. Thus, although the tax rates have been increased, there frequently is a net decline in the flow of revenue.

3. Every tax-law maker should know that tax increases on our mineral resources reduce the number of discoveries of new mineral resources.

Exploration is an expensive, speculative activity. Every tax increase tends to evaporate the funds available for exploration, and every tax increase tends to impair the incentives to enter or continue in this speculative, expensive exploration business.

4. Every tax-law maker should know that every discovery of a new mineral resource creates new sources of revenue for the Federal and State Governments, new sources of employment, new stimulants to trade, new sources of funds for more exploratory ventures, and new barriers against poverty and foreign aggression.

5. Every tax-law maker should know that as additional taxes dry up the source of taxes, more taxes are imposed to meet the deficit. The merry-go-round of depression is accelerated and the geese that lay the golden, silver, copper, lead, zinc, and other metallic and nonmetallic eggs die.

B. Income taxes

6. Every tax-law maker should know that the producers of minerals, oil, and gas have not had a fair deal in the evolution of the Federal income-tax law; that the income-tax burden levied upon them is, in many instances, discriminatory and unjust.

This discrimination arises primarily from the failure of Congress to recognize that a producer of minerals is in substance and reality engaged in two business enterprises. First, he is selling his mineral deposit. Secondly, he is in the business of mining. The over-all profits from both businesses are taxed as ordinary income at the normal and surtax rates; but if, he sold the deposit to you and you mined the deposit, he would be taxed at the long-term capital-gain rates on the difference between the sales price (value in place) and the cost.

We can concede for the purpose of discussion that the profits derived from the second business, i. e., the mining activity, should be taxed as ordinary income but the profit derived from the sale of the deposit should not be taxed more than profit derived from the sale of any capital assets.

Thus, if we grant that a producer is really selling his deposit as he mines the deposit, the conclusion seems clear that he should pay only long-term capital-gain rates on this portion of his income; that Congress by its failure to recognize this situation is effectively discriminating against our mineral producers.

It is noteworthy that Congress has granted taxpayers who cut timber the privilege of having their profits taxed at the rates applied to gains from the sale of capital assets.

7. Every tax-law maker should know the facts which justify the allowances of depletion deduction on percentages of income.

Percentage depletion is a complex subject, but some of the principal reasons for the allowances are briefly stated:

Generally, percentage depletion fails to set off the discrimination against producers discussed in point 6 above. As a rule, if A mines his deposit he will pay more income taxes, even with percentage depletion allowances, than A and B would collectively pay, if A should sell to B and B should mine the deposit—a case where no percentage depletion would be allowed.

But this gesture of percentage depletion toward equality is not all the story.

Statistics will prove that the tax savings which flow from percentage depletion are generally added to other funds and appropriated to determine where Mother Nature has hidden other deposits. These hunting expeditions are expensive and all of the ventures speculative. The cost of finding new reserves is higher than the cost of finding the reserves which are being depleted. This is true not only because of general inflation, but also because of the gradual decline in the quality and quantity of prospects. The merchant can replenish his inventory by purchasing new goods, but the miner replenishes his underground inventory by speculating and wildcatting. For example, to maintain our present domestic crude oil reserves the prospectors and explorers must find 2,000,000,000 additional barrels annually and this task requires a lot of fortitude whether you are speculating with your own funds or the funds of your stockholders.

Many of the important discoveries of the past would not have been made had there been no percentage depletion. In the first place, the funds in reserve available for prospecting would not have been adequate to support the more speculative type of ventures. In the second place, without some tax incentives the long-shot plays would never have been taken.

Even admitting solely for the purpose of argument that the Government is in the grubstaking business, a review of the past will prove that the producers have repaid these percentage depletion grubstakes with thousands of percent interest. The loss of revenue to Uncle Sam from percentage depletion is in reality a capital investment to serve all the people through the promotion of their security and their prosperity. The net results of the percentage depletion allowances are stupendous gains to the Government. The yield to our Government from new oil fields, such as Cuyama in California, and North Snyder in Texas, will set off all of the revenue losses from percentage depletion for a very substantial period. From the standpoint of insurance for prosperity, percentage depletion outranks any subsidies, loans, exemptions, aids, or benefits which are granted by our Government.

Finally, have our people forgotten the contributions of the mining prospectors and oil and gas wildcatters toward winning World War II? Had there been no long-shot wildcat discoveries in the prewar days of World War II of oil, gas, copper, lead, zinc, and strategic metals, we would be paying for a much longer war. Do they remember OPA; the "A," "B," "R," and "T" gasoline rationing tickets? Do they remember allocating metals and the hysterical search for strategic minerals? If their memories fail, let them refer to our current stock-piling programs.

After this narrow escape from disaster (wars cannot be won without adequate domestic mineral resources), can we afford to smother the enthusiasm of our prospectors and wildcatters, to the end that our underground stock piles will become exhausted from ordinary peacetime consumption so that we will be caught short of these indispensable sinews of war when the next sneak attack occurs?

As shown in the prior discussion of general principles, the inevitable result of a heavier tax load on the mineral producers will be a net loss in national wealth and national income, an impairment of our security from poverty and our power to defend ourselves against foreign aggression.

If the parties who insist that percentage depletion is a loophole should review the record carefully, they will undoubtedly reach the inevitable conclusion that any revenue which flows out of this loophole returns to our Government with a floodtide of accessions.

8. Every tax-law maker should know that the rules governing exploration and development expenditures by mining and oil and gas companies effects inequitable and unjust results. He should know the technical reasons for these unfair results. He should know how remedies can be procured.

There are regulations relating to the Internal Revenue Code which deprive, in certain cases, taxpayers who explore for minerals, oil, and gas, any tax benefit from the right to deduct these expenditures from income. The loss of these tax benefits arises: (a) If the deduction must be taken as an expense in a year when there is not sufficient gross income to absorb the deduction (or used as a carry-back or carry-forward deduction), or (b) if the expenditure must be capitalized to be recovered through depletion deductions in years when the depletion deductions are based upon a percentage of income.

The rules are extremely complicated, and there are no just reasons for this confusion. Clearly, every taxpayer should be entitled to deduct the money which he has spent for exploration and development either as a loss if no discovery is made, or as a deferred expense of exploiting the mines which have discovered and developed. The law should provide rules which will grant a tax benefit for every cent expended for finding new mineral deposits.

9. Every tax-law maker should know that the mineral producer is particularly vulnerable to hardships from an unjust rule relating to the recovery of depreciable capital established by the Supreme Court of the United States, commonly known as the Virginia Hotel rule. He should know the remedy.

10. Every tax-law maker should know that there is an obscure provision in section 122 of the Internal Revenue Code dealing with carry-back and carry-forward net loss deductions which has unjustly cost the producers millions of dollars and will continue to levy indirectly terrific unjust burden on our mineral resources.

The provisions to which reference is made are section 23 (s) and section 112 (a), (b), (c), and (d) of the Internal Revenue Code. Hidden obscurely away in these confusing and bewildering sentences is the rule that the net loss of any year when carried backward or carried forward to serve as a deduction from gross income of another year, must be reduced by the percentage depletion allowances in excess of cost depletion for the year to which the net loss is carried.

The mineral producer falls in the category of feast or famine taxpayers who are vulnerable to wide fluctuations of income and losses over a series of taxable years. No other group of taxpayers are more equitably entitled to net loss carry-over and carry-back deductions. Nevertheless, these taxpayers, because of these obscure provisions in section 122 of the Internal Revenue Code, can seldom procure any tax benefits from these provisions. The gold producers who sustained losses from War Production Board Order L–208 were the first group to lose refunds of prior year taxes because the losses sustained while operations were shut down were absorbed by the percentage depletion allowances of the year to which the carry-back loss would have applied. Next on the list of victims were the operators who mined strategic minerals at a profit during the war followed by an era of heavy losses in the postwar period.

The point is noteworthy that the relatively small producers are the taxpayers most vulnerable to this inequity.

11. Every tax-law maker should know that income taxes can be assessed on the proceeds of new ventures before the operator has assurances that his investment will be redeemed.

12. Every tax-law maker should know that an investor in the share of a corporation engaged in producing minerals, oil, or gas may be assessed income taxes on dividends even though the amounts received are in fact redemption of the cost of his shares.

IV. CONCLUSION

In conclusion, it is submitted:

(1) The health and vitality of our mineral resources are in jeopardy from trespassing by taxes.

(2) The duty and the power to delineate the boundaries and construct the barriers against this invasion has been delegated to our tax-law makers.

(3) There are both elementary and complex facts pertaining to the taxation of minerals which every designer of mineral tax law should know.

(4) Every member of this institute owes a duty to his profession and his country to help in this chore of teaching our tax-law makers facts about our mineral resources to the end that they shall design and construct our tax laws intelligently—laws which will engender benefits for capital, labor, consumers, our State government, our Federal Government, and every citizen of the United States.

Thank you.

Let's Not Belittle Ourselves

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. JAVITS. Mr. Speaker, on other occasions I have discussed the relative strengths of the United States and the Soviet Union; the appended editorial bears importantly on this subject. Complacency would be the worst thing possible for our efforts to withstand and win over the Communist drive, but a mature estimate of relative capabilities bears very importantly on the extent of the effort we must expend at any particular point and the confidence with which we may proceed:

[From the Washington Evening Star of March 20, 1950]

LET'S NOT BELITTLE OURSELVES

The collapse of the Soviet-backed mark in eastern Germany serves to point up a fact that a lot of people of the West seem to have forgotten in recent weeks. The fact is simply this: That Russia, although it presents a formidable front and snarls ferociously, is not really a tremendously strong power in relation to the United States or the free world as a whole.

Currency is merely one measure of strength, but it is a pretty good measure, and the fact that the Germans greatly prefer the American-backed mark speaks for itself as an incidental commentary on their evaluation of Soviet power. They have little or no confidence in the Kremlin's money; they have little or no respect for it; and that in turn reflects a low opinion of Russia in general.

Americans would do well to give a little thought to this matter. Within the past few months, all too many of us have been acting and speaking—especially in connection with proposals for "new starts" on peace talks with the Kremlin—as if Russia were in a position to command a great deal of supplication from us. Actually, there are no supermen over there and no supersystem. On the contrary, as indicated by the currency situation in eastern Germany and by numerous other evidences of serious stresses and strains behind the iron curtain, there is more than a little reason to believe that the Stalin dictatorship—both at home and in the satellite countries—has good cause to be worried by its weaknesses.

True enough, of course, the Russians have a big fleet of submarines, a lot of planes and the largest of all land armies. But what else have they got? How much staying power can they put behind their armed forces in being? Politically, economically, and militarily, what are their reserves for the long pull? The answer to these and similar questions seems fairly clear, namely, that they have a long way to go before they can hope even to come close to matching the immense spiritual and material resources that can be mobilized by the free world. To understand this, we have only to keep in mind that their steel production is Lilliputian compared to ours, that their standard of living is miserably low, and that they sit on a volcano of oppressed peoples whose loyalty the Kremlin can never count upon.

In other words, although the Soviet facade looks impressive, the reality hidden behind it—the reality behind the iron curtain—adds up to a situation in which Russian power today, in a basic sense, runs a poor second to the power of the West particularly American power. This is an all-important fact that we ought to keep constantly in mind. We have lately been belittling ourselves much too much, and the effect on public opinion abroad has not been a good one.

Although the Red technique of infiltration and subversion constitutes a serious threat, the heartening truth is that the United States and the West as a whole have such overwhelmingly superior strength—actually and potentially—that they can be certain of victory in the cold war if they use that strength wisely and well, in unison. Among other things, as far as our own country is concerned, that means that Congress must guard against the kind of false economy that would slow down such vital projects as the Marshall plan.

Certainly, this is no time for slowing down. With all the power that we and our friends abroad now have, we ought to move forward with the greatest possible vigor on every key front in the cold war—militantly, confidently, not on a note of defensiveness, self-doubt, or vacillation, as if we were less strong than we really are.

Farm Surpluses and the ECA

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. VORYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star of Wednesday, March 22, 1950:

FARM SURPLUSES AND THE ECA

Despite some overexcited comment to the contrary, the effectiveness of the Marshall plan is not likely to be undermined if Congress as a whole goes along with the House Foreign Affairs Committee in voting for the amendment offered by Representative VORYS, of Ohio.

Under the amendment, instead of authorizing the $2,950,000,000 in new funds requested by the Economic Cooperation Administration—an authorization approved by the Senate Foreign Relations Committee—Congress would reduce the total to $1,950,000,000. But this cash cut would be offset by a provision under which the ECA countries, in accordance with their needs, would be able to acquire $1,000,000,000 worth of American agricultural surpluses from the Commodity Credit Corporation.

Mr. VORYS' proposal is designed primarily to put pressure on all parties concerned, including the Secretary of Agriculture, to force the use of unsalable surpluses now held by the CCC. It also is aimed—in a bookkeeping sense—at lightening the budget deficit. In both these respects, its wisdom and practicality have been sharply challenged. Nevertheless, although it might make the ECA's operations less flexible, it does not deserve to be branded as a mere dumping idea threatening to do serious injury to the Marshall plan by narrowing the scope of our vital aid to Europe.

This is so for the simple reason that the ECA itself, in requesting $2,950,000,000, has estimated that approximately half of that sum is needed to cover assistance in the form of food and agricultural commodities. In effect, therefore, the Vorys amendment, by balancing out its cash cut with a provision enabling the participating countries to acquire the equivalent of $1,000,000,000 in farm surpluses, would not really be changing the scope of the minimum aid deemed essential by the ECA's own careful calculations.

What the amendment would change would be the procurement procedures that have characterized the Marshall plan up to now. Under those procedures, the ECA has acted as a kind of banker extending credits with which the participating countries have acquired farm items chiefly through private American channels at open-market prices. Under the Vorys plan, their food and agricultural needs would be taken care of out of the surplus held by the CCC, with value calculated on the basis of figures no higher than prices prevailing in the open market. As for cases where the CCC might not have a commodity required by one country or another, the need would be met through private channels, with the ECA footing the bill out of the money appropriated for it by Congress.

On closer inspection, of course, enough "bugs" may be found in the Vorys amendment to persuade Congress—as the Senate Foreign Relations Committee is already persuaded—to reject it as a device likely to have little or no practical effect on either the Federal deficit or the problem of farm surpluses. Whether or not that proves to be the case, however, the fact remains that it is hard to see just how the proposal threatens to "cripple" the Marshall plan.

Actually, though it would be happier with present procedures, the ECA itself seems to be satisfied that it could operate effectively with something like the Vorys proposal. Certainly, if Congress votes for amendments no more restrictive than that, we can be reasonably confident that the Marshall plan's third year will win important additional ground for the free world in the cold war.

A Quick and Easy Plan To Make Money

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. WHITE of Idaho. Mr. Speaker, no doubt Americans lead the world in ingenuity. Besides all of our other inventions, we find that during the emergency of the Civil War when this country found itself without cash and low in credit, when Government non-interest-bearing notes—greenbacks—were of little value, the American bankers came forward with a revolutionary monetary invention—national-bank notes—paper money secured by the national credit. This kind of paper money was brought into circulation by the passing of the National Bank Act of 1863.

This monetary invention was so profitable to the banks of this country that it soon spread to the rest of the civilized world with the result that first the use of silver money was greatly reduced and finally the use of gold as money was discontinued.

The Federal Reserve paper-money system was an improvement (?) on the national-bank notes monetary plan. The Federal Reserve bank money scheme came into flower with the amendment of the Federal Reserve Act that made Government obligations—bonds—eligible as security for the issuance of Federal Reserve notes by the Federal Reserve bank.

The plan that is being followed by the banks in creating money is presented in a contribution recently made to a western newspaper which is reprinted here for the consideration of my colleagues:

[From Seattle (Wash.) Spokesman-Review of March 12, 1950]

LEGISLATOR EYES "CUTEST" SCHEME—MARSHALL PLAN FINE—EXCEPT FOR TAXPAYERS, IDAHOAN AVERS

(By COMPTON I. WHITE, Member of Congress from First District of Idaho)

To the EDITOR OF THE SPOKESMAN-REVIEW:

We've got the cutest little plan for making (creating) money. It's a scheme so cute that it's clever.

Uncle Sam, to get money to finance Government business, goes to the banks and puts up his notes (bonds) that bear interest, and then the bank makes a swap. They take Uncle Sam's notes, put them in their vaults and give him, in return, their notes, which do not pay any interest.

The notes of the banks (Federal Reserve notes) Uncle Sam gets in this financial trade are printed by the Bureau of Engraving and Printing and are legal tender money, while Uncle Sam keeps on paying interest on his notes (the bonds in the bank vaults). Uncle Sam is really using his own credit, but he doesn't seem to know it.

Then he takes these Federal Reserve notes (money) he gets from the banks and goes out and buys wheat and things from the farmers and farm machinery and things from the factories, and he gives all this food and machinery he has bought to the poor governments in Europe, and these governments sell the stuff they get from Uncle Sam to their own people and get money to put in their treasuries.

These European governments have a lot of debts, and when the interest on their debts (bonds) comes due, the money for all this stuff Uncle Sam gives England and these Marshall-plan governments helps a lot in keeping all their government notes (bonds) good by paying the interest on time.

So this Marshall plan makes good times for everybody. For our banks, because they are using their credit and making a lot of loans to the Government and getting the interest, and the farmers and factories are making money on their wheat and things that they sell to our Government.

All the things we are buying and giving these European governments is making business good all around. The stores, railroads, factories, and everybody is prosperous in this country and business is getting better in the European countries. The bondholders in Europe are getting their interest on time and everybody seems to be happy—except maybe the taxpayers in this country. But then you've got to take off your hat to the people who thought up this Marshall plan. It may have come from Europe. They say that some people over there are smarter than we are.

Merchant Marine Cadets

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New York Times of Saturday, March 18:

MERCHANT MARINE CADETS

One of the most effective ways of supplying our merchant fleet with competent deck and engine room officers has been the training of qualified men at the Merchant Marine Academy, Kings Point, N. Y. Approximately 1,100 cadets are in attendance on a 4-year course, the completion of which qualifies them for berths in the cargo ships, tankers, and passenger liners flying the American flag. These men have been as carefully selected, and go through as strenuous a course of study, as do the men who attend West Point or Annapolis.

Admission to the Academy is contingent upon the passing of a difficult entrance examination. The next 4 years are spent both ashore and afloat learing the rudiments of a skill which is important to the trading life of our country. At the moment this program is being imperiled by a congressional proposal to eliminate the modest allowances made to the merchant marine cadets to cover the costs of uniforms, textbooks, and minor personal expenses. If this proposal were to take effect, many of the cadets now in attendance would be forced to leave the Academy, while others would have to depend on allowances from home to guarantee the completion of their courses.

This same proposal has not been made concerning the cadets in training at the other military and naval institutions operated by the Government. It seems unfair to create hardships for a group of men who choose to serve their country effectively in a civilian capacity and who are Naval Reserve Officers on graduation, when their opposite numbers in the other services are not affected at all.

Food for Thought

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an editorial appearing on March 7, 1950, in the Daily Tribune, of Royal Oak, Mich., my home city.

This editorial presents some solid thinking, the kind of thinking people should do when they go to the ballot box and express their opinions. I commend it to my colleagues in the House for their reading:

PERSONALLY SPEAKING

(By Floyd J. Miller)

SOME MIDGET EDITORIALS

Here are some news stories I thought important, and the comment that could be stretched into a full column for every one. Lucky for both of us that time and space prevent.

1. The National Labor Relations Board orders John L. Lewis to give up the provision in the mine workers' contract that provided they should work under the agreed-on conditions when able and willing.

Imagine the mine operators saying they would pay a certain scale when able or willing. Or try to borrow somebody else's money from a bank on a promise that you will pay it back as agreed, if able and willing.

2. General Motors earned more profits—over $600,000,000—in 1949 than any other company ever made in a similar period.

Although it certainly doesn't look so now, the stockholders are still risking. Nobody promises them anything. In any year when the company has big earnings the rest of the country benefits even more than the stockholders. Last year the Government (that's we, the people, or our representatives) received $400,000,000 in excise and other taxes from G. M. before there were profits. The company had to sell $5,000,000,000 worth of goods, compared with $2,500,000,000 in 1936, which meant billions in wages and purchases. Of the $1,100,000,000 gross profits, the Government took another cut of $500,000,000 in corporation income taxes and individual income taxes. That left $600,000,000 in spendable income for the owners, many thousands in number.

3. Phil Spitalny, on tour and on the air with his all-girl band, reports that a large share of his big fan mail is from soldiers and sailors thanking him for the hymns on the program.

Our boys have souls and minds and a love for home in peace as well as wartime.

4. The United States Government has decided it will try to get back some of the $37,500,000 it lent the Lustron Corp. to build prefabricated metal houses. It figures it will be lucky to get back 5 cents on the dollar.

That's your money the man is talking about; remember, income tax, cigarette tax, movie tax, luggage tax, etc., etc., etc.? Men with little or no experience in the matters on which they pass judgment hand out this money. It is loaned too often because somebody thinks it would be a good thing. But that somebody risks your money, never his own.

5. Most doctors cure disease, but some make it worse, a University of Colorado psychiatrist contends. The offenders have not grown up; they inflict their immaturity on their patients.

Another complication society has been too busy to attend to. The medical profession itself could pay some attention to it. If our more successful citizens would help remedy defects in our system there would be less attempt by the Government boys to take it all over.

6. An Australian publication comments on President Truman's point 4 program for assisting the undeveloped regions of the world. It asks, "How far is today's American equipped and adjusted to live happily outside of America?"

Most Americans are childlike in their ignorance on this point. They assume that the rest of the world thinks and reacts as they do. It doesn't. Any adventures abroad should be preceded by a study of the target and of one's ability to adjust himself to new living conditions and a different way of acting. People do not always think Americans are pure and simple-minded.

Taxation Without Representation

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. ASPINALL. Mr. Speaker, it is heartening and refreshing to find an area which is wide-awake to the rights and welfare of peoples far distant but supposedly living under the same way of life and the same protective laws of the

land. So that the residents of Washington, D. C., and the Territories of our Nation may know how the people of my district feel about such problems as home rule for the District of Columbia and statehood for Alaska and Hawaii, under leave to extend my remarks, I submit herewith a recent editorial from the Grand Junction Daily Sentinel, one of the leading daily newspapers of the West:

TAXATION WITHOUT REPRESENTATION

One of the injustices against which the early American colonists revolted was taxation without representation. Yet today there are under our flag many peoples—on both home and colonial soil—paying tribute in taxes to our Federal Government who have no representation in that Government.

The most flagrant and inconsistent example of this un-American practice is found, of all places, in our Nation's capital, where supposedly Americans not only preach but exemplify democracy. The citizens of Washington, D. C., have no more direct voice in their municipal government than the people of Czechoslovakia now have in their national government. Instead, the affairs of Washington are directed by Congress through three commissioners of its choosing. In other words outsiders govern the people of Washington who can not even vote for the Members of Congress who rule them—and also tax them.

This policy of taxation without representation is also followed in dealing with our Territories, Hawaii and Alaska, both of which are now seeking statehood. Each of these pay huge amounts in taxes to the Federal Government each year yet have no real representation in Congress, only delegates without a vote. Debates on the current statehood bills revealed that last year Hawaii paid into our Federal Treasury $90,824,693, which was more than any one of 11 States paid in; yet Hawaiians paying these taxes, after 50 years of colonial or Territorial status, have had and still have no representation in the Congress that taxes them.

No wonder peoples of the recently born republics say they cannot adopt the American system because it is so "theoretical and paradoxical." We gained our own independence in revolt against taxation without representation; yet expect these present colonials to remain loyal to us while we practice against them what we held was rank injustice when it was practiced against us. To the credit of the House of Representatives it has approved statehood measures for Alaska and Hawaii, though the Senate may delay—if not refuse—approval, as has been the case in granting home rule to Washington, D. C.

Tribute to the FBI

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of March 23, 1950:

TRIBUTE TO FBI

When an economy-minded House Appropriations Committee gives a Government agency all the additional money it asks for and recommends a salary raise for its head besides, there must be a reason. Beneficiaries of this extraordinary treatment by a group which has not hesitated to wield the ax on many other agencies were the Federal Bureau of Investigation and its long-time Director, J. Edgar Hoover. The reason for the committee's attitude is not hard to find. It lies in the FBI's remarkable record as a protector of the Nation's security in this cold-war era of spying and counterspying.

The committee, without a quibble, approved Mr. Hoover's request for $4,800,000 in additional funds with which to hire 700 more employees, including 325 new agents. In granting the full $57,400,000 asked by the FBI for the next fiscal year, the committee said it "does not feel justified in reducing the estimates of this Bureau in view of conditions at home and abroad." The new employees will help the FBI to reduce the backlog of nearly 14,000 pending security investigations. The committee agreed that such cases are too important to suffer any delay in searching out the facts.

The action of the committee is indicative of the high esteem in which the FBI is held at the Capitol and elsewhere as a result of its effective warfare on potential fifth columnists in the Government and outside of it. It has waged this difficult warfare without resort to witch-hunting tactics, without any semblance of police-state tendencies and without succumbing to political or other pressures. The FBI and Mr. Hoover well deserve the tribute implicit in the House committee's recommendation that both the Bureau and its Director be given more money for their outstanding work.

Money for Social Security Safe as Rock of Gibraltar

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the newspaper Labor of Saturday, February 18, 1950:

MONEY FOR SOCIAL SECURITY SAFE AS ROCK OF GIBRALTAR—FINANCIAL PAPER EXPOSES FALSE PROPAGANDA WHICH MADE BENEFICIARIES UNEASY—INTERESTS RAIL WORKERS — UNCLE SAM HAS INVESTED PRECIOUS RESERVES IN BEST SECURITIES IN THE WORLD

Labor takes its hat off to the Wall Street Journal. That newspaper's views differ widely from Labor's on many subjects, but the "WSJ" rendered a great public service by presenting conspicuously, on its editorial page, a devastating exposure of a hoary old propaganda fake which has worried millions of railroaders, other workers and their wives.

That fake is the vicious "yarn" that Uncle Sam has made off with the money workers contribute to the social security and railroad retirement "reserve funds," so the money won't be there to pay the workers' pensions in old age.

Of course, Labor has exposed the falsity of that propaganda a hundred times, but the old fake continued to spread its slimy trail in newspapers from coast to coast. Finally outraged and "fed up," the Wall Street paper let loose its blast.

SAME WITH RAIL FUND

The Journal discussed only the social security old-age and survivors insurance pension system, or OASI, but its remarks are equally true of the railroad retirement system, which has the same sort of reserve fund, handled in exactly the same way.

"Letters to this newspaper," the Journal says, "show that misunderstanding of the OASI reserve fund is still widespread.

"Many persons still believe what some insurance company officials asserted in the middle 1930's, that the reserve fund, invested in United States bonds, was a fiction, and could result in the cost of pensions being paid twice over."

The insurance officials made that charge because they were then trying to prevent passage of the Social Security Act, by hook or crook. But, the Journal continues:

"Those insurance company men have long since realized their error." In 1945, a committee representing the three principal associations of life-insurance companies recanted and publicly took the fake charge back.

The Journal quotes the insurance men's lengthy confession, but points out that it is in too heavy language for the average person to understand.

The truth, the Wall Street paper declares, was put in clearer terms by the Senate Finance Committee's advisory council on social security, composed of 17 businessmen, economics professors, labor union representatives and insurance company executives. In 1948, this council said:

"INSURANCE FIRMS BUY UNITED STATES BONDS

"We do not agree with those who criticize investment of the OASI reserve in Government bonds. Actually, such investment is as reasonable and proper as the investment by life-insurance companies of their own reserve funds in Government securities.

"The investment of old-age-insurance funds in Government securities does not mean that people will be taxed twice for the same benefits, as has been charged."

The council then gave a mathematical example showing that if the social-security or railroad-retirement fund did not own the Government bonds, the bonds would be owned by somebody else, bankers or private investors, who would get the interest on the bonds if the pension reserve funds did not.

Hence the cost to general taxpayers would be the same, and workers would lose the Government-bond interest which now helps to increase the fund to pay their pensions.

REPEATS STALE ERRORS

Then the Journal says the Brookings Institution, a Washington research organization financed by big business interests, recently published a book which repeats the stale errors about the OASI trust fund. Its authors make the following untrue statement:

"The OASI trust fund is invested in Federal Government securities. Since the money is used by the Government in meeting its regular expenditure requirements, no real reserve is created. The obligations of the Government do not represent assets. The trust fund is thus a fiction."

In other words, the Wall Street Journal points out, the Brookings book makes one or both of two assertions.

One is that the bonds in the OASI reserve fund have no value, and hence are different from all other Government bonds. The second is that all Government bonds are worthless.

The first assertion is ridiculous, the Journal explains, because all Government bonds are the same. Either all "represent real assets," or all are worthless.

As a matter of fact, the Journal continues, if it were possible to divide Government bonds into two categories, the bonds in the pension reserve funds would have to be assigned a superior rating as assets.

BACKED BY UNCLE SAM

"They are the property of many millions of citizens, most of whom have little or nothing else to protect them from destitution in their old age.

"If this portion of the (Government) debt has no existence as assets, the remainder of the $252,000,000,000 debt doesn't exist either."

For these reasons, the Journal concludes, the Brookings book's propaganda that the Government bonds in the pension reserve have less value than fresh toilet paper is wholly false.

"The value of these bonds, like that of all other Government bonds, is assured by the Government's power to assess all the trade and industry of the country, for whatever it takes to pay the obligations.

"It is impossible to assert rationally that part of the national debt is rubbish and the rest is prime investments."

Of course, all that is known to life-insurance companies and bankers and other private investors. They would be delighted to pay more than par for the 3 percent interest bonds Uncle Sam puts in the social security and railroad retirement reserve funds. But no private investor can get Government bonds paying that much interest. Such extraordinary Government bonds are sold only to the social security and railroad retirement reserves.

Labor repeats the Wall Street Journal is entitled to a resounding pat on the back for having printed this splendid exposé of a most despicable piece of propaganda.

Uncle Sam Doesn't Fumble

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am including an editorial appearing in the Mt. Vernon (Ohio) News which shows the United States is paying more than its share of various expenses of the organizations to which it belongs. If we carefully study this editorial we will find one of numerous reasons why our taxes are so high and why our debt is so great.

The editorial follows:

UNCLE SAM DOESN'T FUMBLE

Uncle Sam doesn't do any fumbling when it comes to picking up the check for the expenses of the numerous organizations to which he belongs.

He pays—expects to and is expected to by other nations which are fellow members.

For instance, the United States pays $22,210,257 yearly for its membership in the United Nations and various allied organizations. That is 35 percent of the total cost; the rest of the world foots the bill for the remainder.

And this country's annual assessment for the cost of maintaining the International Children's Emergency Fund is $25,000,000, or 72 percent of the total.

Participation in the Palestine refugee relief effort costs this country $8,000,000 annually, or 65 percent of the total.

The cost of membership in the inter-American organizations to which the United States belongs is $8,000,000 a year, or 65 percent of the total.

And this policy is maintained in all of the international organizations to which the United States has a part and there are 47 of them. This country pays 47 percent of the expenses of these 47 organizations. And the United States is considering joining three more.

The bill for our share of the expenses of these 47 activities is more than $114,000,000 a year.

In addition there are the World Bank and the International Monetary Fund to which this country has pledged nearly $6,000,000,000.

Of course, the role of the United States in world affairs has increased tremendously since World War II; of course, the American people want to meet their responsibilities, and, of course, they want to pay their share, in any movement designed for world betterment.

But, doesn't it appear as though we are doing more than our share?

The American people—some 150,000,000 in number—are paying almost half of the expenses of maintaining 47 organizations; the more than two billion in the rest of the world take care of the remainder.

And there is the probability that we are not getting the best possible result from use of these millions of dollars.

The Hoover Commission report says that, because of the great increase in this country's participation in world affairs, at least 46 of the 50 major departments and agencies in the executive branch have been drawn into foreign affairs to some extent, whereas foreign affairs used to be almost exclusively a State Department function.

A Senate subcommittee has said this change has resulted in "interdepartmental jealousies and rivalries" which have produced a lack of coordination.

This committee reported that there is "no single crystallized process for securing interdepartmental coordination in the formulation of presentation of United States policy with respect to international organizations."

Part of the blame was placed on the White House, the committee charging that the executive office of the President has failed to define the relative roles and authority of the State Department and other agencies.

The amount of money spent in these international activities is unimportant; the fact that the United States is paying much more than its share is neither of any great importance but results are important.

And results are far from satisfactory, as is indicated by the state the world is in today.

Possibly at least some of the lack of results is to be accounted for in the manner in which the money is spent and in which the activities are handled.

The mere spending of money rarely does any good; to make the spending worth while, to accomplish beneficial results, expenditures must be intelligently made and with a definite aim in view.

Shipyard Unemployment and a Neglected Merchant Marine

EXTENSION OF REMARKS
OF
HON. JAMES J. MURPHY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. MURPHY. Mr. Speaker, the Seventy-fourth Congress and the President, some 14 years ago, established a merchant marine policy for the United States. The wisdom of this policy was proven beyond the remotest doubt and demonstrated to an extent that is realized by few long-range governmental decisions. This policy stood the test of an unprecedented war that encircled the earth and probably placed more demands in 4 years upon the United States merchant marine than had been imposed during the entire previous maritime history of the United States.

This great, forward-looking policy was the fundamental principle upon which the Merchant Marine Act of 1936 was based. It was embodied in the opening declaration of that act and implemented by its subsequent provisions. Therefore, I believe it is most appropriate at this time to read and insert here the declaration of United States merchant marine policy, formulated and adopted by Congress, which is the very basis for our discussion here. I quote from the Merchant Marine Act of 1936:

TITLE I. DECLARATION OF POLICY

SEC. 101. It is necessary for the national defense and development of its foreign and domestic commerce that the United States shall have a merchant marine (a) sufficient to carry its domestic water-borne commerce and a substantial portion of the water-borne export and import foreign commerce of the United States, and to provide shipping service on all routes essential for maintaining the flow of such domestic and foreign water-borne commerce at all times, (b) capable of serving as a naval and military auxiliary in time of war or national emergency, (c) owned and operated under the United States flag by citizens of the United States insofar as may be practicable, and (d) composed of the best-equipped, safest, and most suitable types of vessels, constructed in the United States, and manned with a trained and efficient citizen personnel. It is hereby declared to be the policy of the United States to foster the development and encourage the maintenance of such a merchant marine.

The principles I have just quoted had as much to do with the winning the Second World War as any other single factor. The implementation of the policy by ship-construction programs and adequate appropriations resulted in placing 60,000,000 tons of United States merchant shipping in operation and in extending to the remote corners of the earth vast supply lines to battle areas in every continent and in every climate. We would have been practically incapable of waging total war without this gigantic merchant marine which not only supplied our armed forces, but brought back essential strategic raw materials for the fabrication of the highly complex sinews of modern war.

It is for us to be rededicated to this wise policy; I say rededicated because our Government seems to have forgotten too soon the lessons of the immediate past.

The present condition of our entire merchant marine, beginning with the ship-building industry, indicates neglect. Most of our yards have been closed down, while an indispensable army of trained ship builders are unemployed. These men have been compelled to seek employment elsewhere and, unless Congress takes action immediately, their skills may be lost to this basic industry.

In the absence of a substantial long-range new-construction program, we should keep in the best possible condition the ships in our laid-up merchant fleet upon which we must rely in event of an emergency.

There are 2,000 of such reserve ships which need overhauling and recondition-

ing from time to time. Congress should appropriate sufficient money to provide for this work. No money could be better spent. A vital factor in our peaceful commerce and security would be preserved while the essential organization of shipbuilding trades would be kept intact and not scattered, as it is now, so widely as to impair seriously our well-being.

In my district and all along the east and west coasts, the shipbuilding industry is at a standstill while the men who trained over 1,750,000 shipyard workers to build 60,000,000 tons of war merchant shipping are experiencing unemployment and hardships.

It should and will be our objective, not only to provide for repairs to the land-up fleet, but to plan a long-range new-construction program of modern, fast, cargo ships.

We who were first in world shipping are losing our coveted place. We have only a little over a million of the 10,000,000 tons of new-ship construction now under way or on order among the maritime nations of the world.

It behooves us to look back upon the tragic year of 1940 when Hitler overran Europe and almost conquered Britain. Our security then hung upon a slender thread for if Britain had been conquered by Hitler, the shipbuilding capacity of our enemies would have outweighed our resources by 6 to 1.

For this reason we must be aware constantly of our merchane marine. If we neglect it, experience has shown in years just past we will place ourselves in great jeopardy. Wisdom counsels us to keep prepared eternally.

Federal Subsidies Are Varied, Widespread, and Costly

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. BOGGS of Delaware. Mr. Speaker, in a talk before the Rotary Club of Wilmington, Del., a few weeks ago the distinguished senior Senator from Delaware, the Honorable JOHN J. WILLIAMS, presented one of the finest discussions of Federal Government subsidies which it has ever been my pleasure to hear or to read.

So that all Members of the Congress and citizens throughout the Nation may have the opportunity to study and analyze this serious and critical situation, I am including the full text of Senator WILLIAMS' talk as a part of my remarks.

Mr. Speaker, as the Senator so ably pointed out, we have witnessed during recent years a growing tendency on the part of the American people to expect the Federal Government to underwrite functions which previously were recognized as individual or local responsibilities. Now, however, there is striking evidence that the American people are seriously alarmed and have come to recognize this principle of subsidization as a threat to our established economic system.

Although attention has recently been focused principally on agricultural subsidies, Senator WILLIAMS has emphasized the fact that Federal subsidies are varied, widespread and costly. He has pointed up the fact that Federal subsidies are going not only to farmers and agricultural interests, but also to air lines, railroads, newspapers, corporations, maritime enterprises, mining industries, banking institutions, State and local governments and others.

By reason of certain bookkeeping methods and the shuffling of accounts from one Government agency to another, the total and tremendous cost of Federal subsidies has been largely concealed from those who pay this cost—the Nation's overburdened taxpayers. Senator WILLIAMS has pointed out, Mr. Speaker, that during the past 14 years Federal grants and subsidies to States, municipalities, corporations, and individuals have totaled approximately $43,000,000,000. So that the taxpayers may more clearly and more easily understand this cost, the Senator has further stated that this represents about $1,250 for each family in the country.

In view of this situation, Mr. Speaker, it is evident that the most serious thought, attention and consideration of the Congress and of the people must be given to the matter of Federal grants and subsidies.

The text of Senator WILLIAMS' talk follows:

ADDRESS OF UNITED STATES SENATOR JOHN J. WILLIAMS, OF DELAWARE, AT THE ROTARY CLUB, WILMINGTON, DEL., FEBRUARY 9, 1950

During recent years there has been a growing tendency on the part of us, the American people, to expect the Government to underwrite those functions which were once recognized as our individual responsibilities.

This trend has expanded until today a substantial percentage of our annual expenditures can be attributed to the cost of these subsidies.

With our Government confronted as it is today with another huge deficit and the threat of a greatly increased tax rate, the American people are at last becoming alarmed and are beginning to recognize this principle of subsidizing as a threat to our economic system.

As evidence of this, we in Congress are being approached on the streets back home and are receiving volumes of letters urging a drastic reduction in government expenditures and a balanced budget. Practically all of these letters express criticism of some form of government subsidy.

If we were to conduct a poll of the American citizens, asking the question as to whether or not we should eliminate government subsidies, I think that the overwhelming response would be in the affirmative. I venture to say that if we were to conduct a poll of the members of the Rotary Club here today, we would receive an even more enthusiastic vote to abolish them.

Yet I wonder if we are not overlooking the fact that during the recent years this principle of government subsidies has expanded until today it has become an accepted part of our economic system.

The question is often raised as to whether or not, in a show-down, the American people would back up their representatives in Congress for an abolishment of this principle.

Sure—everybody would agree that all Government subsidy or support programs should be repealed—all except those which directly affect them.

The most of this criticism against Government subsidies is leveled against the Government farm-support program. The reason for this is that the Government's support of agricultural products directly affects not only the American farmer but also the budget of the millions of American housewives.

It is this program and its operations which I wish to discuss briefly here today. I have never been a supporter of the Administration's existing program of high farm supports; yet I want it made very clear that I do not consider the farm-support program any more threatening to our economic system than any other form of government subsidy. I shall merely discuss it here today since its operations do so vitally affect everyone.

Unfortunately, during the recent years this principle of Government subsidies has expanded in various fields until today practically everybody is affected, and I call your attention to the fact that in many instances those who are most vocal in their criticism of the farm-support program are themselves recipients of some form of Government subsidies.

As an example of how this principle has expanded to embrace many segments of our economic system, I cite a few examples.

For instance, the owners and officials of the air lines in this country would no doubt agree that the principle of Government subsidies is vicious; yet they are perfectly willing to accept subsidies from the Government amounting to many millions of dollars annually—subsidies which, in effect, guarantee their operations against loss.

Our American railroads were built and developed years ago under the principle of Government subsidies. Large grants of land were given to the promoters in the early stages of development. Today these same railroad lines are still accepting their subsidies for carrying mail.

Our American newspaper system has been rather critical of the principle of Government subsidies in general, particularly the subsidy as related to the farm-support program. Yet I do not recall a single instance where the members of the press have objected to their own subsidy in the form of low postage rates, nor do they object to the special earmarking of over $100,000,000 of the ECA funds to be used to subsidize the distribution of American newspapers in continental Europe.

If we were to conduct a poll of the leading corporations in this country—a group which surely believes in the principle of free enterprise—I venture to say that almost without exception they would express opposition to the principle of Government support prices. Still we find that a large number of this same group have endorsed President Truman's point 4 program which is merely a plan to let the American taxpayer guarantee the investments of the American corporations in foreign countries.

We find that our merchant marine—another division of our free-enterprise system—is perfectly willing to have the Government continue underwriting a large percentage of the cost of the construction of its ships, nor do they object to our Government's annual contribution of several million dollars to subsidize the operations of these same vessels.

We hear a lot of discussion among prominent men, many of whom are identified with our State and local governments, expressing grave concern over the encroachment of the the Federal Government upon the rights of the individual States; yet in many instances we find that these same officials are clamoring for more and more Federal aid for the construction of our State highways, our public schools, our hospitals, and in many other fields which were formerly recognized as inherent State functions.

Our western mining industry has been successful during the past 2 years, following a rather bitter fight on the floor of the Senate, in having legislation passed whereby the Government will support the price of their products. This subsidy, amounting to several million dollars annually, is also at the expense of the taxpayers.

Even our children, from the day they enter the public schools, become recipients of Government subsidies by virtue of the fact that our Federal Government makes annual contributions of several millions to the school-lunch programs.

One of the most conservative groups in this country is the American bankers; yet they have no objection to the policy of the Government guaranteeing a support at par under all Government bonds, thereby protecting their huge investments.

These are not all, but I have cited them as examples in order that while I discuss the farm support program here this afternoon, you will realize that farm subsidies are only a small part of the over-all subsidy picture.

In order that the administration's farm program might be appraised in its true light from the standpoint of the three most interested parties, namely, the farmer, the consumer, and the oft-times forgotten taxpayer, I shall outline as briefly as possible a few pertinent facts regarding its operations.

First of all from the standpoint of a taxpayer I want to explode completely the fantastic claims of the Secretary of Agriculture, Mr. Brannan, that this program is not costing the taxpayers any money.

While the Secretary of Agriculture will now admit that this program might be costing a little money, it was only last year that he issued this statement:

"Support prices do cost money sometimes, even though it is true that CCC at present has a lifetime profit rather than loss on this type of operation."

(The Commodity Credit Corporation is the Government corporation which finances the farm support program. It is also the Government corporation which is now asking for an additional $2,000,000,000 without having rendered to Congress its annual audit reports for 1946, 1947, 1948, or 1949, as is required by law. It is also the Government corporation which was charged last year, in the Comptroller General's annual audit report for the period ended June 30, 1945, with having spent $366,000,000 for which no accounting was available, and which is still unexplained.)

Knowing full well that this fantastic claim could not possibly be true, I directed a letter to the Bureau of the Budget on February 1 of last year, asking this simple question:

"Would you please furnish me at the earliest possible date the net results, from a taxpayer's standpoint, of the operations of the Commodity Credit Corporation since its inception in 1933?"

On February 9, 1949, I received a reply from Mr. F. J. Lawton, Assistant Director of the Bureau of the Budget, in which he completely denied that the Commodity Credit Corporation had made a profit and stated that the net loss sustained by the Corporation since its organization in October 1933, was $3,890,891,170.

In this same letter Mr. Lawton pointed out that the only way the Commodity Credit Corporation was able to show a surplus of $55,000,000 in its operations was by including as income the nearly $4,000,000,000 appropriations it had received from Congress.

I might say that the farm-support program is not the only subsidy program in which an attempt is made to conceal the true cost from the taxpayers. This erroneous practice of concealing losses by shuffling accounts from one Government agency to another seems to be the rule rather than the exception.

We are only kidding ourselves when we claim that the farm program or any of the other subsidy programs is not being operated at the expense of the taxpayers.

It has always been my contention that high support prices under agricultural commodities will not solve the long-range problem of the American farmer. On the contrary, a continuation of high support prices under Agriculture will inevitably lead to disaster.

A lot of oratory has been wasted on the question of whether the farmers are entitled to 60 percent, 75 percent, or 90 percent of parity, with some politicians advocating 100 percent.

What is the meaning of this sacred word "parity?" I question that there is a single Member of Congress who can define this term without referring to the law, and I doubt very much that there is a single individual in either the Congress or in the Department of Agriculture who can twice figure the same parity on any agricultural commodity.

If you will read the definition of parity as written in the law today, you will find that it has taken almost as many words for the Department of Agriculture to define this little word as it did for our forefathers to write the entire Declaration of Independence. Still no one can understand it.

So instead of discussing this program in terms of the unknown factor "parity," I propose to reduce it to language we all understand—dollars and cents.

I shall quote a few facts from two charts which I have with me. The first chart shows the total investment of the Commodity Credit Corporation in all commodities as of December 31, 1949, including inventories and those under loan. The second chart shows the price at which these commodities are being supported and gives a comparison of the support price with the average 10-year price received by the farmer for the same commodities.

CCC inventories loan commitments as of Dec. 31, 1949

Commodity	Quantity	Value
Tobacco ..... pounds	367, 258, 290	$151, 891, 629
Cotton ..... bales	6, 036, 588	955, 109, 372
Wheat ..... bushels	465, 266, 944	906, 719, 026
Linseed oil ..... pounds	394, 827, 620	111, 337, 600
Flaxseed ..... bushels	13, 943, 222	88, 344, 527
Corn ..... do	510, 654, 685	713, 128, 735
Dried eggs (210,000,000 dozen) ..... pounds	69, 036, 207	89, 317, 233
Dry edible beans ..... hundredweight	4, 850, 795	42, 859, 926
Barley ..... bushels	24, 626, 019	35, 088, 096
Dried milk (750,000,000 quarts) ..... pounds	215, 799, 300	27, 399, 460
Butter ..... do	96, 260, 088	69, 518, 797
Wool ..... do	69, 403, 900	53, 510, 467
Other		320, 904, 449
Total		3, 645, 129, 317

Support levels and 10-year average prices received by farmers on commodities now being supported by the Commodity Credit Corporation

Commodity	Support price (actual price) [1]	10-year average price received by farmers 1940–49
Corn ..... bushels	$1.40	$1.16
Peanuts ..... pounds	.105	.0755
Wheat ..... bushels	1.95	1.49
Potatoes ..... do	.96	1.24
Cotton ..... pounds	.272	.225
Wool, shorn ..... do	.423	.406
Tobacco, flue-cured ..... do	.425	[2] .363
Barley ..... bushels	1.09	.98
Butter ..... pounds	.60	.498
Eggs ..... dozen	.37	.366
Hogs, March 1950 ..... hundredweight	16.20	15.20

[1] Support levels listed are those most recently announced. 1949 support price listed if 1950 program not yet announced.
[2] 1939–48 average.

No one can dispute the fact that if the Government continues this policy of maintaining artificially high prices on certain agricultural commodities, it inevitably is going to lead to a choice of one of two things:

1. Either we must launch a program of wholesale destruction of food such as the world has never known; or

2. We must place the farmers of this Nation under strict controls of a bureaucracy with adequate powers to enforce acreage and marketing quotas.

To attempt the former would be such a wanton waste of the taxpayers' money that the Federal Treasury could not stand the pressure.

To attempt the second would mean the complete regimentation and socialization of American agriculture.

During the past 14 years our country has given away in grants and subsidies to States, municipalities, corporations, and individuals a sum total of $43,000,000,000. That means more than $1,250 for each family.

Now, whenever any individual or political entity accepts from the Federal Government such financial assistance in the form of grants, gratuities, or subsidies, then that individual or political entity must of necessity relinquish to the Federal Government many freedoms guaranteed under our Constitution.

We are selling our birthright for the proverbial mess of pottage. And unfortunately, this price, this tremendous price, given in exchange for Federal assistance, is ofttimes not recognized by the recipient until it is too late. Then the recipient suddenly realizes that the cost of this assistance is the loss of our original American freedom and the substitution therefor of a socialistic form of government.

If we continue the destruction of a sound fiscal policy for political expediency by complying with the requests of every pressure group in our own country and the requests of every foreign country, we shall soon find ourselves in the same category as those countries in the past—countries which were rich and prosperous and powerful, but which have now passed into oblivion. And then the last hope of civilization shall have perished.

This country of ours was established and developed into its greatness by our forefathers who operated under the principle that it was their duty to support the Government and not the duty of the Government to support the people.

As a result of their hard work and sacrifices they have handed down to us our birthright of freedom.

Let us never forget the wise words of Benjamin Franklin who said, "He who trades freedom for security will lose both."

Home Rule for North Atlantic States

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Association of Highway Officials of the North Atlantic States:

HOME RULE

Whereas the member States of the Association of Highway Officials of the North Atlantic States recognize their responsibilities in administering the highway obligations; and

Whereas the highway officials of the respective 11 States and the District of Columbia have proved their ability to handle their jobs properly over the many years of their existence; and

Whereas the member States have men with extensive training in the fundamental and advanced problems of technical and administrative procedures who have proved their qualifications to expend Federal and State funds in the best interests of the highway users; and

Whereas the trend has been definitely indicated for increased Federal expansion and participation in the administration of State highway problems as reflected by the increase in the Federal Government's overhead cost for the administration of the highway program, particularly in the face of increased highway production which should normally reflect lower percentages of overhead cost: Therefore be it

Resolved, That the Association of Highway Officials of the North Atlantic States record itself as of the definite opinion that the member States' highway problems can best be solved at the State levels with a minimum of regulation from the Federal Government.

The foregoing is a true copy of a resolution unanimously adopted at a meeting of the Association of Highway Officials of the North Atlantic States held in New York City on February 23, 1950.

A. LEE GROVER,
Secretary, Association of Highway Officials of the North Atlantic States.

Significance of the Changing Characteristics of Agriculture to Farm Finance

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. TEAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dr. Tyrus R. Timm, extension economist and professor of agricultural economics, Texas A. & M. College, at conference of directors and secretary-treasurers of Production Credit Associations of Texas, January 23–25, 1950, Houston, Tex.:

SIGNIFICANCE OF THE CHANGING CHARACTERISTICS OF AGRICULTURE TO FARM FINANCE

(By Dr. Tyrus R. Timm)

A person's figure changes through the years, requiring at intervals new styles, new materials, and different accessories to bring out its best points. Agriculture's figure changes too, and must be clothed at different stages of its growth and development with the style which will bring out its best points.

Thus today and in the years ahead agriculture may need drastically different accessories and aids to maintain good incomes and good standards of living upon the farms and ranches of Texas than was true in 1934, when the production credit associations were first organized.

You who are farmer-directors now take over the full reins of the 36 production credit associations in Texas. In my opinion, then, it is imperative that you understand and appreciate the terrific changes which have taken place in agriculture between the years of 1934, when the Government stepped in, and 1950, when you take over.

It is significant also that Federal production controls and price supports on a large scale are reentering the economic scene at the same time you assume complete command of your associations. The original entrance of these controls was about the same time that the federally sponsored production credit associations made their appearance. But their second debut may have vastly greater implications in the present farm economy, and consequently are of particular significance to farm credit leaders.

Let us examine these contrasts and developments to note their importance to you directors, both as lenders and borrowers, and particularly as farm leaders tremendously interested in the economic, political, and social welfare of farm and ranch families of this State.

1. THE RAPID INCREASE IN THE COMMERCIALIZATION OF AGRICULTURE

One of the really significant developments in the figure of agriculture since 1934 has been its growing commercialization. Agriculture is currently characterized by bigger investments, greatly increased cash production and living costs, and much more dependency upon the market place than was the case 16 years ago.

An example will indicate the magnitude of this trend toward greater commercialization. The costs in farming last year were higher than the gross farm income of farmers and ranchmen across this country for any year up to 1942. Of course, gross incomes, too, have risen considerably during this 16-year period and up until a couple of years ago, rose faster than costs. Therefore, the impact of these high costs on the whole has not caused serious financial difficulties. However, it will probably do so if prices of farm products continue to settle faster than prices of things farmers buy—and they are expected to do just that.

In the case of cash operating expenses, farmers and ranchmen spent some $5,000,000,000 in 1934, in contrast with an expenditure of nearly 18 billions in 1949. So, for every $5 on the average spent in 1934 for feed, fertilizer, and other operating items, $18 was being spent in 1949. Particularly significant is the fact that these costs have continued upward since the war. While net farm incomes for the Nation as a whole reached a peak in 1947, and has been dropping since, cash operating expenses the past 2 years increased by $1,000,000,000.

This is a matter of basic consideration for leaders in farm finance. Most farming systems now are set up for a high degree of commercialization, and it would be very difficult to rearrange their operations without substantial loss to the producers. With fixed costs and production costs running at record levels, the shift from intensive to more extensive operations, which will be required under acreage controls, may result in a serious increase in unit costs unless equally profitable alternatives can be found. Volume is a very important cost factor.

Credit leaders must also recognize that on many units there continues a situation which economists call capital rationing. That is to say, full use is not being made of the resources on these farms. Thus through a better balance and a fuller utilization of the farming system an additional income, more than offsetting the interest charges, is still possible. The needs of these units must not be overlooked in our current policy of growing cautiousness regarding the extension of credit.

2. THE GROWING INTERDEPENDENCE OF BUSINESS AND AGRICULTURE

Naturally, this growing commercialization which has brought about a decrease in the number of farms and ranches and an increase in the size of operations as well as an increase in items purchased in town for better living and better production, has also resulted in a closer interdependence of business and agriculture; in fact, of town and country as a whole.

A glance around the square or down the main street of your home town will prove to you the growing commercialization of agriculture and its attendant relationships with business. As you look around, compare what you see with 1934. How many more feed stores are there? How many more farm-equipment dealers? To what extent have veterinary supplies and insecticides become an important part of the local drug store's business? What has been the increase in electrical supplies sold in the surrounding rural areas? The changes which have taken place are nothing short of amazing when you think about them.

Producers, in 1934, spent about $272,000,000 for farm equipment used on farms and ranches. By 1949 the annual bill had risen to $1,200,000,000; in fact, $100,000,000 more than the outlay in 1947. In other words, farmers today average spending $1,200 for farm equipment for each $272 they spent in 1934.

Many people do not realize that this is the only country in the world in which farmers can go into small towns of two and three thousand population with the opportunity to take their choice among different makes of tractors, combines, and other farm equipment. Perhaps you can remember, after the First World War, and in some places as late as 1934, farm-equipment dealers were found only in the larger towns.

Volume purchases by farmers, brought about by changes in agriculture's figure, have made it possible and profitable for dealers to locate in the smaller towns. If the commercialization of agriculture should halt, the result will hurt these small-town dealers as well as the farmers; fewer dollars to spend by the farmer would mean the drying up of business for the dealers.

3. THE CHANGES IN FOREIGN-TRADE OUTLETS

Since the early nineteen thirties, foreign trade in agricultural commodities has increased substantially and the amount of trading by commodities has varied greatly.

In terms of physical volume, agricultural exports from this country are about 50 percent higher today than they were in the middle thirties. In dollar volume, largely as a result of much higher prices, current exports of agricultural commodities are 4½ times those of the same period.

An immensely significant trend to leaders in farm finance is the change in the export market for some of the crops which are extremely important in this State. As an illustration: Today cotton exports are less than two-thirds of those of the early thirties; on the other hand, wheat exports are running six times the 1930–38 average.

To production credit leaders, the share of the market for particular commodities which depends largely on the whims of foreign governments, is important. This share of the market is certainly more speculative than domestic use. Farm leaders must keep their eyes on international relations affecting these commodities. In the case of other products, such as beef, the story is a little different. Less than 1 percent of the beef produced in this country is exported; therefore, the important consideration (at least, in the short run), is more on the domestic supply-demand conditions and involves domestic policies.

4. A GREATER DEPENDENCY UPON THE MARKET PLACE

The points discussed so far point out that one of the accompanying results of the growing commercialization of agriculture has been a greater and greater dependency upon the market. This is just another way of saying that gross production per person in agriculture has increased, but that a very small share of the increased production has been used at home by farm families.

In fact, in 1947, the production per person in agriculture had increased 57 percent since 1934. In the last 2 years, the production rate

per person in agriculture has continued upward and now is 71 percent above 1934.

A significant trend to watch is that gross production per person in industry has made less gain during that period and has shown no gain during the last 2 years.

We often hear that a higher standard of living, in terms of material goods, such as bathtubs, food products, automobiles, etc., cannot be ours unless we produce more per person. This is true for the country as a whole, but it is also true that one segment of the economy may gain an advantage over other segments by producing at a less favorable rate. The degree by which one group—for instance, industry—might gain an advantage over others in the economy depends upon the relationship of its prices to those of other groups as the production rate is slowed down.

In other words, if industries outside of agriculture reduce their production of items which farmers buy thereby continuing to hold the lid on output per person, and at the same time, if agriculture continues to increase its rate of production per person, the overflow may result in a serious parity disadvantage for agricultural products. If this happens, farmers very likely will not reap the higher standard of living which should be the result of their increased per capita production.

5. AN OUTLOOK FOR LOWER NET FARM INCOMES FOR THE NEXT FEW YEARS

From 1934 to 1948, the outlook generally was for gradually rising net farm incomes. The outlook now is for gradually decreasing net farm incomes. No major depression of the intensity witnessed after World War I or in the early thirties is expected, but rather a general settling of prices and costs, with farm prices going down faster than the prices of products which farmers must buy.

On a number of products, the present supply and demand situation is much different from that of the period after World War I or in the depression which followed the economic collapse of 1929. For example, many producers, remembering other periods, have expected a steep drop in beef prices; each year, however, beef prices have continued good.

A major factor in this development has been the current favorable ratio of beef cattle numbers to the human population. At the end of World War I, there were about 400 head of beef cattle per 1,000 persons in this country. Today there are only 263 head per 1,000 persons.

In 1950, the net income to farmers in the country as a whole is expected to be down for the third straight year. Actually, if the further decrease expected occurs, net farm income in 1950 will be more than 25 percent lower than it was in 1947. Even at this level, net farm incomes will still double incomes of the period 1935–39.

In Texas in 1949, producers as a whole probably received their highest net farm income, significantly, possibly due to the tremendous cotton crop produced in 1949. If this is true, and if it is also true that the reason for it is due to the increased cotton production over 1948, the acreage adjustment problem is even more serious to us than to producers in other States.

Another indication of the seriousness of approaching farm economic problems worthy of consideration by leaders in farm finance is that in December 1949, the parity price index dipped below 100 for the first time since November 1941. It is presently riding at 98 percent of parity. As you know, this is the broad indicator used for comparing prices farmers receive with prices they have to pay.

6. MORE AND DIFFERENT KINDS OF GOVERNMENT CONTROLS

In 1934, direct Federal controls upon the production and marketing patterns of individual farmers were just beginning. As you take over full control of the production credit associations in 1950, these controls are being reinstated and broadened on a larger scale.

Believe it or not, while Texas farmers are enjoying incomes substantially above those of prewar years, there are more support-price programs in effect than in the past. In addition, there is the necessity of diverting some 5,000,000 acres to other uses, under the acreage allotment program of 1950. This is not in criticism of such action, for we realize that even though the general income position of farmers may be good, thousands of farmers need help. The $64 question is: How many programs of this sort can farmers stand as farm incomes begin to suffer more? This is something for each one of us to think about

Another Government-control program of interest to farmers is that of the income tax. In my opinion, no relief is in sight. The President's budget of some $43,000,000,000 for next year means that a reduction in taxes will not be forthcoming soon. Billions are difficult for me to understand, but here is an idea of how much $43,000,000,000 is: If you had that much money, you could buy all the machinery and equipment, livestock, and crops stored on all the farms and ranches in the United States; in addition, you would have enough money left over to be able to spend more than $1,000 an hour for every hour that has elapsed from the birth of Christ to the present time. Government is not only big business; it is serious business.

7. CHANGED VALUES IN OUR STANDARD OF LIVING

So far, the contrasts given have centered on important economic developments since 1934, when the production credit associations began. There have also been social and political developments that must be taken into consideration in appraising possible demands upon future production credit programs.

A terrifically important social consideration is that the standard of living of a farm family also changes slowly through the years. I think of a standard of living as a pattern of attitudes of people toward certain things at any given time. For example, when production credit associations got underway in 1934, only 11 percent of our farms had electric lights. Farmers were anxious to have lights in those days, but I think you will agree with me that they would be even more anxious today if, as a result of lower incomes, they would have to consider doing without electricity. With more than 78 percent of farms with electricity, it has become accepted as standard equipment. My observation leads me to believe that farmers intend to keep electric lights, regardless of income trouble.

There are other significant standard of living trends which have taken place during this period of PCA's existence. How about the attitude on prices? If farmers' vote on various referendums and policies of farm organizations are true reflections of the general feeling of farm people, then this sort of "attitude pattern" seems valid for the present: If the marketplace fails to maintain a fair relationship between prices of things farmers sell and buy, it is right, they rationalize, for the Government to use what the economists call "distributive justice," such as taxation, price supports, or similar aids, to bring about a fair distribution of the national income to the farmer.

The important point here is that the desire of farm people for what they believe to be a fair share of the national income is a tremendous factor in shaping Government policy. Their wishes in the future will have an important bearing upon the nature and extent of Government participation. In analyzing the outcome of certain combinations of enterprises on any farm, the possible effects of these direct Government programs must be appraised carefully.

On the other hand, farm people today are not accepting Government ideas nearly so quickly as they were in 1934. Controversies are more widespread and deepseated. Production payments directly to the farmer asked last year by Secretary Brannan is a tremendously controversial issue today. It is an example of a new issue which may or may not become a part of the farmers' standard of living. The implications are deeply embedded in our entire society and the consequences are difficult to ascertain. As you all know, separating the tinsel from the gold in all of these Government issues is a very difficult and delicate process.

8. GROUP ACTION IN AGRICULTURE

The growth of group action among farmers in the last 16 years—ranging from special group efforts to general farm organizations—has been little short of phenomenal and a significant trend. Your associations have been an integral part of the development.

In 1934, there were 945,000 farmers in the three big farm organizations—the Farm Bureau, the Grange, and the Farmers Union. Today, an estimated 2,722,000 farmers belong to these organizations.

Other "special interest" groups are better organized, too. One has difficulty in recalling, for example, that only a few years ago, industrial labor was not too well organized, with only 3,249,000 members in 1934. Today, the membership is indicated at 15,500,000.

Organized agriculture, industry, labor and other segments of the economy are playing a vital role in the political life of our democracy. These forces must be reckoned with, too, in appraising the extent and nature of Government participation to be expected in agriculture.

9. OTHER STRESSES ON THE NATIONAL POLITICAL SCENE

An interesting development in the "political institutions" relating to agriculture may be found also in Secretary Brannan's 1949 proposal. And that is the manner by which the proposal was developed and presented to the people.

Apparently very few farm organization and congressional leaders had an opportunity to discuss the proposal with the Secretary before it was released to the general public. In refraining from the usual practice of reviewing proposals with these leaders, the Secretary apparently had the full backing of the President, as evidenced by the fact that he spoke for the plan in his recent message to Congress.

The interesting aspect is that here we have the executive branch of the Government competing with the legislative branch for the starring role in leading farmers through the postwar economic wilderness. This approach is even more surprising when one remembers that in recent years there has been a definite tendency throughout the Government toward advisory committees of all sorts to analyze proposals, particularly before they reached the finished stage. The Brannan approach is a distinct departure from that procedure. I am not arguing the merits of the procedure, but merely pointing it out as one of those interesting political developments on the agricultural scene which will bear watching.

Other trends could be discussed and further interpretations made about the never-ending changes in agriculture's figure. More could be said about the kinds of accessories which will be needed to bring out the "best" in the figure from here on. But certainly, the increased commercialization of agriculture, the growing interdependence of agriculture and business, the changes in foreign trade outlets, the greater dependency upon the market place, the outlook for lower net farm incomes in the years ahead, and the fact that more and different kinds of Government control are already on the scene are important economic considerations, the

effect of which must be looked into as you plan your program ahead. They are not, however, any more important than the social and political contrasts which have been mentioned also.

It all adds up in the next decade, as I see it, to (1) somewhat lower farm profits but at levels considerably above those we had before World War II; (2) a highly commercialized agriculture which can't wait very long for needed price and cost adjustments to work themselves out. This means an agriculture that can go broke faster even though farmers have more money in the bank than before the war. Today's net worth, when compared with that of several years past, has little meaning, actually, in terms of security; (3) an agriculture that is more closely than ever related with Government power and with the other segments of the economy. In this last respect a delicate balance must be maintained in order to maintain freedom and encourage private enterprise.

This all means, too, that production credit-association leaders in the years ahead must assume even greater stature in the economic, social, and political struggles of the Nation. The appraisal of a livestock loan even today is only partly finished when the fieldman has completed his check on kinds and numbers of livestock and feed conditions on a man's ranch. Economic, social, and political issues affecting livestock transactions and originating outside of the farm fences may be very significant in the payment of the loan. Certainly these outside influences will continue to play an important role in the total picture.

I've talked about contrasts and significant changes, but I'm glad to report that one tremendously important factor affecting your associations has remained constant—and that is your leadership. Your earnestness, unity of purpose, and hard work has been evident throughout the 36 production credit associations of Texas and the Production Credit Corp. of Houston. Your success thus far may be best explained by the Chinese proverb: "Behind an able man there are always other able men."

I am very proud of the fine records compiled by our credit institutions in Texas—your associations, the commercial banks, the Federal land bank, and others. As a member of the Texas A. & M. College extension staff I look forward in our educational program to working closely with you and these other groups toward better farm-family living in our great State.

Let's Remember the Sea Gulls

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial written by Jack Gore, editor of the Fort Lauderdale Daily News, the largest newspaper in Broward County, Fla.

The moral of this editorial might serve a purpose to evaluate the fundamental principles of thrift, self-reliance, and self-dependability.

The editorial is as follows:

LET'S REMEMBER THE SEA GULLS

We wonder if there isn't something of a moral for the American people in the story of what is happening to the sea gulls up in St. Augustine now that the shrimp fleet has left that area for Key West.

It seems the sea gulls up that way have forgotten how to catch fish for themselves. For many years they have been depending for their food on the scraps and waste thrown overboard from the shrimping fleet. It was a sort of super welfare state for the birds, and the free dinners made it unnecessary for the gulls to depend on their own talents to secure food.

But suddenly the shrimp fleet went away. New and more productive fishing grounds were located off Key West, and the shrimp boats deserted St. Augustine.

The sea gulls haven't been able to adjust themselves to the new situation. According to an INS report, the reefs and the shores around St. Augustine are lined with long silent rows of gulls with their dark eyes turned prayerfully out to sea—waiting for the shrimp fleet and the free meals that won't return.

Nature has played the sea gulls a dirty trick. As generation after generation of gulls learned to depend on the shrimp fleet instead of their own resources to obtain food, parent gulls apparently forgot to teach their little ones their age-old methods of catching fish. So today the gulls are starving. They are no different in physical makeup than the sea gulls of Fort Lauderdale. But whereas our gulls can exist through their own efforts, the gulls of St. Augustine are starving by the hundreds because their welfare state suddenly disappeared and with it went their ability to fend for themselves.

The people of St. Augustine are trying desperately to save the gulls that are left. A city-wide effort is being made to round up table scraps and movie popcorn to tide the birds over until they can once more learn to feed themselves.

But naturalists aren't too sure what will happen. They are puzzled over the apparent complete loss of the sea gulls' natural fishing instincts. Some believe the cycle will be completed without the gulls ever recovering their natural fishing ability.

It's a strange paradox that nature thus gives us. Here we have some of the most independent creatures of the universe, who were given marvelous talents to take care of themselves, victimized because they succumbed to the "something for nothing" lure. They became dependent on unnatural conditions to such an extent that parents apparently forgot to teach their offspring how to get along otherwise. Now with the free food gone, the offspring of these indolent parents are paying the penalty.

We wonder if people aren't a great deal like the sea gulls of St. Augustine. We wonder how many Americans have swallowed the idea of the welfare state to the point where they think it is no longer necessary to teach their offspring that the day of Government hand-outs and security for all may sometime draw to a close. And we wonder then how many Americans may be left like the gulls—puzzled and bewildered because their sustenance has disappeared and they have no resources of their own to fall back on.

Americans don't have to look far to see the sea-gull story translated over into human behavior. We have in England a living example of a "something for nothing" theory gobbled up by the people. Like the sea gulls of St. Augustine, the people of Great Britain have accepted unnatural conditions as a substitute for depending upon themselves. The English Government is the "shrimp fleet" which provides the people of Britain with food, clothing, and shelter. As long as this Government is firm and strong and as long as there are shrimp—meaning taxes—enough to keep it in business, the people will be safe.

But let the shrimp be exhausted, as is now happening, then the Government must seek new beds. It must, of necessity, move on and leave in its wake a mass of miserable people totally unaccustomed to using their own God-given talents and resources to exist.

There is the moral in the story of the sea gulls of St. Augustine. It's a pungent moral and one that every voting American should well consider. Nature has a way of exacting a heavy toll from those who look upon her gifts as unnecessary. As a Nation, we here in America have been singularly blessed with a tremendous capacity for using our skills and our ingenuity to ever improve our way of living. But we have earned our "keep" by wresting it out of the ground, the sea, and the air, through the exercise of our own talents.

We will keep those talents only by continuing to use them. The minute we cast them aside as no longer necessary we will forfeit them as surely as the sea gulls of St. Augustine forfeited their talent to provide themselves with food.

Let's not be that foolish. Let's remember what happened to the sea gulls whenever we are tempted by the Washington "shrimpers" to leave our own board and dine at the Government scrap table of false security.

Old Dame Nature is a wise, though sometimes cruel, teacher. She might have used the sea gulls of St. Augustine as a red flag of warning to the American people. Let's heed it while we still have time.

It Always Bobs Up

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am inserting in the Appendix of the RECORD an editorial appearing in the Mount Vernon (Ohio) News under date of March 22. This editorial relative to Federal aid to education brings out the fear many of us have—that Federal aid to our educational program will take power from the State and local authorities in operating our schools and will bring interference from the Federal Government.

Your attention is called to the statement in this article made by Congressman LESINSKI, chairman of the Committee on Education and Labor of the House of Representatives and one of the spokesmen for this administration. I quote Congressman LESINSKI:

It is impossible to draft a general Federal-aid-to-education bill which will not contain a degree of control over local school systems.

Mr. Speaker, the entire editorial is herewith submitted:

IT ALWAYS BOBS UP

The Mount Vernon teachers' association recently adopted a resolution favoring Federal aid to education without the imposition of Federal controls over the schools.

If a provision for an absolute guarantee against Washington bureaucrats dictating on public-school policies could be written into an education aid bill, nearly all of the opposition to appropriation of Federal money for school purposes would be eliminated.

But no one ever has been able to word a Federal school bill in a manner that meets the objections of those who are bitterly opposed to the Federal Government telling every community in the land how its schools should be operated.

And one doubts if such assurance can ever be given.

The House Education and Labor Committee just recently voted against recommending a Federal school aid bill for passage by Congress.

And when the committee's decision was announced, the group's chairman made this statement:

"It is impossible to draft a general Federal aid to education bill which will not contain a degree of control over local school systems."

A number of Federal aid bills have been drafted in the past year or two since the demand for financial help to the schools became widespread and insistent.

Some have been written by Members of Congress who are opposed to increasing the power of the Washington bureaucracy over the activities of the American people. Therefore, it goes without saying that these did everything in their power to eliminate control features from their proposals.

But still none of the bills submitted to Congress has been able to satisfy the committees, which have examined them closely, that they do not provide means for some Federal bureau to take over control of the schools as soon as the Government starts contributing money to their support.

It is history that whenever there is use of Federal money you have Federal control.

If Federal money helps build a road in Ohio, a Federal bureau says how, when and where the road shall be constructed.

The same principle applies to any other undertaking in which Federal money is involved. You do it the bureaucratic way if you use Federal money, or you lose the Federal help.

That's the way it would be with the schools. If Federal aid is supplied, control of the schools will be transferred from local communities to Washington.

Calumet-Sag Project

EXTENSION OF REMARKS
OF

HON. JAMES V. BUCKLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. BUCKLEY of Illinois. Mr. Speaker, I want to acquaint the House with what I believe to be one of the finest industrial projects ever to be introduced for the development of natural resources, that of the proposed Calumet-Sag waterway. I have backed this, not only for the furthering of trade and industry in Chicago and Illinois, but I have made an intensive study of this project in relation to its benefit to the Nation, and so feel that I am offering a great opportunity to the honored Members of the House of Representatives to work with me for increased appropriations to continue work on the Calumet-Sag project, so vital as part of the Great Lakes and Gulf waterways, noting that, with completion of this project, ocean-going vessels will carry cargo into Calumet Harbor, providing cheaper transportation to that point for millions of tons of freight, from there to be transferred to railroads and motor carriers for inland destination over the vast interior of some of our most productive regions of America.

This appropriation will save Federal money. It will hasten development and improvement for interchange of traffic between lake vessels, river barges, railroad, and motor carriers. Commercial and industrial advancement cannot be underrated should this appropriation be authorized by the Congress. The Calumet-Sag project, when completed, will be one of the most important in the United States. For instance, I have learned that in this district alone, there are more tons of steel produced each year than in the entire country of England. This waterway has been developing rapidly in tonnage of steel, ore, and grain. It is my conviction, when and if it is completed, the tonnage will raise from 2,000,000 to 30,000,000 tons a year. It, in reality, will pay for itself.

It has been approved by Army engineers, labor and material are available. It awaits only the appropriation of the additional funds to complete this great waterway. Gentlemen, at this point, in order that you may be thoroughly informed, I wish to include an address delivered before the businessmen of the Calumet industrial region on February 21, 1950 by Donald O'Toole, vice president, Pullman Trust and Savings Bank, entitled, "The Calumet Industrial Region Today." It is most inclusive and comprehensive, and I hope will open to you the vast possibilities contained within the Calumet-Sag project.

The address follows:

The Calumet industrial region is usually considered to be that concentration of heavy industries lying along the southern end of Lake Michigan from Chicago's south side to Gary. The great leaders in the industries of this area—around whom most of the others have been grouped as suppliers or consumers—have been the huge steel mills of South Chicago and Gary, the great oil refineries of Whiting and East Chicago, the tall grain elevators of the Calumet River, and the enormous railroad industry which shuttles ceaselessly between all of them and rushes the region's wealth of products out to the rest of the world.

This is indeed a vast center of industrial production—too vast certainly for a speaker of my limited comprehension. I'd like to confine that area somewhat to a smaller portion of it with which all of us are somewhat more familiar.

The smaller Calumet industrial area—in which most of us operate as businessmen—may be defined as the group of industries clustered about Lake Calumet and the Calumet River. This area lies between about Seventy-first Street in Chicago on the north, Lake Michigan on the east, and the limits of Cook County on the west and south.

Most of the industries in this smaller Calumet industrial area are—as in the larger Calumet industrial region—related to the big steel mills, oil refineries, grain elevators, and railroads as suppliers or consumers. Most of the people living in this area are employed by these industries.

It behooves us as businessmen to appraise the industries of the Calumet industrial area, for upon their success depends our own profits and our ability to survive as businessmen. Their success—as far as we are concerned—consists entirely of their ability to remain in production and continue to pay wages and salaries. We are not generally owners of these businesses, and we are, therefore, interested in their profits and general financial conditions only as indications of their continuing good business health. Of course, it stands to reason that fine profits and sound financial conditions are almost always evidences of good business prospects, but our analysis of these industries proceeds along this narrower line: Are they going to be able to produce economically, meet all competition for their product, and thus continue to provide employment for the people we serve?

Not long ago a few of us who are keenly interested in this subject chartered an airplane and flew over the area. What we saw was amazing—for businessmen of the area like you and me, it was positively thrilling. I am going to ask you to imagine yourselves in that airplane with me, while I tell you what we saw.

The land below us is flat, as far as the eye can see. No high mountain ranges confine us. No steep hills force railroads and highways through narrow, twisting, and costly passes. Traffic moves freely over our flat lands, and we expand outward at will whenever we need more space. Everywhere you can see new homes, new industries being added to the fringes of the areas already developed.

On literally thousands of transportation routes you see traffic pouring in and out of the area. Railroad trains come in from the West, from the South, and from the East with raw materials, and chug out again, hauling our finished products to the people in other sections of the country; highways, many of them built just within the past 15 years, carry thousands of trucks hauling millions of dollars of raw materials and finished products in and out of the area; freighters bring ore and grain down from the Northwest across the blue waters of Lake Michigan; barges bring grain, building materials, and other products up the Calumet-Sag Channel and haul gasoline and steel and other products back. Unseen pipe lines pour millions of gallons of oil into the Whiting refineries and millions of cubic feet of gas into our furnaces. Railroad trains, barges, and trucks move ceaselessly from plant to plant in the area, hauling products around from one to the other in the complex process of completing our manufactures from raw materials to finished products.

If you had been up in an airplane over this area 20 years ago, you would discover that vast changes have taken place in the past 20 years—changes of which we have been almost unaware and which have served to modernize our vast industrial plant and make it certainly efficient enough to compete with any industrial-producing region. To mention a few we know, Doty Road, the four-lane highway skirting Lake Calumet, built in the middle thirties; the straightening of the Little Calumet River just south of Lake Calumet which has aided barge traffic; the deepening of Lake Calumet at its south end and the construction there of docks and other facilities to handle ocean vessels; new bridges over the river on Torrence Avenue and on One Hundred and Thirtieth Street; widened and speedier highways on One Hundred and Eleventh Street, Torrence Avenue, One Hundred and Thirtieth Street, One Hundred and Third Street, and Stony Island Avenue. In fact, the pattern of highways and waterways and streets that we see in 1950 scarcely resemble at all what was visible in 1930.

And, as you look down upon these arteries so important to the efficiency of the Calumet industrial area, think of the things that are still being done: the Tri-State Highway which will soon be completed from One Hundred and Thirtieth Street south and will provide a wide and flat express route to Detroit; the widening and deepening of the Calumet Sag Channel which will step up the already tremendous shipments now taking place on this waterway—it seems almost unbelievable that the tonnage carried by the Calumet-Sag Channel has grown in 10 years, from 1939 to

1948, from 822,125 to 2,092,772 tons; the construction of the shipyard at the south end of Lake Calumet, and its recent acquisition by Calumet Harbor Terminals, where it is now operating, full-fledged, as a splendid terminal where oceangoing vessels, river barges, railroad freight cars, and trucks all meet and exchange their goods for shipment all over the world. The Calumet Harbor Terminals represents the first actual realization of the dream of the development of Lake Calumet as an industrial harbor, and we are indeed fortunate that its management is in the hands of men who thoroughly understand every modern means of transportation—trucks, railroads, barges, and steamships.

And, as we continue to cruise over the area, look at what has been happening to our industry. New manufacturing centers have developed at Eighty-seventh Street and the Illinois Central tracks, at Ninety-fifth Street and Cottage Grove Avenue, at One Hundred and Thirty-seventh and Indiana, and at countless other points. The vast former Pullman freight car shops at One Hundred and Third Street and Cottage Grove Avenue, idle for many years, are now fully engaged in the production of that most necessary and most modern machine—the Diesel electric locomotive. The new Republic Steel Co. mills in South Chicago is the most modern steel-making plant in the world. Thousands of small industries, operated by especially keen and aggressive men who are determined to keep their products successfully meeting all competition, have come into the area and have given our employment a far broader and more dependable base than the days when we were all dependent upon a handful of large manufacturing plants.

Before returning to the ground, let's see if we can picture the magnificent middle-western country beyond our horizon, in which we hold such a fortunate central position. We can visualize the mountain ranges of northern Michigan from whose mines iron ore is shipped by lake vessels to our hungry steel mills; we can visualize the rich Southern Illinois coal mines whose coal moves so economically over the Illinois waterway and the Calumet-Sag Channel, and over our railroad systems; we can picture the rolling wheat fields of Kansas and of the great Northwest whose corn and wheat are poured into our grain elevators to await shipment to other parts of a hungry world. We can see the stock cars on the railroads drawing corn-fed cattle and hogs from rich farms in Iowa, Illinois, and Wisconsin to be processed in the stockyards just north of the Calumet industrial area.

Yes, it's obvious that we are still the great processing and marketing center for the rich midwestern United States, and it seems also that we have worked successfully to keep our transportation system modern and up-to-date, providing better and better waterways, highways, and railroads so that products can move more swiftly and easily in and out of our great processing factories.

The peculiar position we occupy is that we are close to both sources of raw materials and to the rich, heavily populated markets of the East and the Middle West. Thus, it is the most economical of all systems to ship raw materials here in low-cost bulk transportation units like lake steamships and barges, process them into finished products, and then speed those products on by trains and trucks to the big nearby markets. And, we know, before returning to land, that we must at all times spare no cost in maintaining the transportation system that keeps our area great.

There are two other resources which we have. One is fresh water with Lake Michigan providing a vast and unlimited reservoir for us at all times. Many an industry now located in an area dependent upon wells may very well wish that it had the access to Lake Michigan enjoyed by the industries of the Calumet industrial area.

The other resource is our manpower. This is most important of all because it is within the capacity of our manpower to drag down or make even greater the magnificent situation with which nature and civilization have blessed this great industrial area.

Men must guide this industrial machine. They must operate its individual machines, they must plan its destinies, they must meet its competitors in the markets of the world, and they must work closely with each other to keep the whole machine in operation. What have we done about our manpower?

First, we have provided technical educational facilities. Our industries, ever hungry for skilled mechanics, are assured of a splendid annual supply from the magnificent new Chicago Vocational School and from the other technical high schools of Chicago. We earnestly hope that the Pullman Free School of Manual Training will somehow be able to continue to perform its job in the training of young mechanics. From the nearby great engineering colleges—Illinois Institute of Technology, University of Illinois, Marquette University, Purdue University, and University of Notre Dame—we receive a splendid annual supply of college-trained technicians.

There is ample room for housing all of our working people—laborers, mechanics, technicians, and executives alike. All we need to do when we need more housing is to build further out on our flat plains.

The only thing that can hamper us in achieving and retaining full employment conditions is the inability of men to get along with each other. This is a condition which all of us businessmen in this area must strive constantly to prevent. It would indeed be pathetic if such a great modern industrial plant, constituting our entire Calumet industrial area, should find it impossible to produce for a market hungry for our products, simply because of the inability of its men to settle differences as to working conditions and wages.

What can we do to prevent these work stoppages from overtaking us? Fortunately, we here have not yet been too seriously affected by local strikes, but I suppose the same thing can happen to us that has happened to others if we fail to face the situation fairly.

First, we can seek to know the problems of our factories in their labor relations, and attempt to help them to adjust misunderstandings with their employees. To do this, we must learn more about our industries—just how they operate and how they earn the money with which they pay wages and other operating expenses. Then, when we know the facts, we can take advantage of opportunities to counsel with our own customers who are employees in these plants. In many cases, they look to us, as their businessmen friends, for impartial advice. If we know that demands made by one side or the other are unreasonable, let's not be hesitant about expressing our viewpoints so that we can help to get differences settled quickly. We must be prepared to make real personal sacrifices of our own time in order to keep this industrial machine going.

Secondly, we must understand thoroughly the role of legislation in controlling the relations between labor and management. We must take a keen interest in every bill introduced in our own State legislature and in the National Legislature which will make it more difficult for our factories to operate. It is certain that the more difficult it is for them to operate, the more we lose our competitive advantage in marketing our goods to the rest of the world and the more we have thrown a wrench into the works of the great transportation system we have just viewed from the air.

Fortunately, the employers and labor leaders of our area have been relatively reasonable in dealing with each other. Perhaps it is because we went through our own period of adjusting to unionism before most other sections of this country, and our general labor relations are, therefore, rather mature. Moreover, both our employers and labor leaders have recently taken a considerable interest in our community affairs and have indicated a genuine willingness to have us understand their problems. We should take advantage of every invitation they extend to us to visit their plants and offices and to learn about their problems. It is an old American principle that teamwork solves problems better than individual heads. We always have one very strong interest in looking into their affairs, and that is to see to it that they keep working, and that wages and salaries continue to be paid to the people we serve.

From our experience as a bank, we know that the employers of this area are among the most enlightened, fair-minded, and aggressive in the United States. Their record of accomplishment in the field of industrial production is matched by their record for securing good legislation, good civic improvements, and sound living benefits for their employees. And it is really significant and to the credit of the labor leaders and working people of our community that we have had very few serious strikes that are purely local in character.

I think it may be presumed, therefore, that this vast industrial region, more modern and necessary today than it ever was before, is led by men who are intelligent and inherently resolved to get along with each other. Under such circumstances, I think that the future for many years is a very bright one for the Calumet industrial area.

Addresses of Col. Bradley Dewey and James R. Killian, Jr.

EXTENSION OF REMARKS
OF

HON. CHRISTIAN A. HERTER

OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. HERTER. Mr. Speaker, recently two distinguished citizens of my State made outstanding speeches when the 1949 award for chemical engineering achievement was presented to the Celanese Corp. of America. Col. Bradley Dewey, president of the Dewey & Almy Chemical Co., in Cambridge, Mass., and wartime rubber director of the United States, chose to defend bigness in business—particularly in its relations to the national defense. James R. Killian, Jr., president of the Massachusetts Institute of Technology, spoke of the present-day threats to higher education and particularly the relations these bear to the economic strength and security of our country. Every thinking American ought to have the opportunity of reading these two splendid addresses, which I quote herewith:

STOP DEFENDING BIGNESS IN BUSINESS; PREACH IT—IT IS THE JOB OF EVERY MAN AND WOMAN IN THE PROCESS INDUSTRIES TO PREACH THE FACTS: IN PEACETIME, BIGNESS HAS A VITAL PLACE IN THE AMERICAN SYSTEM; IN WAR IT IS OUR SALVATION

(By Bradley Dewey)

It was the great companies of America's industry that provided the arms and equipment with which our soldiers, our sailors,

and our airmen won World War II. And it is to these same big companies that the United States must turn if she is called upon to defend herself again.

Our big process companies teamed with the Government to furnish the technical brains, the know-how and the sheer power to produce in tremendous volume such industrial miracles as synthetic rubber, high octane aviation gasoline, toluene, magnesium, rocket powders, and the atomic bomb.

Teamwork won the war—and it was primarily big business that furnished the teams. Chemists and physicists—chemical, mechanical, and electrical engineers—production men and skilled workers—all trained by industry and its engineering consultants, made up the elaborate structure of the process industry teams that fought the war behind the lines.

If—and God forbid—we must again defend ourselves, then again we will have to call upon great and strong units of industry to provide us with what we need. Yet today we have the strange sight, the frightening sight, of the defense branches of Government spending billions of dollars for our defense, while other arms of the same Government seek to pull down and destroy our greatest defense asset—the bigness of the companies upon which we must rely in war.

I am not going to defend bigness in industry. I am tired of hearing it defended as though bigness in itself were wicked or immoral or criminal. Far from defending bigness in business, I assert its necessity; its necessity in peace and particularly, its necessity in war.

General Vandenberg, Air Force Chief of Staff, is only one of numerous military men to declare that we cannot hope to match Russia in masses of men, and that we must, therefore, rely upon technical superiority which must come from technically superior industry.

We in the process industries know that technical prowess is, as a rule, directly related to size. No process company can grow except by constant effort toward technical superiority; and bigness is the inevitable long-term result of technical improvement and superiority.

Trying to measure bigness in modern day industry is like trying to say how long is a piece of string. The biggest of corporations has competitors and in order to stay strong and healthy must give its rivals constant battle, striving daily to improve its own products and its own methods. Large, medium, and small companies are a necessary part of the American economy. All prosper together.

Should war come tomorrow—and again I say, may God forbid it ever come—there would be available to the Government not only the physical products of our industry's bigness, but there would also be available big industry's teams of scientists, engineers and skilled workers.

America amazed herself, and the world as well, by mass-producing synthetic rubber in World War II. But, as Rubber Director in World War II, I can testify that synthetic rubber in the quantities and of the quality required for the successful conduct of that war, could not have been produced if the rubber companies and the mighty process industries and their construction and engineering affiliates had not provided the teams of chemists, physicists, engineers, production specialists, administrators, and trained workers.

However it may have appeared to some outsider, it was not the Government that developed the processes, built the plants, or turned out the rubber. Government merely supervised, steered, advised. Men of the rubber, chemical, and petroleum industries and their construction associates and engineering consultants—they are the men who did the job. It was the technical prowess of these companies, so competitive in time of peace but pooled in time of war, which gave to the Nation the technical superiority it had to have to produce rubber after our enemies cut us off from our supplies of the natural product.

This, I submit, is the fruit of bigness—the bigness General Vandenberg and the other military leaders have in mind when they say our success in war will rest on technical superiority. Dr. Vannevar Bush points this up very succinctly in two sentences of his great new book, Modern Arms and Free Men, when he says, "Modern science has utterly changed the nature of war and is still changing it. * * * The combination of science, engineering, industry, and organization during the last decade created a new framework that rendered conventional military practice obsolete."

How quickly we can lose technical superiority if we permit misguided zealots to whittle down industry or to stunt wholesome, healthy growth to bigness. It is up to all to encourage bigness as long as it obeys the laws that govern us all. How can we hope to maintain modern science, upon which technical superiority is based, unless we give engineers and technologists elbow room in time of peace to team with our scientists and continue to build to the unlimited horizons of our democratic country?

If there was any one lesson more outstanding than another learned in the last war it was the absolute dependence of the armed forces upon the teams of industry and business for the development of new arms and weapons.

Among these teams were the ones who in prewar peacetimes had been able to work on problems which then had little hope of being used for a decade ahead. Among them were ones who sent teams of investigators to Germany to bring back the techniques which let us more quickly make butadiene and styrene for synthetic rubber. Among them are those who can afford to work on ideas and to pay for dreaming for the future.

The cry which we now hear that bigness in business is bad is a false cry and a dangerous one. It is as false to say that all big things are bad as it is to say that all little things are good. We have laws against big and little sinners and we should employ them against the big as well as the little in business. But in bigness itself there is no sin.

Now let me talk for a minute about a giant of industry. This one is so great that the Government turned to it to handle its top secret wartime atomic project construction and operation at Hanford, Wash. I refer, of course, to the du Pont Co. Today the same Government which disbursed more than $1,000,000,000 through du Pont during the war is attacking du Pont on the ground that it is too big. Yet it was the bigness of du Pont which led the Government to its door in time of national peril. The fact is that du Pont paid out to other companies 56 percent of all the money the Government paid to it and that although du Pont had the lion's share of the vast responsibility imposed by the Government, it shared profits with thousands of subcontractors, big and little. And after all operating costs were paid, wages and salaries eating up 44 percent, the du Pont Co. had left as its own profit to stockholders, after taxes, about one-fifteenth of a cent of dollar cost.

I did not single out the du Pont Co. for special mention. The Government did that. The Government which leaned so hard upon the du Pont Co. for help in the war now singles it out as being wicked because it is big. And if this attack were successful, misguided and misinformed zealots might single out other companies and blast them for the crime of bigness. But let us look at other companies.

What company except a big company like Monsanto could have replaced the Texas City styrene plant and its 34 top administrative, supervisory, and technical men in less than a year after an explosion had wreaked its havoc? Could any company less than the size of Monsanto have carried on five separate vital, large, wartime projects?

Consider Union Carbide and Carbon's power when it brought to the war effort the experience and abilities of more than 3,000 technically trained people—1,400 of whom were engineers and technicians working in 23 research laboratories spread through 185 plants. Carbide and Carbon made the butadiene from alcohol that was so vitally needed at the start of the rubber program. When we had to build the enormous butadiene plants (and reactions had to be piloted even while the plants were still under construction), where could we have turned except to the big oil companies like Standard of New Jersey, Humble, Standard of California, Gulf, Texas, Shell, Sun, Socony-Vacuum, Cities Service, Phillips, Pure Oil, Sinclair, Standard of Indiana, Imperial Oil, and Atlantic.

Only a great chemical company could do what Dow did when it not only supervised the construction but staffed the enormous styrene plants at Velasco, Los Angeles, and Sarnia, and, remember, it did this while designing and building the facilities for a giant magnesium program. Only a great company could have contributed the hundreds of top-flight executives, supervisors, engineers, and designers for such a prodigious undertaking.

Who but the great rubber companies could have taken on not only the polymerization of synthetic rubber, but at the same time largely redesigned tires and the machinery, processes, and factories necessary to fabricate new materials into tires to win the war?

Earlier I spoke of misguided and misinformed zealots because I believe that many of those who attack business because of its size have no idea what constitutes size or how modern business really operates. I think they honestly do not know that big and little business could not exist in our great democratic economy without each other any more than labor and capital or farmer and merchant could exist only for themselves and by themselves.

As a rather small-business man, I am well aware that my company could not exist if it did not have big as well as small customers to which to sell its products. As one who buys from, sells to, and competes with businesses as big as his own and also much bigger, I think I am in a position to understand how big and little businesses are dependent upon each other and how necessary both are to the American way of life.

But there is one more thing I have to say. How can misguided critics learn the truths about our process industries unless we who are in the industry tell these facts? How can the American public, upon whose passions and emotions misguided zealots are now playing with their incessant criticism of size in business, learn the facts unless we who know the facts talk about them?

It is the job of every man and woman connected with the process industries to marshal the facts and to preach the facts. Let us cease mere passive defense of bigness and let us start preaching aggressively the necessity of bigness for the salvation of the Nation in time of war.

We all know that only big companies can mass produce such products as automobiles and that only mass production can bring the automobile price within the range of most American incomes. But too many of our fellow citizens do not know that national defense in the future will depend almost entirely upon the quick mobilization of industrial teams and their integration into war teams. Bigness is a vital national asset in war and we can no more risk limiting this

UNIVERSITY OF MICHIGAN LIBRARIES

bigness than we can risk giving the secrets of atom bomb construction or the blueprints of our newest guided missile to potential enemies.

We honor the Celanese Corp. of America tonight because it successfully risked millions of venture capital on research. Only a big company could do this. Let us now do what we can to put an end to loose and reckless talk of the badness of bigness. Let us make clear to all that in peace and in war bigness has a vital place in the American system. It insures our future. If we make our story heard by the American people, I for one have no fear of the outcome. The American people are not deaf to an appeal to reason as powerful as this appeal we make for our preservation as a nation.

National Defense and the University—A Mission in Peril

(By James R. Killian, Jr.)

The university has a twofold mission: strengthen our moral fiber, strengthen our economic prosperity

In these parlous times of cold war and hot issues, what are the special responsibilities of our universities in serving our national security?

When considering the relationship of education to national welfare we must first separate out certain basic elements of our national strength. Most basic of all the fiber of our people—their spirit, their moral integrity, their maturity, and their capacity to govern themselves. We must have the kind of education which engenders and strengthens these qualities. Our colleges must give our students, who are tomorrow's leaders, an understanding of our American heritage and of the sacredness of individual liberty in a free society. They must help to create this common bond of our democracy. As President Sproul of the University of California recently said, "How necessary it is that the universities of America should constitute an affirmative force—the chief advocates of our traditions, our institutions, our way of life—that they should not only inquire fearlessly into the defects of our system, but also highlight and extol its advantages and aggressively clarify and strengthen the ideas upon which it rests." I submit that this function of our universities is vital to our national welfare.

Our universities must also do more than they are now doing to aid our young people to grow in moral and spiritual stature. Our people not only must be literate; they must harness literacy to ideals and to a sense of the first rate. Whitehead once said that, "Moral education is impossible without the habitual vision of greatness." Better than any other agencies, our colleges can provide this vision of greatness. In a democracy it is vital that they do so.

Universities, if they are to serve our free society, must not only train men who can do the complex specialized work of society; they must also cultivate in these men a reverence for the dignity of the individual. Someone has said that democracy is most effective when it tries to make all of its citizens aristocrats. It might also be said that education for the protection of democracy is most effective when it strengthens the aristocratic virtues of personal dignity, self-reliance, and self-understanding. Men with these qualifications are more likely to resist all forms of statism and Stalinist communism that regiment and depreciate the individual and therefore weaken democracy.

Next to the fiber of the people as a component of national strength stands the health and wealth of our people. A healthy people, a prosperous economy, and ample natural resources are three of our main defensive lines, and all three of these now depend upon the endless frontier of basic science. Our universities must educate the men and conduct the research to keep this frontier endless.

In our dynamic economy we must constantly create more jobs for more people. We must steadily increase our output per man-hour, if we are to have better and cheaper consumer goods along with higher wages. To do these things requires a steady increase in our fundamental knowledge of nature. Research must also provide us with replacements and substitutes for depleted natural resources. In fact one of the major tasks of science in the universities and in industry in the years ahead will be the conservation of natural resources and the replacement of scarce materials by equally good or better substitutes. As the wellsprings of basic science, our universities are vital factors in meeting all of these requirements for a prosperous economy. They are also essential for educating men for the refinement and management of our industrial machine. The record seems to be clear that engineers have demonstrated an extraordinary capacity to manage great enterprises. I believe that in part this reflects the kind of training they have had, and that it points up the opportunities in our universities to train men still more effectively for management responsibilities. If we are to do this, we must educate men of professional competence who have a cultural reach beyond the techniques of their profession.

Let me mention one reason why a broader education is of practical importance to industry. Industry more and more is looking to technological schools for potential leaders, for the men who must be the managers, the industrial leaders of tomorrow. Graduates of engineering schools often enter industry through a specialized technical channel, with the result that only those few individuals with superior natural endowments rise to top-level posts in management. Industry, because of sound organizational requirements, must insist on specialization among its young scientists and engineers, and is therefore handicapped in increasing the quantity of potential leaders at a time when they are at an impressionable age. When technical education is too narrow, it tends to restrict the supply and development of leaders. By further broadening their teaching programs, our engineering schools have an opportunity to contribute to the solution of this problem, so essential to the management of our highly technical private enterprise system.

But it faces a triple threat: development at the expense of research, security by secrecy, impoverishment

As our educational institutions strive to nurture these elements of our national strength, they encounter today certain hazards which are inherent in the cold war.

Today, for example, we are under constant temptation to divert scientists and engineers in our colleges away from fundamental research by bending their interest too much toward development. If allowed to happen on a large scale, this could dry up the wellspring of new knowledge with ultimate disaster to our national security. Not even the knowledge that an atomic explosion has occurred in Russia can justify our weakening basic research by the diversion of undue numbers of our first-team scientists to development work or to crash programs. I believe that the national defense establishment can continue to work on the development of new weapons essential to our defense without aborting our basic research and educational programs by shifting the emphasis from long-term research to short-term objectives. If ever we are forced or deluded into such a program in peacetime, then we have cut the taproot of our future security and our industrial advance.

A second hazard to our universities resides in the imposition of restrictions on the free exchange and communication of information. Only under very special and urgent circumstances should secret work be brought into our universities. It is incompatible with the basic concept of an educational institution as a source and distributor of knowledge.

Both within and without our universities I believe that scientific advances are being retarded today by too much secrecy. In the public mind secrecy is mistakenly considered synonymous with security; actually secrecy and scientific progress are mutually inimical. I am not one of those who believe we should have no secrets—that is obviously absurd in a period of cold war. I do believe that we can achieve a better balance between secrecy and free exchange of information for the purpose of accelerating our scientific advance. If there were fewer secrets in our atomic-energy program, for example, we could forge ahead more rapidly in atomic physics. There would be more cross-fertilization, more mutual stimulation of active minds.

"It would be better," as Dr. Karl T. Compton recently pointed out, "to take the calculated risk of allowing some confidential information to get out of our hands, if such a policy would enable us to advance our own science and art at a more rapid rate which a competitor cannot hope to equal, than it would be to impose by regulation or public opinion a condition which seriously handicaps progress by rendering employment in these pursuits definitely unattractive to top-flight scientists and engineers."

A third hazard to universities as components of our national defense is their impoverishment. Prof. Seymour Harris recently pointed out that in 1932 our colleges and universities spent 1 percent of our national income. By 1949 this had fallen to less than one-half of 1 percent. Over this same period the enrollment of our universities had doubled. The situation is even worse if we examine the private institutions which are the pace setters of our educational system. Their share of the national income has suffered a greater reduction than the system as a whole. Implicit in this declining support of our privately endowed institutions is the danger of their losing their private status by being forced to accept Government subsidy and control. I suggest that this would be a major calamity. If the private universities come under Federal control, then one of the bulwarks of free enterprise will have been destroyed. The solution, I believe, lies in diversified support for these institutions, with industry, foundations, and Government joining together, and all recognizing the vital importance of these institutions remaining free of any kind of control. I submit, however, that we must adequately finance all of our universities, whatever the source of funds, if our system of higher education is to continue adequately to serve our democracy. Our universities, if they are strong and powerful, are a striking force that can be thrown into immediate action if needed, as was demonstrated in the last war. We must be sure to have in these institutions this kind of reserve strength.

Such are some of the responsibilities, obligations, and problems of education in this critical period. I believe that the symbiotic relationships between industry and education must be further strengthened if our educational institutions are to remain strong. I believe that industry has a responsibility to see that they do. I believe that our free institutions can continue as potent pillars of our national strength, if they are not diverted from their primary responsibilities, and if we can circumvent the hazards of these parlous times.

Article From Wall Street Journal of February 9, 1950, Answering Fallacious Attack on Old-Age and Survivors Insurance Trust Fund

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Wall Street Journal of February 9, 1950:

BONDS IN UNITED STATES PENSION RESERVE—THE STALE FALLACY THAT THE TRUST FUND IS A FICTION STILL CROPS UP DESPITE AUTHORITATIVE REFUTATION

(By A. F. Korsmeyer)

Letters to this newspaper from subscribers, among other things, show that misunderstanding of the reserve fund of the old-age and survivors' insurance of the Social Security Act is still widespread. Many persons still believe what some insurance company officials asserted in the middle 1930's, that the accumulation of a pension-reserve fund invested in United States bonds was purposeless, that the reserve was a fiction and that it could actually result in the cost of pensions being paid twice over. Those insurance-company men have long since realized their error; a sort of vicarious recantation came in 1945 from a committee representing the three principal associations of life companies. The committee said, in part:

"The first step in understanding this problem is to agree that pay-roll taxes are collected so that workers may currently make a contribution to the support of the OASI system from which they hope later to benefit. The money might conceivably be held in the form of cash to be used when needed. However, the Government must currently borrow large sums, and will later need large amounts for refinancing at least some of its rapidly maturing obligations. It is reasonable for the OASI system, if it has funds available, to take advantage of this opportunity to earn interest on its money by purchasing Government bonds.

"Furthermore the apparent double taxation does not involve an avoidable burden if it can be assumed that the excess of income over outgo is used by the Government for some essential purpose, and does not by its existence and availability stimulate unnecessary expenditures. The purchasing of bonds by the OASI system means that, later on, when it needs money in excess of pay-roll receipts in order to pay benefits, the interest on the bonds (raised, of course, by general taxation) will be available to meet the additional benefit load. However, if the bonds had not been bought by the system but were in the hands of the public, then not only would the interest on the bonds have to be raised by general taxation but additional general taxes would have to be levied to cover the deficit in OASI operations. Current pay-roll taxation to create a reserve fund, therefore, makes possible the use of interest which the Government has to raise by taxation anyway for a purpose which would otherwise require further general taxation on its own account."

SAME THING IN CLEARER TERMS

This heavy language is not much easier to understand than the cryptic chatter of an insurance agent trying to write another policy. A report from the Advisory Council on Social Security to the Senate Committee on Finance, rendered in April of 1948, stated its like conclusions in clearer terms. This council was composed of 17 businessmen, economics professors, labor-union representatives, insurance-company executives, and scientists. Its report said, in part:

"We do not agree with those who criticize this form of investment of the OASI reserve in Government bonds on the ground that the Government spends for general purposes the money received from the sale of securities to that fund. Actually such investment is as reasonable and proper as is the investment by life-insurance companies of their own reserve funds in Government securities. * * *

"The investment of the old-age and survivors insurance funds in Government securities does not mean that people have been or will be taxed twice for the same benefits, as has been charged. The following example illustrates this point: Suppose some year in the future the out-go under the old-age and survivors insurance system should exceed pay-roll tax receipts by $100,000,000. If there were then $5,000,000,000 of United States 2-percent bonds in the trust fund, they would produce interest amounting to $100,000,000 a year. This interest would, of course, have to be raised by taxation. But suppose there were no bonds in the trust fund. In that event, $100,000,000 to cover the deficit in the old-age and survivors insurance system would have to be raised by taxation; and, in addition, another $100,000,000 would have to be raised by taxation to pay interest on $5,000,000,000 of Government bonds owned by somebody else."

GOVERNMENT'S "USE" OF PENSION REVENUE

Some correspondents of this newspaper stumble over the Government's "use" of its borrowings from the OSAI, reserve for general purposes, which they fail to distinguish from the alleged but nonexistent "use" for such purposes of the age-pension pay-roll tax revenue. The distinction is supremely important. Without it, the Government would be merely appropriating such revenue without compensation to those for whose present or ultimate benefit the revenue is collected. But the Government makes the distinction, and makes it effectively, by issuing Treasury obligations for the moneys it borrows from the reserve.

Lately, the Brookings Institution of Washington has published a work entitled "The Cost of Financing of Social Security," which, along with a considerable amount of useful information about other sections of the Social Security Act, unfortunately repeats the now stale errors about the alleged illusion of an OASI trust fund. Its several authors—for whose conclusions a foreword disclaims the institution's responsibility—make on page 155 the following weirdly untrue statement:

"The OASI trust fund is invested in Federal Government securities. Since the money is used by the Government in meeting its regular expenditure requirements, no real reserve is created. The obligations of the Government (liabilities) deposited in a trust account do not represent assets; they merely record future obligations which can be fulfilled only through the levy of future taxes upon the economy in general. The trust fund is thus a fiction—serving only to confuse."

Here the authors make one or both of two assertions. One is that the Governmnt bonds in the OASI fund are different from all other parts of the national debt in having no value as assets. The other is that all the Government's obligations are worthless. If the second reading were correct, the first would, of course, follow.

DEBT IS ALL GOOD OR ALL BAD

Now it is impossible to divide the national debt into two categories on any such (or any other) basis of distinction. If any segregation of the debt were imaginable, the bonds in the OASI reserve would have to be assigned a superior rating as assets. They are the property of many millions of citizens, most of whom have little or nothing else to protect them from destitution in the feebleness of their old age. If this portion of the debt has no existence as assets in the ownership of OASI beneficiaries, the remainder of a debt which the daily Treasury statement says is now more than $252,000,000,000, doesn't exist either.

The authors do not support their assertion that the Government bonds in the pension reserve have less value than fresh toilet paper. Their statement that the investment of funds in Government bonds is not procreative in character is true but has nothing to do with the asset value of the bonds in the pension reserve. Their value, like that of all Government issues, is assured by the power of the issuer to assess all the trade and industry of the country (including the procreative investments of the life companies and others) for whatever it takes to pay the issuer's obligations. The issuer, of course, will do that, without regard for their ownership in or outside of the reserve fund.

There is much that is open to criticism in OASI and the changes therein proposed by pending bills. But it is impossible to assert rationally that part of the national debt is rubbish and the rest is prime investment.

Broadcast by Hon. Francis J. Myers, of Pennsylvania, to People of Pennsylvania

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, March 27 (legislative day of Wednesday, March 8), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a broadcast by me over Pennsylvania radio stations on the week end of March 17 to 19, inclusive. This is No. 22 in a biweekly series of broadcasts.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

TEXT OF TRANSCRIPTION BY HON. FRANCIS J. MYERS, OF PENNSYLVANIA, OVER PENNSYLVANIA RADIO STATIONS, WEEK END OF MARCH 17–19, INCLUSIVE

(No. 22 in biweekly series)

Thoughts of springtime usually bring to mind things that carry us out of doors—perhaps working around the yard, or making plans for long drives on Sundays, or any of a great many other pleasant activities. The world in springtime is commonly regarded as a pretty nice place—and where most people have spring fever most of the time.

That's the picture, at least, that our poets and song writers and story tellers usually paint for us. But when our spring fever isn't too bad most of us realize that we have just about as many serious things to do this time of year as any other. There's still a living to be earned. There's still a family to be fed.

And for the housewife, in addition to her regular duties, there's generally the semi-annual job of turning the house upside down to air it and get things back in order.

Springtime often brings with it as well the first distant rumbles of the coming election campaigns. Now, perhaps, it's because of spring fever—or something—but for some reason not many people seem to hear these early political murmurs, and in all frankness this does bother me.

I'm bothered about this because, under our representative, democratic form of government, these beginning political activities are perhaps the most important of all in determining the kind of people we ultimately get to represent us in every level of government.

I'm speaking here of the events leading up to the primary elections where the voters of each party go to the polls to select—from a list of candidates—the particular candidate whose name will appear on the party ballot for each office at the time of the general elections in November. And I think it goes without saying that the interests of good government demand that each party have the best possible candidates on its slate.

Now, it may surprise some of you, but as a matter of fact, the primary election is something that wasn't even contemplated by our founding fathers when they drew up our Constitution, and for the first 60 or 70 years that the American Republic existed we got along on a single general election in any particular campaign.

About a hundred years ago machine politics developed to the point that the average voter was being pretty badly abused. It happened in this way: As you know, we've always had basically a two-party system in this country, but by the 1850's political machines in many parts of the country were so completely in control of both parties that voters on election day frequently found themselves confronted with no real choice between the candidates of the two parties. All too often the candidates on both tickets were merely corrupt and incompetent tools of the respective political organizations.

This is why the primary was born. It was felt that the voters rightfully had something to say about the selection of the candidates themselves on each party slate, thereby making it possible to overthrow the political hacks and putting in their places party candidates of integrity and ability. Pennsylvania was among the earliest States to adopt a primary election law.

Now, the way the primary worked was this: Any person who wished to be considered as a candidate on a particular ticket could get his name on the primary ballot as a Democrat or a Republican by having a group of eligible voters sign a nominating petition on his behalf, and usually it was necessary to post a nominal fee at the time the petition was filed.

The purpose of the nominating petitions was primarily to keep the ballots from becoming overburdened with a hopeless number of names of people who stood no chance of capturing a significant portion of the vote, and thus, by requiring a reasonable number of signatures on the nominating petitions, those who were without any support were discouraged from seeking the party nomination.

The earliest primary laws—for all their good intentions—had some pretty serious faults that weren't contemplated by those who proposed them. I won't go into these troubles in any detail except to explain briefly how it came about that you now must register as a Democrat in order to vote in a Democratic primary, and as a Republican to be entitled to participate in a Republican primary. There were no such requirements in the first primary laws.

Thus, it frequently happened that one party would raid the primary of the opposition party by turning out its organization to vote for the weakest candidate on the opposing primary ballot. These raids by one party upon the other usually resulted in an easy victory for the raiding party because such a weak opponent had been selected for the opponent's slate. It was to do away with party raiding that the primary laws were later changed to limit participation in primaries to voters who were registered as members of a particular party.

So much for history.

Primary elections will be held in Pennsylvania this year on May 16. At this time registered Republican voters will determine their choice of candidates for some two-hundred and seventy-odd State and Federal elective offices, and so will the registered Democrats. It is frequently true that there are instances on party primary ballots where, for a given office, a particular candidate may be without opposition. This was so in my own case in 1944 when I was unopposed in the Democratic primary as the candidate for the United States Senate.

I wish to make it clear, however, that the mere fact that one or more candidates on a primary ballot are unopposed in no way lessens the need to have registered voters of each political party participate in the primary elections to select the slate. There will be on the Republican and Democratic ballots alike this year office after office for which there will be strongly competing candidates, and, as I've said, it is certainly necessary in the interest of good government for the voters of each party to exercise the greatest care in the selection of the candidates they wish to represent them on their party's ballot.

I want to list for you—in outline form, at least—the various elective offices for which the people of Pennsylvania will select party candidates in the May 16 primaries. It will be necessary to select a party candidate for United States Senator, for 33 United States Congressional Representatives, for governor, lieutenant governor, State secretary of internal affairs, judges of the supreme and superior courts of Pennsylvania, 25 State senators, and 208 State representatives for the State general assembly. These, as I say, are for State and Federal elective offices only. In addition to this, selection of candidates must be made by both parties for various county and local political committees which must be filled in the coming fall elections.

Now, actually, the task of any particular voter isn't as complicated as I have made it appear. A primary voter doesn't select all 33 candidates for the United States House of Representatives; instead, he selects only the candidate from the congressional district in which he votes. This is also true insofar as the selection of the 25 State senators and the 208 State representatives, where, again, the individual voter selects only one candidate each for his particular district for the offices of State senator and State representative.

On the other hand, everyone who votes in the Republican or Democratic primary elections on May 16 will have to decide upon his choice of the party candidate for United States Senator, governor, lieutenant governor, secretary of internal affairs, and the judges for the supreme and superior courts of Pennsylvania.

It is not yet clear how many candidates will be listed on each party ballot for these various offices in the coming primary, because it will be possible to file nominating petitions until March 27.

There is the background of the coming primary elections. Now I have a question for you to ask yourself. Are you registered to vote in the May 16 primaries?

If you aren't registered at all, here are the qualifications you must meet: You must be over 21 years of age by the day following the election in which you wish to vote. You must have been a United States citizen for at least 1 month. You must have resided in Pennsylvania for at least a year preceding the election—unless, of course, you previously resided in Pennsylvania for more than a year, then moved away and came back—and if this is the case, you must have resided in Pennsylvania for at least 6 months prior to the election after reestablishing your residence here. In addition, you must have resided in the precinct or election district in which you intend to vote for at least 2 months prior to the election. Finally—and this is essential if you haven't already registered to vote—you must register by March 25 if you otherwise meet the qualifications and intend to vote in the May 16 primaries.

Now, I am sure most of you are familiar with the fact that our voting registration in Pennsylvania is permanent—but in order to stay permanently registered, you must have voted at least once during the 2-year period preceding an election. So if you haven't voted in the past 2 years—even though you have been registered previously, you will have to register again in order to vote in the May 16 primary or in the general election next November 7.

Of course, if you're registered as a nonpartisan voter, you aren't entitled to vote in the party primary elections—and thus your participation is limited to the November general elections.

I do want to suggest to you, however, that you can change your registration if you haven't already changed your registration since the last general election. Thus, if you've previously registered as nonpartisan, you still have time to change over to a partisan registration and vote in the coming primaries. If you live in one of our cities of the first class, you have until March 25 to change your registration—or you have until March 27 if you live elsewhere than in a city of the first class.

Of course, as all of you know, your party registration—while it does affect the way you can participate in a primary—has no effect when you vote in the November general elections. Thus, a nonpartisan voter may cast his ballot in favor of either party, and a partisan voter may, if he wishes, cast his vote for candidates of the other party in the general election itself—though he is not eligible to do so in the primary.

I wish to say a bit now about the voting turn-out in Pennsylvania in recent years. The first great truth is the fact that people tend to neglect the primary elections pretty badly—there being a far smaller primary turn-out than occurs in the general elections. And this is especially true in the primaries for local candidates. Let me illustrate this by pointing out that less than one-third of the registered voters participated in Pennsylvania primaries in 1946—whereas two-thirds of the registered voters participated in the general elections * * * or in other words, twice as many voters turned out for the general elections in that year than voted in the primaries.

Another great truth is the fact that a far larger percentage of the registered voting population participates in presidential years than turn out in the off-year elections when the voting is for congressional and State offices. As I've already said, two-thirds of the registered voters engaged in the 1946 off-year elections, as compared to almost four-fifths of the registered voters who showed up for the presidential election of 1948.

There is one further truth to be found in the fact that not nearly all of our people eligible to vote are actually registered to

do so. For example, in 1948 there were over 7,000,000 Pennsylvanians old enough to vote—though it is true that some of these seven million were not yet American citizens, or were otherwise disqualified because they had not resided in Pennsylvania a sufficient length of time. The important point is, however, that only 4,750,000 Pennsylvanians out of that seven million were registered to vote in 1948.

Good government is everybody's business—and the extent to which our Government is good or bad reflects directly the degree to which our people show an interest in it, inform themselves on issues and candidates, and when the chips go down, engage in that most important duty of citizenship—the privilege of voting.

I am, indeed, gratified that voting registration in Pennsylvania increased by almost 200,000 in 1949 over the previous year. I believe this is a very healthy sign, and I want to encourage this sort of thing in every way.

So if you're not registered to vote—but otherwise eligible to do so, I can't urge you too strongly to get your name on the voting register by March 25 to participate in the May 16 primaries—or by September 16 to vote in the general election November 7.

Salary and Privileges of the President

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. McCORMACK. Mr. Speaker, for some time now there has been in progress a deliberate effort on the part of the Republican Party to set itself up as the great champion of economy and to portray the Democrats in the contrasting light of extravagance.

In line with this political-campaign propaganda, my distinguished colleague the gentleman from Michigan [Mr. WOODRUFF] recently presented a survey, carried in the CONGRESSIONAL RECORD of March 13, under the title "Salary and Privileges of the President."

He began this presentation with the remark:

> Mr. Speaker, a survey into the resources and privileges of President Truman discloses that in addition to being one of the best, if not the best-paid man in the world today, he also enjoys services undreamed of by his predecessors.

And the gentleman from Michigan [Mr. WOODRUFF] concluded with this statement:

> Mr. Speaker, everyone should agree that economy in every walk of life is a most admirable thing. In these days of wild-eyed and reckless public spending for almost every conceivable thing, good or bad, it is my opinion that those in high office should be the first to set an example for the people throughout the country. The above facts disclose beyond peradventure that economy has become a lost art in the highest office of the land.

Then the gentleman from Michigan proceeded to add all of the expenses of the President, as head of the State, into what the Congressman was pleased to call the President's real salary.

Such items as the cost of carrying on the State functions of the office of the President were included, the cost of Secret Service protection, the cost of maintaining and building destroyers and plane and such like items.

The tortuous statistical method used to gain the distinguished Representative's point is like adding the pro rata cost of operating the Congress onto his own salary to indicate that the real salary of the Congressman from Michigan is not $12,500 plus a tax-free expense allowance but in the nature of $100,000 or $150,000, per year.

For political purposes the distinguished Republican Member from Michigan has made his figures very plausible.

The Republicans in their self-appointed role of guardians of the public purse acted as prosecutor, judge, and jury of President Truman's expense account—and their verdict was "guilty."

But whom did they convict? Not President Truman; not the Democratic Party.

The ironic facts are that the legislation increasing the salary and the emoluments of the President was Republican in origin, was first studied and proposed in the Republican Eightieth Congress, and that an overwhelming majority of Republicans in the Eighty-first Congress voted for it.

Under the circumstances, therefore, our Republican colleagues will understand when I say that we, on this side of the aisle, in common with the public at large, regard to our colleague's fulminations on economy—at least in this instance, with a certain amount of skepticism. We can even go further and with complete safety in view of the facts of the case, and label this attack upon the President for what it really is: A completely unjustified and unwarranted political campaign libel based upon misrepresentation by omission.

In his statement—obligingly released to the press on the morning before its insertion into the CONGRESSIONAL RECORD the gentleman from Michigan first of all omitted the fact that the subject was first brought under study in July 1947 by a subcommittee of the Senate Post Office and Civil Service Committee.

You will recall that at that time the Republicans were in the majority in both the Senate and the House of Representatives. You will recall also that Republican hopes were then high for the election of a Republican President the following year and, presumably, it was for the purpose of making the office of President more lucrative for the expected Republican incumbent rather than for President Truman.

At any rate, the result of the study by the Senate subcommittee on the whole subject of top-bracket salaries in the Government resulted in the introduction of a bill, S. 1537, by Senator RALPH E. FLANDERS, of Vermont, who was chairman of the subcommittee. This bill was reported favorably in the Senate on April 1, 1948, but title III, the portion dealing with top-bracket salaries, was subsequently stricken from the bill.

However, the report on S. 103, which did become law in this Congress—and of which our colleague now, a year later belatedly complains—adopted the Flanders subcommittee report in toto explaining that, with certain minor exceptions, "the bill, as reported, is identical with the bill recommended by the subcommittee." The gentleman from Michigan [Mr. WOODRUFF] did not tell you that—another grave omission of fact.

Neither did Mr. WOODRUFF recall to this House that former President Herbert Hoover—a former Republican President—testified before the subcommittee of the Eightieth Congress on December 14, 1948, in favor of increasing the allowances to the President.

At that time Mr. Hoover, who testified along with other members of the Commission on Organization of the Executive Branch, of which he was chairman, said:

> I should think the American people would be perfectly willing, and perfectly willing and glad, to see the Government give board and lodging to the President. He does not get it now for he must pay his own board and that of numerous other people. He gets his lodging free, but even there he has to pay part of the upkeep cost. • • •
>
> He must receive a great many guests that he cannot charge to his allowance account, and so forth. We want the White House to be the leading and gracious home of the Nation. At least, I feel the American people would want that to be.

In his improper castigation of President Truman for accepting additional compensation which he himself did not seek but which was freely given by this Congress, the gentleman also omitted to remind you that this legislation was approved in the Senate January 13, 1949, by a vote of 66 to 9.

Almost three times as many Republicans voted for this measure as opposed it. The Republican vote was 26 ayes and 9 nays.

In the House this bill did not even come to a roll-call vote. It was passed January 17, 1949, under suspension of rules agreed to by voice vote of more than two-thirds of the membership.

In the face of such virtual unanimity on the part of this Congress in enacting a law giving the President the additional compensation he now receives, there seems to be no other explanation for the gentleman's recent diatribe on the subject than a desire to spread political propaganda.

Certainly the record of the House debate on the legislation at the time of its passage fails to disclose that the gentleman had any interest in the matter at all then. He did not even comment. The CONGRESSIONAL RECORD is bare of any utterance from him.

And finally, what other purpose than partisan politics could such a statement by the gentleman from Michigan serve? He does not ask that the Congress reverse its action. He does not propose reduction of the President's compensation to its former figure. He has not introduced any legislation to change the situation of which he complains.

I believe the public will rightfully mark down his present agitation of the subject—and similar transparent protestations to be expected the closer we get to election day—for what it is, pure a campaign utterance, completely unsupported by the facts.

UNIVERSITY OF MICHIGAN LIBRARIES

Loyalty in Washington

EXTENSION OF REMARKS
OF
HON. CHARLES R. HOWELL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. HOWELL. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include a letter to the editor of the New York Times, published in the March 27 issue of that newspaper. Written by Henry L. Stimson, who has served his country both as Secretary of State and Secretary of War, this letter reaches to the heart of the current so-called loyalty investigation in the Senate and presents a very clear exposition of the dangers involved by unfounded accusations against those in public service, both to the persons who are unjustly accused and besmirched and to the Nation as a whole because our foreign policy is dangerously impeded.

I congratulate Mr. Stimson on his masterful presentation of this difficult subject and present his letter in full for the benefit of those of my colleagues who may not have read it. I wish to add that I fully subscribe to the contents of the letter, which is entitled "Loyalty in Washington":

LOYALTY IN WASHINGTON—METHODS AND MOTIVES OF ATTACK ON STATE DEPARTMENT QUESTIONED

To the EDITOR OF THE NEW YORK TIMES:

The present charges against the Department of State have not in my view deserved much attention. But the very widespread notice they have received prompts me to make certain comments.

First, this is most emphatically not the proper way in which to insure loyalty of Government employees. If that had been the real purpose of the accuser, he would have used the fully developed and tested procedure of the executive branch of the Government, under which charges are investigated and weighed by men of both parties and unimpeachable integrity. Any constructive result which may eventuate from the present charges would have been achieved far more surely and effectively by use of the existing procedures. The fact that the accuser has wholly ignored this well-established method indicates that his interest is of a different character.

Second, no matter what else may occur, the present charges have already spattered mud upon individuals of the highest integrity, and in the present state of the world the denial cannot always overtake the accusation. It should by now be wholly clear that indiscriminate accusations of this sort are doubly offensive; they damage the innocent, and they help protect the guilty. For if the accuser is so stupid as to connect a man like Ambassador Jessup with communism, are not all such accusations made suspect?

REACTION ABROAD

Third, and more important by far, the method of the present charges directly and dangerously impedes the conduct of the foreign affairs of our Government. It creates abroad a feeling that we are frightened and suspicious of each other; it diverts our attention, at home, from the genuine and pressing problems of our foreign affairs; it requires of many high officials that they desert their proper duties in order to prepare and deliver such extensive replies as that of Mr. Jessup. Not one of these effects would have resulted from a disinterested study of the loyalty of any suspected State Department employees; each of them is the direct result of the manner in which these charges have been made.

Fourth, it seems to me quite clear that the real motive of the accuser in this case is to cast discredit upon the Secretary of State of the United States. This man is not trying to get rid of known Communists in the State Department; he is hoping against hope that he will find some. Fortunately, the Secretary of State needs no defense from me. No one who knows his extraordinary record of able and disinterested public service can believe that he is in any danger from these little men. It is already obvious that in any test of personal confidence the men of honor, in both parties, will choose to stand with the Secretary.

But there is more at stake in this matter than the rise or fall of individuals. What is at stake is the effective conduct of our foreign policy.

RESPONSIBILITY OF OFFICE

Every Secretary of State, second only to his President, and alone among appointive officers of the Government, stands before the world as the representative of the United States of America. No man who holds this office can fail to feel the extraordinary responsibility he carries for service to the country and its peace. No man has a greater right to ask the sympathetic support and the cooperation of his fellow citizens, and none is more properly exempt from the ordinary trials of politics. The man who seeks to gain political advantage from personal attack on a Secretary of State is a man who seeks political advantage from damage to his country.

The American Government, led by the President and the Secretary of State, is currently engaged in a major effort to give leadership to the country in a time of changing international conditions and grave world tension. This effort will require as part of our democratic process widespread and earnest public consideration of the great problems now before us, so that the ultimate decision will surely reflect the basic steadiness and faith of our people. In such public consideration there is always room for honest differences, but now, as for many years past, the formulation of foreign policy most urgently demands an adjournment of mere partisanship.

This is no time to let the noisy antics of a few upset the steady purpose of our country or distract our leaders from their proper tasks. This is rather a time for stern rebuke of such antics and outspoken support of the distinguished public servants against whom they are directed.

HENRY L. STIMSON.
HUNTINGTON, LONG ISLAND, *March 24, 1950.*

Address by Hon. Francis J. Myers, of Pennsylvania, Before Philadelphia Federation of Greek-American Societies

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Monday, March 27 (legislative day of Wednesday, March 8), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by me before the Philadelphia Federation of Greek-American Societies, in Philadelphia, March 26, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There are few American schoolboys who cannot tell you that the origins of the democracy under which we live are found in the ancient city states that flourished in Greece more than two millenniums ago. And the schoolboy can tell you too that the democratic institutions of the western world also trace their beginnings to the great days in the Golden Age of Greece.

I don't think, however, that this debt owed by the American Republic to those democratic beginnings so long ago completely explains the close bonds of friendship which have united the Greek and American people in modern times. Let us look for a moment, for example, at the struggles of a valiant Greek people about a century and a quarter ago to achieve national independence. In that era the young American Republic which had achieved its own freedom only a few years before, heeded the calls for help of the Greek people in their efforts to throw off the shackles imposed by the Ottoman Empire. Famous names in American history are found on the honor roll of those who made American aid possible. Thus we find on that roll such men as President Monroe, Daniel Webster, Henry Clark, Samuel Gridley Howe, and others, who bent their energies to aid the Greek people in giving a real meaning to the national independence they had declared in 1821.

The friendship between our peoples has been a deep and enduring one.

World War II brought home more keenly than ever the realization that freedom is everybody's business. Every American, aware of the bestial treatment visited upon so many of the Greek people by the Nazis during the long years of German occupation, could not help thinking that "there but for the grace of God are my family and my children." This thought explains in part—though there are many other reasons as well—why the American people have insisted that others the world over have the right to live in freedom under a government of their own choosing which safeguards their liberty and guarantees their opportunities for a secure future.

Europe emerged from World War II terribly-shattered, terribly tired, and terribly hungry. The defeat of the Nazi and Fascist dictatorships was a great sign of hope for the future that democracy could be kept alive and permitted to flourish. But there were other forces at work amid this chaos.

Despite the fact that three-fifths of the prewar industry in Greece failed to survive the war, and despite the fact that her agricultural resources were then hopelessly inadequate to feed her people, there were nonetheless two free elections held in Greece during 1946. In the spring of that year, representatives to the Greek Parliament were selected in democratic general elections. Later, in September of the same year, once more in a free election, a majority of the Greek people chose to reestablish their monarchy. That was where the trouble started.

The Communist threats to Greece were part of a huge world-wide strategy to dominate the planet. The events which characterized the year or two immediately following the end of World War II furnish us with abundant evidence as to Communist designs for control of the world. Elsewhere in Europe in that period, the economic outlook for most of the people was just about as grim as that which confronted the people of Greece. The Russians, of course, had made pledges regarding Poland and the other independent states of eastern Europe, in which they agreed to cooperate in permitting the people to choose their governments through democratic elections. One by one, these pledges were broken. By 1946 the iron

curtain was a reality. Government after government behind the curtain tumbled into the Soviet orbit.

The people of Greece at least did not have to contend with the presence of a Red army which had refused to go home, and in this respect their situation differed from that faced by the people of Poland, of Czechoslovakia, of Hungary, of Bulgaria, Rumania, and others behind the curtain. As a result, the Communist efforts to dominate Greece appeared in the form of an effort to stir up a civil war. Guerrilla forces, fed and armed by supplies which flowed across the borders from countries securely within Communist control, roamed at large through the mountain fastness of Greece, descending upon village after village to plunder and destroy them and ultimately to overthrow the Government chosen by a majority of the Greek people.

Turkey too was feeling the heat of Russian demands and was militarily unprepared to withstand any serious threat to its independence.

The democracies of the west used every possible means available in the United Nations to hold the Communists to their pledges, but they were inevitably confronted by a veto on the Security Council or by the walkout of Communist representatives in the UN General Assembly. By early 1947 it became clear that the Communist tactics would pay off in terms of selling out the free governments of Greece and Turkey unless someone acted, and acted at once. America's answer to this challenge was the Truman doctrine.

The Truman doctrine was a bold step, but judging it now in the light of hindsight, it is all the more remarkable that such a step was conceived and taken. Under that program, $300,000,000 was earmarked for immediate assistance to the Governments of Greece and Turkey. The bold step was a tremendous success.

In September of 1949, the Government of Greece was able to announce that the last guerrilla warfare had been stamped out. It was able to announce that civil order had once more been restored, that the guerrillas had either surrendered or fled from the country.

Then only a few short weeks ago, free elections were once more held in Greece. From the election returns we can draw one conclusive observation. The Communists have lost their political significance in Greece.

I do not pretend for a moment, however, that the troubles of the Greek people have all been solved. The people there are eating now, though to be sure, their diet is not one of abundance. There is enough food to go around, and enough to keep the people healthy and give them energy to carry out the big job which lies ahead of them. Agricultural production is larger than it was before the war, and industrial production has more than doubled in the past 4 years. This has not been enough to put the country on a self-sustaining basis. The progress that we have seen has resulted largely from the Marshall plan and the Truman doctrine, and of course, the hard work and ready cooperation of the Greek people themselves to improve their lot and bring to them the full measure of greatness which they so richly deserve.

In all likelihood that day is some time away. I am confident that the goal will be achieved under a free and democratic Greek Government. I say this because I know how sincerely the Greek people seek this goal, and I know, too, that America will do everything in her power, just as it has done in the past, to assist them.

The answer ultimately will lie, of course, in a greatly expanded industrial capacity for Greece, and in the achievement of a unified economy among the democratic nations of Europe.

The Marshall plan, as all of you know, has done a great deal to bring about economic recovery in Europe. The success obtained by the Marshall plan to date is almost miraculous when you consider that it has been in operation less than 2 years. In that brief time, representatives of the free, democratic nations of Europe have found an opportunity to sit down together and map out long-range plans for creating a balanced economy among the nations participating in the Marshall plan program.

This economic unification of the democracies is, of course, nowhere near complete. Mr. Paul Hoffman estimates that three billion American dollars are absolutely necessary this coming year to assure the ultimate success of the recovery program. That is a tremendous amount of money, and Mr. Hoffman is certainly the first one to appreciate that fact. However, I am in complete agreement with him that a cut made in the Marshall plan program at this time would cause a serious setback in the recovery efforts, and might very well hurl us back to the critical days of 3 years ago when we were faced with the alarming prospect that the Communists might control all of the continent of Europe, simply as a result of economic collapse in the democracies. The Marshall plan is our investment in a free world at peace, and quite apart from the horrors of another war, we have been assured by all our military advisers that we would be spending $30,000,000,000 or $35,000,000,000 annually for our national defense alone at this time if the Communists were in control of Europe and its productive capacity.

As I have indicated, the Marshall plan plays a key role in our efforts to achieve world peace. But we cannot confine our efforts to that program alone. I am hopeful that within the next 10 days or so the Senate will complete its action on the long overdue changes in our displaced persons law. Every delaying tactic in the book has been used up to now by the handful of Senators who have for one reason or another, objected to passage of a decent DP law. I am satisfied now, however, that we are on the last lap, and that the Senate will pass a new law which will offer some genuine relief to almost 150,000 victims of political oppression brought about largely as a consequence of World War II. I might add the thought here that the pending provisions in the Senate open the doors of America to 10,000 Greek refugees who, up to the present time, have had no opportunity to take advantage of the displaced persons program.

I would not feel that my remarks to you this evening would be complete without some reference to the thousands of Greek children who were abducted during the guerrilla warfare, and who are still being held captive in the Communist-controlled countries north of the Greek border. This cruel and inhumane kidnapping has received the condemnation of every free nation in the world. The agencies of the United Nations are continuing to bring pressure on the nations now holding these children. President Truman and many Members of the Congress have been in close contact with His Grace, Michael, Orthodox Archbishop of North and South America, and we have followed closely every development thus far. I am sure most of you are familiar with the fact that a strongly worded resolution of protest against these abductions was passed by the House of Representatives last Wednesday, and a similar resolution is now before the Senate Foreign Relations Committee. I give you my full assurance that I shall support the resolution when it is brought before us for a vote, and that I shall continue my own efforts to make certain that these children are returned to their families and friends in their native land.

I have attempted to summarize, briefly, it's true, some of the more significant landmarks in recent history. My emphasis, as you can certainly understand, has served to highlight those aspects of American foreign policy which reflect the deep friendship between the American people and the people of Greece. I feel, however, that all of you can appreciate the international overtones of these acts of friendship. I am certain that you appreciate—and I'm certain that the American people as a whole appreciate—that the cold war is world-wide in its scope. The Communist aims at world domination present themselves to us along a whole, broad front of our foreign policy. It is quite apparent, I think, that the Communists will use every effort to create division and disagreement among the democratic nations, and to stir up difficulty in the internal affairs of the democracies.

I am absolutely convinced that America is now winning the cold war. Such programs as the Truman doctrine, the Marshall plan, the Atlantic Pact and military assistance program, have served as an affirmative attack on Soviet schemes to catch us off guard. Successful as we have been to date, it is nonetheless apparent that we cannot relax our vigilance for a moment. We must move confidently ahead by projecting our existing programs to meet new situations as they arise, and we must adopt such proposals as the point 4 program recommended last year by President Truman as a means of assisting economically backward countries in lifting their living standards and strengthening themselves against the threat of communism.

As I say, our stakes in the future are tremendous. If we are to give a real meaning to our great dream of peace on earth under democratic forms of government, we will have to make use of every bit of intelligence we can muster. We will have to judge our moves rationally, thoroughly, and in an atmosphere of clear-headed cooperation. We can destroy our chances for achieving peace if we permit our foreign policy to become embroiled in cheap and petty political partisanship. We can also destroy our hopes for the future if we lose confidence in ourselves and in our ability to handle this admittedly difficult world situation.

As an American I am proud that our postwar foreign policy has been conducted on a high plane, and that it has enjoyed the overwhelming support of our people. We have not been stampeded by fear, and we have met our responsibilities of world leadership head-on and realistically. So long as we continue to do so, and I am sure we will continue to do so, I have no fear for our future. A world at peace, a world in which the full dignity of every man is recognized through the existence of democratic forms of government, is our goal. We have made real progress toward this, and I, for one, am sure that we possess both the ability and the will to succeed.

Dependence and Independence

EXTENSION OF REMARKS

OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. TALLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial entitled "Dependence and Independence" from the March 18, 1950, issue of the Oelwein Daily Register. This thought-provoking and timely article was written by my

good friend and constituent, Mr. O. P. Larson, Oelwein, Iowa, and appeared first in a recent issue of the Construction Bulletin:

DEPENDENCE AND INDEPENDENCE

There are two words in our English language of particular and peculiar importance at the present time. Perhaps they are of greater importance right now than at any other time in our history.

The two words are dependence, which Webster defines as "a state of being subject to direction or disposal of others. Inability to provide for one's self. Reduced to a servile state"; and the other word is independence, which is defined thus, "Freedom from the control of others. Direction of one's own affairs without interference."

Obviously they are exact opposites in their meaning and equally obvious is the fact that one cannot have both.

Our great war for freedom in 1776 has been called the war of independence and our great national holiday on July 4 is designated as Independence Day all over the land.

To be independent of others, to be free from their control, to be able to operate without interference, to shake off the yoke of servility to an oppressive king were the reasons for that great struggle.

Now are we a people clamoring for dependence? Do we wish to exchange the freedom for the bondage, the dependence on government for all of our securities and our daily lives?

Yet, there is no choice. We must be one or the other, for Government control of prices, labor, agriculture, old-age pensions, medicine, and such will permit no other course. The loss of independence is the price of these things. And, whether they will admit it or not, the loss of independence and the right to independent action has been and is the price which the rank and file of union members have paid for their leadership.

The state of dependence is the goal of every type of dictatorship too. The pattern of their development has always followed the submission of the people to their plans. To steal away their independence of thought and action by assuming their normal responsibilities and developing a servility born of dependence is the first step.

The thinking person knows how impossible it is for the Government to guarantee the responsibilities of the individual, to assume his task of providing for his own welfare, to maintain prices of commodities and labor and other paternalistic provisions without complete control of the individual. But there are too many who dream and do not think.

Will we awaken too late to these things? Will the moral fiber of the rank and file of our citizens be too far weakened before the end is discernible to revolt against this trend in Government? Is it already too late? Those are serious questions—infinitely serious questions. They involve the present as much as the future. They also involve every principle of our treasured independence.

For 16 long years the people of this Nation have been fed a diet of fabulous promises. Promises upon promises. Bigger promises to hide the ones impossible to fulfill. And they are still being fed the same pap of impossible attainments. Attainments impossible so long as there is a shred of independence left in the land.

The wicked wax fat on their promises even as they did in Biblical times, but let us hope that the divinity that shapes our ends will assert itself in our God-given intelligence and we of this Nation assert our rightful heritage and return to man's rightful character of independence and self-provision, for the Maker designed it so.

Deficit Spending a Threat to American Freedom, a Comfort to Collectivism

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement presented to the New England congressional delegation by the Smaller Business Association of New England on March 27, 1950, at Washington, D. C., by John H. Campbell:

DEFICIT SPENDING—A THREAT TO AMERICAN FREEDOM—COMFORT TO COLLECTIVISM

"Democracy and freedom here and throughout the world depend upon the preservation of our solvency which is being jeopardized by growing debt and chronic deficits," from a statement by Senator HARRY F. BYRD, Democrat of Virginia, dated February 22, 1950. This is not the alarmist cackling of an uninformed crank, it is the considered statement of your colleague, a member of the important Senate Finance and Armed Services Committees, and chairman of the Joint Committees on Reduction of Nonessential Federal Expenditures.

The SBANE has had for several years as one of its major planks the urging of a reduction in Federal expenditures. In our daily tasks of providing tools to employ nearly half of our national army of workers, we have to face economic facts. We direct the creation of that wealth from which taxes may be collected. But we must operate with a credit balance in the bank. If we have a bad year, we know that redoubled efforts must be exerted the next year or we will be forced out of business. And so it is with genuine alarm that we observe our National Government has been in the red since 1930, excepting for 1947–48. President Roosevelt used to tell us that we would balance the budget when we got out of the depression and President Truman tells us we'll do it when prosperity is greater.

We are alarmed that economic theorists are replacing recognized economic leaders in advising the President. We are alarmed by contradictory positions taken by the President on tax matters during the past 5 years. We are alarmed when the President says a reduction in Federal expenditures cannot be made, whereas only 2 years ago in 1948 the Government operated successfully on $8,200,000,000 less than he asks you Members of Congress to authorize for 1951.

We are alarmed when Government propaganda implies the blame for this increase is due to wars and foreign aid, when actually $5,300,000,000 is an increase in domestic civilian projects, exclusive of interest and defense and veterans' aid.

We are alarmed when Congress after having unanimously authorized the study of the reorganization of the executive department, fails to pass on the vital parts of the Hoover report. This report, completely nonpartisan, acclaimed as an outstanding public service by hundreds of outstanding citizens, is being made a political football. We realize it is not easy for you Members of Congress to vote changes that will disrupt the even tenor of bureaucratic existences. It is, however, just as patriotic a necessity as it was for millions of our young men and women to disrupt the even tenor of their lives in World Wars I and II.

In closing we are mindful that we were requested last year to be specific in our recommendations. To that end we are attaching to this statement a copy of Senator BYRD's $36,000,000,000 budget taken from his statement of February 22, 1950, and urge its adoption. Incidentally, we urge that this entire statement entitled "A Reply to Mr. Truman" be reexamined by each of you. It is startling to note that if this $36,000,000,000 budget be passed instead of the $42,400,000,000 asked by the President, the estimated savings to the taxpayers of Massachusetts would practically equal the total State budget for 1949. We also urge the prompt adoption of the report of the Hoover Committee on the Reorganization of the Executive Department. This is urged in order that the citizens of the United States receive the improved services possible under the reorganization plan. This promises both better service and reduced costs.

The hosts of collectivism are eager for a bankrupt America. Our personal freedom will then be in peril. A national debt of a quarter of a trillion dollars, and local, State, and Federal taxes that take nearly one-third of our national income, are warning signs. Heed them.

Finally we extend to you, our Representatives in Congress, the pledge to render every assistance in our power as citizens. It will not be an easy task to reduce Federal spending with the active opposition of the President. The fate of the Nation is as truly in your hands today as it was in the hands of the military during the war. Unfortunately we have glamorized wartime heroism almost to the exclusion of heroism in the line of peacetime duty. You have the opportunity and power to perform heroic service. May God give you strength to serve your country well in an hour of need.

A $36,000,000,000 budget for progress, in tabular form, with comparisons

[In billions of dollars]

Expenditure categories	Fiscal year 1948 (ended June 30, 1948), actual	Fiscal year 1950 (will end next June 30), estimated [1]	Fiscal year 1951 (begins next July 1)	
			Byrd 36 "billion" dollar budget	President's Jan. 9 proposals
I. Domestic-civilian (exclusive of veterans and interest)	6.9	11.4	8.9	12.2
Social welfare, health, and security	1.9	2.3	1.9	2.7
Housing and community facilities (including RFC secondary mortgages	.1	1.0	1.0	1.3
Education and general research	.1	.1	.1	.4
Agriculture and agricultural resources (including CCC)	.6	2.7	2.2	2.2
Natural resources	1.1	1.8	1.2	2.2
Transportation and communication (including postal deficit)	1.3	1.9	1.2	1.7
Finance, commerce, and industry	.1	.2	.1	.2
Labor	.2	.2	.2	.2
General government	1.5	1.2	1.0	1.3
II. National defense	11.0	13.1	11.3	13.5
III. Veterans	6.6	6.9	5.3	6.1
IV. Foreign	4.8	6.0	4.8	4.7
V. Interest on Federal debt	5.2	5.7	5.7	5.6
Total expenditure budget [2]	34.2	43.3	36.0	42.4
Revenue [2]	[3] 42.2	[4] 37.5	[4] 37.5	[4] 37.5

Washington News Letter From Hon. Francis J. Myers, of Pennsylvania, to People of Pennsylvania

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, March 27 (legislative day of Wednesday, March 8), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record two news letters by me to the people of Pennsylvania, the first dated March 9, 1950, the second March 23, 1950.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

WASHINGTON NEWS LETTER—A PERSONAL REPORT TO THE PEOPLE OF PENNSYLVANIA

MARCH 9, 1950.

A $28,600,000 water bill for Pennsylvania in 1951 is pending in the Appropriations Committees of Congress. You pay a different kind of water bill at home monthly, but these Federal funds for water management by Army engineers are just as important to you.

Flood-control projects save lives and cut down on millions lost annually through property damage, disaster relief, and reduced incomes in flooded areas. Flood control starts on the land itself by planting cover crops and developing forests that absorb water and retard run-off. Dikes and levees keep streams within their banks and prevent overflow. And huge storage reservoirs like Conemaugh Dam near Pittsburgh hold back winter water surpluses and drain them off gradually in the drier summer months.

River-channel improvements permit shipments of vast tonnages of steel, coal, petroleum, and others along rivers like the Ohio and Delaware.

Harbor developments keep open the Port of Philadelphia and our other vital gateways to world trade.

We're flood conscious in Pennsylvania. The terrain of our State is a flood maker, and with our high rainfall, downpours often add their burden to melting snows, causing flood damage to our communities.

Every section of Pennsylvania will be affected by the proposed Federal appropriations.

Planning funds: $285,000 to draw up flood-control specifications for reservoirs at Prompton, Bear Creek, along the Allegheny, the Shanango, and at Uniontown, Johnsonburg, Swoyersville, and Forty Fort.

Flood-control construction: $13,490,100 for work at Monemaugh, Sunbury, Clarion, York, and Williamsport.

Flood-control maintenance: $294,500 to maintain and operate existing projects at Johnstown, Punxsutawney, Tionesta, Crooked Creek, Loyalhanna, York, Youghiogheny River Reservoir, and the Mahoning Creek Reservoir.

Construction on rivers: $4,530,250 for locks and dams on the Ohio and Monongahela. And $4,000,000 is proposed for Federal clean-up of the grimy Schuylkill between Norristown and Philadelphia. Government work is possible now that the State has reached the half-way point on this $52,000,000 Federal-State program for culm removal from the Schuylkill, a program made possible by the 1946 act of Congress which I sponsored.

River and harbor maintenance: $6,013,000 to dredge and maintain channels of the Monongahela, the Allegheny, the Youghiogheny, and the Delaware—and for work on the harbor at Erie and in the Port of Philadelphia.

Federal water bills are big. Congress balances carefully the individual need and merit of each project against our limited ability to pay for it. No projects can be approved unless the benefits achieved will be greater in value than the construction costs.

From idea stage to completed project, every step requires one or more separate laws. Thus Congress must satisfy itself over and over again in approving the various steps. So bear in mind that each stage indicated below calls for one or more new acts of Congress:

Authorization for initial study to determine benefits and costs.

Appropriation of funds for the study.

Authorization of funds for construction when benefits exceed costs.

Appropriation of planning funds.

Appropriation of construction funds on a yearly basis (so each year the work is reviewed before new funds are allowed).

These safeguards against waste explain why necessary projects often take 10 years to complete. But it is foolhardy to drag out the work too long. Water-control projects do little good until completed—so during construction benefits are few. And construction cost generally rise when a job is tackled piecemeal. Thus, across-the-board reductions in funds delay all projects indiscriminately—and are poor economy in the long run.

FRANCIS J. MYERS.

WASHINGTON NEWS LETTER — A PERSONAL REPORT TO THE PEOPLE OF PENNSYLVANIA

MARCH 23, 1950.

More Government efficiency is on the way. President Truman sent 21 new reorganization plans to Congress March 13, 1950, to carry out Hoover Commission recommendations by clarifying chain of command—tying responsibility down to a single person for doing a given job by holding one individual accountable and giving him the proper authority to do his work (the Commission cited many instances in which it was impossible to determine who was responsible for what simply because of overlapping authority and conflicting jurisdictions); putting related jobs under the same roof—wiping out the inefficiency of having numerous "independent" agencies hacking at a small part of a big job.

Twenty percent of the Commission recommendations were put in effect in 1949. An estimated $1,250,000,000 will be saved annually by the 1949 changes. Major reorganization plans went through last year for the State and Defense Departments, and General Services Administration was formed to handle Government "housekeeping" affairs. Some changes were also made in the Departments of Commerce, Post Office, Labor, and in the Executive Office of the President.

The 21 new plans will take us almost to the halfway point on the job of reorganizing the executive branch along lines recommended by the Commission report.

Plans 1 through 6 clarify the chain of command for the Secretaries of Labor, Treasury, Justice, Interior, Agriculture, and Commerce. Similar changes were made last year in the State and Post Office Departments. These plans also propose to create Administrative Assistant Secretaries to provide top-level assistance to each of the six Cabinet officers.

Plans 7 through 13 also affect chain of command by placing administrative responsibility and authority in the Board Chairmen of seven Federal regulatory agencies: Interstate Commerce Commission, Federal Trade Commission, Civil Aeronautics Board, Federal Power Commission, National Labor Relations Board, Securities and Exchange Commission, and Federal Communications Commission. This will leave Commission and Board members free to handle rule-making and adjudicative duties without being bogged down with administrative details. Plan 12 also abolishes the statutory office of the NLRB General Counsel. A similar proposal was made in the Taft-Hartley Act amendments passed by the Senate June 30, 1949.

Plans 14 through 21 propose to bring related jobs under the same roof. Five plans deal with "housekeeping" by the new General Services Administration. Two plans transfer to the Labor Department certain wage-hour duties and unemployment-compensation matters presently handled by other agencies. And plan 21 takes a big step toward consolidating all Government transportation agencies by transferring the duties of the now-independent Maritime Commission to the Department of Commerce and creates the new office of Under Secretary of Commerce for Transportation.

Opposition faces some of the 21 new plans. Recall that the least controversial changes were made last year—and at that Congress rejected one of the seven reorganization plans submitted by President Truman when it voted down the proposal to establish a Cabinet-level Department of Welfare as recommended by the Commission. Either the Senate or House may reject one or more of the new plans by voting against it prior to May 12, 1950—but plans not voted against by either House or Senate become effective on that date. No one can argue against efficiency in Government, but disagreement is expected to some phases of reorganization as to what is the most efficient course to follow.

Bipartisan efforts to carry out Government reorganization must continue. In addition to the 21 new plans, hearings are scheduled on all-important legislation to modernize the accounting and personnel practices of Government and on a bill to complete reorganization of the Post Office Department. I'm hopeful of early action on all these measures because efficiency in Government is above politics—and, as I've done since the Commission was first proposed 3 years ago, I intend to give my full support to this important work.

FRANCIS J. MYERS.

Let Us Have Peace in Israel

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. McDONOUGH. Mr. Speaker, the continued shipment of arms to the Arab States by Great Britain in excess of the armament actually necessary to maintain internal law and order within those states constitutes a serious threat to world peace in which the United States is vitally concerned.

Unless further shipments of arms to the Arab States are halted, there might conceivably be a break in the truce between Israel and the Arab States which could ignite the holocaust of a third world war, and immediate action to prevent such a catastrophe is imperative.

The embargo on the arms shipments to the Arab States was lifted by the Security Council of the United Nations in August of 1949.

In view of the threatening attitude of the Arab States at the present, in my opinion our State Department should immediately instruct our delegates to the Security Council of the United Nations to act to bring the issue of arms shipments by Great Britain to the Arab States up for reconsideration by the Council, and to make every effort to impose new controls on such shipments which would restrict them to armaments actually necessary for the maintenance of internal law and order.

Constituents in my district have written to me concerning this vital issue, and from Mr. Aaron Richie and Mr. Gustave L. Goldstein both letters are so similar I am submitting only one:

MARCH 10, 1950.

DEAR MR. MCDONOUGH: I am taking the liberty of writing to you today about two matters which are causing me grave concern and which have to do with the attitude of our Government toward the State of Israel.

The first concerns the continued shipment of arms by Great Britain to the various Arab States in the Middle East, and which was recently called to the Secretary of State's attention by Congressman JAVITS, of New York. Unfortunately, Mr. Acheson's reply that Britain is shipping arms to the Arab States in fulfillment of treaty obligations with the sole purpose of ensuring internal law and order, is wholly unsatisfactory and does not stand up against the real facts of the situation, well-authenticated reports indicate that the Arab States are accumulating heavy arms such as jet planes, submarines, tanks, and destroyers which far exceed those necessary for the purpose of maintaining internal security.

The Jewish people of this country together with other large segments of the public, see in the rearming of the Arab States a threat to the work of reconstruction and rehabilitation now being carried out in Israel. It would involve the new State of Israel in an armament race which would divert manpower and capital into defense purposes and it constitutes a definite threat to the hard-won truce with the Arab States.

The second matter concerns the present discussions in the Trusteeship Council of the United Nations regarding the internationalization of Jerusalem. A new scheme has been proposed by the Chairman of the Trusteeship Council, presented as a compromise but which retains all the objectionable features of the original plan adopted by the last General Assembly and strongly opposed by our own Government and also by both interested parties, namely, the State of Israel and the Kingdom of Jordan. It is of the utmost importance that our Government take the initiative to change the unfavorable climate prevailing in the Trusteeship Council so as to settle this problem of Jerusalem before it comes to the spring session of the United Nations General Assembly.

Because I know that you have always been willing to help in situations such as these, I urge you personally to intervene with the President and the Secretary of State in these two matters. Our Government should tell Great Britain to stop immediately these arms shipments to the Arab States which jeopardize the peace of the Middle East. We should use our influence in the United Nations to work for a just and equitable solution of the Jerusalem program and a reversal of the impractical decision of the last General Assembly.

With kindest personal regards, I am,
Cordially yours,

AARON RICHIE.

I have responded to these appeals by writing the following letter to President Truman and to Secretary of State Dean Acheson:

MARCH 13, 1950.

MY DEAR MR. PRESIDENT: It has been brought to my attention that the continued shipment of arms by Great Britain to the various Arab States in the Middle East in excess of the necessary armament for maintaining internal law and order constitutes a serious threat to world peace in which the United States is vitally concerned.

I, therefore, urge that you take whatever steps are necessary to protest this action by Great Britain which, if not halted, might conceivably result in a break in the truce between Israel and the Arab States.

It has also been brought to my attention that the compromise proposal of Monsieur Garreau, chairman of the Trusteeship Council of the United Nations, relative to the internationalization of Jerusalem actually retains all of the objectionable features of the original plan which was opposed by the representatives of the United States to the United Nations.

I, therefore, urge that our representatives to the United Nations be instructed to work for a just and equitable solution of the Jerusalem problem, and for the defeat of the Garreau proposal as well as a reversal of the impractical decision of the last General Assembly of the United Nations on this problem.

Very truly yours,
GORDON L. MCDONOUGH,
Member of Congress.

It is my hope that the good offices of the President of the United States through the Secretary of State will be used to convince the Security Council of the United Nations that the potential danger of war in the Middle East may be the spark to set off world war III. The controversy over the administration of the holy places in Jerusalem should also be settled in a peaceful and conclusive manner.

Editorial Comment on Foreign-Policy Speech of Hon. William Benton, of Connecticut

EXTENSION OF REMARKS
OF
HON. RALPH E. FLANDERS
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Monday, March 27 (legislative day of Wednesday, March 8), 1950

Mr. FLANDERS. Mr. President, in the Washington Post of March 26 an editorial referring to the address on this floor of the junior Senator from Connecticut [Mr. BENTON] last week. It is an excellent editorial, and I think it would be of interest to those who read the RECORD to have it appear. I therefore ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INFORMING THE WORLD

It is high time the United States tried to capture leadership in the world of ideas in the manner Senator BENTON has suggested. The bolder foreign information effort he calls for, in a resolution introduced in company with ten other Senators, is affirmative action of the right sort. Reports from southeast Asia, one of the crucial areas, tell of the lag in knowledge of America and American aims. The riot in Saigon was a prime example of misunderstanding about American purposes. In this case, perhaps, the Voice of America cannot be blamed, for policy in Indochina still remains in semicloudland. It is basic that America be known as on the side of the hopes of the common people, not as the country whose arms are strewn all over the world.

India is another and even greater example of a land in darkness about America. Our editor, on his recent visit, noted three urgent requirements from America: more American library facilities, a steady stream of documentary films, competition with the British press ascendancy so that American news could have ready access to the Indian market. A tremendous need exists in a subcontinent which is in the throes of revolutionary change to show the people how America handled or is handling similar problems. Aside from being a vast country, India is one of many countries in the world which are in the grip of misconceptions about America produced by years and years of Communist propaganda. High and low the people speak the Muscovite patter about America. As an example, it took the representative of the Free Trade Union Committee of the AFL, Mr. Richard Deverall, about a year to live down the suspicion that he must be a Wall Street stooge. There are three excellent American libraries operated by American men and women with a sense of dedication, but they are simply scratching the surface, and the American investment is less than that of the British, let alone the Russian. Throughout the world the United States spends in total $34,000,000 in the information program, and this sum includes items that do not properly belong in that budget.

It is our experience in several other countries as well as India that the United States could profit from a thorough study of the methods pursued by other operators in this field of information. We can absorb a few lessons from the greatest propagandist in the world, viz, Russia. The Russians in this realm are supreme technicians. In India they keep in the background and work through such instrumentalities as Czech-Indian cultural institutions, the money seeming to come from the proceeds of Czech trade with India. The British Council, in its quiet and thorough way, provides splendid service in the field of education—night classes, library work—in such countries as Mexico and makes every penny count. Italians and French maintain institutes in far-away places which spread respect for the values of Latin civilization. All these operations, manned by intelligent and sympathetic persons, have provided true and rewarding mirrors of the sponsoring countries, and in the case of slave-ridden Russia even a vision of a fantastic workers' paradise. America, on the contrary, is seen in vast areas of this world through a glass very, very darkly as an ogre of a money-mad imperialist.

Senator BENTON would move ahead on many fronts—radio stations capable of reaching every receiver in the world; more aggressive efforts in the United Nations for freedom of information; support of the UN Educational, Scientific, and Cultural Organization; promotion of democratic education; a conference of non-Communist countries on information programs. We ourselves would pick out libraries and documentary films, a diplomatic crusade for freedom of the press, personal contact through American students and American teachers abroad, and radio stations—in that order. As to press freedom, it is our experience that the censor is beating out the newspaperman almost everywhere. Yet press freedom is a "value" the free world must treasure and must proselytize. Time was when Lord Hawksbury could write to

Bonaparte that "the King of England will make no concession to a foreign power at the expense of the liberty of the press" and when Alexander I could ask as soon as he arrived in Paris that the gags on press freedom should be removed. We applaud Senator BENTON for his initiative. Here is something affirmative, something truly fundamental.

Opposition of Labor to Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, March 27 (legislative day of Wednesday, March 8), 1950

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written for the Trainmen News by Alvaine Hamilton entitled "Labor Fights Bill To Boost Natural Gas Cost to Public."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LABOR FIGHTS BILL TO BOOST NATURAL GAS COST TO PUBLIC

(By Alvaine Hamilton)

WASHINGTON.—A lot of Senators are watching their mail carefully these days, to see how to vote on the natural gas bill proposed by ROBERT KERR, Democrat of Oklahoma. This measure would increase the gas bills in every major city using natural gas to heat its homes and fuel its industries.

With the amount of natural gas used at least doubling between 1947 and 1952, and with expansion of the pipe lines carrying gas from the oil fields of Texas and six adjacent States going on apace, the issue of whether the Federal Government can regulate the rates charged by gas producers who don't own their own pipe lines is a crucial one.

A 5-cent increase in the price of natural gas, probable if Federal regulation is lifted by passage of the Kerr bill, could cost gas users in Ohio $11,441,000 a year; in Pennsylvania $8,556,250 a year; in Illinois $4,768,800 a year; and in Michigan $3,744,500.

This money would be paid by household users and industries in those States, and it would go to swell the coffers of a small group of powerful companies—Standard Oil, Phillips Petroleum, Skelly Oil, Continental, and Gulf—which made fabulous profits equal to about one-quarter of their assets in 1948 alone.

MAKE HUGE PROFITS

The 24 large producers whose gas sales would be subject to no Federal controls if the Kerr bill passes, are among the most spectacularly profitable outfits in the country. In 1948, they had total assets of $14,000,000,000, and income of $12,500,000,000. They now enjoy special Federal tax provisions which allow them to charge off to depletion each year 27½ percent of their income, a loophole which every recent President has asked Congress to plug, but which is still wide open. Treasury statistics show the big companies are escaping taxes on about half a billion dollars a year in profits from this provision alone.

The Kerr bill, already passed by the House, will be fought by a group of Senators including DOUGLAS, Democrat, of Illinois; MYERS, Democrat, of Pennsylvania; KEFAUVER, Democrat, of Tennessee; HUMPHREY, Democrat-Farmer Labor, of Minnesota; GILLETTE, Democrat, of Iowa; AIKEN, Republican, of Vermont. It is expected to come to the floor soon.

The bill's supporters claim that, if passed, the bill will receive President Truman's signature. However, opponents point to the expression of disapproval of the original Kerr bill by the President's bureau of budget in hearings on the measure and claim that any changes since then have not changed its big steel character.

Federal controls over nontransmitting producers of this basic natural resource have been challenged on several occasions in the past. These efforts were largely unsuccessful because of the able battle by Leland Olds, then chairman of the Federal Power Commission, who saw how essential to consumers of gas was some effective regulation of rates in the public interest. It was this issue which led to the unsuccessful fight to secure his confirmation for another FPC term last summer.

Nothing but Federal controls on prices charged by nontransmitting producers will protect the public, opponents of the Kerr bill insist. They point out that the pipe lines which carry the gas are expensive; once a line is established from a producing field to a city like Cleveland, or an area like upstate New York, the city's consumers and the pipe-line owner are at the mercy of the producer. If they don't like his prices, they can't pick up their pipe line and move to another field where a competitor will sell at a lower price.

MAYORS OPPOSE BILL

And city officials and consumer spokesmen including the unions look with deep suspicion on the claims by Kerr and others that State price regulation will prove effective. The gas is highly concentrated in seven States—Texas, Oklahoma, Arkansas, Louisiana, Mississippi, Kansas, and New Mexico. The oil producers in most cases virtually elect and run the legislatures in these States.

Twelve big companies, out of the 600 producers, who would be affected by this bill, sell over half of the natural gas in the United States.

The Panhandle and Hugoton fields in Texas, Oklahoma, and Kansas produce one-quarter of all the natural gas.

The United States Conference of Mayors and the Municipal Law Officers Association both are fighting hard against this bill, because they know what it will mean in terms of higher gas bills for the people of the big cities. Both CIO and AFL are working nationally and locally against the measure, to get Senators committed to oppose it.

Middle-Income Housing

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, March 27 (legislative day of Wednesday, March 8), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Sound Housing Decision," appearing in the Philadelphia Inquirer of March 24.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A SOUND HOUSING DECISION

Rejection by the House of Representatives of President Truman's plan for a $2,000,000,000 agency to assist middle-income housing cooperatives seals the fate of another administration attempt to edge the Government still further into a field that should be left to private enterprise.

Our disapproval of this phase of Mr. Truman's program is not founded on the notion that there are ample homes available for families with incomes ranging from $2,800 to $4,400 annually. There is, in fact, an acute shortage of such homes.

The issues are whether it is sound public policy for the Government to invade an area in which private financing appears to be able to fill the need and whether, had Congress authorized the experiment, the housing shortage would have been materially relieved. The answer in each case is "No."

The most ardent believers in the aid-to-cooperatives plan say only 50,000 homes a year would result and that in 5 years less than 4 percent of the need would be met. This estimate should be compared to the 950,000 homes that will be started this year without benefit of the proposed program.

In the field of low-cost housing, where it is manifestly impossible for builders to produce homes within the reach of the lowest income group, the Federal Government has quite properly accepted responsibility. It is in this area of the greatest need that Federal assistance should be concentrated.

Criticism by Hon. Francis J. Myers, of Pennsylvania, of Proposed Reduction in ECA Funds

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, March 27 (legislative day of Wednesday, March 8), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me regarding the proposed reduction in the ECA appropriations.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

MYERS SAYS ECA REDUCTION WOULD MAKE PROGRAM DOLE

ERIE, PA., March 11.—United States Senator FRANCIS J. MYERS, Democrat, of Pennsylvania, insisted tonight that a reduction of 1951 ECA funds below levels recommended by Marshall plan Administrator Paul G. Hoffman, would "convert that program from one of recovery into a high-price dole—or worse still, jar Europe's economy so badly that Communist domination would be inevitable."

The Pennsylvania senior Senator addressed members and guests of the Erie County Bar Association here tonight.

"Economic stability," MYERS said, "is being accomplished in Europe today. By this I mean that recovery is a dynamic thing. The Marshall plan is not merely shoring up employment and providing the people of western Europe with a minimum diet. American aid thus far has permitted the democracies to make steady progress to a greater production—and in fact, industrial output today is well above the prewar level.

"Translated in terms of economic stability this means that western Europe is now finding it possible to reinvest 20 percent of its total product for the enlargement of its production facilities. Progress of this sort is the kind of guaranty required if Europe

UNIVERSITY OF MICHIGAN LIBRARIES

is to close the dollar gap and become an effective, self-supporting working partner in our efforts to bring about world peace.

"The Marshall plan is perhaps the greatest cooperative adventure ever undertaken by man. It owes its birth to the proposal outlined by our great soldier-statesmen George C. Marshall, and without any doubt whatsoever, the brilliant leadership of Paul Hoffman has played a major part in the success the program has thus far achieved in bringing the democratic nations together as a team.

"As we look into the coming year, I am convinced that future world peace stands at the crossroads. Those whose duty it has been to administer the European recovery program have been completely honest in giving us the facts of the case—the bad right along with the good. When Mr. Hoffman and those who work with him have come to the Congress to request funds for the program, they have not overstated the case. They have not asked for more than they needed to bluff the Congress into furnishing what they really required. They have requested the minimum funds absolutely necessary to assure success of the recovery plan.

"For the coming year, Mr. Hoffman has asked the Congress to underwrite an appropriation amounting to $2,950,000,000. This is not a number pulled out of the air. This figure represents the realistic best estimate of men who are at once aware of America's ability to foot this kind of bill, and who, at the same time, keenly appreciate the alternative we face if the Marshall plan fails to accomplish its purpose.

"There are two ways we can meet this situation. We can stick with the job until western Europe can stand on its own feet without the need for extraordinary dollar assistance. To do this we must make adequate funds available to assure the continued expansion of Europe's economy to the point that it balances its trade under conditions of high-level employment. Mr. Hoffman has told us what this will cost during the coming year.

"But as I say, there is another way to handle the matter. We can reduce Marshall-plan funds below the level recommended for the coming year. By doing this—depending upon the size of the slice we whack off—we can slow down or halt economic expansion. If we merely slow it down, we postpone the day that Europe can become self-sufficient. Necessarily that will require American aid over a much longer period than we now plan, and we will wind up spending much more in the long run. If we halt expansion completely, we will leave western Europe with a still existing dollar gap, a still existing bare minimum level of subsistence. At such a point American aid will cease to promote recovery and will become no more than a hand-out to keep people from starving to death. It will not solve the problem. It will merely guarantee that the problem will remain.

"If European aid is cut too far or withdrawn altogether in the coming year, the situation will become far worse than this. We would, in effect, pull the rug out from under everything we've achieved to date. Unemployment will skyrocket. People will once more be starving, and Communist hopes of domination over the western democracies as a result of economic collapse will become a reality.

"America cannot afford the consequences of this. If the Communists controlled western Europe today, we would be planning a defense budget for 1951 in terms of twenty-five or thirty billion dollars at least—instead of the twelve or thirteen billion dollars we are presently considering. I do not, however, intend to justify the Marshall plan on the materialistic dollar savings it represents to us, though I think it quite obvious that such an argument is on economically sound grounds.

"Success of the Marshall plan is spelled out in two words—cooperation and hope. Without both, there can be no success. Cooperation faced tremendous obstacles when the recovery program was inaugurated 2 years ago. Traditional national jealousies, economic, political, and social, have divided the nations of Europe, built tariff walls and trade barriers between them, and have, in effect, been the very opposite of cooperation. But the nations of Europe have come a long way since 1948. Cooperation is steadily gaining greater meaning. But it's slow, and efforts cannot be relaxed. Curtailment of American participation in this cooperative venture would spell disaster.

"Psychologically, the recovery program has given Europe hope that its problems may be worked out together—hope that a bright future can be achieved if the present mighty efforts are continued. Perhaps hope is, in and of itself, our most effective cold war weapon.

"The Marshall plan is achieving a miracle. It is a model of what can be achieved internationally when men of idealism and ability can find the chance to join hands and work together in good faith for a common aim—the aim of peace in this world for all time to come. None of those who so deeply desire peace in a free and democratic world underestimate the size of the task that confronts us. The job will strain every ability we have. It will require steady nerves. It will require resolute insistence upon the basic premises of freedom. The stake in the future is huge. And so is the need for peace. The American people have a grave responsibility on their own shoulders to play a realistic part in the joint efforts of free people to reach this sought-after peace. I know we will come through."

Communists in Government

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, March 27 (legislative day of Wednesday, March 8), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The McCarthy Rampage," published in the New York Herald Tribune of recent date, and excerpts from the sermon by Rev. Powell Davies, at All Souls Unitarian Church, on March 19, 1950, relative to the inquiry being made by the subcommittee of the Committee on Foreign Relations.

There being no objection, the editorial and excerpts were ordered to be printed in the RECORD, as follows:

THE MCCARTHY RAMPAGE

The promise of at least a week-end lull in the McCarthy uproar gives a chance to ask, with some soberness, what this is all about, anyway. It was early last month that Senator MCCARTHY suddenly broke out on his shotgun rampage against Communists in the State Department. Just what he was talking about has never been wholly clear, since he has seldom paused long enough to say; his specific allegations have been, altered, dropped, shifted in a bewildering torrent of words, but the general charge appears to be that the State Department is honeycombed with Communists and Communist sympathizers, all sheltered by Secretary Acheson himself.

At least a preliminary review of the resultant furor and fireworks now seems possible. The Senator has scored a point or two. He has forced an investigation, which is only just showing signs of struggling up through the party politics (prominent on all sides of this curious affair) and possibly doing some real investigating. He has trapped the State Department into an absurdly anomalous position in the John S. Service case. On the other hand, he caught a Tartar in Miss Dorothy Kenyon, whose description of the Senator as an "unmitigated liar" has not so far been widely challenged. His methods have been inexcusably reckless, irresponsible, and patently unfair; and they have called prominent attention to his own past, in which his record for balance, judiciousness and probity is far from invulnerable.

Nor has he begun even remotely to prove what seems to be the major thesis of widespread Communist infiltration in the State Department. He has not produced a single actual Communist, card-carrying or otherwise. What he has mainly done so far is to drag up a good deal of past history, most of it well known, to present it in the most invidious possible light. Most of the nine persons as yet actually named fall into a few familiar categories. The most important—it includes Messrs. Lattimore, Service, and Hanson—are the survivors of the State Department group which was impressed by the Chinese Red leaders (not by the Soviet leaders in Moscow), who were convinced that the Reds were going to win China (as they have done) and whose influence was generally in favor of basing American far-eastern policy on the Red movement. This group was undoubtedly influential; it may have been short-sighted and its influence misdirected, but it was certaintly not motivated by treason to the United States or hidden loyalty to the Kremlin. And to assail it now on such ground is certainly not the way in which to correct any defects it may have introduced into American foreign policy.

Around this group the Senator, by lavish use of the technique of guilt by association, has been weaving a wider net. Those who, like Miss Kenyon, may have been careless about Communist exploitation of their names; figures like Professor Shapley and Schuman who have lent repeated support to Communist attitudes or propagandas, fellow-traveling types of one sort or another—any of these who can be connected, however remotely, with State Department encouragement, are cited to show Communist infiltration of our foreign affairs. Elements in the Department may have been too gullible in such cases; it is again no proof of Communist domination and this reckless assault is again an extremely dangerous and useless way of correcting whatever real defects may exist.

The Senator may really have more than all this to bring out, and the proceedings are at least to be got on a somewhat sounder footing. So far, one can only say that if there is anything wrong with the Department it is not what the Senator implies that it is, while his method of remedy is the equivalent of burning down the whole house in order to roast a pig. We are in too deadly serious a world to permit of that way of conducting our foreign relations.

DR. DAVIES DEFENDS ACHESON—URGES "QUIET" LOYALTY PROBE

The Reverend Dr. Powell Davies yesterday defended Secretary of State Acheson.

In a sermon at All Souls' Unitarian Church, Sixteenth and Harvard Streets NW., Dr. Davies declared that Acheson is "desperately trying to arouse the Nation to a full recognition of its peril and * * * to unite us behind a policy that combines strength and resolve with a high sense of moral aim and worthy purpose."

Yet, he said, Acheson is "sniped at, whispered about, and badgered by the same paltry men who have done the same paltry things to every other man of stature in the Government."

He charged that political opportunists are sowing "suspicion and mistrust * * * pretending that they do it as patriots seeking to uncover disloyalty."

Searching out treason, Dr. Davies said, is a "delicate business, to be undertaken quietly, responsibly, and soberly by people who understand that business."

It is necessary, he continued, to identify efficiently "whatever traitors there are in the Government and then to deal with them to our advantage.

"This cannot be done by turning a Senate hearing into a sideshow at a circus," he declared.

"Mental balance and emotional maturity," he said, "are necessary if we are to defeat the Communists.

"The Communists are smart. Much too smart for Senator MCCARTHY, because he is doing exactly what they want him to do," he said. Wisconsin Senator JOSEPH R. MCCARTHY'S charges of communism in the State Department were aired before the Senate last week.

America is giving Stalin what he wants "not through disloyalty but through stupidity," Dr. Davies said.

Political Investigations

REMARKS

OF

HON. THURMAN C. CROOK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. CROOK. Mr. Speaker, observing with microscopic nicety the tactics used by some Members of both Houses of this Congress, I am stimulated to wonder whether or not this is the second session of the Eighty-first Congress or just the curtain raiser of the current political campaign.

Seemingly, a few Republicans have resorted to every conceivable method to discredit the Democratic Party and some agencies of Government. If we have Communists holding responsible positions in our Government I advocate their discharge immediately, if not sooner, but when we make charges against any man or woman let us be certain we have adequate reasons and proof to justify said charges. False accusations clothed in legalized immunity are dangerous weapons before the eyes of Americans and a gross handicap to the peace and respect of the world.

It is a rather strange situation when Republican leaders constantly desire to institute investigations of the Democratic Party when they themselves are not living far in the annals of time from the Fall and Doheney caravan that goose-stepped across the United States to the tune of the sizzling Teapot Dome and many other similar escapades that left a trace of shame on our esteemed Commonwealth, including attempts of monopolistic exploitation of the American people in this Congress.

The party that has always been guilty of instituting investigations, and a few other individuals closely affiliated with it, have, in their rancor, reached the stage where I deem it expedient that an investigation committee be appointed to investigate those instrumental in giving inception to the original investigating committees. Those that live in glass houses should always refrain from throwing stones.

All the angels are not in any one political party, as some would gladly have you believe. This is true in the Nation and all the States of the constellation of States. The Republican Party has reason to hang its head in shame. And when I say this, I remember one of its governors in the State of Indiana that served time in the penitentiary at Atlanta, Ga., and another one of its governors of the same State that pleaded the statute of limitations to keep from serving a similar term. What a record they established in their greed for wealth and power at the expense and exploitation of the common man.

Our Navy

REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. HARVEY. Mr. Speaker, 156 years ago today President Washington signed a measure creating our Navy. This was on March 27, 1794. The glorious history of our Navy and its part in preserving our early Republic needs no recounting. It would be appropriate today, however, to pause and recognize what a great debt we owe to our Navy.

There are those who—though I do not question their sincerity—would reduce this component of our armed services to minor proportions, and in so doing would seriously jeopardize our security.

At this time I wish to congratulate our Navy upon its birthday and wish for it a continuation of its long and glorious history.

Indiana has had an impressive part in our Navy, and at this time I include a list of some outstanding naval officers and recipients of the Navy Cross, who were from Indiana:

Rear Adm. M. K. Fleming, United States Navy (retired), was born December 6, 1906, in Winchester. He holds two Legion(s) of Merit awards as well as other medals. Was an aviator, commander of several attack groups during the war. Retired October 1, 1949.

Vice Adm. John H. Cassady, United States Navy, was born April 3, 1896, in Spencer. He is presently the Deputy Chief of Naval Operations (air) and is a naval aviator. He commanded the carrier U. S. S. *Saratoga* operating with a Pacific task force. He has commanded a carrier division and holds three Legion(s) of Merit, honorary commander of the Military Division of the most Excellent Order of the British Empire awarded him by the Government of Great Britain, as well as other medals.

Read Adm. Howard H. Good, United States Navy, was born August 12, 1888, in Warren. He served on many warships prior to the entrance of the United States into World War II. He was in command of the cruiser U. S. S. *New Orleans* at Pearl Harbor during the initial bombing of that base by the Japanese. The ship under his command later served with distinction during the Battle of Coral Sea. Besides the Legion of Merit, the admiral holds the Mexican Service Medal, the China Service Medal, and many others. He is now commandant, Thirteenth Naval District, Seattle, Wash.

Rear Adm. Robert E. Blick, United States Navy, was born July 8, 1899, in Peru. A naval aviator, he also holds a master of science degree in aeronautical engineering from Massachusetts Institute of Technology. He commanded carriers during the war and his ships participated with distinction in many campaigns. He holds the Navy Cross, the Legion of Merit with Gold Star, the Presidential Unit Citation, and many other medals. He is now in command of Carrier Division 14.

Rear Adm. Morton D. Willcutts, Medical Corps, United States Navy, was born March 10, 1889, in Carthage. He saw much action in World War I as a medical officer and gained world renown in the Second World War when he was commanding officer of the naval hospital at San Diego. He holds medals awarded him by the Governments of China and Haiti as well as the Legion of Merit, and many other medals. He is now commanding officer, National Naval Medical Center, Bethesda, Md.

Vice Adm. Russell S. Berkey, United States Navy, was born August 4, 1893, in Goshen. Prior to World War II he served in China and Iceland and elsewhere on warships. During the war he commanded the cruiser U. S. S. *Santa Fe* in Alaskan waters, then became commander of Cruiser Division 15 which saw much action in the Pacific. He won the Navy Cross, the Distinguished Service Medal, three Legion(s) of Merit, and many other medals. He is now in command of the Seventh Task Fleet with orders to report as Chief of Information, Navy Department.

Commander Richard N. Antrim, United State Navy, born December 17, 1907, in Peru. He is one of three Navy men from Indiana who won the Medal of Honor, highest award in the United States presented to him by President Truman at ceremonies in the White House January 30, 1947, for conspicuous gallantry at the risk of his own life while a prisoner of the Japanese. He also holds the Navy Cross, the Bronze Star Medal, and many other awards.

Rear Adm. Norman Scott, United States Navy, was born August 10, 1889, at Indianapolis. Served on destroyers during World War I, and as naval aide to the President in 1918. He was killed in action during the Battle of Guadalcanal November 23, 1942, while in command of a task force. On December 9, 1942, the President presented the Medal of Honor to Rear Admiral Scott's family. The medal was "for extraordinary heroism and conspicuous intrepidity above and beyond the call of duty."

Col. David M. Shoup, United States Marine Corps, was born December 20, 1904, at Battle Ground. He served in the Philippines, China, and many marine stations within the United States. In the Pacific war he was wounded during the fight for New Georgia Island in the Solomons, and again at Tarawa. During the latter engagement, though shocked by an exploding shell and severely wounded by enemy fire, he continued to rally and lead his men until the entire Japanese invasion was annihilated. For this he was awarded the Medal of Honor.

Rear Adm. John B. Heffernan, United States Navy (retired), born October 21, 1894, in Washington; he is now director naval records and history. He served on destroyers in both world wars. He commanded a transport division in the assault and recapture of

UNIVERSITY OF MICHIGAN LIBRARIES

Guam and later commanded the battleship *Tennessee*. He was awarded the Legion of Merit, the Bronze Star Medal with three gold stars, the Navy Unit Commendation, as well as many other decorations. His usual residence is 14 George Street, Washington, Ind.

Rear Adm. Royal Rodney Ingersoll, United States Navy (deceased), was born December 4, 1847, in Michigan, retiring from the naval service in 1919 to live in LaPorte, Ind., where he died in 1931. The admiral was the father of Admiral Royal Eason Ingersoll, United States Navy, and grandfather of the late Lt. Royal Rodney Ingersoll II. The destroyer U. S. S. *Ingersoll* is named for the late rear admiral and his grandson.

Admiral Raymond Ames Spruance, United States Navy (retired), was born July 3, 1886, in Maryland, attended high school in Indianapolis and was appointed to the Naval Academy from Indiana. He served on many warships during his naval career and in both World Wars. In addition to the Navy Cross, the Distinguished Service Medal with two gold stars, the Distinguished Service Medal-Army, and the Presidential Unit Citation, Admiral Spruance also was presented medals by the governments of Greece, Belgium, and Great Britain. His wife is the former Margaret V. Dean, of Indianapolis. Official address: care of Monterey Country Club, Del Monte, Calif.

Admiral Jonas H. Ingram, United States Navy (retired), was born October 15, 1886, in Jeffersonville, Ind. For gallantry in battle at Vera Cruz, Mexico, in April 1914, he was awarded the Medal of Honor. He commanded battleships, destroyers, destroyer divisions, and battle fleets, as well as task forces during World War II. Besides the Medal of Honor, Admiral Ingram holds the Navy Cross, the Distinguished Service Medal with two Gold Stars, Purple Heart, and awards from the governments of Brazil, Belgium, and Great Britain.

Vice Adm. Arthur B. Cook, United States Navy (retired), was born December 11, 1881, in Evansville, Ind. He served in World War I, qualified as a naval aviator in 1928 and served in aviation billets from thence on. He served as commanding officer of the carriers *Lexington* and *Langley*. He served in the Bureau of Aeronautics and as Chief of Air Operational Training and as Commandant, Tenth Naval District, during the late war. He retired December 1, 1944. His usual residence is Evansville, Ind.

Vice Adm. William S. Farber, United States Navy (retired), was born in Frankfort, Ind., on March 16, 1885. He served on or as commanding officer of many warships in his distinguished career. During the late war he served as head of the Fleet Maintenance Division, as Assistant Chief of Naval Operations for both Matériel and Maintenance, and as Deputy Chief of Naval Operations. He has been awarded the Distinguished Service Medal, Legion of Merit, and many other decorations, including one from the Government of France. Official address: Breezeland, RFD No. 2, Cazenovia, N. Y.

Rear Adm. Edward J. Marquart, United States Navy (retired), was born March 11, 1880, in Valparaiso, Ind. He was an ordnance expert during his career and served at the Naval Gun Factory in Washington during all of World War I, for which work he was awarded a special letter of commendation. He served as Commandant of both the Navy Yard, New York, and the Third Naval District during World War II before retiring April 1, 1944. Besides the Legion of Merit, he holds the Spanish Campaign Medal, China Service Medal, Philippine Campaign Medal, and others. Official address: 755 South El Molina, Pasadena, Calif.

Rear Adm. Robert W. Hayler, United States Navy, was born June 7, 1891, in Ohio, and attended schools in Muncie, Ind., before entering the Academy in 1910, appointed from the Eighth Indiana District. He won the Navy Cross for heroism while commanding the cruiser *Honolulu* in August 1942, and a second Navy Cross a year later. His ships won the Navy unit commendation for action against the Japs. While Commander Cruiser Division Twelve, he won a third Navy Cross. In addition to his Navy crosses, he also was awarded the Silver Star Medal, Legion of Merit twice, Bronze Star twice, and many other decorations. Official address: 800 East Washington Street, Muncie, Ind.

OFFICERS AND ENLISTED MEN OF THE UNITED STATES NAVY BORN IN THE STATE OF INDIANA AWARDED THE NAVY CROSS, DECEMBER 7, 1941–AUGUST 1, 1948

Commander Richard Nott Antrim, United States Navy; born December 17, 1907, Peru, Ind.; home, 109 North Fremont Street, Peru, Ind.

Lt. James W. Barnitz,[1] United States Naval Reserve; born May 10, 1920, Indianapolis, Ind.; home, Indianapolis, Ind.

Lt. James Henry Bell, United States Naval Reserve (deceased); born December 19, 1918, Penville, Ind.; home, 1521 North A Street, Elwood, Ind.

Rear Adm. Russell Stanley Berkey, United States Navy; born August 4, 1893, Goshen, Ind.; home, 1620 South Elleroad Avenue, Tulsa, Okla.

Ensign Norman Burns Bitzegaio, United State Naval Reserve (deceased); born January 20, 1921, Caumont, Ind.; next of kin, 340 Prospect Street, Indianapolis, Ind.

Capt. Robert E. Blick, United States Navy; born July 8, 1899, Peru, Ind.; home, 716 Spring Street, Michigan City, Ind.

Lt. Comdr. John Randolph Bowen, United States Navy; born March 8, 1917, Wiona Lake, Ind.; home, 6146 Primrose Avenue, Indianapolis, Ind.

Capt. Maurice E. Browder, United States Navy; born October 22, 1897, Indianapolis, Ind.; home, Indianapolis, Ind.

Capt. Charles A. Buchanan, United States Navy; born October 28, 1904, Brookville, Ind.; home, 1132 Isabella Avenue, Coronado, Calif.

Lt. Philip W. Cobb, United States Naval Reserve; born March 24, 1918, Indianapolis, Ind.; home, 1014 Throop Street, Saginaw, Mich.

Lt. Comdr. James W. Coe, United States Navy; born June 13, 1909, Richmond, Ind.; home, 211 North Fifteenth Street, Richmond, Ind.

Lt. Comdr. Albert Joseph Corsi, United States Naval Reserve; born May 12, 1911, Richmond, Ind.; home, 291 North Walnut Street, East Orange, N. J.

Lt. Comdr. Clement M. Craig,[1] United States Naval Reserve; born December 4, 1914, Indianapolis, Ind.; home, P. O. Box 276, Los Gatos, Calif.

Commander Robert W. Denbo, United States Navy; born August 2, 1906, Orleans, Ind.; home, 435 West Jefferson, Orleans, Ind.

Lt. (jr. gr.) Charles Hall H. Dickey, United States Naval Reserve; born November 25, 1920, Aurora, Ind.; home, 202 First Street, Morristown, Tenn.

Lt. Charles Owen Dodson, Jr., United States Naval Reserve; born November 17, 1920, Hammand, Ind.; home, National Carbon Co., Niagara Falls, N. Y.

Ernest Willard Downey, boatswain, United States Navy; born November 3, 1908, Loogootee, Ind.; home, 923 East Whitman Avenue, Pocatello, Idaho.

Ensign William Robinson Evans, United States Naval Reserve (deceased); born August 11, 1918, Indianapolis, Ind.; next of kin, 5019 North Meridian Street, Indianapolis, Ind.

Commander James Louis Fuelling, Medical Corps, United States Navy; born July 16, 1913, Allen, Ind.; home, 1720 North Bosart Avenue, Indianapolis, Ind.

Lt. Ronald Paul Gift, United States Naval Reserve; born February 20, 1919, Indianapolis, Ind.; home, Marlette, Mich.

[1] Gold Star in lieu of second Navy Cross.

Commander Irvin S. Hartman, United States Navy; born, September 14, 1911, Columbia City, Ind.; home, route 7, Columbia City, Ind.

Commodore Samuel P. Jenkins, United States Navy; born, June 3, 1893, Evansville, Ind.; home, 1145 Twenty-first Street, San Diego, Calif.

Lt. (jg) Robert L. Klingler, United States Naval Reserve; born, January 23, 1921, Clay City, Ind.; home, Clay City, Ind.

Lt. Robert D. Kunkel, United States Naval Reserve; born, November 2, 1918, Peru, Ind.; home, Dallas, Tex.

Commander Frank D. Latta, United States Naval Reserve (deceased); born, January 10, 1909, Indianapolis, Ind.; next of kin, 543 South Central Avenue, Burlington, Iowa.

Lt. John C. Livezey, United States Navy (deceased); born, February 12, 1909, New Castle, Ind.; next of kin, 6 Hawthorne Terrace, Leonia, N. J.

Lt. (jg) James Harold Livingston, United States Naval Reserve; born, August 11, 1922, Marble Rock, Ind.; home, 629 Washington Street, Monroe, Mich.

Lt. Carl F. Luedemann, United States Naval Reserve; born, June 11, 1919, Indianapolis, Ind.; home, 1009 Villa Avenue, Indianapolis, Ind.

Ensign Charles O. McDaniel, United States Naval Reserve; born, February 6, 1923, Rushville, Ind.; home, 217 North Spencer Street, Rushville, Ind.

Lt. Clark William Miller, United States Naval Reserve; born, December 15, 1919, Lebanon, Ind.; home, 212 East Washington, Lebanon, Ind.

Ensign James B. Miller, United States Naval Reserve; born, May 12, 1922, Howard County, Ind.; home, 7925 North Main Street, Dayton, Ohio.

Lt. Robert A. Morris, United States Naval Reserve; born, October 11, 1918, Muncie, Ind.; home, rural route No. 1, Farmland, Ind.

Capt. Allen Prather Mullinnix, United States Navy; born, December 12, 1898, Attica, Ind.; home, 2714 Thirty-fifth Place NW., Washington, D. C.

Lt. Comdr. Hugh W. Nicholson,[1] United States Naval Reserve; born, February 28, 1912, Campbellsburg, Ind.; home, Campbellsburg, Ind.

Lt. Jerome John O'Dowd, United States Naval Reserve; born, October 15, 1918, Fort Wayne, Ind.; home, 1802 Kingsington Boulevard, Fort Wayne, Ind.

Lt. Comdr. Robert William Ramage, United States Navy; born, October 25, 1918, Indianapolis, Ind.; home, 202 West Forty-fourth Street, Indianapolis, Ind.

Lt. Robert D. Reed, United States Naval Reserve; born, March 8, 1920, Muncie, Ind.; home, 709 Fifth Avenue, Venice, Calif.

Lt. (jg) Robert "G" Riley, United States Naval Reserve; born, January 10, 1921, Buckcreek, Ind.; home, rural route No. 2, Lafayette, Ind.

Commander Joseph Wayne Runyan, United States Naval Reserve; born, November 22, 1913, Terre Haute, Ind.; home, Los Angeles, Calif.

Commander William R. Staggs, United States Naval Reserve; born, November 11, 1912, Valparaiso, Ind.; home, Chicago, Ill.

Lt. Comdr. Alexander Vraciu, United States Naval Reserve; born, November 2, 1918, East Chicago, Ind.; home, 1604 One Hundred and Forty-second Street, East Chicago, Ind.

Lt. Comdr. William Thomas Williams, United States Naval Reserve; born, August 14, 1919, Rockville, Ind.; home, box 209, Robstown, Tex.

Rual Solen Wilson, MM1c, United States Navy; born, December 24, 1913, Shelburn, Ind.; home, Granite City, Ill.

Lt. John L. Wirth, United States Navy (deceased); born, April 25, 1917, North Vernon, Ind.; home, box 316, route 4, Pensacola, Fla.

[1] Gold Star in lieu of second Navy Cross.

Lt. (jg.) Charles Edward Young, United States Naval Reserve; born, August 5, 1921, Perry County, Ind.; home, rural route No. 2, box 209, New Albany, Ind.

Lt. Owen DeWitt Young, United States Naval Reserve; born, May 29, 1920, Fort Wayne, Ind.; home, 20 Westervett, Tenafly, N. J.

America Symbol of Fair Play and Freedom Among Men

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, March 27 (legislative day of Wednesday, March 8), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a broadcast by me from radio station WHAM in Rochester, N. Y., February 27, 1950.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

For more than 160 years now the American Nation has been a symbol through the world of fair play and freedom among men. No belief is more deeply rooted among our people than this. Yet, as a Nation, we are not perfect, and the efforts to enlarge the freedom of opportunity of our people are continuing.

All of us are aware that not all of our people have achieved the status of full-fledged citizenship with opportunities equal to those enjoyed by other Americans. We realize this from our own experience in our own communities.

Much as I wish this were not true, I believe every American realizes that full and equal opportunity for all, vitally important though it is, cannot be achieved overnight. The problems which give rise to substandard citizenship result from misunderstanding—misunderstanding of the hopes and aspirations of others—misunderstandings that come about because our own experience has never afforded us an opportunity to know the personal problems and difficulties encountered by those whose beliefs differ from our own—whose skins are a different color—or who have grown up in another part of the world.

So, basically, our problem boils down to enlarging our experiences and developing our understanding. We have in this twentieth-century world of ours an almost unbelievable number of means at our disposal by which we can enlarge the knowledge we have of others, and the knowledge they have of us. The newsreel, the radio, and more recently, television—the huge presses which turn out our books, magazines, and newspapers—our churches and pulpits, the hundreds of thousands of neighborhood clubs, parent-teachers' associations, school boards, and other gatherings where we may come to know one another better, exchange our thoughts, and reconcile our differences—these are but a few of the many opportunities we have for getting at the heart of misunderstanding.

We have, of course, other avenues along which we may approach the development of greater individual freedom. One primary avenue is available to us in the form of the laws under which we live. All of us recognize, for example, our constitutional liberties of free speech, freedom of press, freedom to worship as we choose, the right to trial by jury, the right to be secure in our homes against unwarranted invasion by our Government, and all the other commandments contained in our Bill of Rights. We believe in these laws and we live by them.

The growing maturity of our people under our Constitution has steadily rounded out and given deeper meaning to our constitutional liberties. But we have as yet to give these rights their fullest meaning. Last week the House of Representatives fought out another round in the long struggle to give our Constitution the same meaning to all our people. The decision by the House on a law that would give many more Americans equal opportunities in their work was not the decision many of us had hoped the House would achieve. The House, by its vote, has seriously qualified the right to equal opportunity of employment.

In a short time this same issue will confront the United States Senate, and there, too, a great battle will ensue. I do not know what the outcome will be, but I will do everything in my power to see that we get a Federal law which will guarantee fair practices of employment in all channels of commerce between the States.

This week the Senate is debating another measure which also involves the issue of freedom in the form of the displaced-persons bill. For nearly 2 years it has been the policy of the American Government to offer our country as a haven to thousands of homeless people who have been exiled from their own countries by the forces of war. We are seeking now to enlarge that law in order that the exiled victims of Communist oppression in eastern Europe may now find new hope in the New World.

The strength of our country has immemorially been somewhat dependent on a continuing supply of new blood brought into our life stream by those who have fought for freedom in their own countries, and having failed in their efforts to liberate their people, have turned to join hands with us.

The Senate will have a fight on its hands this week over the displaced-persons bill, but I am satisfied that we will be successful in this small but important way in achieving another victory for the dignity of man.

These are but isolated attacks along the whole battle line for human freedom. This does not mean that they are unimportant, but it does mean that we must maintain constant vigilance and a readiness to do battle with the forces of oppression, tyranny, and misunderstanding wherever they appear. We are going forward to greater understanding every day, and despite the big job still to be done, we should take tremendous pride in each success as we achieve it.

Address of Hon. William E. Warne

EXTENSION OF REMARKS
OF
HON. TOBY MORRIS
OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. MORRIS. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix of the RECORD, an address by the Honorable William E. Warne, Assistant Secretary of the Interior, at a meeting of the New Mexico Indian Affairs Association in Santa Fe on March 10.

I make this request because this address, in my opinion, summarizes the serious problems which confront those of us who are deeply interested in the welfare of our Indian citizens. It reviews the progress which has been made, and outlines the steps which must still be taken before the Indians can participate fully in our national life. While it makes particular reference to the programs in our great Southwest area, such as the long-range Navajo rehabilitation bill recently passed by the House, I believe that the comprehensive policies which Assistant Secretary Warne advocates will provide a sound pattern for action throughout the Nation.

The address follows:

During the recent drought in New York City there appeared on the front page of a great New York newspaper an account of discussions between officials of the Atomic Energy Commission and the Interior Department on the problem of water rights for the Pueblo Indians living in Jemez and Zia and the water needs of the Los Alamos atomic energy plant, where many Pueblo Indians are now working.

There is no need to discuss this matter further at this time, except to say that the Atomic Energy Commission officials have publicly stated that they do not wish to do anything that will deprive Indians, or others living in the Jemez Valley, of life-giving water. My purpose in mentioning the incident is to emphasize again the fact that the Indians in the Southwest as well as their neighbors find themselves propelled rapidly into the atomic age. What this will mean to all of us, Indians and non-Indians alike, can now be but dimly seen. But one thing is clear. We shall have to adapt ourselves to the portentous problems of the future in order to survive. We shall have to adapt or perish, Indian and non-Indian alike. This necessity may give some of our citizens a more tolerant attitude toward the struggle of the Indians to adapt themselves to our intensely competitive, industrial society.

Throughout our still young and vigorous Nation today, each of us everywhere is reacting almost daily to problems of adjustment brought about by the changes taking place in the economy of our country, and, indeed, of the world. You in the Southwest must see these things in a dramatic way, in the adjustments that are being made by the Indians to fit themselves into our modern world. In the merging of modern and primitive cultures, the line between integration and disintegration of human values is formed. In this situation it is the duty of all of us to invest in an almost infinite patience in our dealings with the human problems involved in the passage of the Indians from their ancient culture to one whose customs and values are not yet finally fixed.

The Pueblos have shown a historic capacity to adopt certain non-Indian attributes while retaining an inherently Indian culture. They have been more successful than many other tribes in avoiding some of the less favorable aspects of our modern life. A new and particularly important development in the relations between the two cultures is represented by the Bernalillo County Hospital project. The construction and successful operation of the hospital will be a lasting monument to the cooperation of this community, the larger non-Indian community, the State, and the Federal Government. Negotiations for the construction of the hospital were begun in February 1949; in August of that year a bill was introduced in Congress, and in October President Truman signed it. At that time the President said:

"I wish to express my full approval of the basic objective of this legislation, which is to encourage the integration of hospital facilities for the care of Indians and non-Indians in the same community. * * * assurances have been received from county officials to the effect that no forms of discrimination or segregated services were ever intended, nor will they be permitted, in the operation or maintenance of the hospital."

UNIVERSITY OF MICHIGAN LIBRARIES

To me the most significant thing in the history of the new hospital is the constant give-and-take, the modifications, adaptations of methods by all of those who are involved. Representatives of the various pueblos took an important part in the discussions and negotiations. Meetings between Indians and non-Indians were held frequently. The all-pueblo council met three times to discuss the project. And this is significant because in the process of working together for a common cause, Indians and non-Indians come to understand each other better, to realize that each faces common necessities of life and common methods of meeting them.

All Indians have been citizens in the strictly legal sense since 1924. The privilege of voting, of course, is not automatically conferred with citizenship. Citizenship is governed by the Congress; voting is determined by State law. Today every State has granted the right of reservation Indians to vote.

At present, Federal courts in New Mexico are affording Indians an opportunity to sit on Federal juries. This is another instance in which Indians will participate in the educational processes of political democracy. It will be meaningful to them. As one Indian said: "This will give us an opportunity we have long been seeking, an opportunity to assist juries in understanding more adequately Indian cases that come before them."

We are making real progress. I have said before, but I think it worth repeating, that our unthinking impatience is perhaps the greatest enemy of the Indian today. We must remember that our major objective is not simply to be done with the so-called Indian problem, but to prepare these people for full and equal participation in the highly competitive society that we have developed on the continent that used to be theirs. We need not trace the dismal history of our efforts to break and subdue this continent and its 800,000 original inhabitants. But we can remind ourselves that it has hardly been 80 years since a Commissioner of the Bureau of Indian Affairs reported to Congress:

"No one will certainly rejoice more heartily than the present Commissioner when the Indians of this country cease to be in a position to dictate, in any form or degree, to the Government; when, in fact, the last hostile tribe becomes reduced to the condition of suppliants for charity. This is, indeed, the only hope of salvation for the aborigines of this continent. If they stand up against the progress of civilization and industry, they must be relentlessly crushed * * * they must yield or perish."

We have moved a long way since then.

I do not need to add that Dr. John R. Nichols, our present Commissioner, whom many of you know, and who asked me to give you his personal greeting and best wishes, shares no such view. A policy of self-determination has replaced the old one of extermination.

If a general picture of the Indians today remains one of poverty and of limited opportunity, still we can see measurable progress if we put the picture in perspective. I have mentioned two instances of what I believe to be progress; let me cite a few more:

1. The shrinkage of the land holdings of the Indians which, between 1887 and 1932, were reduced from 142,000,000 acres to 52,000,000 acres, has been arrested and the land base increase to 56,000,000 acres.

2. Almost 200 Indian tribal corporations, corporate business enterprises, cooperatives, and credit unions have been organized and are transacting their business effectively.

3. During the past 10 years, Indians have taken the lead in applying conservation practices on their eroding lands.

4. Trachoma, a scourge of Indians as well as of many other races, can now be successfully attacked among American Indians since a cure for this disease has been given to the world by its discoverer, Dr. Fred Leo, an Indian Service physician.

5. Indian accredited senior high schools have increased from 2 to 28 during the past two decades. Also during this period of time more than 2,500 Indian boys and girls have attended college with Federal assistance. Academic retardation of Indian children has been cut in half and normal progress through the grades established.

6. During the past two decades, Indians have increased their cultivated area by more than 300,000 acres and have withdrawn from leaseholders some seven million acres of range land for their own use.

7. During this same period, Indian-owned cattle have increased in number from 170,000 to more than 400,000.

8. In the 8 years between 1940 and 1948, agricultural income to Indians has more than quadrupled.

The principal source of agricultural income to Indians is from their livestock industry. Although the increase in numbers is remarkable, the improvement in quality is even more so. During the early thirties, Indian cattle were a drug on the market. Buyers simply did not want them. As a result of the livestock improvement program conducted by the Bureau of Indian Affairs, Indian cattle sales in most areas now attract buyers from all over the country. Often Indian cattle sales top the market.

9. The Indian Reorganization Act and the Oklahoma General Welfare Act authorized a total appropriation for the revolving credit fund of $12,000,000. At the close of fiscal year 1950, a total of $9,599,600 had been appropriated; of this amount, $3,000,000 was for the fiscal year 1950. The fund has actually revolved two times at the close of fiscal year 1949. Of the amount due, 97.8 percent of all repayments were met promptly. Only 1.8 percent was extended, only one-half of 1 percent was canceled, and less than 1 percent was delinquent.

The amount of the fund is far from adequate. At the time the original amount was authorized, less than half of the Indians were eligible for loans; now all are eligible. In 1935, the National Resources Board estimated that a credit fund of some $66,000,000 was needed. Today the amount required is necessarily larger.

10. One other thing should be mentioned. At the turn of the century, the Indian population was somewhere around two hundred thousand. Today's best estimates place the number around four hundred thousand. They are the fastest growing segment of our population. At one time it appeared as if a technologically superior group would completely wipe out the American Indians. Here again, as I am informed by sociologists, their increase in population is a sign of adaptation on the part of Indians to our modern world.

All this is about Indians in general. But what about those Indians close to you here in New Mexico? Let us take population figures here also. Prior to 1930, the Pueblo Indians were growing at only one-fourth of 1 percent a year. Since that time they have been increasing at a rate of around 2½ percent a year. In total figures, the population increase was from 9,295 in 1930 to some sixteen thousand in 1950.

Eighteen of the nineteen pueblos, all but Jemez, voted to accept the Indian Reorganization Act. Three pueblos, Isleta, Santa Clara, and Laguna, have written their own constitutions.

In 1930 school attendance in the pueblos was 69 percent of all those of school age. It was 90 percent in the last fiscal year. In New Mexico as a whole it has increased among Indians from 44 percent in 1930 to some 65 percent now.

Increasing attention is being given to public health. In 1930 there were only seven nurses for all Pueblo Indians. Today there are 36. Of course, this is not nearly enough, but when the Bernalillo Hospital has been completed, the situation will be greatly improved.

In New Mexico in 1933, lands held in trust for Indians totaled slightly more than 6,000,000 acres. This has grown to 8,000,000 acres. Congress recognized the necessity for an adequate land base for the New Mexico Indians when it passed last August a bill to add over 600,000 acres to the Indian holdings.

There has been a 28 percent increase in Pueblo cultivated areas, from 14,000 to 20,000 acres, since 1935. Acreage under constructed irrigation works has increased greatly. Storage facilities for the Pueblos have increased 6,900 acre-feet. Stock water development has increased from 177 separate units in 1935 to 259 units. Domestic supply has increased from 3.2 miles to 13.8 miles in supply lines.

But the answer to the Indian problem generally, I think, lies largely in the pattern set for the Navajos and Hopis. Both Houses of Congress have now passed a bill, S. 2734, to authorize the long-range program of rehabilitation for these two tribes. This bill was introduced after a previous bill, S. 1407, was reluctantly vetoed by the President because it had been amended to include provisions which, with some qualifications would have extended State criminal and civil laws to the two reservations. In accordance with the President's desires expressed in his veto message, appropriation requests to carry out the first year of the long-range program are included in the budget for the fiscal year 1951, beginning July 1 of this year. These requests amount to approximately $14,000,000 in cash and $6,000,000 in contract authorizations.

I do not want to go into all the details of the proposed $88,000,000 Navajo-Hopi 10-year rehabilitation program, but, in general, it includes:

Development of small irrigation projects on the reservation, and survey costs of the Shiprock-San Juan project;

Transfer of colonists to the irrigable lands on the Colorado River Reservation;

Industrial developments on the Navajo Reservation;

Seasonal or part-time employment away from the reservation; and

New school, road, and hospital construction.

Lest I be misunderstood, let me say that this 10-year program is not an end-all plan.

It will have to be followed by other constructive measures, because the situation on the Navajo Reservation today does not even provide a good base upon which to build. This program should provide that base, the foundation. It will succeed in accordance with our expectations if it does. Please keep that in mind. This is the starting point, not the last lap in the grind to rehabilitate our largest and most impoverished tribe.

The next rehabilitation program being considered is the $23,000,000 program for the 7,000 Indians living on the Papago Reservation. As in the case of the Navajo, this program would call for irrigation, stock water development, soil and moisture conservation, construction of education and health facilities, roads and community facilities, and relocation projects.

This, then, is the pattern of Indian development and rehabilitation, one that fits in with an Indian policy that has been reasonably consistent since the Meriam report of two decades ago. That policy includes:

The maximum utilization of Indian resources by Indians so that they may become self-supporting. To reach this end they must have education, health, credit, and other facilities, as well as an adequate land base.

Increasing participation by State and local governmental units in programs, services,

and operations, in order that they may integrate Indians in normal civic functions with their fellow Americans.

At a recent hearing before a congressional committee, Secretary of the Interior Oscar L. Chapman spoke of the need for a reevaluation of our Indian policies. As an Assistant Secretary, and later as Under Secretary, Mr. Chapman has had long and sympathetic experience with these problems. In tracing this experience, he pointed out the tremendous progress which has been achieved in recent years, and said he felt we were ready to move ahead with new policies which could further achieve the aim of enabling the Indians to achieve full participation in our national life.

This is not a task for the Secretary alone, or even for the Interior Department and its Bureau of Indian Affairs. The groups like your own which have given valuable service to Indian affairs and who rightly share the credit for the progress that has been made, must enter into these considerations.

Rehabilitation bills may provide some of these answers. Other problems exist—lack of resources, lack of training, health deficiencies—combine to make it difficult for Indians to survive either on or off their reservations. Communities where Indians seek to live and labor are often sympathetic in words but not deeds. The people in these communities retain some traditional suspicion of the Indian that they acquired in childhood, or they persist in giving life to some unreal myth or stereotype about the habits and responsibility of the Indian that show little insight or understanding of him as a human being, or as an American citizen, or as a veteran of the recent war. Every American in his own home and town can help the attack on this problem, because largely it is the individual problem of each of us.

Let me conclude by saying that the old policy of denying civil and religious liberty to the Indians has been reversed and the constitutional rights of this, the oldest of our minority groups, have been completely avowed, with the result that the spiritual aspirations of the Indians as a group have revived and have reached a new high level. This has been accomplished by the recognition of the rights of Indians as American citizens, while, at the same time, protection has been afforded their property rights and their economic assets. The credit for this result does not belong to one individual or group. This has been accomplished by many, by you here, by the Indians themselves, by those of us who are working steadily on the problem in State offices, in Washington bureaus, and in the halls of Congress. Much more remains to be done, but in the spirit that now prevails of live and help live, I am confident we will reach the goal that Jefferson saw for the Indians and the non-Indians long ago:

"The ultimate point of rest and happiness for them (the Indians) is to let our settlements and theirs meet and blend together, to intermix, and become one people."

The Postmaster

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I would like to submit an article by Mr. W. H. McWilliams, who writes for the Martins Ferry and other Ohio newspapers, under the pen name of Hi Waters. I believe this column of Mr. McWilliams could apply to many areas in this country. Mr. McWilliams writes with a down-to-earth viewpoint and expresses the sentiments of the average man better than anyone I know.

The article follows:

HI WATERS—RIGHT AROUND HOME

(By W. H. McWilliams)

Outside of a doctor and a school teacher, the most important person in our lives is a postmaster.

At least, we have more to do with a postmaster than most any other guy. A doctor escorts us into this world and therefore we kinda hang around him out of self-protection.

A school teacher trains us to use sense for the first 12 years of our lives so we kinda string along with them, in second place.

But a postmaster stands behind the little windows with the iron bars over them and keeps us in touch with the rest of the world. A postmaster is the go-between with us and our neighbors no matter whether they live next door or on the other side of the world.

Who's the most pleasant postmaster you ever dealt with?

Well, here's a list of the 15 most pleasant postmasters in eastern Ohio as I have dealt with them. As you look into the eyes of these 15 master postmasters you feel yourself bein' lifted up and you leave feelin' good like you had just been given a shot of hard cider on an empty stomach.

1. Edithe Glass, Short Creek.
2. L. E. Buffington, Morristown.
3. Zilvio Zanzanella, Adena.
4. Alice Wilson, Jerusalem.
5. Kenneth L. Burley, Bridgeport.
6. Stella E. Dickerson, Glencoe.
7. Rolland Jackson, Neffs.
8. Mrs. Delude P. Levi, Connorsville.
9. Enoch Carman, Belmont.
10. Harry C. Stratton, Piney Fork.
11. L. E. Fowler, Hendrysburg.
12. W. F. Mock, Powhatan.
13. P. M. Keyser, Shadyside.
14. Mary I. Timko, Barton.
15. Pearl Calovini, Lafferty.

Now, of course, there are other postmasters who could almost qualify for membership in this team. But they just didn't quite make the grade. Take Frank Vannelle, of Bellaire, who has just been there for a short time. Frank tries to grin, out of habit of being a politician for so long but he hasn't had the length of time behind the windows that would test him out.

I know some postmasters who, if you would walk up and say, "Any mail for me today?" would look at you as sour as a pint of green Damsel plums before breakfast, and makes you feel like a dried bread crumb on the table of Belshazzar, last king of Babylon.

But the 15 I selected, every one of 'em—smilingly handle the cares of countless people and grin sweeter than a bride when the preacher says, "I now pronounce you man and wife" and her husband turns around quiverin' like a jar of raspberry Jello and kisses her on the cheek.

I respectfully request all of you to watch carefully the next time you walk into the post offices of any one of my 15 and see for yourself. Watch that sly smile that sweeps like a summer shadow over a field of ripening grain as he, or she, caresses the letters and hands them lovingly through the bars to us. Ah, such postmasters are the honey on the bread of life or horseradish on the bacon of existence.

They have a hard job to fill in this life. Most everybody jumps on a postmaster because some erring relative, or friend, fails to write when they should. They get the devil when a money order ain't enough and Sears, Roebuck sends a cheaper article. They are criticized when the weather report says rain or when it don't.

I know some unthinking people who deny a postmaster even the small satisfaction of readin' the post cards that come through the mails—imagine that.

But what a service they perform for us. You can send a letter for 5,000 miles for 3 cents. That's the cheapest thing in the United States—except what the Government pays the postmasters.

Yes, sir, a postmaster is the No. 3 person in our lives in importance. He is outranked only by the doctor and the school teacher. Instead of conkin' him over the head when the mail didn't come, you ought to go up and shake hands with him and say, "Listen, friend—you can't do everything."

So, the next time you go to the post office for the mail, look at your postmaster and see if, in his eye, lurks the smile that you have a right to expect and a grin that warms your skin and makes you feel glad you ordered that last catalog of the seeds that never fail.

Yea, postmasters—my 15 most pleasant ones in eastern Ohio.

The Congressional Record

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, March 27 (legislative day of Wednesday, March 8), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me broadcast from radio station WHAM in Rochester, N. Y., on March 13, 1950.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Most of you, I think, are aware that if you visit Washington while the Congress is in session, it is usually possible to obtain a seat in the visitors' galleries of the House or the Senate, and thus you may witness and listen to the debate then taking place.

If you are observant, you may notice one of the stenographers whose job it is to make shorthand notes of every word uttered by the Members of each body while it is in session. The stenographers are men, and I imagine they are frequently mistaken for a Senator or Representative, because they usually seat themselves in a vacant chair nearby the Member who is then speaking. You can usually spot the stenographers scribbling away in their long notebooks, and occasionally, when the debate shifts from one side of the Chamber to the other, you'll notice a stenographer rise, and still writing as he walks, move closer to the Member then speaking.

The stenographic record made during each daily session of the Congress is printed in its entirety during the course of the night and appears by 9 o'clock the following morning in the CONGRESSIONAL RECORD. The daily CONGRESSIONAL RECORD is a remarkable document. As I've already indicated, it contains in writing every word spoken in the Senate and the House during the preceding day, and thus it furnishes a permanent account of all the legislative proceedings in Congress.

These day-to-day issues of the RECORD make it possible for the Members of Congress to reexamine more carefully the points raised

UNIVERSITY OF MICHIGAN LIBRARIES

in previous debate, and, of course, the RECORD makes it possible for any Member to discover what has taken place during the period he may necessarily have been absent. Furthermore, the RECORD lists the names of those who favor or oppose a particular issue at the time a vote was taken.

Last year the Eighty-first Congress was in session from January 3 until October 19, a total of more than 10 months and a half. During that first session, 198 issues of the CONGRESSIONAL RECORD were published. The combined proceedings of the Senate and the House during that time filled 15,386 pages of small print. In addition, the Appendix of the CONGRESSIONAL RECORD, containing letters, speeches delivered elsewhere, and other material of general interest, totaled another 7,180 pages.

These pages cover the official legislative record of 96 Senators and 435 Representatives over the 10½-month period, a record more than 22,000 pages long. Neglecting the cost of the paper, it cost the Government $85 a page to set up the type for the CONGRESSIONAL RECORD, in other words, more than $1,750,000. This is a lot of money, but I would certainly be the last to recommend that the CONGRESSIONAL RECORD be abolished.

By and large the material contained in these 22,000 pages of small print is worthwhile and useful information. But this is not completely true by a long shot. I believe, and I think anyone familiar with the proceedings of Congress would agree with me, that ofttimes the proceedings of the Congress are filled with useless repetition of the same old thoughts and the same old arguments. Now, heaven knows, it is very often necessary to say something over and over again in order to convince others that what you say is true.

It might be argued that endless repetition doesn't contribute any new facts that aren't already known and understood. On the other hand, repetition of the same thought can be, and has been, used constructively to prevent injustice and to broaden general understanding of an issue.

Repetition can be misused. When talk is no longer confined to the merits of an issue, when the talk serves no other purpose than delay, delay, delay on the part of a handful of willful opponents of a particular measure, a serious threat to our representative democratic government presents itself.

Free speech is one of the fundamental and absolutely necessary requirements of the democratic process. Under dictatorships, no one dares voice his opposition, and that is certainly the last thing we want here. Our important problem legislatively, a problem we still haven't solved completely, is to draw a line which on the one hand, permits unlimited opportunity to criticize and to speak with the intention of influencing others—and which, on the other side of the line, puts a stop to the kind of talk which is not intended to inform or influence, but which has for its purpose instead the obstruction of the majority will on matters which in no way violate the fundamental rights of minorities. There's our problem.

In trying last year to draw up that kind of law by changing the filibuster rules of the Senate, our efforts failed. We are still confronted with the situation in which a willful minority may overrule the majority simply because the minority doesn't like a measure which in no way invades its constitutional rights. So the CONGRESSIONAL RECORD does more than keep us posted on legislative events. The 22,000 pages in the 1949 RECORD provide us with documentary evidence for the need of bringing filibusters under control. Filibusters are still with us in the Senate, and until we've found the answer, the full measure of democracy will never be available to all our people.

Why Farm Groups Hit ECA's Use of Surpluses

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. JONES of Missouri. Mr. Speaker, under leave to extend my remarks, I have requested permission to insert in the Appendix the following article from the March 24, 1950, issue of the Christian Science Monitor, which, in my opinion, sets forth the most convincing reasons why Congress should not give its approval to the idea of using the Marshall plan as a device for unloading surplus farm products:

WHY FARM GROUPS HIT ECA'S USE OF SURPLUSES

(By Joseph C. Harsch)

WASHINGTON.—When the four farm organizations get together on anything, it makes news. When they get together in opposition to some one thing done in the Congress, it also shows that several Members of that legislative group failed to do the usual prelegislation reconnaissance.

The four farm organizations are together today, for the second time in modern history. They—the Grange, Farm Bureau Federation, Farmers Union, and Council of Farmer Cooperatives—are opposed as one to the idea of using the Marshall plan as a device for unloading some of the mountains of surplus farm products cluttering up the United States.

It seemed like such a good idea to Congressmen when they were sitting around in the committee room figuring out what to do with the third-year appropriation for the Marshall plan. The ECA expects to need $1,400,000,000 of United States farm products for export to Marshall-plan-receiving countries during the upcoming third year of the plan. The Commodity Credit Corporation has that much in surplus farm products on hand—and more, too. Why not get rid of some of the surplus and save money on ECA?

Put that away, it sounds like quite an appealing idea.

However, there is one trouble with it which the promoters of the idea do not seem to have thought of in advance. If ECA gets most of the United States farm products it ships to Europe through the CCC, there will be that much less buying of farm products through the ordinary marketing channels. It means that the wholesalers and commission merchants who have been handling this business in the past will cease handling it. The deal would have taken $1,000,000,000 worth of business out of the hands of free enterprisers.

Also, there is another objection in the minds of the farm organizations. If the ECA supplies are taken from the existing mountains of surplus, there is going to be a fresh accumulation of surplus in the markets where ECA normally does its buying.

Out of this springs one of those episodes which make American politics so confusing to visitors. The man who proposed the plan of getting ECA supplies out of the surpluses on Government hands is Representative JOHN M. VORYS, of Ohio. Mr. VORYS is a Republican. Mr. VORYS is also a solid believer in free enterprise. The two biggest of the farm organizations which oppose the Vorys plan are generally regarded as conservative—the Grange and the Farm Bureau Federation. Also, the dominant political coloration of those organizations is Republican. In the joint letter which the four farm groups have mailed to every Member of Congress, they assert that the Vorys plan would inject more government operations quite fruitlessly into the Marshall-plan operation.

So, in effect, we have a plan proposed by a Republican legislator in the interest of economy being rejected unanimously by the farm organizations on the ground that it would narrow the area of free enterprise and expand the area of Government operations in the United States.

The farm groups have other objections, too. They point out that to take ECA supplies from surpluses would play into the hands of Russian propaganda which alleges that the Marshall plan is just a device for dumping United States surpluses overseas. They also object that the plan would make the farm price-support program bear the cost of ECA supplies and thereby make the farm program appear to cost $1,000,000,000 more than it actually does. This, of course, would be a political liability for the farm program.

But the real, basic objection of the farm groups is that the plan would take $1,000,000,000 worth of ECA business out of the regular market and put it into the Government market, which would be bad for farm business.

It is not always easy for a legislator to be sure these days which side of an issue is the free-enterprise side and which the Government-in-business side.

Give Harry the Byrd

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald of Saturday, March 25, 1950:

GIVE HARRY THE BYRD

The House Appropriations Committee has just nicked Truman's 1951 domestic budget by $1,500,000,000. And the House Foreign Affairs Committee has slashed another billion from the foreign-aid funds demanded by "Handout" Harry.

For all of which we give thanks. However, it still leaves the country faced with a $4,000,000,000 deficit. So when the big appropriation bill comes up on the floor next Monday the Republicans are going to try to cut another three billion off the total. We wish them luck.

But we believe Senator BYRD, of Virginia, a member of Truman's own party, has a better idea. BYRD announced last December that he thought the 1951 budget should be kept down to thirty-six billions.

This would be six and one-half billions below Truman's estimates but higher than the budget allowed in 1948 when it was balanced.

It was the Republican Eightieth Congress that balanced that 1948 budget by spending only thirty-four billions.

The action of the House Appropriations Committee, which is dominated by the administration, shows how utterly foolish is Truman's contention that you can't cut the budget.

LET'S PAY OUR DEBTS

We hope the House will honestly take another whack at the big bill when it hits the floor and that the Senate will complete the job when it gets on its side of the Capitol.

The budget should be cut back to where it not only balances but to where it produces a surplus to pay off some of the huge national debt that is hanging over the country.

Chairman Spence Introduces Bill To Extend Rent Control in Cities Like Chicago

REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. O'HARA of Illinois. Mr. Speaker, I have had occasion on previous occasions to call the attention of the House to the situation in Chicago which would result if rent controls ended June 30 of this year. I do not wish any Member of this House to consider my statements as being even slightly on the exaggerated line. I am, therefore, calling the attention of my colleagues to an article on page 16 of part I of the Chicago Sunday Tribune of yesterday. The headline of this article reads: "High-rent flat easier to get; few low ones," and the subhead reads "Want-ad survey shows housing situation."

This article states that—

A survey yesterday of the rental situation in the Chicago metropolitan area disclosed that * * * the ads of those seeking apartments are more than double the supply and still rising.

The article further states that—

Comparative figures taken from Sunday want ads, the largest offering of any day shows that * * * the lineage of "wanted to rent" ads has risen this year from 962 lines on January 8 to 1,036 on February 12 and 1,139 on March 12.

The situation, briefly, as stated in the Republican and conservative Chicago Tribune of yesterday is that people with money now have "considerably greater opportunities to find apartments in the upper rental bracket," but that it is becoming increasingly difficult for people in ordinary circumstances to find homes within their means.

If rent controls are ended on June 30 of this year an immediate increase in rents above the ability of tenants to pay is inevitable. I say inevitable because of the law of supply and demand which must operate in such a situation.

As the only Chicago member of the Banking and Currency Committee I have felt keenly my responsibility not only to the tenants of Chicago, but to the general welfare of my city, which would suffer if after June 30 we had no protection for a considerable number of our workers who would be forced on the streets with their families because of their inability to meet rental demands.

Feeling this responsibility, I remained in Washington during the early weeks of December, working on the problem and with such results that I was able to give to the press a statement which was widely printed throughout the country stating that the administration, in my opinion, would not permit rent control to die until the housing shortage had been removed to such an extent that the relaxing of the rent controls could be effected without forcing many thousands of tenants to face an impossible housing situation.

During the present session I have been in constant touch with the distinguished gentleman from Kentucky [Mr. SPENCE], the chairman of our committee, with other Members of the House and with the distinguished gentlemen who represent Illinois in the other branch, Senator LUCAS and Senator DOUGLAS. I can assure the House and the country that there is no disposition to let down Chicago and the other cities similarly situated. The time is fast running, and with June 30 only approximately 3 months away there is naturally great uneasiness prevailing among the people of Chicago and of other large cities in a similar situation. Meanwhile, I understand that one or two or perhaps other Members of the House are preparing bills for the extension of rent control. It would be unfortunate if the publicity attending the introduction of such bills should lead the people, not familiar with the procedures that obtain in this House, to false expectations.

As we know, but unfortunately the country is not as well informed, it is the bill introduced by the chairman of the committee that receives serious consideration. Thus the Housing bill was the Spence bill, and the rent-control bill which will be considered and brought before the committee and the House will be the Spence bill.

I am authorized to say by the distinguished gentleman from Kentucky [Mr. SPENCE], the chairman of my committee, that at the proper time a bill will be introduced by him to continue rent control in those urban centers like Chicago where at this time the termination of controls would have such serious repercussions as is suggested by the statements in the article in the Chicago Sunday Tribune of yesterday to which I have referred.

Fortunately, and as we had all hoped, the need for rent control in a number of States and in many localities has ended. I hope it will be a matter of only another year until the need of such controls has been ended in my city of Chicago and in other cities in similar situation. Until that time arrives I bespeak the cooperation with us in protecting the people of Chicago and of other like cities of those Members who no longer have the immediate interest in the subject which they did in the time when their constituencies were in need of the controls.

I am further authorized to state that when the bill is introduced by Chairman SPENCE and public hearings are started by the House Banking and Currency Committee, that the mayors of a number of the large cities in need of continuing rent control will personally appear to testify as to the actual conditions existing in their respective cities.

Farm Plan of Association of Southern Commissioners of Agriculture

REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. LARCADE. Mr. Speaker, I am in receipt of a telegram from the president of the Association of Southern Commissioners of Agriculture in regard to the farm plan adopted by the Southern Commissioners of Agriculture on December 10 at their meeting in Atlanta, Ga., as follows:

ATLANTA, GA., *March 25, 1950.*
Hon. HENRY D. LARCADE, JR.,
House Office Building,
Washington, D. C.:

I note AP story from Washington your splendid effort to get into the RECORD plan adopted by southern commissioners of agriculture and kindly referred to as the Linder plan. This is actually now the plan of the commissioners of agriculture of most of the cotton-growing States.

It seems obvious that minimum labor wage makes it imperative to have minimum raw-commodity prices to keep our economy in balance. Otherwise, it will continually be necessary to appropriate tax money in large and larger amounts to keep a prop under raw commodities, especially farm crops.

Under the proposed plan, taking cotton, for example: Each farmer would have allotment in bales or pounds, eliminating all necessity for measuring or allotting his acres. He would be issued certificates covering his number of bales which would entitle their sale in the domestic market at or above minimum price. Any cotton grown in excess of his allotment could be carried over another year, could be sold for export at world prices, could be sold to another producer having excess certificates, but no appropriation would be required.

The southern commissioners desire at later date to present their plan to Congress through proper committees, and we hope that numbers of Congressmen and Senators from the Cotton Belt and other farm States will see fit to take up this fight and champion this plan. I note your intention to pursue this matter and want you to know that other sponsoring commissioners and I appreciate the splendid job you are doing.

TOM LINDER,
President, Association Southern Commissioners of Agriculture.

Mr. Speaker, this telegram refers to an effort on my part, at the request of Hon. W. E. Anderson, commissioner of agriculture of the State of Louisiana, to present the farm plan of the Association of Southern Commissioners of Agriculture and to have the same included in the record of the House Committee on Agriculture. This was refused. However, the chairman of the House Committee on Agriculture did state that at some later date the committee would consent to the inclusion of this proposed program in the hearings of the committee.

Mr. Speaker, this matter was presented by me when my bill, H. R. 7134, and House Joint Resolution 430 was being considered by the committee, and inasmuch as my bills dealt with the question of farm surpluses, support prices, and the farm program generally, it was

UNIVERSITY OF MICHIGAN LIBRARIES

and is my opinion that it is proper to have this proposed plan of the Association of Southern Commissioners of Agriculture printed in the hearings of the Committee on Agriculture in order that the committee, the Congress, and the citizens of this country might be acquainted with the program proposed by this informed and patriotic group. Mr. Speaker, I do not presume to be an expert on agricultural problems; however, in view of the discussions in the Congress and throughout the Nation in regard to proposed changes in our farm policies, I think that any and all plans presented should have fair and reasonable consideration, and while I do not know that the plan proposed by the Association of Southern Commissioners of Agriculture is the best plan, I do believe that the same is worthy of consideration, and, therefore, I desire to read the proposed plan into the record at this point in order that the same may be brought to the attention of our people:

A SUBSTITUTE FARM PLAN

(By W. E. Anderson, commissioner, agriculture and immigration, State of Louisiana)

The main trouble with so-called agricultural plans, price supports, etc., has been that they have been dictated by political expedience rather than by statesmanship.

Let's analyze the situation calmly and honestly and let the chips fall where they will.

In the first place, it is wrong for the Government to use the taxpayers' money to subsidize any group. Therefore, any plan which involves the expenditure of tax money either to raise prices or to lower prices is contrary to the spirit of the Constitution of the United States.

Congress and the President have no right to make any plan for the special benefit of the farmers, for the special benefit of labor, for the special benefit of the consumer nor for the special benefit of industry or business.

The Congress of the United States and the President do have a right and it is their constitutional duty to take such action within the Constitution as will best serve the general welfare of the whole public.

Due to our tremendous national debt, and other debts, it is imperative that the Nation's income be maintained at a level of not less than $250,000,000,000. It is also necessary that the income of unorganized groups shall be on an equality with organized groups. This is necessary for the benefit of all the people—not for the benefit of any group.

It is most essential that prices of raw products, including agricultural products, be maintained at a figure which will provide a national income of $250,000,000,000, or more. This is not to be done for the special benefit of the farmers or other raw material men. It is to be done in the interest of the entire people.

If maintaining high prices for farmers would benefit farmers only, then it would be wrong for Congress and the President to do it. If maintaining high farm prices will benefit all the people, including the farmer, then it is right for Congress to maintain those prices provided it is not often done by subsidizing from the taxpayers' money.

It is now generally recognized that the national income will be seven times the amount received by the farmers. It is also generally recognized that the national income will be five times the amount received by farmers and all other producers of raw materials.

It therefore follows that, in order to have a national income of $250,000,000,000, the income of farmers and other raw-material men must be maintained at $50,000,000,000. The income of the farmers alone must be maintained at $36,000,000,000. This means cash income and cannot include any other income such as food and feed consumed on the farm or other benefits from the farm.

When organized labor asked Congress for a minimum price for labor, Congress did not deem it necessary to guarantee a job for all labor at the minimum price. Congress did not deem it necessary to make loans to labor to maintain a minimum price. Congress simply passed an act making it unlawful to buy a man's labor, if he came within the definition, at less than the minimum price.

If Congress had subsidized labor and paid a part of labor's wages out of the tax money, that would have been a Brannan plan for labor. I think most everyone would agree that it would have been ridiculous for the Government to subsidize labor and then have said to industry we are going to see that labor gets a fair wage, but we are also going to see that industrial management gets cheap labor.

It is equally ridiculous for the Government to say we are going to see that the farmers get a fair price, but we are also going to see that the general public gets cheap farm products.

Since Congress and the President were able to provide a minimum wage for labor without a subsidy from the taxpayers' money, it should not be any more difficult for Congress to see that the farmer gets a fair price for his crops, which is his labor, without giving the farmer a subsidy out of the taxpayers' money.

Since cotton is still our main cash crop in the South, let's see how this plan would work with cotton. If it works with cotton, then with proper adjustments it can be made to work with other major crops.

Suppose that when Congress meets in January, it would enact a law on the same principle as the minimum wage which law would require that cotton could not be purchased for less than parity. No subsidy, but simply make it unlawful to purchase cotton for less than 100 percent of the parity price.

I mean, of course, actual parity based on present conditions and not some fake parity as we have been having, based on conditions that ceased to exist in 1914. Let's assume for the purposes of this statement that actual parity for middling fifteen-sixteenth inch staple is 35 cents per pound. There is no more reason why a farmer should get 90 percent of parity or 80 percent of parity than there is why the laborer should receive 90 percent of the minimum wage or 80 percent of the minimum wage. The farmer should receive 100 percent of parity as a minimum price. This minimum price, of course, would have to be limited to the number of bales of cotton consumed in our domestic market.

If our domestic market in the past 12 months has consumed 9,000,000 bales of cotton, then we would assume that 9,000,000 bales would be required for the next 12 months for our domestic market. Instead of going out and measuring each farmer's land and giving him an acreage allotment, each farmer would receive certificates qualifying him to market the number of bales which he is entitled to produce for the domestic market—one certificate for one bale of cotton.

Each farmer would get the same number of certificates as the number of bales of cotton he was entitled to sell for domestic consumption at not less than the minimum price. On an average this would give the cotton farmer an income of $1,575,000,000. This, when translated in the seven-time turn-over, would contribute to the national income. $11,025,000,000.

Now let's take an individual cotton grower and see how this plan would operate on his farm: John Jones is a farmer who now has or will have an allotment of 15 acres for cotton. He is given this allotment on the supposition that 15 acres of his land will produce 10 bales of cotton. Therefore, John Jones will receive 10 certificates enabling him to market 10 bales of cotton at not less than the minimum price in the domestic market.

Suppose that Jones plants 15 acres and has an extra good year, making 12 bales of cotton instead of 10. Or, suppose that Jones decides to plant 20 acres instead of 15 and that he makes 16 bales of cotton. In either case he will have produced more cotton that he will have certificates to enable him to sell for domestic consumption. In the one case he would have 2 extra bales—in the other case he would have 6 extra bales. What can he do with these extra bales?

Before answering that question, let's consider Bill Smith, a neighbor of John Jones. Bill Smith has certificates also for 10 bales of cotton, but he only produces 4 bales due to a bad year or to the fact that Smith decided not to plant very much cotton that year. In that case, Smith has 6 certificates more than the number of bales of cotton he has produced.

Smith has 6 certificates which he does not need—Jones has 6 bales of cotton for which he has no certificates. If Jones and Smith can agree on a transfer of Smith's certificates to Jones, then Jones can sell all his cotton for domestic consumption and Smith can also sell all his cotton for domestic consumption.

Suppose, though, that Jones is unable to find a neighbor who has extra certificates, or who is willing to transfer his certificates, then Jones can do one of two things: Jones can simply keep his 6 bales of cotton until the next year and reduce his cotton crop the next year or Jones can sell those 6 bales of cotton to an exporter at the export price. Cotton sold to an exporter would have to be exported because the exporter would have no certificates to enable him to sell into the domestic market.

On the other hand, there would be no imports of foreign cotton because the importer would have no certificates to enable him to sell imported cotton into the domestic market. The farmer producing cotton would have the minimum price on all domestically consumed cotton just as labor has a minimum price on a day's work.

This would give the American market to the American producer of cotton. The American producer would be protected against competition from foreign cotton. His income would be protected by a minimum price.

It would be necessary to apply the same rule to competitors of cotton and to fix a minimum price on each competitor which would prevent such competitive material from having an advantage in the domestic market over cotton.

This, of course, is a two-price system. It is an American price for domestically consumed cotton and a world price for cotton that is exported. Under this plan no cotton farmer would be forced to compete with the world market. At the same time, any farmer who believed that he could produce cotton at a price that would enable him to sell in world markets would be at liberty to produce all the cotton he wished to produce.

Such a law, would of course, defeat the so-called reciprocal trade agreements. It would give the farmer in the United States the same protection against cheap foreign products that protective tariffs have given to industry and labor against cheap foreign labor and cheap foreign products. It would give the farmer parity—it would give him equality. It would adjust the domestic supply of cotton to the domestic demand for cotton without the necessity of going out surveying and measuring each farmers' acres, and without the necessity of ploughing up and destroying any crops because the farmer happened to overplant.

It would make the farmers politically independent because they would receive parity as a matter of law and would not be dependent upon changing administrations and changing pressure groups to get appropriations of tax funds to maintain the price.

No patriotic, intelligent American wants American labor's wages on a level with foreign labor's wages. No patriotic, intelligent American wants salaries in America on a level with salaries in foreign countries. No patriotic, intelligent American wants American farm prices on a level with foreign farm prices. To equalize our wages, salaries, and farm prices with foreign countries would mean the lowering of the American standard of living to that of foreign countries.

The only possible way to maintain the American wage standard, the American salary standard, and the standard of living in America is to maintain a minimum price on the raw materials so that the five times turnover of all raw materials and the seven times turn-over of agricultural products will maintain a national income of not less than $250,000,000,000.

The fixing and maintaining therefore of a minimum price at parity on farm products is for the benefit of the entire population of the United States and is not for the benefit of the farmers only. The farmers will not benefit any more than all the rest of the population regardless of the economic group to which they belong.

The farmers cannot continue to operate if the Government continues to reduce cotton acreage, to reduce peanut acreage, to reduce tobacco acreage, to reduce the acreage of wheat and other crops. The farmer must plant his land in order to continue to exist and to feed and clothe the Nation.

It is bad enough for the farmer to have to compete with foreign production in world markets. It is intolerable for the farmer to be forced to compete with foreign production in the American market, whether such foreign competition is brought in under the cloak of so-called reciprocal trade agreements or otherwise. Think this over.

The American Manufacturers' Association says the farmer must produce cotton cheaper. The international-minded Committee for Economic Development says the farmer must produce cotton cheaper. Some farm leaders and some farm Congressmen, parrot-like, repeat, "The farmer must produce cotton cheaper." Anyone who wants the farmer to produce cotton for less than 100 percent of parity is no friend of the farmer.

Everyone who has given even casual thought to the subject is bound to know that we must maintain a high economic level, a high monetary level, and a high standard of living in the United States. To do less will necessarily result in the complete disintegration of our national economy. It might even result in the disintegration of our Government itself.

Also, anyone who has given study to the subject must know that the income from the sale of raw materials, including agricultural products, determines the level of our economy and the level of our standards of living.

For 15 years we have had some form of Government support for the price of basic crops. At present, the contest in Washington is between the different variations of the plans heretofore tried out and the so-called Brannan plan.

The so-called Brannan plan would have most farm crops to sell for whatever they would bring without any legal support of prices. The Government would then make up the difference between what the farmer received and what the Secretary of Agriculture determined was a fair price by a subsidy from the Federal Treasury.

Let's analyze the prospects of the farmer if the so-called Brannan plan were enacted into law.

The first long range price support law was enacted in 1938 and provided for 52 to 75 percent of parity for wheat, cotton, tobacco, corn, rice, and peanuts.

From 1938, to the enactment of the Steagall amendment, loans were made to the farmers on these basic commodities. Another part of the program was very similar to the proposals of the so-called Brannan plan. Through this legislation Congress authorized the Secretary of Agriculture to make parity payments. These payments were supposed to amount to the difference between what the farmer actually received at the market place and the price that the Secretary of Agriculture fixed as parity. While Congress made large appropriations for this purpose, it failed to appropriate enough money to make full compensation to the farmers except in 1 year. This program was in effect during the years 1938 to 1942 inclusive, a 5-year period; 1942 was the only year when Congress appropriated enough money to make up the difference in price to the farmer. The only reason that the appropriation in 1942 was enough was because of rising farm prices incident to the war.

The first year 1938, Congress appropriated $211,742,000, whereas $666,601,631 would have been required if the farmer had received parity. Thus the farmer lost $454,859,631 in the deal of 1938. The amount appropriated was 31.8 percent of the amount the farmer was entitled to receive.

In 1939, the appropriation was $196,761,000, whereas $598,550,956 would have been required. This left the farmer a net loss in his parity payment of $401,789,956. In 1939, Congress appropriated 32.9 percent as much money as the farmer was entitled to receive.

In 1940, the appropriation was $196,908,000, whereas the farmer was entitled to receive $584,042,337. The farmer was short-changed $387,134,337 in 1940. The appropriation that year was 33.7 percent of the amount the farmer was entitled to receive.

In 1941, even after farm prices had made considerable advances, the appropriation was $10,453,137 less than the farmer was entitled to receive. The appropriation in 1941 was 95.1 percent of what the farmer was entitled to receive.

As stated above, 1942 was the only year that sufficient money was appropriated to make the parity payment to farmers.

It is most important that we keep in mind the fact that when the farmer most needed the parity payments was the time that Congress appropriated the least.

It is important that we impress these figures on our mind in order to visualize what would happen to the farmers if they were dependent on a Government subsidy and congressional appropriation to give them a decent income.

If the price of agricultural crops were allowed to go unsupported and forced to compete with imports under the so-called reciprocal-trade agreements, then it is certain that present farm prices would drop not less than 33⅓ to 50 percent. That would mean that in order for the farmer to get substantially present prices Congress would have to appropriate each year around $10,000,000,000 for farm subsidies.

Is there any reasonable-thinking person, farmer or otherwise, who believes that Congress would appropriate $10,000,000,000 to subsidize the farmers? Is there any reasonable person who believes that $10,000,000,000 could be appropriated annually for farm subsidies without creating a revolution among the consumers of the Nation whose lack of understanding of national economics makes them easy prey to newspapers and radio agitators?

Liquor Ads Are Degrading and Flaunt Temptation in the Faces of Our Children

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. WHITE of Idaho. Mr. Speaker, there are companion bills before Congress to bar liquor advertisements. Senate bill 1847 and House bill 2428 which have my unqualified support, as I have stated in the hearing before the Senate committee in charge of the legislation which is inserted here for the consideration of my colleagues H. R. 2428:

STATEMENT OF HON. COMPTON I. WHITE IN HEARINGS BEFORE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

Mr. WHITE. Mr. Chairman, for the purpose of the record, I am COMPTON I. WHITE, Member of Congress from the First District of Idaho.

Mr. Chairman, I am very much opposed to our magazines, and publications, and radio carrying liquor advertisements. I am in full support of the bill under consideration by this committee.

One of the most distressing and discouraging things you find in our civilization today, particularly in our everyday life, is to find some fine young man whose father is taking great pains in raising and educating him, and he is ready to go into business, and probably gets married, becoming a liquor addict and is unable to control his appetite that is fastened upon him.

I want to commend the good work that is being done by the Alcoholics Anonymous, the AA, to assist these men, young folks, and immature people, to overcome that habit. They cooperate and lend their support, and they are doing a wonderful work, and I do not see why we should permit advertising to induce people and lure people to become addicts of liquor. There is temptation enough without having these luring advertisements we find in the magazines—expensive advertisements, I may say, that appear in these national periodicals and on the radios. I think that this bill is a step in the right direction, that we should curtail and eliminate those advertisements.

If you and I had a constructive project to finance, if we wanted to advertise, if we needed venture capital to develop a mine or to develop any industry, the SEC would step in and under their present rules in effect today absolutely make it impossible for you to make any public announcement, or advertise, in any way obtain capital to employ people and build a worth-while industry. Try it if you want to see.

The SEC will tell me "If you want to put any advertisements out you must print your whole prospectus." You must use two or three sheets of the newspaper to advertise, if advertise at all.

But when you come to liquor you can go out and put in these attractive illustrated advertisements, these allurements, if you please, to fasten this destructive habit on the people, and I am opposed to it.

I think if we are going to enforce regulations that prevent people from advertising constructive industry and constructive projects, as the Securities and Exchange Commission is doing, certainly we cannot permit

UNIVERSITY OF MICHIGAN LIBRARIES

these breweries and these distilleries to advertise a product that fastens degrading habits on the people such as it does. For that reason I am very much in favor of this legislation.

I thank you.

The CHAIRMAN. Thank you, Congressman.

New England Workers Pay the Price in Jobs

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. SADLAK. Mr. Speaker, it is becoming increasingly apparent with each passing day that the cut-throat foreign competition provided by the importation of goods manufactured abroad is costing us a pretty price. As the alarming aspects of our foreign-trade policy begin to open the eyes of the American worker the fact is brought conspicuously to the forefront that the inevitable injury caused by growing imports is not confined to just a few industries. It is definitely encroaching on other areas of our economy.

The oft-repeated, yet unassailable truth is that American workers cannot compete with the low wages paid in other countries. Excessive imports can mean only one thing. The administration prefers to risk the closing of our factories. It seemingly remains unconcerned about the much-dreaded picture of men without jobs, a condition it is now in the process of creating.

Connecticut and New England with its concentration of industries are faced with the paying of a terrific toll in jobs lost, if the flow of foreign-made products continues unchecked. The indiscriminate, ill-conceived administration foreign-trade program is doing one thing that is definite. It is starting American workers on a discouraging march for jobs that will soon be nowhere available.

Under leave to extend my remarks in the RECORD, I include the following article from the New Haven Register of March 24, 1950, which gives some indication of the damaging effect upon one of New England's great industries by low-wage foreign competition:

CHEAP IMPORTS HELD HARMFUL TO JEWELRY TRADE

PROVIDENCE, R. I., March 24.—An official of the New England Manufacturing Jewelers' and Silversmith's Association says "a flood of foreign merchandise produced by low paid, substandard workers" is pouring into this country.

George R. Frankovitch, executive secretary of the association, told the New England council's committee on economic research last night the United States is encouraging import of merchandise from prewar competitors.

Frankovitch declared:

"Produced under conditions unthinkable in Rhode Island, Massachusetts, and Connecticut, the pearl industry of Japan is again sweeping away the jobs of pearl workers in New England.

"Slave or nearly slave labor in Czechoslovakia is again producing a cheap-type jewelry that is slowly stilling the machines of the New England plants."

Frankovitch described New England as one of the greatest jewelry manufacturing centers the world over.

He said that more than half of the industry's 80,000 workers in the United States are employed in New England. Most of the others he said work in the New York-New Jersey area.

He reported that Rhode Island is the greatest jewelry producing State in the country, while entire communities southeast of Massachusetts are totally dependent on the manufacturing jewelry industry for their livelihood.

Frankovitch attacked the 20 percent luxury tax on jewelry and declared that it has been the greatest detriment to full employment, greater stability, and general prosperity in the jewelry industry.

Small Businesses

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. LANE. Mr. Speaker, I wish to insert the following statement of Mr. S. Abbott Smith, of the Thomas Strahan Co., manufacturers of fine wall decorations, Chelsea, Mass., presented in behalf of the Small Business Association of New England, Inc., before a meeting of the New England Senators and Congressmen, and officers and principal committee chairmen of that organization held in room 18 in the Capitol Building on Monday, March 27, 1950.

This statement is most interesting, enlightening, and helpful, as a step in the right direction to assist and improve small business in New England and to help and relieve the serious unemployment situation in that section of the country:

Gentlemen, we very much appreciate your coming here this morning and giving us this opportunity to present our views on these important problems facing small business. At the same time, we hope these meetings may be profitable to you also in obtaining a boiled-down picture of the feelings of many of your constituents.

My subject is the great need of small businesses all over the country for adequate long-term and equity capital financing. That this need is increasing all the time is evidenced by the increasing number of applications to the RFC, by the hundreds of applications to the American Research and Development Corp. in Boston, and by our own personal contacts. I do not doubt but what your own mail tells you the story directly. All this is still further corroborated by the statement of Senator O'MAHONEY, chairman of the Joint Economic Committee, that the burden of the testimony before the Investment Subcommittee was that while private savings are at record-breaking levels, our private-enterprise system is starving for lack of debt and equity capital. The pressure is building up for supplying this capital from Government funds. Most of us, however, feel that such moves are unsound and will probably not be satisfactory.

Our banks seem to be adequately taking care of the short-term financing needs of our businesses but most of them stop there. The Bank of America is apparently doing an outstanding job on the west coast, going much farther. Some individual banks in New England are doing a good job, too, but in general all too many of our banks have become repositories for their depositors' money rather than performing what used to be considered full-banking functions. They are quite right when they say it is not the job of a commercial bank to supply equity capital; there is a very real question as to how long maturities they ought to allow on loans and what security should be required. All this merely accentuates the wide gap between the financing needed by business and what is being supplied by the banks.

The RFC has been of help to some small businesses but its loaning abilities are restricted, its purpose is not to lend equity capital and it very obviously is not filling the need. Furthermore, if it can possibly be done, we should prefer to see this financing come from private sources rather than be done with Government money.

Just why do we have this paradox of the greatest accumulation of savings in history and yet the dearth of long-term and equity capital for small businesses? The answer lies fundamentally, I believe, in our present tax structure. The quickest and best solution to the financing problem would be to reduce taxes, let companies plow back their earnings, eliminate the double tax on dividends. If you want hosts of new small businesses, just eliminate all taxes on profits and dividends from new small businesses for say the first 5 or 10 years.

If the reward is proportionate to the risk, you will no longer have to worry about a lack of equity capital.

Obviously, in view of our present budgetary situation, the above steps cannot be taken all at once anyway so instead of attacking the root of our trouble, we have to find some way, in spite of the present tax structure, to provide at least partially the long-term and equity financing needed by our New England small businesses—and preferably from private sources.

Last year, you will remember, we suggested that a capital bank might be one of the answers. It has been amazing and pleasing to see the swing of sentiment in many quarters in favor of such a plan. All this sentiment was crystallized a few weeks ago when Senator O'MAHONEY introduced in the Senate, S. 2975.

This bill would amend the Federal Reserve Act and authorize the creation of the 36 such banks, 1 in each Federal Reserve or Federal Reserve branch district. No Federal appropriations or guaranties are involved but this bill would provide a means for channeling some of the funds of the commercial banks, savings banks, life insurance companies and other financial institutions, as well as those of individuals, into local small businesses. All of these sources are expected to supply the initial capital by buying the original stock.

The capital banks would be a part of the Federal Reserve System and under the general supervision of the Federal Reserve Board. Each bank would have a board of directors of nine men, three appointed by the Federal Reserve bank in the district from the public and six by the stockholders.

The general powers of the capital banks would be to:

1. Insure loans by banks to small businesses up to $10,000 each and 5 years maturity.

2. Make loans direct to small businesses or buy obligations of small businesses from banks and other institutions.

3. Purchase equity or other securities of small businesses.

4. Purchase shares of local industrial development corporations which specialize in furnishing venture capital for new businesses. Such purchases would be limited to 5 percent of the capital, surplus, and authorized indebtedness of each corporation.

There are various other qualifications of the above powers, but there is no need to go into more detail now.

Applications to the capital bank for financing would be initiated through the local banks and other cooperating institutions. In this way the usual local bank-customer relationship which is so desirable will not be disrupted. Furthermore you will observe that the capital bank picks up where the local commercial bank generally stops, i. e., at long-term and equity financing, thus filling that gap which has become so glaringly apparent.

Personally I believe that a capital bank can and will be profitable if properly managed. However, Senator O'MAHONEY offers an additional inducement to the investors in this bank: It and its income will be exempt from Federal, State, and municipal taxes (except on real property) for a period of 15 years. Parenthetically it seems to me this provision backs up my original suggestion as to how to really supply small business with plenty of equity capital.

The bill also provides that the capital banks shall use the facilities of the Federal Reserve System and the Department of Commerce and shall provide consulting and advising services on a fee basis.

That, gentlemen, is a very brief statement of a very big subject. We hope each of you will study this bill carefully because, although not perfect by any means, we do think it along the right lines. Considerable discretion and latitude must be left to the directors of such banks because experience will undoubtedly show the need for changes not now foreseen. The main thing is to get started.

This subject is of particular importance to us in New England. New England money financed the development of a great deal of the United States in many fields, yet today our own little businesses cannot obtain the financing they need. Money is today being pumped out of New England pockets by Federal taxes to irrigate western sands to produce more of what, in many cases, we already have too much of. Our money is being used to develop other parts of the country which at the same time are enticing our men and businesses away from us.

Last Friday I participated in a panel discussion at the New England Council quarterly meeting in Providence on the subject of community industrial financing. Other parts of the country are way ahead of us. We must wake up and mobilize our resources to see to it that our New England businesses get the financing they need, the new equipment and buildings they must have to compete successfully. We must encourage our young men and develop new ideas, not just coast along on ideas which have now grown old.

The development of New England has always gone in cycles. When the clipper-ship era passed, we pioneered and developed textiles, shoes, and other industrial enterprises. Now those are slipping, but new ideas are flowing in streams from our research factories along the Charles River as well as from our thousands of businesses throughout New England. We must see to it that those ideas do not die aborning or move elsewhere just for lack of financing here.

We need a capital bank run by men of vision and keen financial judgment, cognizant of and sympathetic with the needs of small businesses. Such men with these facilities will put new vigor into our New England businesses and New England communities. Therefore, we hope that a bill similar to S. 2975, perhaps better, will be introduced in the House.

We urge you to study this bill. Improve it if you can. Give it your whole-hearted support. We must have long-term and equity financing.

The Brotherhood of Railroad Trainmen Oppose St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. VAN ZANDT. Mr. Speaker, the Brotherhood of Railroad Trainmen, representing employees of the Pennsylvania Railroad lines west, is opposed to the construction of the St. Lawrence seaway project.

For the benefit of Members of Congress, I am inserting a resolution adopted March 21, 1950, and outlining the reasons why the Brotherhood of Railroad Trainmen oppose the St. Lawrence seaway project.

The resolution is as follows:

GENERAL GRIEVANCE COMMITTEE,
BROTHERHOOD OF RAILROAD TRAINMEN,
Richmond, Ind., March 21, 1950.

Hon. HARRY S. TRUMAN,
President, White House,
Washington, D. C.

MY DEAR MR. PRESIDENT: At a recent session of the Full General Committee of the Brotherhood of Railroad Trainmen, Pennsylvania Railroad, Lines West, the following resolution was adopted:

"COLONIAL HOTEL,
"Cleveland, Ohio, March 14, 1950.

"To Officers and Members, General Grievance Committee, Pennsylvania Railroad, Lines West, in Special Session at Cleveland, March 14, 1950:

"Whereas there are in the United States and Canada, selfish business interests who are attempting to influence the governments of both nations to reconstruct the channels of the Great Lakes and the St. Lawrence River to provide a channel for the maritime traffic of the world; and

"Whereas these selfish interests have caused legislation to be introduced in the Congress of the United States to provide for the construction and maintenance of the project, to be known as the St. Lawrence Seaway; and

"Whereas such proposed seaway could only be used a few months each year, due to the subzero temperatures which causes the lakes and the river to be frozen over during the winter months; and

"Whereas the cost of the proposed seaway of several hundreds of millions of dollars is to be paid by the taxpayers of the United States, with little or no benefit to the people; and

"Whereas the selfish interests promoting the proposed seaway hope to benefit from its operation through lower transportation rates, without any reduction whatever in the prices of commodities to the consumers; and

"Whereas the territory in the United States to be served by the proposed seaway is now adequately served by transportation facilities which were able to efficiently handle all of the military, industrial, and civilian transportation needs of the world wars, and will be able to meet the needs of our peacetime expansions: Now, therefore, be it

"*Resolved*, That the general committee of the Brotherhood of Railroad Trainmen on the Pennsylvania Railroad, Lines West, in meeting assembled in Cleveland, Ohio, March 14, 1950, go on record opposing the legislation to provide for the construction and maintenance of the St. Lawrence seaway; and be it further

"*Resolved*, That copies of these resolutions be forwarded to the President of the United States, the governors, United States Senators and Representatives in Congress of all States served by the Pennsylvania Railroad, and the president of the Brotherhood of Railroad Trainmen.

"G. H. GATES (421),
"J. N. NORTON (141),
"J. B. PHILLIPS (298),
"Resolutions Committee.

"Moved by McGrath (225) and Sandilla (198) that the resolution be adopted.

"Motion carried unanimously."

Hoping that you will not concur in this proposed wasteful enterprise, which will only make the rich richer and the poor poorer, I am,

Sincerely yours,
U. D. HARTMAN,
General Chairman, Brotherhood of Railroad Trainmen, Pennsylvania, Lines West.

Protection on Import Competition

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. TOLLEFSON. Mr. Speaker, imports of foreign commodities under our reciprocal trade agreements policy have in many instances been injurious to domestic industry. Many plants have either closed down or curtailed their operations, throwing many thousands of workers out of employment. Representatives of labor and management in affected industries have formed an organization known as the National Labor Management Council on Foreign Trade Policy. Their position on import competition has been well stated by Mr. O. Strackbein, chairman of the organization, in a letter appearing in the Washington Post on March 27, 1950. I trust that Members of the House will read it and give consideration to what Mr. Strackbein has said.

PROTECTION ON IMPORT COMPETITION

As chairman of the newly organized National Labor-Management Council on Foreign Trade Policy, may I express to you the position taken by the labor and management groups which make up the council in regard to the impact on certain American industries of the Administration's import policy.

Lower wages than those prevailing in the United States create the principal competitive advantage enjoyed by foreign countries when they ship dutiable merchandise into our domestic market. These lower wage rates often result in lower foreign costs and confer a price advantage upon the shipper to our shores, since his productivity is not generally so far below our own as to offset the lower wages. With the exception of a few products, such as automobiles, that are mass-produced by us, other countries are not

UNIVERSITY OF MICHIGAN LIBRARIES

very far behind us in productivity and are rapidly catching up in many lines because of the spread of mechanization.

In the meantime, however, and contrary to the theory of classical economists and free-trade advocates, the competitive advantages of imported dutiable goods in our domestic market are not generally reducible to superiority of natural resources, soil, climate, or greater efficiency in the countries of origin. Unfortunately they are attributable in some cases to simple exploitation of labor.

Competitive goods that derive their cheapness from this source therefore enter higher-standard countries with a spurious economic advantage rather than a fair one. Instead of spreading the economic benefits often attributed to trade, they undermine the living standards in the higher-standard importing countries.

In order to prevent the destruction of high-labor standards and to maintain the possibility of reasonable business profits, a high-standard country is therefore fully justified in taking measures to prevent the economic erosion that may result from unimpeded importation of competitive, as distinguished from complementary, goods from lower-wage countries.

Protective measures that are designed thus simply to place competitive foreign products on a fair competitive level in the market of a high-standard country cannot properly be described as trade barriers or obstacles to the flow of healthy trade. The United States is unique in the world of trade because all other countries operate on a lower-wage standard. Nevertheless approximately 60 percent of our imports are now free of duty, consisting largely of noncompetitive items and raw materials. The economic conditions of their production overseas cannot directly undermine our standards and our consumers can enjoy the lower prices without hurting domestic production.

However, the claim of consumers to the enjoyment of lower prices on the 40 percent remainder of our imports, which are competitive goods, is not valid if the lower prices of the latter merely reflect lower-wage levels abroad, since such a claim would be based on the destruction of our economic standards.

The postwar economic situation, characterized by an unprecedentedly high national debt, calls for the continuance of an unusually high annual national income, or one of well over $200,000,000,000. This requirement binds us, however, unwillingly, to a high-price level.

The interests not only of labor and management but also of the public therefore make it imperative that they seek reasonable safeguards against unfair and deflationary foreign competition.

O. STRACKBEIN,
Chairman, National Labor-Management Committee on Foreign Trade Policy.
WASHINGTON.

Unemployment Classified by Usual Occupations

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks, I include the following statistics on unemployed persons in the United States on January 1950, classified by usual occupation:

Major occupation group:	*Number of persons*
Professional and semi-professional workers	124,000
Farmers and farm managers	25,000
Proprietors, managers, and officials, except farm	146,000
Clerical and kindred workers	348,000
Salesmen and saleswomen	218,000
Craftsmen, foremen, and kindred workers	728,000
Operatives and kindred workers	1,153,000
Domestic service workers	135,000
Service workers, except domestic	377,000
Farm laborers and foremen	316,000
Laborers, except farm and mine	771,000
Never had a job	141,000
Total unemployed persons	4,480,000

Admiral Cook in Formosa as Adviser on Strategy to Chinese Nationalists

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Constantine Brown which appeared in the March 25 issue of the Washington Star with respect to the naval adviser to the Chinese Nationalist Government, Vice Adm. S. C. Cook:

THIS CHANGING WORLD—ADMIRAL COOK IN FORMOSA AS ADVISER ON STRATEGY TO CHINESE NATIONALISTS

(By Constantine Brown)

Vice Adm. S. C. Cook, former commander of the Seventh Fleet in the Pacific, is in Formosa in the capacity of naval adviser to the Nationalist Government.

Admiral Cook, who retired from the Navy about 2 years ago, agreed to go to Formosa to help the Nationalists continue their struggle without any specific authorization from the United States Government.

The arrival of Admiral Cook has put some new life in the defenders of that island. So long as the Chinese Communists do not have the necessary landing craft and a powerful air force, it will be difficult for them to cross the nearly 100-mile stretch of water which separates the island from the mainland.

DEFECTION CHIEF FEAR

The possible defection of the Nationalist navy and air force was more feared by their government than an actual invasion. American observers on the spot have reported since last December that so long as these two branches of the Nationalist force remained loyal, the chances of a successful Communist landing remained slim. Communist propagandists have urged the air and naval personnel of the Nationalists to give up, since the United States and Britain had written them off.

The fact that the British Government broke diplomatic relations with the Nationalists and recognized the Peiping puppets did not worry the defenders of Formosa very much. Britain's prestige had been at a low ebb for some time.

But the Nationalists' abandonment by the United States was an entirely different story. The Chinese know that we stood by them ever since the Japanese invaded Manchuria in 1931, and considered us their only friends. Our attitude in recent years has severely undermined the morale of the Nationalist forces. It was more recently reflected in the doubtful loyalty of the personnel of the naval and air forces gathered in Formosa for a last stand.

PRESENCE ACTS LIKE TONIC

The mere presence of an American retired admiral, well known to the Chinese because of his previous associations with them, has acted like a tonic. Within a few weeks after he assumed the position of adviser to the Nationalist naval forces, a daring commando raid was staged on the mainland. On March 15, the town of Sugmen was occupied for a few days. After executing a number of Communist officials in that area, the raiding party split in two: one group went into the interior to join the guerrillas whose number is increasing rapidly; the other returned on board the raiding vessels and had a triumphal reception at the Keelung naval base in Formosa.

From a military standpoint the raid was of no consequence. But from a psychological warfare view it was more important than almost anything the Nationalists have done in the last 2 years. It raised the morale of the Nationalist armies which had suffered only defeats since 1947; it impressed the subjugated Chinese peoples who saw for the first time since the fall of Canton and Chungking regular troops on the mainland and it compelled the Communist army to detach two divisions from the south to prevent another possible incursion.

The rank and file of the civilians and military on Formosa probably are not aware that Admiral Cook is a civilian so far as the American Government is concerned. They look upon him as a representative of the American Navy and rejoice that Washington has finally decided to give them some assistance. The moral effect of Admiral Cook's presence on Formosa in terms of stiffening the resistance of the Nationalists is worth more than the ECA assistance we are giving their government sparingly.

Crucial Data

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. LANE. Mr. Speaker, I wish to include the following article from the Daily Evening Item, Lynn, Mass., of recent date:

TALKATIVE CONGRESSMEN

Congressmen are always complaining that they don't get the truth, or at least all of it, from such important arms of Government as the State and Defense Departments. But they themselves are partly to blame, because few of them know how to keep a secret. They're undoubtedly right that they don't get the full story.

Of course some of the information they don't learn is too vital to security to be passed around, even within the departments. We're not thinking about rigidly classified material.

But lots of other data Congress could wisely lean upon for intelligent lawmaking it never gets. What it does find out about the state of our defense or political and

diplomatic conditions abroad is too often not distinguished either for accuracy or clarity.

The departments, to be sure, can't be whitewashed of responsibility for their part in this. Many Government officials have a generous contempt for the people's representatives and are predisposed to tell them as little as possible, just on general principles.

The thing is further complicated by the departments' dependence on Congress for money. Department officials come to Capitol Hill as bargainers, trying to put the best conceivable case for the granting of the funds they seek. Understandably, some inconvenient truths may not get told.

But there's another side of it. Congressmen as a rule are among the poorest guardians of a confidence to be found in Washington. Tell them something confidential and, like as not, it'll find its way into print in record time.

The average Congressman fairly bursts with self-importance when he's lugging a big secret around in his brief case. He can hardly wait to fish out a shiny photostat fresh from Government files and show it to a colleague, a visiting constituent, or a reporter.

The information usually is passed on with appropriate warnings not to disclose it. Yet few who relay such data to reporters can have any illusions about where the material will ultimately wind up.

The plain fact is the Congressmen want it known that they have important information. It increases their stature, they believe.

Actually, their stature would be a lot greater if they showed more responsibility in preserving confidences. They can't expect to be entrusted with crucial data so long as they spill the contents of their brief cases to every good listener who hits their offices.

There'll be more point to their demand for important facts when they learn to curb their schoolboyish eagerness to command attention.

The Faith That Created America

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include a recent editorial from the Everett (Mass.) Evening News-Gazette. This editorial brings a hopeful message to all Americans who believe in preserving our ancient landmarks. The editorial follows:

THE FAITH THAT CREATED AMERICA

John W. McPherrin, editor of the American Druggist, recently spent 5 weeks in England studying socialized medicine. He said that Britons seem to have accepted the "false doctrine" that the state alone can bring security, though, he added, "I don't think they really believe it deep down in their hearts." He quoted the British health minister, Aneurin Bevan, as saying in a private interview, "The method we are using to provide health for all the people will spread throughout the world. Such a change is inevitable. America must come to it."

Then he gave his own view, in these words: "After 5 weeks in Great Britain I came home with a new reverence for the faith in mankind that created America. The same faith did not create the welfare state."

The main importance of socialized medicine—and of the compulsory Government health-insurance scheme now being proposed for this country—is that it is not a thing complete in itself, but part of an infinitely larger plan to give Government either ownership or absolute control over the people's resources and the people as individuals. According to the classic Communist dogma, socialized medicine is one of the most important steps in this direction. If it cannot be achieved all at once, an attempt is made to bring it on by degrees. To take a current example, Congress now has before it two bills, one of which would authorize Federal handouts to medical schools, and another which would make the Government responsible for the medical care of children within certain age groups. The obvious purpose is piecemeal socialization.

The welfare state, in all its many facets, is the antithesis of what we have believed to be the American tradition. Sooner or later, it would destroy that tradition totally.

Farmers Union Resolutions

EXTENSION OF REMARKS
OF
HON. MERLIN HULL
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. HULL. Mr. Speaker, in these troublesome times, the farming situation in the Northwest is growing more troublesome, and from month to month it becomes even worse. The decline in prices of farm products steadily lowers the buying power of the great food-producing sections of our country. Looking backward to other such depressions, many are brought to a realization that hard times in rural sections frequently have been the forerunner of a national decline in prosperity.

Temporarily, Government expenditures may seem to protect the industrial centers, but loss of the purchasing power of the rural centers, in which reside nearly half our population, is a warning to all people. The number of the unemployed has mounted steadily in the past few months. It now is in excess of 4,000,000 workers, one of the unfavorable indications which quickly follows a decline in agriculture.

At the annual convention of the Wisconsin Farmers Union, in Eau Claire, there was brought together a large group of practical men as representatives of their great and growing organization. Most of these delegates come from the big dairy centers, from the dairy farms which produce such a large percentage of the milk and milk products which supply the Nation's industrial and commercial centers. These able men are students of economic conditions, as well as the details of dairy farm and home life. They speak from the wisdom born of long experience and observation. They know whereof they speak, and they speak not because of a love of vocal expression, but because they know and feel the difficulties with which all our people are confronted. Their thoughts are well worthy of the consideration of all people who recognize the gravity of the problem, and the necessity of a solution.

The debates of this big and important convention are in part embodied in a series of resolutions adopted at the convention. They were as follows:

RESOLUTIONS

APPROPRIATIONS FOR FHA

Whereas the Wisconsin Farmers Union is basically concerned with the welfare of all Wisconsin farmers, especially those operating family sized farming units and who are in need of financial assistance, and farm and home management guidance; and

Whereas many farmers in Wisconsin, both veterans and nonveterans with good agricultural backgrounds and experience lack the necessary land, livestock and equipment to be successful as farmers; and

Whereas the Farmers Home Administration, as an established agency in the United States Department of Agriculture, has for many years demonstrated its ability to give such financial aid, farm and home management guidance to needy veterans and other farmers, through its supervised credit program; and

Whereas this agency does not compete with any other agency by making loans only to worthy and qualified farmers, who are unable to get money through banks or other loaning institutions, and gives guidance not provided by other loaning sources; and

Whereas the funds annually appropriated for the use of the agency are entirely inadequate to meet the needs of eligible farm families; and

Whereas the need of eligible nonveteran farmers is particularly apparent at this time to be as great or greater than veterans, because many veterans have received the excellent service rendered by the FHA in recent years; and

Whereas prices of farm products, especially poultry and dairy products have dropped sharply this past year and continue downward with practically no reduction in farm supplies; and

Whereas the current drastic drop in farm income has been accompanied by a very pronounced tightening of local agricultural credit: Therefore be it

Resolved, That we, the delegates attending the Twentieth Annual Convention of the Wisconsin Farmers Union, which is being held in Eau Claire, Wis., February 17-20, 1950, do favor the Farmers Home Administration being given the continued active support of the Wisconsin Farmers Union, and that our national office take such steps as are needed to inform Congress and the Secretary of Agriculture of the need for more appropriations so as to enable the FHA to meet the needs of eligible farm families; and be it further

Resolved, That our national office review the appropriation and the needs of this agency, and to inform Congress of the need of a deficiency appropriation if advisable in the light of current agricultural conditions; and be it further

Resolved, That copies of this resolution be mailed to Senators WILEY and MCCARTHY and all Wisconsin Congressmen.

ST. LAWRENCE WATERWAY

Whereas years of effort have been devoted to the proposition of developing the St. Lawrence River as a joint seaway and hydroelectric power project by the Governments of the United States and Canada; and

Whereas the Canadian Government has completed a considerable part of its commitments with respect to developing the St. Lawrence River as a joint project of the two nations, and is now waiting for the United States to take decisive action; and

Whereas dairy, grain, and livestock farmers in central and midwestern United States have a definite stake in the development of the St. Lawrence seaway as a means of gaining access to foreign markets for the products; and

UNIVERSITY OF MICHIGAN LIBRARIES

Whereas freight rates and handling costs have increased more than 50 percent in the last few years and these costs must be borne by consumers in our eastern cities in higher food prices: Therefore be it

Resolved, That the Wisconsin Farmers Union delegates attending the organization's twentieth annual convention in Eau Claire, Wis., February 17–20, 1950, do hereby reaffirm our previous stand that the St. Lawrence seaway be developed as a means of giving the landlocked central and midwestern farmers an ocean gateway; and be it further

Resolved, That a copy of the resolution be forwarded to Wisconsin's congressional representatives with the request that they push for action on this project.

THE BRANNAN PLAN

Whereas the American farmer has done a wonderful job producing food and fiber to meet the needs of the whole world; and

Whereas it is unfair to any group of society not to be insured of a decent standard of living, especially after having contributed so wholeheartedly of their sweat and toil to feed the world; and

Whereas the present agricultural program is inadequate in that it concerns itself primarily with the prices of individual farm products. With the program now in, there are no funds for the Secretary of Agriculture to use, so it means nothing to the price-support program; and

Whereas the Brannan plan program is designed to provide the American farmers with a sounder and more effective farm program than is now available to them. At the time it aims to assure consumers of plentiful and steady supplies of agricultural products at reasonable prices; and

Whereas the proposed program carries a definite and realistic income objective and uses price support as a means to that end: Therefore be it

Resolved, That we, the delegates attending the twentieth annual convention of the Wisconsin Farmers Union, which is being held in Eau Claire, Wis., February 17 to 20, 1950, go on record supporting the Brannan plan; and be it further

Resolved, That a copy of this resolution be sent to our Congressmen and Senators.

ABOLITION OF ELECTORAL COLLEGE

Whereas our present system of an electoral college for the purpose of electing a President and Vice President of the United States is not only outmoded but also undemocratic: Therefore be it

Resolved, That the Wisconsin Farmers Union, by action of the delegates attending the twentieth annual convention of the organization, held at Eau Claire, Wis., February 17–20, 1950, do favor the abolition of the electoral college and instead favor the direct election by popular vote of the President and Vice President of the United States; and be it further

Resolved, That a copy of this resolution be sent to our congressional Representatives with the petition that they initiate legislation to accomplish this object.

FEDERAL AID FOR EDUCATION

Whereas competent studies show that the United States will need school buildings for at least six and a half million additional children during the next 6 years; and

Whereas at least 2,000,000 American children of school age are not attending any school; and

Whereas hundreds of rural communities in the United States are unable to finance a sound system of rural education; and

Whereas we contend that education is the keystone of our representative form of government and a cardinal requisite for the preservation of our democratic way of life; and

Whereas in both the Eightieth and Eighty-first Congresses the United States Senate passed a bill to provide Federal aid for the Nation's schools, but twice the reactionaries in the House of Representatives killed this legislation; and

Whereas the President of the United States in his budget message to Congress last month requested an appropriation of $400,000,000 for education and general research; and

Whereas we believe that this sum is insufficient when contrasted to the $13,600,000,000 requested for national defense: Therefore be it

Resolved, That we, the delegates attending the Twentieth Annual Convention of the Wisconsin Farmers Union, which is being held in Eau Claire, Wis., February 17 to 20, 1950, do hereby go on record in favor of reducing the request for defense funds and increasing funds for educational aid; and be it further

Resolved, That a copy of this resolution be sent to all Wisconsin congressional representatives as an expression of our views with the request that they support our proposals with their votes.

John M. Cashman

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. LANE. Mr. Speaker, I wish to insert the following eulogies that appeared in the newspapers in the city of Lynn, Mass., following the passing of one of the outstanding members of the bar of that city.

This lovable member of the profession, Attorney John M. Cashman, had served with honor and distinction as the assistant city solicitor of that city for a number of years.

The statement "Cashman files brief" appeared in the Lynn Telegram-News on Thursday, March 23, 1950. The other article entitled "John M. Cashman" appeared in the Lynn Daily Item of that city. The entire city of Lynn and members of the legal fraternity, friends, and associates outside of that city respectfully mourn his passing:

CASHMAN FILES BRIEF

Assistant City Solicitor John M. Cashman presented the final and most important brief of his brilliant career early Tuesday morning as he faced the supreme judge of all—St. Peter.

It couldn't have been too lengthy a summation since John had received little notice of the assignment. It must have been something he hastily composed when the angels of death began to hover about him in his lonely hospital room at the Palmer House. But then John was never one for literary hemorrhages, he had a penchant for saying things as speedily as possible and his success in the legal field was attended by that reputation that he was a man who came to the point early in a discussion.

John could have told St. Peter many things the other morning, that he had always been a devoted husband and companion, a doting father, a man who had not the time to belabor his fellowmen with criticism, a churchman who had always taken his religion seriously, but knowing him as they did his friends are certain his summation went something like this: "You've been keeping the books. What's the verdict?"

John M. Cashman won the game of life, for he never allowed it to become too important to him. In death he is even greater than in life, for only now may the populace truly appraise the exemplary existence of this man. There is no great sorrow over the death of John Cashman, for death is inevitable and it meant nothing to him. He could have met it as a boy or as a young man, but a kind Providence allowed him to round out a full and complete life before separating from his loved ones. That was how John looked at it. He never at any time during his mortal span ever stopped being thankful for his blessings.

True, Lynn has lost an outstanding citizen, the city an able servant, the bar an insatiable student, and his loved ones a devoted companion, but balancing all of these things is the lesson of the life he lived; that man is not important upon his earth, that his reward, if there is to be one, must come in still another sphere. There is no doubting the fact that John Cashman enjoys that rich reward today, the pains gone from his chest, his stiff knee strong and new, the multiple correspondence he signed for the rotary machine a memory, legal opinion and briefs a hazy item of the past.

John M. Cashman, virile, strong, brilliant, wealthy, chose to live with the Almighty for the greater portion of his life. Were legal opinions necessary in his new domain, no doubt he'd command a dozen of the most talented stenographers in Heaven.

JOHN M. CASHMAN

Lynn has lost one of the most brilliant members of the legal fraternity and a public servant of the highest integtrity in the death of Attorney John M. Cashman, assistant city solicitor for the past 29 years.

John Cashman loved his profession and brought to it an ardor that never waned. He was thoroughly versed in the intricacies of the law, particularly in municipal law, a field in which he won recognition throughout the Commonwealth. His private practice was large and fruitful.

The respect and esteem in which he was held by his professional colleagues was best attested by the fact that he was chosen by them to serve 15 years as president of the Lynn Bar Association, an honor not to be regarded lightly in a community plentifully supplied with legal talent of a rich order.

Mr. Cashman was a man of unimpeachable personal character, devoted to his home and family and to various civic causes to which he brought the same enthusiasm and industry that he demonstrated in his professional duties. His sense of humor, his keen intellectual background, his inquiring mind and his genial amiability won him countless, enduring friends in many circles. Lynn is the poorer in his passing.

Putting the Votes on Record

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an editorial from the Evening Star, Washington, D. C., appearing in their issue of March 25.

This editorial endorses and favors my House Resolution 450 which would require a record vote—yea and nay—on

all appropriation bills of public funds or of a public nature.

The editorial is as follows:

PUTTING THE VOTES ON RECORD

Representative ROGERS of Florida wants to have the House of Representatives do a very sensible thing—require a yea-and-nay vote (which becomes a matter of public record) on every bill or resolution that appropriates public funds. He has introduced a resolution to that effect and has asked the Rules Committee to approve it, so that it can be brought before the House.

Mr. ROGERS points out the interesting fact that last year Congress authorized and appropriated upward of $28,000,000,000 without a record vote in either House or Senate to show how individual Members voted. Record votes were taken on some measures in the Senate, omitted on others. Mr. ROGERS believes that when the people's representatives vote to spend the people's money, their votes should be taken down. He is right. It should be required. His proposal merely establishes a rule that no one can quarrel with: That the people are entitled to know who voted for and against what spending.

The Propaganda War

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, March 27 (legislative day of Wednesday, March 8), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "The Propaganda War," published in the Bridgeport Post of March 24. It is the judgment of my community of Fairfield, Conn., that Mr. George Waldo, Editor of the Post, wields one of the canniest and wisest pens in the newspaper world. Of course, I am most happy to submit for the RECORD this particular editorial entitled "The Propaganda War," because it indicates the support of this eloquent writer and this influential newspaper for the greatly enlarged campaign of ideas which I advocated last week on the floor of the Senate. I know such support will make its influence felt in Congress, in the administration, and in the State Department.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PROPAGANDA WAR

Senator WILLIAM BENTON, of Connecticut, is the only Member of the Senate with actual State Department experience—in his case, as a former Assistant Secretary of State. When he took the floor the other day and uttered a plea for Secretary Dean Acheson, asking Congress to be his adviser on foreign policy but not his executioner, he had the advantage of being able to delineate State Department problems, not from hearsay, but from direct knowledge. His plea was an effective one.

But the important part of Senator BENTON's speech was not his defense of the present Secretary of State, but his offering of a resolution, supported by a group of his colleagues, which would vastly extend our activities in giving the rest of the world the truth about American politics, American affairs, and American intentions.

Senator BENTON made his point most effectively. He proved that Communist infiltration depends upon propaganda, not upon war or force, and that in the propaganda war the Communists thus far have marshaled forces far exceeding our own.

They are telling the rest of the world that the United States is headed for an economic crash, that its rulers are Fascists and warmongers, that the rich are getting richer but that everybody else is getting poorer, that starvation is rampant, that our ideal of freedom is a fraud, that we practice racial and religious discrimination, and that we are culturally barbarous, money-mad, lawless, and crime-ridden.

Propaganda of this nature is pumped forth from Moscow every day. It reaches every Russian and it probably reaches most of the people in the satellite countries, not to mention a great many others beyond the borders who hear the Russian radio blasts or read the Russian periodicals.

A great part of the world is completely puzzled regarding the United States because our counteroffensive in the propaganda line has been weak and ineffective. It isn't enough that we in America know the utter absurdity of Russia's lying charges against us. The rest of the world does not know. To tell the world is our foremost duty if we would win the cold war.

As Senator BENTON well says, this is not merely a struggle for territory, it is a struggle for the minds, the hearts and the imagination of the rest of the world. He proposes a propaganda offensive on three fronts, by radio, the movies, and the printed word, and on a scale in keeping with our size and resources and the importance of this issue. He admits that this would cost money. Some might call it big money, he says, as compared with the appropriation for the Library of Congress, but it is small money as compared with the cost of the Navy or the hydrogen bomb.

We hope Senator BENTON's idea will receive the most serious consideration. Russia's admitted victories in the propaganda war have been injurious to our prestige, harmful to our pride, and costly to our pocketbooks, in the sense that we have tried to gain good will solely by dumping dollars. It doesn't work.

Wildlife Restoration Week

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the proclamation of the distinguished Governor of Michigan, the Honorable G. Mennen Williams, expressing his interest in the conservation of wildlife during this fitting period of National Wildlife Restoration Week:

STATE OF MICHIGAN,
EXECUTIVE OFFICE,
Lansing.

PROCLAMATION—NATIONAL WILDLIFE RESTORATION WEEK

Michigan's citizens are becoming increasingly aware of their obligation to coming generations to help in conserving our natural resources.

Michigan has held a position of acknowledged leadership since the inception of the conservation movement in this Nation. Michigan is a leader now in a movement to teach conservation principles in the State's public schools and to take boys and girls into the outdoors where they can learn first-hand about soil, water, trees, minerals, and wildlife, and all the God-given natural resources on which our well-being and prosperity are dependent.

Prudent management of our natural resources, including water, soil, trees, and all other plant as well as animal life, is imperative if we are to continue to prosper as a State and as a Nation. To this end it is essential that we enlist the interest and cooperation of every citizen in the carrying out of good conservation measures.

It is fitting, therefore, that Michigan should play a leading part in the observance of America's thirteenth annual National Wildlife Restoration Week, and that each individual should dedicate himself to the conservation pledge which states:

"I give my pledge as an American to save and faithfully to defend from waste the natural resources of my country—its soil and minerals, its forests, waters, and wildlife."

Therefore, I, G. Mennen Williams, Governor of the State of Michigan, do hereby proclaim the week of March 19 to 25 as National Wildlife Restoration Week, and urge the participation of all Michigan citizens in the observance of the week and in public programs which will emphasize the importance of conservation to us and to future generations.

Given under my hand and the great seal of the State of Michigan this 26th day of January, in the year of our Lord 1950, and of the Commonwealth the one hundred and fourteenth.

G. MENNEN WILLIAMS,
Governor.

Something to Think About

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks I include an editorial which recently appeared in the Somerville (Mass.) Journal. This editorial reflects, I am sure, an attitude on the part of our people which is steadily becoming more pronounced and more vocal. The editorial follows:

SOMETHING TO THINK ABOUT

Socialism versus capitalism has become the biggest peacetime issue in this country. And yet voters have never had an opportunity at the polls to express a clear-cut preference. Everyone appears to be against socialism, European style. At the same time its physical manifestation here in our own land is steadily growing.

At present, the Federal Government costs us close to $50,000,000,000 a year out of our total income of about $200,000,000,000. The Federal, State, and local governments, combined, take about one-third of everything we produce. We work for ourselves only 2 out of every 3 days. With a 40-hour workweek, we have less than 27 hours, or about 3½ days per week to produce our food, clothing, and shelter, and to maintain our health and education.

Government already owns one-fourth of all the land in the United States. It has also become the biggest employer in the world. It now has more than 2,000,000 civilian employees. They receive a half billion dollars per month.

Many more million citizens have become dependent upon payments, benefits, subsi-

UNIVERSITY OF MICHIGAN LIBRARIES

dies, and hand-outs. One out of every six adult Americans receives checks regularly from Washington. A United Press report sets the figures at 15,830,899. If each check went to a different family, that would mean that 42.7 percent or nearly half of the American families now balance their budgets with money from Washington.

Each year our tax burdens increase. Each year others join the ever-increasing ranks of the 15,830,899 who are directly dependent on Washington's management of their lives, either in whole or in part.

No one has a greater stake in the issue of socialism in the United States than each one of us as an individual. It is an issue which goes to the very roots of representative government. It is an issue about which we must think intelligently and constructively. We must become vocal in our opposition to the socialistic trend, sugar-coated though it is, and we must vote for those who still believe that as this country became great under a representative governmental system with regulated capitalism, so it can continue to be great and to grow stronger and greater under that same system.

Editorials From the Progressive Farmer

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. RAINS. Mr. Speaker, in a recent issue of the Progressive Farmer, an outstanding farm magazine, there appeared two editorials which I think will be of interest to the Members. I include them herewith:

YES; FARMERS NEED SOCIAL SECURITY PROTECTION

"Aren't there any old-age benefits for farm workers or benefits for his widow and children—like there are for town workers?"

This question was put to us by a farm hand a few months ago. And our answer, of course, had to be, "No." Thus far Congress has done nothing to provide payments for farmers, farm tenants, and farm hands such as are provided for industrial workers when they reach 65, or if they become permanently disabled at an earlier age.

We believe the time has come when Congress should make such provision. Three reasons why stand out clearly in our viewpoint:

1. Every day farm people are paying to provide such benefits for other classes, but getting no such benefits themselves.

2. Unless capable farm tenants and farm hands get such benefits soon, they are more likely to get town and city work where such benefits are provided.

3. Any right-hearted farmer would hate to fire a man because of age or disability, yet he may feel that he cannot afford to support such a man by paying him regular wages. Under the social-security plan, employer and employee both pay into an insurance fund that takes care of such payments.

Some further questions commonly asked about this program and the correct answers, according to the best information we can get, are as follows:

"What classes of benefits would be given farmers under the social-security program and how much?"

There are three classes of monthly payment benefits as follows:

1. Old-age or retirement payments at age 65.

2. Total disability payments.

3. Payments to widow and children in case of the death of the farmer, farm tenant, or farm laborer.

"Suppose I am a farmer or farm tenant or farm worker, with net income of $200 a month; how would these payments work out?"

1. If you should become totally and permanently disabled at any age, you would receive $62 a month as long as disabled.

2. If you should retire at 65 (or later) you would receive $62 a month the rest of your life; your wife, $31 a month after reaching age 65; and any child under 18 would receive $46 a month till he or she reached age 18.

3. If you should die leaving a wife and children, your widow would receive $46 a month until your youngest child becomes 18 and continuously after reaching age 65. Each child would receive $31 a month until reaching age 18.

So much for monthly payments to persons who have paid premiums based on a net income of $200 a month. If your income has been $100 a month, you would receive about 80 percent as much; if $300 a month, about one-sixth more than the amounts just given. Corresponding amounts will be given for larger or smaller incomes.

"How much would it cost the farm people to be thus included for social-security benefits?"

The farm operator and tenant farmer would each pay a premium of 2¼ percent on the first $3,600 of his net (not gross) farm income per year—such a net income as your income tax would show after all deductions are made. This would be $45 a year on a net income of $2,000. The premium rate would gradually increase until 1969, when it would be 4⅞ percent. The farm hand would pay 1½ percent of his wages to begin with, and after 1969, 3¼ percent. The employer and employee contribute an equal amount to provide protection for the farm hand and his family.

"What reports will the farm operator have to make?"

The farm operator and tenant farmer would each report annually with their income-tax returns, and pay the premiums indicated. The reports of farm hands would be handled either on a quarterly return or a stamp-plan system.

We repeat our belief that farmers, farm tenants, and farm workers should write our Congressmen and Senators and ask to be included in this social-security program. It will make farm tenants and workers and their families more contented and therefore more efficient and stable. It will save farm owners from the ever-present threat of having to look after disabled workers or needy widows and children, or else see them suffer.

Furthermore, these important facts should never be forgotten: (1) All manufacturers now pay to provide social security for town and factory workers; (2) manufacturers add these social-security payments to their production costs when fixing the prices of manufactured products we buy and pass these costs on to consumers; (3) therefore, farmers, farm workers, and farm tenants are every day paying large amounts to provide social-security benefits for industrial workers while farmers and farm workers have no such protection.

WE ARE LOSING PATIENCE

American Government is big business. Able men of unquestioned honesty and integrity are required in its administration for the public. Yet, no sooner does an able, courageous man accept an important post in public service than he becomes a target for the sharpshooters. No matter how honest he may be, no matter how capable in carrying out the duties of his post, the villainous crew starts tearing him apart.

There's always room for difference of opinion. Difference of opinion invites argument. But an argument, even though it be heated, does not justify vilification.

We are losing patience with those who differ with others just for the sake of being different. We have long since lost patience with those who, in their effort to win an argument, stoop to vilification of the person with whom they differ.

We hold no brief for those few who seek public post with selfish intent. These few are soon unmasked and made to pay the penalty. Such persons should be exposed, and we honor those who bring their shame to light. But in seeking out these few, why crucify the far greater number who are working diligently, earnestly, and ably in behalf of the public good?

How can any man in position of public trust render best service when he is forced to spend much of his time in parrying personal slander? How can any man, feeling the dejection that comes from unjust attacks, be expected to render top service? How can any able businessman, one who enjoyed the accomplishment of building up and directing a successful business, one who has enjoyed the prestige that comes from such accomplishment, have the courage to accept a high position in Government, where he will be the target for all types and classes of vicious snipers? The ablest among us sometimes are the most sensitive.

We have many, many able men who have been in public service over a long period of years. These men continue to flinch when hit by the barbs cast their way. These men still have feelings. But their appreciation of the importance of the work they are doing, their feeling of responsibility for the proper performance of this work goads them on, dulls the pain from the uncalled-for attacks. We feel for these men who have the courage to remain in public service. We are losing patience with those who can see no good, those who can think nothing but evil.

What Oleo Can Do That Butter Can't

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by a constituent to the editor of the Des Moines Register:

WHAT OLEO CAN DO THAT BUTTER CAN'T

To the EDITOR:

A short time ago Hoard's Dairyman outlined six things that oleo can do that butter cannot do, and seldom has any editorial message been as widely reprinted.

Here is what it said:

"If you think the oleo monopoly has been mistreated, read these advantages:

"1. Oleo can use benzoate of soda as a preservative.

"2. Oleo can use glycerides to change melting point.

"3. Oleo can bleach their natural greenish-gray product to a more desirable white.

"4. Oleo can hydrogenate and clean up oils going into its manufacture.

"5. Oleo can fortify its product with synthetic vitamins.

"6. Oleo can use the drug diacetyl to correct and imitate flavor.

"7. Oleo can use any color in the rainbow except yellow by Ohio law (before the November referendum).

"Butter would be branded as adulterated if it did any of the above. Don't you think oleo has gone far enough?"

By the way, in his opening campaign speech at Adel in 1948, it seems that Harry Truman said something about somebody sticking a pitchfork in the farmer's back. In signing the new oleo bill, I wonder who is wielding the pitchfork now on the dairy farmers.

P. W. PETERSEN.

WILLIAMS, IOWA.

The Day We Celebrate

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech, delivered in Rhode Island on St. Patrick's Day by the majority leader of the House, Hon. JOHN W. MCCORMACK:

THE DAY WE CELEBRATE

I am honored and happy to be with you tonight on this festive occasion, particularly to be on the same speaking program with my close friend of years in Washington, Vice President BARKLEY, and my very close and valued friend, Father Slavin, president of Providence College.

The quaint mixture of Irish fancy and grim realism may well serve to remind us that one of the most important qualities which the world needs today is a willingness to face facts—no matter how unpleasant—and at the same time remain steadfast to high ideals and principles.

I mention this quality—not to the exclusion of others equally praiseworthy—but to emphasize it as an Irish characteristic peculiarly applicable to the saint whose day we celebrate.

It was approximately 1,500 years ago that the mortal remains of St. Patrick were wrapped in the shroud said to have been woven by St. Brigid, and laid to rest in the soil of the land that he had won to the heart and love of God.

Over the span of those centuries, perhaps no individual in the calendar of the saints has grown larger in stature, won greater popular affection and devotion, or wielded greater influence for good.

The secret of that growth and popularity and influence is found in the name of your society. For all the adjectives which might be chosen to describe him, none is so apt as "friendly." The secret of the success of his mission in Ireland is discovered in his friendliness to all of God's creatures. In one of his biographies we are told that "he could never look unmoved on the sorrows and sufferings of the underdog," and he is described as "full of compassion and sympathy for the poor and suffering"—a man "whose disinterestedness in his own regard was completed by a great generosity toward others." Such is the saint whose name and feast we honor and in whom we may, with just pride, rejoice as his "friendly sons."

Patron of the land where he labored, revered by Christians and religious-minded persons everywhere, an illustrious example of religious zeal and patriotic fervor to all men in all ages, the slave boy who became a saint is universally acknowledged as one of the great figures in all recorded history.

Because he had experienced the degradation of slavery and fought so fiercely against the horrible slave system of pagan Ireland, St. Patrick's mission to the Irish people was marked by strong emphasis upon the virtue of freedom and the inherent dignity of man. So well did he labor, so indelible was his teaching, that ever since, the Irish people have been foremost in the world in their burning love of independence and in their positive declaration of the natural rights of man.

Modern diplomacy might well take heed from the example of St. Patrick. In fact, the history of the conversion of Ireland to Christianity should be required reading for all who aspire to the role of statesman. For of all of his great accomplishments, none distinguished the missionary bishop to Ireland more than his political acumen and his astute diplomacy.

As a Roman provincial from Britain undertaking a mission in a pagan land, St. Patrick might easily have courted failure and disaster. His passionate love for the Irish people, however, and his sympathy and respect for native culture and traditions assured his success.

While his primary motive was the winning of souls to God, his way was that of the mild, sincere, and persuasive diplomat. He made friends and converts among Irish lawyers, poets, and chiefs of clans, and with their help, he strove to conform native legislation with Christian ethics. St. Patrick respected Irish social conventions, and Irish manners and customs insofar as they did not conflict with the principles of the spiritual truths and the philosophy which he preached.

As a result, while he met with trying difficulties, St. Patrick enjoys the unique distinction of converting a whole people without strife, persecution, or bloodshed. At the same time, so deep was the impress of his Christian thought on the matter of government that as late as 1938, when the present Irish constitution was adopted, the Irish people formulated their organic charter in the name of the Most Holy Trinity and in profound acknowledgment of their obligations to the Saviour of mankind. Parenthetically, I might here pose a question: Is it not significant that the one country in modern Europe which boldly acclaims God and His Divine Son as the beginning and the end of all things is also the one country where the evil doctrine of communism has no chance of acceptance or survival?

Indeed, the work and the teaching of St. Patrick has stood the test of time. He came to the people of Ireland, not as a disdainful representative of a foreign culture, not as a dictator to enforce his mission by coercion, but as a friend bearing the gift of his friendship, the hope of his doctrine, and the sublime faith of a religion which has endured to this day as the bulwark of the land and its people.

We well know, as students of history, that the tribal nation to which he had come as a missionary was a land of warlike people. The Ireland—a united Ireland—to whose embracing soil he was committed at his death was already known to the then civilized world as the isle of saints and scholars. This tremendous and significant change had been brought about by the heroic life and labors of a single man of intense faith—St. Patrick, Ambassador of God to Ireland.

On the day we celebrate, 15 centuries after his death, the fruits of his ministry are still being harvested in an ever-widening garden.

His seed was the grain of truth—the divinely revealed truths of the Christian religion—and the natural truths of freedom, charity, and justice.

His granary was the fold of the faith—faith in God, faith in the idea of Christian brotherhood, and faith in the supernatural dignity of man as a creature of his maker.

It is this faith which is today the living legacy of St. Patrick.

In Ireland itself, the preservation of that faith has been the paradox of history.

Some ascribe it to a natural antipathy to England and everything English.

The English, in turn, have been want to ascribe it to a natural obstinacy which they claim to be inherent in the Irish.

Others are inclined to ascribe it to a native conservatism and the Irish love for antiquity.

All of these reasons may have in them the germ of truth, but none of them, nor all of them together, can explain the moral miracle and supernatural fact that a whole people for many generations chose confiscation, extermination, degradation, exile, and death rather than give up their faith.

The true reason is that the light of their faith, so fully revealed to them by St. Patrick, fired their intelligence, steeled their will, fortified their character, and endowed them with grace and strength to the extent that hell itself could not prevail against them.

Truly, indeed, have the Irish people and their descendants "fought the good fight and kept the faith." Our generation has witnessed their triumph.

When St. Patrick, in defiance of the high king's edict, lighted the Paschal fire on Slane Hill, it is recorded that the Druid priest said to the king:

"Unless yonder fire be this night extinguished, he who lighted it will, together with his followers, reign over the whole island."

That fire was dimmed only by the brilliant glory of the dawn of Easter, and its flame was exceeded in intensity only by the passionate faith of the man who ignited it.

St. Patrick conquered—and he still reigns over the whole island.

To us, and to the legion of other spiritual descendants of St. Patrick all over the world, with his spirit inspiring us, and with God and his infinite wisdom guiding and directing us, that fire will never die out.

To the troubled world of today—it is the fire of hope and of success.

The fire of St. Patrick lit centuries ago and which still burns with strength and splendor is the fire of God and his law; the fire of true and firm faith; and is the fire of the way of life we believe in which has its origin in God, Himself.

It is the fire of the brotherhood of man under the fatherhood of God.

Appropriation for Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mr. WALTER. Mr. Speaker, in the wake of increasing—and in many instances justifiable—clamor within the Nation for economy, it is my thought that when additional funds are appropriated for purposes as controversial as the House Un-American Activities Committee has been in the past, some remarks of justification are in order.

I must admit that when I accepted membership on this committee a year ago, it was with some misgivings. It was far more unpopular than popular. Since serving for more than a year now as ranking member, under the most able chairmanship of the gentleman from Georgia [Mr. WOOD] I feel that the many hours spent in committee have enabled me to make good use of the main privilege afforded me as a Representative in Congress—that of serving the interests of not just a few at a time, but of the

UNIVERSITY OF MICHIGAN LIBRARIES

entire Nation at one and the same time. I do not think it can be denied that the record of the House Un-American Activities Committee in the Eighty-first Congress proves that the comportment of the committee has greatly changed under the leadership of the gentleman from Georgia. While we have been successful in making new disclosures of activities dangerous to the security of our country and of machinations aimed at the destruction of our form of government, not the least of our accomplishments has been our effort—and I feel a successful one—to protect those whose reputations might be irrevocably impaired by the hasty release of uninvestigated or unsubstantiated reports or information.

Our chairman, the gentleman from Georgia, is sparing no time or effort to review for the benefit not only of the individuals concerned, but for the preservation of the very basis of our system of Anglo-Saxon democratic jurisprudence, an enormous volume of information trying to preserve the rights of individuals, to protect the innocent or innocently involved and to expose the real culprits.

It is both an honor and a pleasure to serve under the chairmanship of a man who understands all that is at stake in the important work of the House Un-American Activities Committee. I am taking this opportunity to add to the remarks already on record that I deem it a privilege to serve on the House Un-American Activities Committee and I wish to commend our chairman and my colleagues on this committee for excellent service at the not most savory of tasks.

Tribute to J. Edgar Hoover

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Monday, March 27 (legislative day of Wednesday, March 8), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Tribute to the FBI," from the Washington Star of a few days ago, which pays a highly deserved tribute to J. Edgar Hoover.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRIBUTE TO THE FBI

When an economy-minded House Appropriations Committee gives a Government agency all the additional money it asks for and recommends a salary raise for its head besides, there must be a reason. Beneficiaries of this extraordinary treatment by a group which has not hesitated to wield the ax on many other agencies were the Federal Bureau of Investigation and its long-time Director, J. Edgar Hoover. The reason for the committee's attitude is not hard to find. It lies in the FBI's remarkable record as a protector of the Nation's security in this 'cold war" era of spying and counterspying.

The committee, without a quibble, approved Mr. Hoover's request for $4,800,000 in additional funds with which to hire 700 more employees, including 325 new agents. In granting the full $57,400,000 asked by the FBI for the next fiscal year, the committee said it "does not feel justified in reducing the estimates of this Bureau in view of conditions at home and abroad." The new employees will help the FBI to reduce the backlog of nearly 14,000 pending security investigations. The committee agreed that such cases are too important to suffer any delay in searching out the facts.

The action of the committee is indicative of the high esteem in which the FBI is held at the Capitol and elsewhere as a result of its effective warfare on potential fifth columnists in the Government and outside of it. It has waged this difficult warfare without resort to witch-hunting tactics, without any semblance of police-state tendencies and without succumbing to political or other pressures. The FBI and Mr. Hoover well deserve the tribute implicit in the House committee's recommendation that both the Bureau and its Director be given more money for their outstanding work.

Startled by Reaction

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. BIEMILLER. Mr. Speaker, I was much struck with the sound reasoning of Doris Fleeson in her recent column in the Washington Star headed "Startled by Reaction." It appeared to me to be an excellent analysis of the dilemma facing the reactionary group in the Republican Party in its effort to repudiate the civil-rights principles in the Republican Party national platform. Under leave to extend my remarks, I insert it in the RECORD:

STARTLED BY REACTION—GABRIELSON NIBBLES AT FORBIDDEN APPLE OF DIXIECRAT-GOP COALITION

(By Doris Fleeson)

Republican National Chairman Guy Gabrielson has been nibbling at the forbidden apple of a Dixiecrat-GOP coalition. The reaction in the form of protests from Negro organizations and others has proved somewhat startling to the politically naive chairman and more embarrassing than somewhat to those who manage his public relations.

In an interview Mr. Gabrielson offhandedly mentioned that he had recently discussed with States rights leaders a trial marriage at the top between them and the GOP.

ELEMENTS OF STRATEGY

The elements of this strategy which could defeat President Truman in 1952 are:

The Republicans meet first and nominate their candidates. The States righters then convene and nominate the same men. The invention of the Alabama State chairman, Gessner McCorvey, this scheme is guaranteed by the Dixiecrats to produce twice as many southern electoral votes as they got in 1948. Many Democrats agree and are heartily afraid of it.

The gimmick, however, is that such an arrangement necessarily implies that the Republicans and States righters have a preconvention understanding on acceptable candidates. At the least it would give the States' righters a veto power over the GOP slate.

It also suggests a veto power for them over civil-rights legislation, as many people are briskly pointing out to Republican headquarters. The difficulty of making a direct answer without pulling the rug out from under a very important person is obvious. It is probable, however, that the national chairman will be more careful in the future both of his conferences and confidences.

REPLIES TO NEGRO REPORTER

Mr. Gabrielson has had difficulties in matters of this kind before. In reply to a Negro reporter's question about whether he favored FEPC, he told a press conference that you could not legislate human relations. An aide swiftly struck in with a reminder that his own State of New Jersey had an anti-discrimination law often praised by Republican Governor Driscoll. The chairman gulped and clambered safe to shore with fuller explanations that FEPC was a fine thing.

It is not too hard to understand that Republicans are greatly tempted by devices that after 20 years may put them back in power. The conservatives, of whom Mr. Gabrielson is one, are especially restive and in a mood to try anything once.

But to accept the Dixiecrat proffer involves sacrifice of the civil-rights principle by the party of Abraham Lincoln, southern newspapers which are editorializing widely on the Gabrielson-Dixiecrat discussions, warn that Republicans cannot get the South without abandoning civil rights enforced by the Federal Government.

Republican sentiment on this question will be tested in the Senate soon when Majority Leader LUCAS calls up the FEPC bill and asks that cloture be applied to the inevitable southern filibuster.

Meanwhile Republicans are shopping harder than ever for an astute press agent for the national committee and Mr. Gabrielson.

Guy George Gabrielson, Republican National Chairman, May Not Realize It But He Gives Aid and Comfort to Moscow and Follows Communist Party Line in His Attack on American Foreign Policy; if Gabrielson's Efforts Were To Succeed, Kremlin Would Rejoice and Danger of War Would Be Increased

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith timely views as expressed in excerpts from a radio broadcast by Mr. Elmer Davis over the American Broadcasting Co. network on March 22, 1950. Mr. Davis' remarks, heard locally over Station WMAL, follow:

It has been clear for some time that Senator MCCARTHY's real target is not the minor figures he has been talking about, in the State Department or formerly in the State Department or never in the State Department. The man he is trying to get is the Secretary of State. Until last night he had

UNIVERSITY OF MICHIGAN LIBRARIES

little help from his fellow Republicans. To put it in military terms, McCARTHY seemed to be an expendable advance guard pushed out to make a reconnaissance in force. If he found anything the main body would move forward and back him up; if he didn't find anything, McCARTHY could be left out on his limb.

The main body has not yet moved; but last night two strong forces came up to support him—Mr. Gabrielson, chairman of the Republican National Committee, and Senator WHERRY, the floor leader. Speaking in Omaha, Mr. WHERRY said the Secretary of State must go; he is a bad security risk. He is, said Mr. WHERRY, the idol of the left-wing appease-Russia agitators. This idea would never occur to anybody who reads the papers, but Mr. WHERRY is apparently too busy to do that. Acheson and the Hiss crowd, he says, have been calling the signals in the State Department, thus betraying China, Poland, Czechoslovakia, and all the countries of eastern Europe. Mr. Gabrielson doesn't quite say that Acheson is a Communist; he merely implies it, and supports Senator McCARTHY's story that the Government is infested with Communists. The attack on Acheson is not yet a formal Republican policy; but two eminent Republican leaders have now joined McCARTHY in demanding that Acheson must go.

Well, Acheson is not going to go. He has not the slightest intention of resigning, nor has the President the slightest intention of removing him. But it might be worth while seeing what would be the consequences, if this McCarthy-Wherry-Gabrielson crusade did succeed. Mr. Acheson has lately laid down the policy of the United States for dealing with Russia—to get not merely solutions but satisfactory solutions of seven problems, before we could live in the same world with the Russians in reasonable security; and to do so by building up situations of strength which the Russians must recognize. That is a tough and a bleakly realistic policy. It offers no comfort to the appeasers or the let's-hope-for-the-besters; it is already being attacked by the people who either still trust Russian promises, or else are simply scared. It is a policy which will take time, and cost money, and will entail some danger. Any policy entails some danger; this in my judgment entails less than any other, but it does entail some danger to us and still more to our European allies who are nearer to Russia. Nevertheless, it looks like the policy that offers the best hope of preserving a just and honorable peace.

If Acheson were thrown out, that policy would be thrown out with him. You are not going to make foreign nations believe he is a Communist; they know better. And they are never likely to understand the motives of the Gabrielsons and the Wherrys. If Acheson were thrown out every foreign nation—the Russians, and our allies, and the nations of southern Asia that were still on the fence—they would all conclude that the United States had repudiated the Acheson policy. And our allies, if they take Mr. Gabrielson seriously, would conclude that we had repudiated them too. For he says that socialism is just about as bad as communism, and leads to the police state; he says the third force on the continent of Europe is neo-communism, though as everybody with the slightest knowledge of current history is aware, it is the most active and most effective opposition to communism. Socialist England, Socialist Norway and Denmark, France where the third force is keeping the Communists down—those nations are now our allies. But if they thought that Guy George Gabrielson spoke for the American people every one of them might reasonably look around now and pick out the nearest exit, see what terms they could make with the Russians. For if his crusade and his ideas should prevail they could well conclude that the United States was ready to run out on them; ready to turn either to appeasement or to isolationism.

If Acheson were thrown out, no man who might succeed him could pick up his policy—that tough and bleak but realistic policy—and make it work; for you could never persuade either our enemies or our friends, after that, that the policy had the support of the American people. That would mean an end to any hope of stopping the Russian advance by a vigorous and intelligent diplomacy; it would leave us no way to stop it but by war, and a war which we might have to fight alone, since Mr. Gabrielson has repudiated our allies.

Now Mr. WHERRY and Mr. Gabrielson of course do not intend to work this vast injury to the interests of the United States; they mean well, they simply don't know. They have no idea that if their crusade against American foreign policy were successful, it would greatly increase the danger of war, and would also greatly increase the danger that we would lose the war. Fortunately there are Republicans who do know. Congressman NIXON, while reserving his judgment about the personnel of the State Department, says that its policies need united support during the cold war. There must be other Republicans who share his concern on that point; and who might reassure our European allies that when Mr. Gabrielson writes them all off as no better than Communists, he doesn't speak for his party.

In the meantime there is this reassurance; the Secretary of State is not going to resign.

Economizing at Expense of Veterans' Hospital Program

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mr. TEAGUE. Mr. Speaker, the Vet-Times newspaper continues to accurately report to day-to-day happenings in Washington and throughout the 48 States which affect our veterans. I especially want to call to the attention of the House of Representatives an editorial concerning the recent action which will result in the firing of several thousand medical employees.

With new Federal hospitals to be opened in the remainder of this fiscal year and in 1951 our veterans' hospital program should be an expanding one with the addition of medical employees to properly staff the new installations. The Congress should not aggravate this situation by providing a further cut in Veterans' Administration medical appropriations and those of us who are concerned about a well-balanced veteran program regret to learn that the House Committee on Appropriations has recommended a cut in the 1951 Veterans' Administration budget of $7,500,000. I trust that we will be successful in having this amendment restored in the Appropriation Act.

Under leave to extend my remarks in the RECORD, I wish to include the editorial that appeared in Vet-Times on March 25, 1950, entitled "Inhuman Economy":

INHUMAN ECONOMY

A "penny-wise and pound-foolish" Congress—which annually squanders billions of dollars on nonsensical political programs—is now, by its gesture toward economy, endangering the entire medical-care program of the Veterans' Administration.

The medical-care program of the VA, elevated from a "third-rate" status in 1945 to a "second to none" status in 1950, is the victim of a senseless and unreasonable attempt to save a paltry few millions of dollars.

The situation has now become so acute that Chief Medical Director Paul B. Magnuson soon must choose between closing additional hospital beds or letting the standard of medical care revert to the status of 1945.

In order to save peanuts at the expense of the ill and disabled of World War II, Congress is destroying the morale of VA's entire medical staff and, according to a confidential survey made in VA's neuropsychiatric hospitals, may be dooming thousands of mentally ill veterans to permanent insanity.

The situation now existing in regard to operating funds for VA's medical program is a shame and a disgrace, both to the Congress and to the veterans' organizations which are supposed to protect the ill and disabled from such threats to their well-being and security.

The senselessness of the phony attempts at economy was never better illustrated than this week.

On Monday, the House of Representatives passed a bill which virtually hands some 70 land-grant colleges in the United States a gift of $12,000,000 in GI bill funds—despite the fact that, in many cases, it represents double payment for veterans' tuition.

On Tuesday, the House Committee on Appropriations recommended that Congress cut the 1951 budget for VA's medical-care program $7,500,000 below the minimum figure requested by the tight-fisted Budget Bureau—this in face of the fact that VA's medical-care staff already is being reduced by almost 5,000 employees.

Dr. Magnuson, who has waged a relentless fight to prevent influences—both inside and outside VA—from diluting the medical-care program, is virtually sick at heart over the penny-ante tactics of Congress. He is faced by a threat of wholesale resignations of his top medical men; he already has had to intercede personally to prevent one of his chief aides from resigning; and he is now being urged to close down additional hospital beds, in a desperate attempt to save the quality of VA medicine.

According to the confidential survey made of conditions in VA's mental hospitals, the necessity for reducing present activities may mean the difference between sanity and insanity for large numbers of mental patients.

The survey stresses that forced reduction of personnel in the medical care program will necessitate limited activities programs; will require VA to curtail leukotomies (brain operations), whereby one-third of the mental patients operated on have been able to go home afterward; will require curtailment of the shock therapy program, which demands the services of highly trained personnel; will force VA to use more physical and chemical restraints on mentally ill patients; and offers a serious indirect threat to VA's entire residency program.

Ever since the end of World War II, the Vet Times has given generous support to Federal Government programs requiring billions of dollars in American aid to the war-devastated areas of the world, and we have urged and supported the expenditure of vast sums of American money to contain communism in Europe and Asia.

We have supported such programs because we felt they were tied in closely with the wel-

fare of the United States, and because we felt that Congress was being reasonably generous in its treatment of our war veterans, and particularly generous and concerned over the quality of medical care provided for veterans.

Now, however, it appears that this supposed generosity was merely temporary and that Congress is too lazy and unconcerned to investigate the inhuman effects that its picayunish attempts at economy have cost the ill and disabled.

The Vet-Times demands that steps be taken forthwith to assure adequate money and manpower for VA's Department of Medicine and Surgery. This is not the area in which to economize at the cost of untold human misery.

The Cold War

EXTENSION OF REMARKS
OF
HON. GEORGE W. ANDREWS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by the Honorable ED GOSSETT, of Texas, before the Texas and Southwestern Cattle Raisers Convention on March 15, 1950:

THE COLD WAR

First, gentlemen, I want to congratulate your organization and your membership for your rugged individualism and for your adherence to what many of us believe to be sound American principles. About 1 year ago your president, Mr. Bryant Edwards, testified before the House Committee on Agriculture in opposition to the so-called Brannan Plan. He startled a good many people in Washington when he put your membership on record as being opposed to subsidies and controls for the cattle raisers. He pleased most adherents to American democratic principles by reaffirming your faith in a comparatively free and competitive economy.

In response to repeated requests for the subject of my today's remarks, I announced that I would speak on the cold war. That subject just about covers the entire field of domestic and foreign affairs. Our magazines, our radios, our newspapers, our pulpits, and our public forums have of late been filled with little else than a discussion of the cold war. Congressional mail has been filled with overtures and appeals and suggestions as to what this country can do and must do in the current crisis.

On one thing I think most everyone can agree: Unless we survive the cold war, we will not be able to survive the hot one. Win or lose, another great conflict would doubtless be the end of American democracy, and would wipe us out as a Nation of free people. Instead of two cars in every garage, we would probably have two Russians in every home and would be lucky if permitted to live in the garage.

Among the nostrums, panaceas and expedients now being urged upon this country is the Atlantic Pact, world government, or a world federation, offensive and defensive alliances of various kinds, a 4-point program to bring competence and teach democracy to the people of the world, etc.

Perhaps the three most notable speeches delivered in the United States Senate during the current session of the Congress have been one by Senator MILLARD TYDINGS, in which he appealed for universal reduction and control of armaments, and the two other such speeches have been by Senator BRIEN MCMAHON, chairman of the Atomic Energy Committee of the Congress. The Senator with grave and sincere eloquence is crying out for world control of atomic weapons and of the most recent prospective hydrogen bomb.

Amidst all of this excitement and near hysteria it might be well for us to consider calmly just what we are going to do. Since I was 15 years old I have been making speeches on world peace. My first intercollegiate debate was on the subject: Resolved That America Should Join the League of Nations. I was a youthful idealist. However, my idealism has been tempered with realism. I am somewhat of a "reformed reformer." It is my contention that if the cold war is to be won it must be won in the hearts and minds of the American people and on the homefront. Many of us are convinced that such security as we may have must in the last analysis rest in the strength of American institutions and in the integrity and devotion of the average American citizen to sound political and economic principles. Leagues, alliances and treaties have been futile in the past to preserve the peace and will probably be of equal futility in the future. If our country drives or is driven into national socialism we lose. If we preserve a healthy democracy we win, regardless of all other considerations. Isolation and appeasement are, of course, discredited doctrines, and we know we cannot live unto ourselves. We know equally well that we cannot buy friends. A brief panoramic view of history should convince us that we must in the last analysis rely upon our own strength, and that if such strength be dissipated in grandiose schemes to create utopias we shall have destroyed our hope of survival.

A hundred years prior to World War I the victorious allies under the leadership of Czar Nicholas set up the Holy Alliance. In the preamble to its constitution it declared its purpose to be to perpetuate the truths of the holy religion and to preserve the peace. In a few years it became a conspiracy to destroy free governments and a free press. Prior to World War I numerous alliances were made and balances of power set up for the purpose of avoiding war. Following World War I we know what happened to the League of Nations. The Kellogg Peace Pact, which we negotiated, was always a scrap of paper. We got into World War I and II largely because our potential enemies thought first they could bluff us, or if bluffing failed they could whip us. Regardless of cost we must be sure that no potential enemy again makes such a mistake.

Finally, the two greatest eras of world peace since the birth of Christ have rested upon the strength and integrity of some major dominant power. First there was Pax Romana. It lasted 100 years and rested upon the strength of Roman arms and the justice of Roman administration. For almost 100 years prior to World War I there was an era of comparative peace which might be designated the Pax Britannica. It rested upon the strength of the British Fleet and the intelligence and justice of British administration. If we are to have a Pax Americana it must rest upon the strength of the American Nation and the intelligence and integrity of American democracy. If this Nation marches into national socialism we immediately dissipate this strength and integrity and we immediately become a prey to barbaric hordes which unquestionably would devour us. It is well, of course, for us to promote world brotherhood and Christian principles, but to surrender sovereignty to those one cannot trust or to our questionable friends who may become avowed enemies is a stupid and futile thing.

Excluding Russia, we are spending twice as much on armaments as is all of the rest of the world combined. Yet we must know that a million miles of superhighways, a multibillion-dollar radar screen around our border, thousands of planes that can circle the globe at 1,500 miles an hour or more, mountains of hydrogen bombs and atom bombs will avail us nothing if spiritual and material decay robs us of internal strength and integrity.

Approach this problem from any direction and one comes back to the one big question: Preserving American democracy against the corroding influence of national socialism. In other words, the cold war is more a domestic problem than a foreign problem.

One brief look at the national socialism of England should make Americans recoil in horror and should place every honest man on guard.

Mr. Strachey, the gentleman who has just become War Minister in the British Cabinet, has recently boasted that under national socialism there are now only 250 persons in England who have incomes of as much as $14,000 per year after taxes. In other words, in the whole British Isles there are not as many individuals as I now address who have incomes equal to your own. In taking over the railroads British socialism boasted they would make $250,000,000 per year for the Government. On the contrary rail service deteriorated and the first year's operations cost the Government $118,000,000. On taking over the mines British socialism spent $170,000,000 on mechanization. Still production failed, per man-hour output decreased and the National Coal Board lost $95,000,000 on the first year's operations. Last week hundreds of Britain's doctors were striking against the regimentation of socialized medicine. Socialized medicine in its first year of operation cost the British Government $300,000,000 above estimates, or to exceed $1,000,000,000. Public housing under national socialism has built fewer homes than were being constructed prior to the war, to say nothing of the cost. Furthermore, in that great country which gave to the world the Magna Carta and the bill of rights all men between the ages of 18 and 50 can now be ordered to take any job anywhere, i. e., compulsory labor is legal.

Many years ago the great William Pitt, in a speech on the excise bill, declared that:

"The poorest man may in his cottage bid defiance to all the force of the Crown.

"It may be frail, its roof may shake; the wind may blow through it; the storms may enter, the rain may enter, but the King of England cannot enter.

"All his forces dare not cross the threshold of the ruined tenement."

Now the agents of 17 ministries can ransack an Englishman's home from cellar to attic without even a letter of introduction, to say nothing of a search warrant. National socialism has made austerity to deprivation and poverty the perpetual and common lot of all Englishmen.

On the other hand, what have the incentives of capitalism, the practices of the free-enterprise system, and adherence to democratic principles done for America. With a little more than 6 percent of the world's people, and a little more than 5 percent of the world's land, we possess more than one-half of the world's material wealth. We have 78 percent of the world's automobiles, 52 percent of the world's trucks, 58 percent of the world's telephones, 51 percent of the world's radios, and so on ad infinitum.

Notwithstanding these graphic comparisons we now stand in danger of embracing national socialism and losing the cold war.

The road into national socialism, like the road into hell, is paved with good intentions.

At the danger of oversimplification and confusion let's briefly put our finger on the five interrelating reasons why we may march into national socialism and thence into oblivion. Let's call these five conditions, or states of mind, perils.

Peril No. 1 we call ignorance and confusion. Great masses of good people simply do not know or do not understand social, political, and economic problems. They do not understand that money of itself is worthless, that it gets its value from goods and material produced. The average man looks at our tremendous national wealth and assumes that we are immune to poverty. He doesn't know that the total assessed value of all the property in the United States of America is approximately $186,000,000,000, while our national debt is now $254,000,000,000. In other words, in terms of money we are broke. Our wealth consists in manpower and production capacity. Our mass production technique could easily be destroyed and our economy go to pot overnight once public credit is impaired and public confidence destroyed. We are rich in human resources alone and intangible and spiritual things, the nature of which we need to understand. Again, ignorance and confusion is preyed upon by propagandists of various hues. The average American must learn to understand the campaigns that are put on by those who wish to sell him on Utopias and supposedly humanitarian objectives. The average citizen of today must be above average.

A second peril we might call indifference. There is an old saying that there is one generation between shirt sleeves and shirt sleeves. This means that the son of a wealthy father too often dissipates his inheritance. A prosperous civilization usually destroys itself because of the contentment of the individuals who refuse to stay on guard. In my early youth I was puzzled and distressed to discover that few happy people ever wrote a book. Most books, I discovered, were written by those who had an ax to grind, who wanted to dynamite some existing institution, revolutionists, agitators, and impractical theorists who wanted to sell their generation on something, people who wanted to start a crusade, folks who wanted to shock their conventional contemporaries—these are the people who write books, as a rule. The great tranquil stream of humanity lulled into indifference refuses to take note of, or to be alarmed because of these movements. The proponents of national socialism, through aggressive and militant activity, wring compromise after compromise from their less militant brothers. Indifference, therefore, becomes a sin, which too often lulls people into disaster.

A third peril we might call big government or expanding bureaucracy. In the first 152 years of our national life, or down to 1940, our Government spent $167,000,000,000. Since the war, or from 1946 to 1949 inclusive, our expenditures have amounted to $177,000,000,000. In other words, we have spent more money since the war than we spent during our entire national life prior to the war. Even though our national income during the last several years has amounted to more than $200,000,000,000 a year, we find ourselves now operating on a $5,000,000,000 national deficit. Even a school boy could look at these figures and readily understand that all is not well. If we spend $5,000,000,000 more than we make in times of great prosperity, what are we going to do when national income falls. Prior to the war we thought ourselves in great danger when operating on a $9,000,000,000 budget. Now we take a $40,000,000,000 budget as a matter of course. We create a temporary bureau, and it becomes permanent. We establish a small bureau and it becomes a large one. The bureaucrat is an ordinary American businessman who is placed at the head of an agency; with typical promotional ingenuity he begins to reach out for more authority and more money and begins to enlarge his activities. It is obvious that this sort of thing, unless curtailed, will continue to grow until the national economy is completely destroyed.

A fourth peril we might call security psychosis, or a mania for security. Too many people now imagine that through Government planning and programs the individual citizen can be given absolute security against all the hazards of life. Such, of course, is utterly impossible. The only absolute security of which I know is the security of the grave and the security of the jailhouse. The slave is secure only so long as his master is kind and solvent. Striving for security, of course, is a virtue, but when supposedly obtained it generally defeats its own ends. Imagine what effect it would have upon the character of youth to know that if he were unable to earn a livelihood or to own a home that such would be furnished him by his Government. The illusion of security eats out of the individual his primary attributes of good citizenship. Of course, the antithesis of the indolence which comes from security is the madness which comes from fear. Both extremes are to be avoided. Fear dethrones reason and induces madness. It is not quite as simple as Mr. Roosevelt's pronouncement, borrowed, I believe, from Bacon, that "The only thing we have to fear is fear itself." Individually and collectively we, of course, must continue to strive for better standards of living and better security. But we must not delude ourselves into thinking that we can get something for nothing, that everybody can live off of everybody else and nobody work. I personally subscribe to Emerson's philosophy that everything is paid for at some time or other in some way or other. The books must be and will be eventually balanced. Someone has said, "A grafter is one whose income exceeds his service to society." Governments must make the ways of grafters and transgressors uninviting. Governments should protect the weak against the avariciousness of the strong. Government should write the rules of fair play, and enforce such rules, but Government should never undertake to extend to its citizens the illusion of complete security. Governments should not do for the individual what he can do for himself.

People grow strong through discipline and denial. People grow great through sacrifice and service. England never rose to greater spiritual heights than when that distinguished statesman, the Right Honorable Winston Churchill, on coming to power said, "I promise you nothing but blood, sweat, toil, and tears." It was this great man, too, who said he did not become the King's Minister to preside over the liquidation of the British Empire. His declining years must be sad indeed as he witnesses his successor, who apparently did become the King's Minister to preside over the liquidation of the British Empire by illusory promises of security to the British people.

A fifth peril we might call political apostasy. Even when the average good citizen becomes concerned with the issues of government, under the political machinery and the political practices of our country he often feels futile and helpless. We elect our Presidents, the most important official in the world, through a hocus-pocus system called the electoral college. Under the electoral college the Presidential candidate who gets more votes than any of his opponents in a particular State gets all of the electoral votes of that State. For example, in the last campaign Mr. Dewey, with 48 percent of the vote in New York State, received all 47 electoral votes of New York State. Under this system powerful organized minority pressure groups in the big States of the Union have become dominant. They write the platforms of both of our major parties, and to a large extent dictate national policy. More and more the great American public is victimized by the selfish and unfair demands of these organized minority pressure groups. There is now pending in the Congress an amendment to our Constitution which would abolish the electoral college and provide that each person vote directly for President and that the vote be counted for the person for whom he votes. This has been called the Lodge-Gossett amendment, and is now my major legislative objective in the Congress. In my judgment, to abolish the electoral college and to divide the electoral vote of each State in exact ratio with the popular vote will go a long way toward saving this country from eventual national socialism.

We must evolve a system of electing Presidents in this country under which the people can vote on honest issues and make their voices heard. Platforms and policies must be written on the basis of the general welfare and not on the basis of political expediency.

To summarize, gentlemen, we cannot win the cold war through misguided zeal. We can lose the cold war through ignorance and confusion, through indifference and complacency, through a dissipation of resources by our Government in its efforts to serve ourselves and to serve others, through a mania for security, or through stifling the honest political expression of a majority of our people in a surrender to minority domination. Truly democracy is on trial for its life. Upon this generation of Americans depends the hope of the world for the next 1,000 years. Devotion to the principles and the ideals that have built this country and that have made us a great people is our only hope of survival.

"Tax the Co-ops," Moley Says

EXTENSION OF REMARKS
OF
HON. JOHN R. WALSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. WALSH. Mr. Speaker, a full-page article by Raymond Moley, appearing in a January issue of Newsweek magazine, harped another old tune to an old song—Tax the Co-ops.

The Moley article was answered in a masterly fashion by my good friend, Von O. Pinkerton, of Marion, Ind., editor of the Farm News, one of Indiana's outstanding farm publications.

The Farm News is printed and published in Marion, Ind., a different issue being prepared each month for each of eighty-odd Indiana counties. Scores of thousands of Hoosier farmers receive and read this publication and it may certainly be considered an accurate spokesman of their views and opinions.

Von Pinkerton is a real Hoosier pioneer in the co-op movement and has built his personal prestige and fortune in the typical American manner, having commenced, I understand, with one old printing press, hope in his heart, and faith in his soul. What he writes is not for political effect, but are the words of an earnest and sincere man, written to be read by equally earnest and sincere people.

UNIVERSITY OF MICHIGAN LIBRARIES

Therefore, I desire at this time to insert in the CONGRESSIONAL RECORD Von Pinkerton's answer to the Moley attack, as published in the Farm News, of Grant County, on March 17, 1950:

"TAX THE CO-OPS," MOLEY SAYS

Jim, who lives on a well situated 40 out on Route 6, came into our office this week to tell us he's worried because some of the big shots are advocating "tax the co-ops." "Did you see where Raymond Moley had an article on that subject in the January Newsweek?" Jim asked.

We had seen the article—we had read it. But we didn't get enthused or worried. It was like chewing on some Thanksgiving turkey hash in January. Mr. Moley may have some new ideas on the subject, but, if so, he was careful not to divulge any of them.

You know many of the high-priced magazines are getting so many high-priced hard-liquor advertisements that it is a question what to do with the white space they use to separate the advertisements. They are just likely to slap in anything to fill the space. That's certainly the only reason for Mr. Moley's article.

The ex-New Dealer starts his misleading tirade with a nice soothing sentence intended to lull the reader into complacency. He says, "Of course, no one wants to destroy the cooperatives." How any feature writer or otherwise can use a sentence like that and then expect his readers to believe any of his other sentences is beyond us. He didn't believe that remark, and the publishers of the magazine don't believe it. The publishers know they could have filled that page with the names of organizations that would like to destroy the co-ops.

Then as he goes into his next two paragraphs to prove why the co-ops should be eliminated he breaks down and weeps because the co-ops have gone far beyond their humble beginnings. That means, of course, that so long as the co-ops didn't offer any competition there was nothing to worry about, but now that they are getting a lot of business because of rendering a real service we ought to stop 'em dead in their tracks.

He unintentionally or deliberately misleads his readers when he attempts to point out how much revenue the Government is losing by not taxing the co-ops, like some organizations would like to have them taxed. He bases his figures not on the amount of business the co-ops are doing but upon the amount a Congressman says they will be doing 5 years from now. If a reader can find any Congressman who knows what he (the Congressman) is doing today and not what somebody else will be doing 5 years from today he is lucky.

He says the co-ops did $13,000,000,000 worth of business in 1946, and NOAH MASON (the Congressman) estimates their gross business will reach $25,000,000,000 in 5 years.

We have read considerable literature on both sides of this proposition, including official estimates wherein co-ops attempt to project their thinking into the future. Not a single co-op official has said he expects to have the dollar volume of their business doubled by 1955. But why do the co-op officials figure and worry over the subject? All they have to do is ask Raymond Moley and NOAH MASON. They know the answers.

Anyone who has read anything on the subject of tax the co-ops will immediately recognize where Moley got all his information. In fact, his article is a disappointment, because one really expects him to inject at least one thought, but he didn't. It's just NTEA literature with Moley's name on it.

The tenseness engendered by the article is relieved by the stock NTEA joke with which the article is concluded. Our readers have heard it many times, but as it gets funnier every time it is told we will repeat it here in NTEA Moley's words:

"With heavy taxes and a Government drive against big business there will be a great incentive to private business to reorganize as cooperatives. John Hartford, head of the A. & P., said some weeks ago 'that if the Government won its suit against the company, he would convert the business into a huge tax-free cooperative. This shift would cost the Treasury about $15,000,000 a year. There is no reason why many other companies would not follow the same course.' "

After you get through laughing, reread the punch line at the end which says, "There is no reason why many other companies would not follow the same course." If Raymond Moley believes that, he is totally ignorant of the whole subject of cooperatives.

The truth is, any individual, any association, any organization, including A. & P. can legally avoid paying the Federal income tax exactly like the cooperatives. All they have to do is to avoid having a net income. That can easily be done by cutting prices so there won't be any profit, or legally obligate the organization at the beginning of the year to return all the overcharges (profit) to the purchaser, like the cooperatives. Do you expect A. & P. or any other profit organization to do that?

The difference is, A. & P. knows, even if Moley doesn't, that the United States Treasury Department has said, "The exclusion of patronage dividends from corporate gross income is not the exclusive privilege of cooperative associations. Any corporation making payments to its customers under the conditions prescribed by the Commissioner of Internal Revenue and the courts is granted the same treatment." It has also said, "It is held to be immaterial whether refunds are distributed in the form of cash, stock, certificates of indebtedness, or credit notices."

In addition, even the bonuses paid by A. & P. to Mr. Hartford for doing a good job as head of the organization or for any other reason are subtracted, before the company figures its Federal net income tax.

Sometime when we have a quarter inch of space left we will print the names of all the profit companies that have or seriously contemplate converting to the cooperative method of doing business.

Can a "One Package" Appropriations Bill Succeed?

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. ENGEL of Michigan. Mr. Speaker, I am for a single consolidated appropriation bill provided we can make it work without abandoning the basic principles we must follow if we are to have an intelligent method of spending the taxpayers' money. I want it to work. I shall do everything within my power to make it work. I will not, however, under any condition waive or give up the constitutional right of the House of Representatives to originate appropriations; neither will I give up the right of the House of Representatives and of the Appropriations Committee as the servant of the House to make and control appropriations.

I shall oppose any move to delegate that power directly or indirectly to a few men whether in the executive or legislative branch of the Government. I want no czars in our financial set-up, whether they be in the executive, legislative, or committee branch of the Government. That is what the proposed system will ultimately lead to if followed. I repeat, I want the single consolidated appropriations bill to work. It is not working under the system proposed here. I believe it can be made to work without sacrificing any of the principles referred to.

Before we discuss this so-called one-package bill we are trying to adopt, let us compare it with the system we have been operating under in past years. Prior to this year, we had as now a number of subcommittees. A bill was assigned to each subcommittee. These subcommittees commenced hearings on their bills sometimes as early as December. After the hearings which took sometimes as much as 10 or 12 weeks, depending on the size of the bill and on the number of departments or agencies in the bill, the bill was reported to the full committee. Only the members of the subcommittee which handled the bill knew anything about that bill up to that point. Acting on the repeated instructions from the House and of the members of the Appropriations Committee, several days were permitted to elapse after the bill was reported out and before it was brought before the full committee. The Members of the House and particularly of the full committee had an opportunity of studying the hearings and report, and examining the bill before it was considered by the full committee. I recall that on several occasions strenuous objections were made when a bill was considered by the full committee the day after it was reported out.

When the bill came before the full committee, the chairman of the subcommittee explained the bill in detail, answering questions as he went along. When he finished his presentation the bill was open to amendment. Arguments were sometimes vehement and questions rather revealing. The full committee usually devoted from 1½ to 2½ hours to the consideration of each bill before it and took a vote on reporting it to the House. The members had an opportunity of informing themselves and did inform themselves on each bill and usually knew what they were voting on. Each subcommittee had the benefit of the criticism of the other members of the full committee which often proved very valuable and sometimes avoided making serious errors.

Under this system the Members had from 3 to 4 days as a rule to read the hearings on each bill, read the bill, and examine the report. The bills as a rule were presented to the committee and the House at intervals of approximately one a week which gave ample time for careful consideration before the bill came before the full committee. Each bill was carefully explained and members were informed so they could ask intelligent questions from the subcommittee reporting the bill. All this was done before the members including those reporting

the bill were asked to vote on the question of reporting the bill out of committee and to the House with the recommendation that it do pass. The recommendation of the committee meant something because it was based on facts and information of all the members of the full committee.

Bills began going through the House sometimes as early as February 1 and committee hearings were often held in December by the subcommittees. Bills usually had all passed the House before May 1 and sometimes much earlier. The last 1950 appropriation bill passed the House on April 13, 1949.

HOW DOES THE NEW SYSTEM WORK?

Now let us examine the new system of operation:

First. The full Appropriations Committee consists of 45 members which is divided into 9 subcommittees and 2 special subcommittees.

Second. The nine regular subcommittees consist of five members each, three of the majority and two of the minority party. They handle all appropriations with the exception of the legislative. The special subcommittees appointed so far are the legislative subcommittee handling the legislative appropriations bill of approximately $56,000,000 and the so-called central committee. What I say here applies only to the nine regular subcommittees.

Third. Each regular subcommittee handles one bill designated as a title in the consolidated bill covering one or more departments and agencies. It holds hearings on this bill, drafts the bill, and presents it to the full committee as heretofore. Hearings are released as printed. The hearings on all titles this year covered 14,723 printed pages. These subcommittees as usual did a magnificent job on their particular bill or title this year. The subcommittees worked hard and many of them felt as I did that we were crowded too much to be able to give the bill the careful consideration we would like to have given it. However, I have never been fully satisfied with any bill that came out of my subcommittee, whether under my chairmanship or under the chairmanship of three other members who served during my 14 years on the subcommittee.

While the hearings were sent out as published, each of the 45 members was so busy preparing his own bill that he had very little time to read those hearings. Furthermore, the hearings as a rule were so large that the usual custom was to examine the report, select the doubtful items, and read those parts of the hearings in which there was some doubt in the mind of the members or in which he or his district was particularly interested. This was impossible, inasmuch as the report was not then available.

The members, and particularly the older members who had served some time on the committee, had a fairly good understanding of each bill as it came up. On Friday night, March 17, the 425-page consolidated bill and the 337-page consolidated report, covering 11 titles of this $27,266,403,664 consolidated appropriation bill, arrived at my office. The same mail brought me a notice that the full committee would meet Monday morning at 10 a. m. to consider the bill. Trying to handle this 425-page consolidated bill and the 337-page consolidated report, based on 14,723 pages of hearings within that time, was an impossible and hopeless task.

Monday at 10:05 a. m. the committee was called to order by the chairman. There were nine titles, not including the small legislative bill and general provisions. As each title came up, the only members who had any information as to that title were the five who were on that particular subcommittee and who had reported that bill or title to the full committee. The other 40 members knew practically nothing about that title or bill. No statements were made explaining the bill to the full committee, and questions asked were confined as a rule to items of particular interest to the member asking the question or to his district. When the vote came to report this consolidated bill to the House of Representatives with a recommendation that it pass, there was not a member who had adequate information to act or vote intelligently on any of the eight titles other than the one he had considered in his subcommittee. This $27,000,000,000 bill was reported out on the judgment of the five men on each subcommittee, and not on the combined judgment of the 45-man committee, as it should have been and was under the old system. Because of this reason, I voted "no" in committee.

The recommendation of the full forty-five-man committee to the House of Representatives that the bill pass means very little, if anything, as it is not based on information as to the facts involved and the Members know very little, if anything, about the bill itself as a whole. Not even the chairman of the committee with all his help and certainly not the gentleman from Michigan who is now speaking to you, could ask or answer many intelligent questions as to the bill now before the House for consideration.

Surely the framers of our Constitution did not have such a method in mind when they wrote into the Constitution that all revenue bills—which included appropriations as well as taxation bills—must originate in the House of Representatives. A further examination of the facts will, I believe, verify this statement.

Let us look at the record and see just how much consideration was given to and how much time was spent by the full committee, not only on each title, but on the entire consolidated bill appropriating more than $27,000,000,000 of the taxpayers' money before a vote was taken on each title and on the motion to report the bill to the House of Representatives with a recommendation that it pass. I kept a careful and accurate record of the time when each title was taken up in committee, when it was approved and when the motion to report the bill was passed. Here is the record according to the committee clock:

Monday, January 20, 1950, the full committee was called to order at 10:05 a. m. by Chairman CANNON. At 10:12 a. m. the committee had approved—

Title I, making an appropriation for the District of Columbia for $12,000,000.

Title II, making appropriations for the legislative branch of the Government for $56,822,450.

Title III, making appropriations for the Department of State, Commerce, Justice and Judiciary for $1,110,870,462. Total titles I, II, and III appropriations aggregating $1,179,692,912 were approved by the full committee in exactly 7 minutes.

At 10:12 a. m. the committee took up title IV, making appropriations for Department of Treasury and Post Office for $1,131,155,600. In exactly 8 minutes the full committee had approved this $1,131,155,600 appropriation bill.

At 10: 20 a. m., the committee took up title V, the Labor-Federal Security Agency appropriation for $2,271,099,614. It took exactly 7 minutes to approve this bill.

At 10: 27 a. m. the committee took up title VI, making appropriations for the Department of Agriculture, for $764,032,761. In exactly 12 minutes the committee had approved this bill.

At 10:39 a. m. the committee took up title VII, making an appropriation for the Department of the Interior for $621,634,130. Within 71 minutes, 55 of which was spent in arguing four amendments which were turned down and again without explanation of the bill title VII was approved.

At 11:50 a. m. the committee took up title VIII, making appropriations for the independent offices, including Veterans' Affairs, for $8,024,877,007. The bill was approved after spending exactly 20 minutes or an average of 2½ minutes per billion dollars.

At 12:10 p. m. the committee took up title IX, the $632,620,000 civil-functions bill. This bill covers rivers and harbors, flood control, both maintenance and construction, Panama Canal, and so forth. The budget recommended $834,867,500. The subcommittee cut it $202,247,500 or approximately 25 percent. This bill reaches into nearly every congressional district in the United States. It was this bill which was in conference last year for 121 days. The full committee took it up at 12:10 p. m. and after careful consideration without explanation approved it in exactly 21 minutes.

At 12:31 p. m. the full committee adjourned until 10 a. m. Tuesday, March 21, 1950.

Tuesday, March 21, 1950, at 10:05 a. m., Chairman CANNON called the full Appropriations Committee to order and title X was taken up. This was the $13,000,000,000 national defense appropriation bill and at 11:06 a. m., in exactly 61 minutes, and after spending less than 5 minutes per billion dollars, the bill was approved.

At 11:06 a. m. the committee took up title XI, consisting of 14 pages of general provisions of law. After careful consideration for 3 minutes and without reading the provisions, title XI was approved at 11:09 a. m. A motion was passed on a purely partisan vote to report the entire

UNIVERSITY OF MICHIGAN LIBRARIES

one-package bill to the House with a recommendation that it pass.

Under the old system we would have taken 20 or more hours for the consideration of this bill in full committee. The record shows that we took exactly 206 minutes to put this $27,000,000,000 appropriation bill through the full committee. When we deduct 55 minutes devoted to 4 amendments to the Interior bill which did not pass and 3 minutes we devoted to general provisions of law which we did not read, we find that we devoted exactly 152 minutes to the consideration of the subcommittee recommendations of the entire bill of 10 titles. In other words, the appropriation went through the full committee at the rate of $180,000,000 a minute or $3,000,000 a second. That is putting appropriations through the full committee at what we would call in Air Force language a supersonic speed.

It cannot be argued successfully that the full committee could act intelligently on this bill under this method and according to this record. If this system is continued it will mean that the Congress will soon accept the Budget Director's figures and will have lost it power of regulating and controlling expenditures of the various departments or bureaus. I am very much afraid that under this system the one-package bill is doomed to failure.

I have given this matter a great deal of thought. The solution of this problem is not too difficult. I believe it can be made to succeed. I believe that we can have the so-called one-package appropriation bill without taking power away from the full committee and without sacrificing everything we did in the past to inform our membership on every bill. Here is my suggestion:

First. Proceed with each appropriation bill just as we have done heretofore. Have each subcommittee commence hearings at the earliest moment; start some in December if possible.

Second. Consider each bill, report it out to the full committee, explain it to the membership of the full committee as it is reported out, giving the Members of the House and of the committee at least 3 or 4 days before the bill is brought before the full committee, so they may study the bill, report, and hearings.

Third. Report each bill to the full committee, just as heretofore, taking it up in the House and considering it in the Committee of the Whole up to but not including the third reading.

Fourth. Hold each bill in the House until all of the bills have been passed up to the third reading. Offer a consolidated bill as a substitute for the individual bills. Then, if the consolidated bill is still too high, offer a motion to recommit the consolidated bill to the Appropriations Committee with instructions to reduce it by the amount desired. If it is reduced, it will be the House and not a few men on the committee who will do the reducing. We will know what our income is and what total appropriations will be before we pass the bill. The recommendation of the full committee will mean something because it will be based upon information as to all titles contained in the consolidated bill.

Claims Adoption of Hoover Report Would Destroy Veteran Preference in VA Employment

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. SHAFER. Mr. Speaker, in the Appendix of the CONGRESSIONAL RECORD, at page A1945, I extended my remarks to include a letter and the contents of a booklet by Herman W. Steinkraus, president of the United States Chamber of Commerce. The extension carried the title, "A Veteran Explains the Hoover Reports."

In response to this extension I have received a letter from Mr. Francis M. Sullivan, national legislative director for the Disabled American War Veterans, in which he points out a glaring weakness in at least one of the arguments presented by Mr. Steinkraus—pointing out that under the recommendation the merit system and veterans' preference in Federal employment would be destroyed.

Because of the importance of Mr. Sullivan's observations I herewith include the text of his letter in these remarks:

DISABLED AMERICAN VETERANS,
Washington, D. C., March 22, 1950.
The Honorable PAUL W. SHAFER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SHAFER: In the Appendix of the CONGRESSIONAL RECORD, beginning on page A1945, you quote a letter written by Herman W. Steinkraus, president of the United States Chamber of Commerce, together with the content of a booklet published by the chamber entitled "A Veteran Explains the Hoover Reports." The DAV would like the opportunity to reply to this letter and to have it printed in the CONGRESSIONAL RECORD.

The DAV is surprised to note the admissions made by Mr. Steinkraus relative to the subject of personnel management as it affects veterans' preference. We feel that these admissions certainly bear out the position of the veteran organizations in opposing the recommendations of the Hoover Commission.

In answer to the question, "What was the chief feature of the Commission's proposals for Government personnel?" Mr. Steinkraus states, "The main recommendation was that the heads of Federal departments and agencies be permitted to do their own hiring instead of relying on the slow, cumbersome Civil Service Commission procedure."

This answer is proof positive that the proposed recommendations would destroy the merit system, and with it the long-established policy, since 1883, of veterans' preference in Federal employment. By recommending such freedom of personnel selection, every Government agency would become a little kingdom within itself, free to hire and fire whomsoever it chose, setting up its own standards, giving only lip service to veterans' preference and render the Civil Service Commission impotent to enforce the laws of the United States with respect to the merit system.

The next question in Mr. Steinkraus' letter is, "Would this mean setting up thousands of independent hiring boards to replace the single Civil Service Commission?" and is answered, "Not at all. It would simply enable the executive of the Federal agency to hire the right man for the right job at the right time. The present system sets up all sorts of barriers against hiring the best man, against promoting the best man, and against firing the worst man. Veterans on the civil service register for junior professional assistant have found out all too well how slow and uncertain the Civil Service Commission system works."

Here again the answer by one of the foremost proponents of the Hoover Commission recommendations indicates that the worst fears of veterans with respect to complete abolition of veterans' preference in the civil service is confirmed. It is admitted that at times the merit system of hiring and firing veterans is slow and cumbersome, but it is fair, and whenever complied with by agency heads free from arbitrary abuse. I feel certain that the Members of Congress do not wish to endorse a system that would permit agency heads to hire and fire without regard to the civil-service laws and without regard to other safeguards designed to allocate Federal positions equally among the citizens of the 48 States.

That an executive head of any Federal agency could hire, promote, and fire at will, without regard to an open, competitive hiring and firing process would result in a complete return to the spoils system. Mr. Steinkraus' answer to this second question removes every shadow of doubt that adoption of the Hoover Commission recommendations would destroy the long-established principle of veterans' preference.

We would appreciate having the same publicity given to this partial reply to Mr. Steinkraus' letter as he in turn enjoyed.

Very sincerely yours,
FRANCIS M. SULLIVAN,
National Legislative Director.

Reaffirmation of Support for House Concurrent Resolution 64

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. JAVITS. Mr. Speaker, the ideological counterpoint to the Communist drive is the establishment by the United States as the objective of its foreign policy of a world federation open to all nations with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation and enforcement of world law. If we are to avoid the martial threat to all civilization inherent in beginning production of the hydrogen bomb, we must bring an end to the very real competitive arms race now going on between us and the Soviet Union. A realistic and practical hope for the resolution of this cold war struggle is the development of the United Nations into a world federation. In this way with the guaranties inherent in a world legislature, executive and judiciary, and with a fundamental world law governing all and control of military means in the hands of the world collectively we can give what ought to be acceptable assurances to the minority, and it is clear in this case that the minority is the Soviet Union and the countries within its orbit. It is for this reason that utilization of the United Nations machinery alone is

inadequate, as there is no way to give the minority guaranties under the United Nations except of our good faith; and yet the minority—to wit, the Soviet Union—has by its veto the power to block any constructive action for peace and security. In view of the fact that communism worships lack of good faith, we can hardly believe that it will ever depend on it in others, regardless of how often we in the United States and others of the world's democracies may have manifested it.

What we lack now is an adequate rallying cry by which the peoples outside the Communist orbit can express their faith and their aspirations. Thus far, the United States, leading the democracies, has depended upon the worth of our cause in preserving freedom with much blood and treasure, in giving peoples rights of self-determination and in the great program of self-help and mutual cooperation to save peoples from economic anarchy and to raise their living standards. The next step is to adopt as the objective of our policy, world federation, and in this way to give eloquent voice to a program which can evoke the evangelical zeal that communism evokes from its disciples and yet be infinitely superior to it in terms of the material and spiritual values which it can deliver. It is for this reason that 102 Representatives and 22 Senators introduced House Concurrent Resolution 64 stating that—

> It is the sense of the Congress that it should be a fundamental objective of the foreign policy of the United States to support and strengthen the United Nations and to seek its development into world federation open to all nations with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation, and enforcement of world law.

So far the European recovery program has been our most positive ideological response to the Communist ideology. ERP is fundamentally grounded on regional organization in the Organization for European Economic Cooperation. Should we adopt as the objective of our foreign policy world federation, these regional organizations become the necessary precedent step by which the free world can organize itself in units greater than national units and yet not as great as world federation but in preparation for world federation. The program of those interested in world federation therefore should be to promote all such regional organizations and primarily for mutual economic development but also for mutual security. There has been great activity in this regard in Europe with the Organization for European Economic Cooperation, the Atlantic Pact, and the Council and Consultative Assembly of Europe, but we need now to move into Asia with a Far East recovery program urgently required as an ideological response to the Communist challenge in China, into an African program for the purpose of developing the vast resources and the vast markets which can be attained through greatly increased economic development and through raising the standard of living, education, and health of the African people and finally into a program for the Americas, themselves, a vastly underdeveloped area, all for the benefit of the economic and moral strength of the free world.

House Concurrent Resolution 64 should be considered when the question of military appropriations is brought before this body; it should be considered when veterans' benefits are before us; it should be considered along with the military defense assistance program—for all this legislation is necessary because we live in a world where we are neighbors to all but where not all are friendly. The unarmed peace we enjoy with Canada has saved us untold amounts that would have been spent in fortification on our long borders shared with the Dominion, the world's second largest nation. What the United States and Canada have done—even after a history replete with mutual invasions—the rest of the world must do if it is to save itself.

Two Hoosier Philosophers

EXTENSION OF REMARKS
OF
HON. JOHN R. WALSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. WALSH. Mr. Speaker, in Marion, Ind., in the heart of my district, we are fortunate enough to have at least two Hoosier philosophers in the grand tradition of Riley, Ade, and Nicholson. Each, one in the prose and one in verse, can make us take a moment from the busy workaday world to smile awhile at ourself and our foibles or even to shed an abashed tear for things, events, or people of an earlier and perhaps happier day.

Paul L. Hillsamer, publisher and editor of the News-Herald of Marion, is the prose expert and his recent article on the old-fashioned threshing ring tugged a string in my heart. I am sure that at least two-thirds of the Members of this House, myself included, know from experience exactly what Mr. Hillsamer was talking about when he wrote in the March 17 issue of News-Herald the following article:

OH, THE VIRTUES WE'LL SING

It is time for someone to write about it, for soon the last rig will be junked and then, not so much later, the last participant will die and who will sing the joys of the old Indiana threshing ring?

The "ring" was a group of farmers living fairly close together with roughly the same amount of wheat and oats to separate from the straw, which is why the threshing machine was also called the separator. These complicated machines, powered originally by steam engines and later by ordinary tractors, were fed by two huskies, one on each side, unloading the sheaves of grain—always one at a time, head in and straight. To throw in a sheaf sideways or butt first was to incur the wrath of the captain, a solitary, stern individual who paced the top of the separator much as the Ancient Mariner may have strode the deck of his trusty vessel. Now he stooped to oil a vital part, now to guide the blower in the blowing of a perfect stack, now to bellow words of jollification, advice, or rebuke into the ear of one of the unloaders. When an unloader left his post or one finished ahead of the other the captain grabbed a fork and pitched in, and when the machine clogged it was he who gave the signal to stop and then plunged his arm in (up to the neck) the straw, string, dirt, and chaff which had stopped the works.

Steam engines were before our time. We only dimly remember Cordia Shinholt's ancient rig. On the tractor-powered outfits a lanky, half-grown, half-naked boy usually sat on the tractor seat, more or less (mostly less) alert to the captain's signal to stop or start.

Two grain wagons handled the grain on small rings. The separated grain poured like a cascade from a reversible tin trough approximately every 20 seconds. Three pourings filled a sack and getting the full sack out of the way and the empty sack over the mouth of the trough before a bushel of wheat or oats came charging out was no feat for amateurs. For some reason older men usually operated the grain wagons, possibly because unloading them was such an easy task. All that one needed do in unloading was to pick up the 130-pound sack, hoist it 3 or 4 feet above one's head, and dump it over the wall of the granary, that's all.

Also no mean feat was loading one's wagon to haul to the separator. Wheat and oats were shocked 12 or 15 sheaves to the shock, with two caps—sheaves spread out and put on top as a roof. Thirty-five shocks made a nice load, though show-offs took 40 and smart men 30. One loaded by laying a ring of sheaves around the wagon, butts out and heads in, and then filling the center with alternating bundles, first reaching one way and then the other. All very simple when the top of the load was the bottom of the wagon, but rather complicated when the top was 12 feet in the air. Racks tapering off at a 90° angle; in other words, 6 feet high to nothing, fitted on the sides and 6-foot high ends, to the ends of the wagon, thus saving, one fondly hoped, the whole load from sliding down to mother earth.

About 8:30 you commenced to sweat. From then on in you never ceased. The huge dinner and its accompanying quantities of iced tea or lemonade did nothing to halt the phenomena.

Your editor always maintained a small local reputation, out in Washington Township, as a sweater. Looking at labor, much less doing it, always caused us to break into profuse perspiration until we looked as though we had been dipped in a horse trough. But the harvest field sweat was a healthy one which did not harm, all of us fat men could well afford to pay $20 a day for the privilege now.

In the old days not feeding every man threshing at her home would have been sacrilege to a housewife. With the advent of the automobile many wives started delivering their husband's dinner in person and gradually the mass feeding became extinct.

Just what did feeding the threshers entail? Eight bundle haulers, four grain wagon men, the captain, the tractor man, two or three boys, the housewife and perhaps three assisting neighbor women constituted the crowd. For these 20 or 22 people, a gracious old Washington Township lady-friend assures us that the following menu is, if in error, on the light side:

(Editorial note, 1950—"Aunt Annie" Hillsamer since passed away.)

Eight fried chickens, half a bushel of mashed potatoes, 2 gallons of gravy, 1 gallon of coffee, 5 gallons of lemonade (though this was to last all afternoon), 10 pounds of green beans, cream corn, lettuce, turnips, three or four kinds of pudding, 10 home made loaves of bread, 3 pounds of butter, 8 pies, 5 cakes.

That was before the war. Either one of them.

In the early days fights were common but as the Civil War veterans died off, so did the

UNIVERSITY OF MICHIGAN LIBRARIES

scraps. Most disputes centered around who should be threshed next; occasionally trouble flared if a stack were built too near a neighbor's line fence—threshing spread a lot of weed seeds.

Every year a new host entertained at the settling up—an involved process in which everyone paid everyone else 30 or 40 cents an hour and the women gossiped and the little kids played hide-and-go-seek and everyone ate ice cream and cake until they were in sweet misery. To the sharp-eyed reader who observed the omission of those—neither man, woman, nor kid, but sweet sixteen—well what did you do when you were that age?

When we started this article we aimed to paint a picture of the old-time threshing ring—an institution which has taken a mortal beating during the past 15 years. Now we find, we haven't, our vocabulary can't paint a picture of the scene, can't make you smell the wheat and straw and grease and dirt and sweat and fried chicken. We cannot reproduce the taste of the cold drink from the harvest jug, the feeling of comradeship of the wheatfield. Neither can our poor words describe the feeling of the thresher, wending homeward his weary way, or the peaceful spectacle of a new stack silhouetted against a Hoosier sky. You who have experienced all this know what we want to say. You who haven't don't know what we're talking about. So let's let well enough alone.

Mr. Speaker, Mr. John J. Kolher, also of Marion, has, during the past few years attained recognition as one of Indiana's finest poets. I particularly desire, at this time, to call attention of the Members to one which I consider really outstanding:

INDIANA

It could be her gentle, kindly folk,
Who share their smiles and tears,
And warm you with a welcome,
That allays all doubts and fears.

Or the air perfumed by flowers,
That fill her fields in spring;
Or music from each tree and hedge,
Where a million warblers sing.

The matchless scenic grandeur
Of lake and stream and plain,
Her dark majestic forests, or
Her fields of ripening grain.

Her roads like magic ribbons,
Through an endless holiday,
Where blue skies like to visit,
And warm breezes seem to pray.

In the lore of primal legend,
Every milepost is enshrined.
Romance, drama, set to capture
And enslave the heart and mind.

Could be the regal pheasant,
Who struts before his mate;
Or tense moments in a blind, where
Migrant mallards keep a date.

The great bass in the rushes
And a shower of silvery fry,
As he breaks for open water,
Where we cast our feathered fly.

Could be her crystal fairyland,
Seen through the silent snow;
And a million other wonders,
But this one fact we know.

There's a strange and subtle something;
The enigma of these parts,
That reaches out and gently takes
A hold of human hearts.

They lost nostalgic yearnings,
Settle down to work or play,
And vow they'll be good Hoosiers,
'Till the dawn of judgment day.

—*John Kolher.*

Fame and Infamy—Communism in Hollywood

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. RANKIN. Mr. Speaker, some time ago the Committee on Un-American Activities investigated communism in Hollywood.

It found Hollywood literally reeking with communism and using the moving-picture industry to spread its poisonous propaganda.

They were not only attempting to spread their atheistic propaganda throughout the Nation, undermine this Government, and destroy our American way of life, but they were attempting to destroy the moral fabric of America by poisoning the minds of the children of the Nation.

It is about time the Christian people of this country, the conscientious, decent, moral men and women throughout the Nation, joined in the battle now being waged by such men as Lloyd T. Binford, chairman of the Board of Censors of the City of Memphis, Tenn.

At this point I am inserting a statement issued by Mr. Binford a few days ago against the filthy, loathsome pictures of Ingrid Bergman, which I hope every Member of Congress, in both Houses, as well as every Christian mother and father in America, will read.

The matter referred to follows:

FAME AND INFAMY

One of the primary requirements of worldly fame is virtue. Without virtue, fame becomes infamy.

The most infamous example of the manner in which the motion-picture industry flaunts its devilish disdain of Christian ethics and principles is the Rossellini-Bergman case. Not only have these people defied the laws of man; they have defied God's laws; not only have they attempted to glorify their perfidy; they are now attempting to entice millions of theatergoers to pay them, through the box office, high wages for their widely publicized sin.

It is the considered opinion of the Memphis and Shelby County Board of Censors that it would be inimical to the public morals and welfare to permit the public exhibition of a motion picture starring a woman who is universally known to be living in open and notorious adultery.

RKO Radio Pictures, Inc., is releasing the picture Stromboli, which stars Ingrid Bergman and was directed by her paramour, Roberto Rossellini. In RKO's advertisements there appear running headlines in prominent letters that read: "Raging island; raging passions."

The star of this production with its crude manner of commercializing vice is a reminder of all the impurities of sexual abnormalities of lust-driven delinquents.

Stromboli itself is a sordid tale of marriage; a marriage consummated without love as its basis. It is a story which, while carrying the unborn child of her husband, she engaged in a clandestine affair with another man. It is a story in which the husband beats her while she is pregnant—the witnessing of which would have effect of degradation even upon the minds of the calloused adults.

Sadistic, unmoral, immoral, and featuring a woman who deserted her own husband and daughter and became the mother of an illegitimate son by a roue, already married to another woman whose children he had fathered—such is the picture of Stromboli, from which the vendors of vice expect to make millions. In truth, it is the picture that should make millions turn away nauseated from all the box offices and motion picture theaters until the producers of motion pictures have come to their senses and will not attempt to abort and corrupt motion-picture screens of the world with indecent, godless, communistic filth.

When Ingrid Bergman came to America she was greeted with open arms by all motion-picture fans, young and old. Seeing in her all the beauties and virtues of divine womanhood, they gave her their affections and contributed dollars to assist her in rising high on the ladder of success. Now, Ingrid Bergman has given birth to an illegitimate child, conceived in illegitimacy, who will bear the brand of his parents' disgrace as long as he lives.

Not only has this alien now proved herself unworthy of the love and respect she was given and the trust that placed in her, Ingrid Bergman has cast a shadow of shame upon the entire world of women. She has disgraced her own homeland. She has deserted her own young, innocent, legitimate daughter of her legitimate marriage and both she and Rossellini have heaped coals of shame upon her little girl's head.

The Memphis Board of Censors does not undertake to judge Ingrid Bergman, for her conduct as exposed by her, is between her and her God; and while she has violated the laws of God and man she has evidenced no regret or repentance and the word of God makes it very plain that the repentance must precede forgiveness.

There is not an instance in the Bible where Jesus condoned or pardoned any sin without evidence of repentance. The much quoted reference to the woman taken in adultery (John 8: 1–8), we must confess that we hardly see a trace of analogy. There, the woman had been caught in the act of adultery and was on trial for her life by stoning, a penalty that was justified in the light of ancient laws of Judaism (see Deut. 22: 22–23) and (Lev. 20: 10). The point is, Jesus did not condemn her to death by stoning as her accusers wanted him to do. On the other hand, He did "condemn" her sin, the sin of adultery, as the words, "henceforth, sin no more" reveal. It is unfortunate that so many well-meaning persons have distorted so grievously this ancient passage of scripture through their sheer ignorance of its true contents.

This is not a matter of "who hath no sin amongst you, let him cast the first stone at her" (John 8: 7). For it should be remembered that the woman did not approach the Savior bragging of her "pure love" but, rather approached Him truly repentant, asking that she be forgiven.

As long as millions of unthinking, maudlin, sentimentalists condone the acts of those who commercialize vice by attending theaters in which it is displayed at so much a seat, just so long will virtue live in rags, and, finally crushed by poverty and lack of appreciation, sell itself for riches and become vice.

Those who attain worldly fame have an obligation to all humanity. It is their God given duty to uphold the morale of the laws without which society cannot safely and happily exist. It is their duty having been blessed with worldly wealth and affection, to show their appreciation by living exemplary lives. It is their duty (especially for those who admire them and look up to them as the very acme of all that is noble and

good) to set an example of such finesse and fidelity that never will they create disillusionment with its tender cynicisms, distrust, discouragement and—even despair.

Dr. Fosdick said: "There is bound to be a reaction against this flaunting of promiscuous sensuality; this glorifying of adultery, this flippant deriding of love, which contributes to the demoralization of the social life."

We want no more of Stromboli, the Raging Island of raging passions, for it is indeed regrettable that there are producers of stage and screen players so disinterested in the welfare of the physical and spiritual health of the American people—especially their boys and girls of impressionable age, that makes boards of censorship necessary.

LLOYD T. BINFORD,
Chairman of the Board of Censors of the City of Memphis, Tenn.

Justice for Poland

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a radio address recently made by Hon. J. Howard McGrath, the Attorney General of the United States, "Justice for Poland," including the introductory remarks made by former State Representative Stanley Borsa, made on a radio program sponsored by the western Massachusetts branch of the Polish-American Congress:

INTRODUCTION BY MR. STANLEY BORSA

It was only a few short years ago that people thought and dreamed of one world. Today everyone talks in terms of two worlds. The difference between the Soviet Union and the western democracies has proved too deep to be ignored. There are some who believe the main difference is a conflict between socialism and capitalism—economic structures. Others think it is a political problem between freedom and tyranny. The common denominator of these differences can probably be summed up in terms of morals. The division of the world has been profoundly accomplished by the religion of immorality invented by Marx, preached fervently by Lenin and carried to unimagined extremes by Stalin. Marx dismissed God as a hoax, Lenin accepted this belief and advanced toward sowing hate, revolution and scorn and Stalin has accepted the doctrine of both to completely stifle freedom in Russia and suppress any movement toward it. Religion, poetry, art, education, scholarship and even pure science are twisted to the momentary needs of the tyrant. These things are not only true in Russia but wherever the influence of the Communist conspiracy extends. Poland and other satellite countries furnish us a shocking example. Communism deprived them of independence and are crucifying their religious beliefs. "No compromise with immorality" should become the battle cry and guiding principle of every individual in every still uncorrupted government in the world. Only upon the upholding and teaching of Christian moral standards can civilized life be maintained. The Honorable J. Howard McGrath is the sixtieth Attorney General of the United States. He was born in Woonsocket, R. I., and after graduation from college was admitted to the bar. From his early college days, Mr. McGrath has been interested in the law, politics and the science of government, devoting the past 20 years to public service. In 1934 President Roosevelt appointed him as United States district attorney for Rhode Island. He has served his State as governor and Senator and his Nation as solicitor general, Cabinet head of the Department of Justice as Attorney General. From President of the Young Men's Democratic League of Rhode Island in 1924 he advanced step by step to become chairman of the Democratic National Committee in 1947, serving in that job until his elevation to the office of Attorney General. His career has been marked with his vigorous defense of human rights and the American way of life. It gives me pleasure to present a recorded address by Hon. J. Howard McGrath, Attorney General of the United States.

JUSTICE FOR POLAND

(By Hon. J. Howard McGrath, Attorney General)

I deeply appreciate the opportunity afforded me by the Polish-American Congress of Western Massachusetts to broadcast a 1950 message on the Polish devotion to freedom and justice.

Throughout the centuries freedom-loving humanity all over the earth has been inspired by the historic battle of the Polish people for liberty—the God-given right of all men.

Their thousand-year record is emblazoned with struggle, suffering, and sacrifice in freedom's cause. Year after year, despite defeat and tribulations that would have broken the spirit of the less faithful, they have ever fought on and on toward the coveted goal.

Centuries of partition and enslavement by powerful and ruthless neighbors have failed to quench the Polish thirst for liberty. Time and again they have ripped off the shackles of their oppressors to enjoy for brief intervals the blessings of a free people. One such period followed the First World War, when our own Nation helped to restore their independence.

But that independence was all too short-lived. For in 1939 Hitler's Nazi madmen overran Poland's sacred soil. Notwithstanding the fact that she was outnumbered and militarily unprepared to meet that vicious attack, she was the first nation to battle Hitler. There were no quislings in Poland.

The Communist grip on Poland is a warning to the democratic world. The democratic world is learning that communistic ideology denies the inalienable rights of man, suppresses freedom of expression, prohibits the participation of the people in the affairs of their own government, and substitutes the rule of a minority for the rule of a majority. Yes, the rule by a controlled few for the rule by free millions.

We know this wicked doctrine takes away man's most precious possession—the right to religious worship in accordance with the dictates of his own conscience. We do not forget the bitter lessons of history vividly reminding us of nation after nation crumbling in the dust, never to rise again, whose people have turned away from God.

Founded on faith in God, never wavering; established on the rock of religion, unshakable against all the winds of adversity, our country has developed and grown into the most prosperous and most powerful Nation on the face of the globe.

We do not say this in the spirit of exultation, but with deep humility as we strive to carry out the eternal mandate to do good—"To love thy neighbor as thyself, to feed the hungry and heal the sick."

The bond of friendship between the Polish people and the American people has continued since the days the courageous Polish pioneers helped to found the Jamestown colony, the first English settlement on American soil. In the new year of 1950 it is particularly gratifying and inspiring for us to reflect that many distinguished Polish names have enriched the story of America from the days of our independence to the present hour.

Americans will ever remember those fearless Polish pioneers of the Jamestown colony. Records show that the Polish pilgrims of that day and time, artisans in glass and soap making, demanded political rights—the right to vote.

The attainment of this privilege is considered by some as the first victory in America for the right of suffrage. Immense strides in liberty's cause have been made since then. Renowned Poles have graced the Halls of Congress, honored governors' chairs, and embellished other places.

Nearly a million American boys with Polish blood in their veins valiantly fought in two world wars that we were forced to wage in defense of our democracy in a single generation.

One of the first to enlist in our country's Revolution for democracy—for human liberty—was Gen. Casimir Pulaski. Selfless and heroically he fought in our war of liberation and gave his life in the siege of Savannah, Ga. General Pulaski was not an American, but he was a fighting exponent of freedom and he came from a country that cherished freedom above all else. No nationality, no race, no creed has exclusive ownership of liberty. Liberty is indivisible, it is universal, it is the birthright of every human being. God meant it so to be.

As I have said on other occasions, Poland has furnished us with more than a great national hero. She has steeped our country in her culture and ideals. Her musicians and writers, her artists and singers, her missionaries, teachers and inventors, her gallant fighters, aviators, and seamen have added, year after year, to the grandeur of General Pulaski's supreme gift. For a thousand years Poland has been stanchly devoted to her Christian ideal of religious tolerance and democracy.

Pulaski is a symbol of that democracy. In these tense and uncertain times it is both fitting and vital that we reemphasize the ideals for which Pulaski gave his life. While a United States Senator, I had the privilege and honor to introduce a bill in Congress to provide a permanent memorial in honor of General Pulaski—a national memorial which would serve to perpetuate the lofty ideals for which he laid down his life. As in the past, displaced persons coming from Poland will add to the fullness of our way of life.

Would that the rulers all over the world heed the terrible lessons of the past and learn once and for all that the flame of liberty cannot be forever extinguished in the hearts and souls of men. The torch of liberty must be kept ever burning to light the way to a better world.

War has not been and never will be the final solution to mankind's problems. It is not civilization's answer. War does not eliminate lust for power, greed, suspicion, intolerance, and tyranny. Such discords in life can only be conquered by education, mutual understanding, and brotherhood through peaceful processes.

As President Truman has so aptly said:

"The world today needs the spiritual guidance of inspired leaders, who can rise above creed or class, who can help humanity gain security.

"If civilization intends to avoid destruction, nations must learn to live together in harmony with each other."

With the aid of divine providence, we are determined to go forward until we reach the peak of freedom and security, peace, and happiness, for peoples everywhere.

UNIVERSITY OF MICHIGAN LIBRARIES

Address by Rev. James S. Barry, D. D.

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a recent excerpt from the Clinton (Mass.) Daily Item containing the text of a speech by the Rev. James S. Barry, D. D., pastor of St. John's Church in that community.

Father Barry traced the history of the churches in Clinton in an outstanding address given at the centennial banquet March 14 in honor of the one hundredth anniversary of the founding of Clinton.

In introducing Rev. Father James S. Barry, D. D., pastor of St. John's Church, Congressman PHILBIN said:

"Clinton has long been noted for the religious life of its people, the strength and fervor of their faith, the broad toleration of their outlook, the sincere spirit of their brotherhood, the large number of its sons and daughters who have been called to vocations. The free religious worship guaranteed by our Constitution has found strong, profound rock upon which our community is built.

"There is no man among us better equipped to discuss our religious life than the fine Christian gentleman I am about to call upon.

"Scholar, devoted spiritual leader, of keen penetrating mind, broad and unselfish, highly honored in the new diocese of Worcester, always gracious, kind, and considerate, beloved by all, I am happy and proud to present to respond to the toast, 'Our Churches,' the Reverend James S. Barry, D. D., pastor of St. John's Church, Father Barry."

Rev. James S. Barry, D. D., pastor of St. John's Church, in responding to the toast, "Our Churches," said:

"Mr. Chairman, ladies, and gentlemen, today we celebrate the centenary of the beginning of the town of Clinton. To appreciate what that really means, we must needs go back over the history of those hundred years. The religious history of the town logically divides itself into two equal periods: before the year 1900 and since that year."

THE FIRST CHURCH

"The first church in point of view of origin, in Clinton, was the Congregational, whose parent parish recently suffered a heavy loss in Lancaster. In 1840, Sabbath school was held, in Clintonville, with Congregationalists, Baptists, and Methodists worshipping there.

"The first Congregational was formally organized in 1844 and a chapel was built near the foot of Water Street on Main Street where religious services were held for 2 years.

"The first pastor was Rev. J. M. Eaton. A new church was erected on Walnut Street in 1847. This church was remodeled and rededicated February 22, 1869.

"This church was replaced by the present edifice, erected on the same site, and dedicated May 29, 1899.

"Thus, briefly, the history of Clinton's oldest parish whose present pastor is Rev. E. Maurice Bussey."

THE BAPTIST PARISH

"Baptists: During the first quarter of the nineteenth century there lived within the present limits of Clinton several earnest Baptists. In 1816, when the New Brick Church was being built, in Lancaster, a new Baptist society was formed and meetings were held in private homes; such as those of Charles Chace, John Burditt, and Levi Howard.

"When the Congregationalists determined to build, on Walnut Street, they urged the Baptists to begin worship in the chapel, on Main Street. Rev. Charles M. Bowers became the first resident pastor in 1847. This chapel soon proved too small, and, in 1849, the new church on Walnut Street was dedicated January 10. Before Clinton became a town the parish numbered 90 members.

"A new Baptist Church was dedicated February 1868. This was later moved back to become the chapel of the large brick church.

"March 23, 1894, the brick edifice, with the chapel in the rear, was dedicated. On the night of January 30, 1934, this beautiful brick church was destroyed by fire.

"But with characteristic enthusiasm a new church was pledged and dedicated in 1936. The present pastor has been in charge for 11 years, including a leave of absence in the Army. He is Rev. Donald B. Weymouth."

THE METHODIST CHURCH

"Methodist: In 1842, the Methodists secured the use of the brick school house, on Main Street, for their Sunday services and then later in private houses. The building of the church was completed in 1852, during the pastorate of Rev. T. Willard Lewis. Several pastors have served this church. During the year 1850, the first regular preaching began, under Rev. Philip Toque. In 1867, the church was razed and during the next 2 years extensive repairs were made. Later, in 1897, extensive repairs were made. In 1900, the Methodist Church was on High Street, then later, property on Walnut Street was purchased where the present church was erected. A new unit of a community hall and Sunday school was dedicated in 1927. This community hall now has been made into the auditorium. The present pastor is Rev. Andrew R. Eickhoff."

THE EPISCOPAL CHURCH

"Episcopal: The Church of the Good Shepherd is a development of All Saints Parish, Worcester, and Christ Church, Fitchburg. In February and March 1874, services were held in Bigelow Hall and it was decided to hold regular services, beginning with the first Sunday after Easter, Rev. L. Gorham Stevens, a deacon, took charge of the mission.

"In March 1875, Rev. J. C. Hewlett became the regular pastor. Plans for a church building developed, and at the suggestion of Rev. Dr. Bowers, the old library building site was acquired.

"The church was completed and consecrated April 17, 1877, when Rev. Henry Foote became the first settled director. In January 1884 a fire did some damage to the church and Rev. George F. Pratt became the first rector. In December 1889 the church was enlarged and later, June 10, 1892, the chancel was dedicated.

"Gradually the parish developed along the lines forecast by the early founders. The name, the Good Shepherd, was suggested by one of our distinguished townspeople, Miss Ellen K. Stevens. Since 1900, there have been seven rectors, who have left pleasant memories behind them.

"In November 1949 the seventy-fifth anniversary of the parish was celebrated, when Bishop Henry Lawrence presided. The present rector is Rev. T. Frederick Cooper."

THE GERMAN CHURCH

"German Evangelical Church: This parish was organized in 1887 with 52 members. The church building was erected in 1888, and, with many improvements and additions to the original structure, is still in use. In the course of the years, eight pastors have served, beginning with Rev. F. S. F. Scherf, and the present pastor is Rev. Harold S. Winship. Three members of the parish have entered the Christian ministry. Since 1944, all services of the church have been in English."

THE UNITARIAN PARISH

"Unitarian: The Unitarian Church was originally dedicated in February 1853 and enlarged in 1873 when practically a new building was erected. Since then the church has remained practically the same.

"Rev. L. J. Livermore was the first official pastor but during the formative period Rev. George M. Bartol, of the mother church in Lancaster, was truly the guiding director.

"Rev. James C. Duncan became pastor in June 1886 and his remarkable career, as pastor, ended with his death, in 1937, having been the pastor over 50 years.

"Judge Jonathan Smith took a very keen interest in the early years of the parish and was active in the life of the parish. The parish observed the seventy-fifth anniversary of the founding of the church, in July 1925.

"In November, of that year, a memorial tablet commemorating this event was unveiled and, after extensive repairs, the church was rededicated.

"October 19, 1936, Rev. James Cameron Duncan, D. D., completed 50 years in the ministry when four of the five young men who had entered the ministry were present. Dr. Duncan lived 4 months more, when he died. The present pastor, Rev. John H. Taylor, began his ministry here, September 1, 1949."

THE PRESBYTERIAN CHURCH

"Presbyterian: The First United Presbyterian Church, in Clinton, was organized February 6, 1893. Ground was purchased, on Chestnut Street, from the Bigelow estate and an edifice erected which was dedicated May 6, 1894. This proved too small and a new church was dedicated, January 27, 1901.

"This is the present building with some later alterations and improvements. The present pastor is Rev. Robert C. Shaub who has proved to be a good neighbor to St. John's for the last 3 years."

THE THREE CATHOLIC PARISHES

"Catholics: The history of the Catholics, in Clinton, naturally revolves around the history of St. John's Parish. Irish people slowly arrived, in Clintonville, and, in 1845, several were engaged in the construction of the Clinton Co.

"From the expanding parish of St. John's, in Worcester, a mission was established in Clinton. As early as 1845, the Holy Sacrifice of the Mass was offered here by Father Matthew Gibson. Services were held in private homes for some time.

"In 1847, Father John Boyce came and after considerable difficulty construction of the first church began and was dedicated under the patronage of St. John the Evangelist.

"Clinton's first resident priest in charge of the parish was Father John Connolly. During the years, several pastors have served at St. John's, and I would like to mention these: Most Rev. William A. Hickey, D. D., who later became Bishop of Providence. It was he who started the present parochial school; Most Rev. Patrick T. O'Reilly, D. D., once an assistant at St. John's, later called to become the first bishop of the new Springfield Diocese; Rev. Michael H. Kittredge, who was the only native of Clinton to serve here as pastor; Rev. Richard J. Patterson, who began the longest career that any priest had as a pastor in the year 1868, which was ended the last day of the past century.

"His pastorate was most notable, especially because during the time there came the dedication of the present—third church—in 1866.

"The present pastor, Rev. James S. Barry, D. D., has had the honor of serving both as a curate and as pastor which he shares with

Father John O'Keefe and with Bishop Hickey.

"The parish celebrated the centennial year of the first church here, in 1949.

"During this centennial year of Clinton's history, the Catholics of Clinton joined with those of all Worcester County in acclaiming Most Rev. John J. Wright, D. D., as he became the first bishop of the newly created Diocese of Worcester."

THE ROSARY CHURCH

"The parish of Our Lady of the Rosary was formed in 1909, a division of St. John's. It was fortunate in having as its first pastor, Rev. Edward J. Fitzgerald, long and favorably known to Clinton people as the trusted assistant of Father O'Keefe. He erected the striking school and rectory which overlook Clinton from the south.

"The school hall serves as the place of divine worship. Father Fitzgerald was a well-known orator and delivered a stirring address on the occasion of Clinton's fiftieth anniversary. The present pastor, Rev. James B. Kennedy, has served with great success over 6 years."

ST. MARY'S PARISH

"In recent years the Poles came to Clinton in numbers sufficient to justify a new parish in 1916, under Father Fox. For some years they attended St. John's Church, and later Our Lady of the Rosary where Monsignor Cyran was then an assistant.

"Father Bloom built St. Mary's School. The first church was destroyed by fire.

"But with characteristic energy, the parishioners rallied to the task and a satisfactory emergency building was erected.

"Rev. John Oszajca is the present pastor of St. Mary's, where he has presided for some years, guiding his flock in the way of the Lord."

TRINITY LUTHERAN CHURCH

"We can begin the second half of Clinton's life by recording the history of Trinity Lutheran Church which had its origin at the turn of the century. Pastor Kaestner, of Worcester, came here at first to hold services at the request of a number of Lutherans in Clinton. These were held in a private home.

"Increased numbers necessitated renting a large room in the Pierce Block, on High Street. Various pastors continued the work but, in 1913, Pastor Rademacher became the first full-time pastor. The church building, on Chace Street, was dedicated in April 1915. Shortly after, in 1919, certain services were conducted in English, and now both German and English are in use. The congregation was incorporated in 1925. The present pastor is Rev. Theodore Martin.

CHRISTIAN SCIENCE CHURCH

"First Church of Christ Scientist: Although Christian Science services were held in Clinton as early as 1892, regular services began in 1908, and were held in GAR Hall, in the Bank Block. The organization became a regularly recognized society in October 1903, with readers chosen from its own membership. During May 1911 the meeting place was changed to Music Hall, in the municipal building.

"The society constructed its church home at the corner of Water and Hammond Streets, ground being broken in September 1921, with completion in January 1922.

"The society was recognized by the Mother Church in Boston as a branch church, and is now known as First Church of Christ Scientist, December 13, 1923. The present president is Elie Rivollier."

ST. NICHOLAS CHURCH

"Greeks: We have an unusual group in Clinton, who form the Greek Orthodox parish whose church is dedicated to St. Nicholas. The church was first established in 1913, with Reverend Thaddeus as the first priest. Many of the charter members still reside in Clinton.

"Two years after the first mass, the parishioners purchased the property on School Street, which is now the site of the present church. The building has been used as a hospital and served as a church until 1926. Then with an enlarged population the present church was erected.

"In 1941 a fine choir was formed, considered one of the best a capella choirs in New England. January 1, 1947, a young group of directors took over the management of the church and were sworn in by Rev. Constantine J. Polymeros, who is the present priest in charge of the church. Daniel J. Paul, at present, presides as president of the various officers."

OTHER DENOMINATIONS

"In this short review we should not forget the Congregation Shaarei Zedeck, which has an imposing synagogue on Water Street where Rabbi Aaron Twersky officiates. He has received definite marks of distinction this very year.

"The Free Methodist Church of Clinton had its beginning in 1906, at which time the congregation worshiped in the Coulter Building. The first pastor was E. H. Wyeth. The church was built in 1923 under the pastorship of Rev. Charles E. Ross. The present pastor is Rev. M. A. Parker.

"Let us one and all thank Almighty God for the sufferings and privations endured by the early pioneers of the various parishes in Clinton, through which they have left to us of today the noble edifices that distinguish our town, which can rightfully be named the town of churches. May a true religious spirit ennoble its citizens always."

Aid in Southeast Asia

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the New York Times of Saturday, March 11, 1950:

AID IN SOUTHEAST ASIA

It seems to be agreed that if the United States is to make effective moves against the advance of communism in Asia some plans for stabilizing the situation in various countries must be initiated and adopted. Viet Nam wants military aid at once to meet the increased threat of the Communist-led forces of Ho Chi Minh. Burma has indicated a receptivity to American assistance, after having been somewhat fearful of foreign exploitation. Indonesia is seeking further rehabilitation loans. Discussions are in progress concerning the relation of American stockpiling to Malaya's economy. A State Department mission is now in the field making a survey and a new Asiatic policy is predicted for sometime in the summer.

Meanwhile there is one danger point at which we can and should act without the need for further exploration. That is the Philippines. We have a direct military commitment and a strong moral commitment to the new Republic's security and progress. It can be met now with concrete actions that will promote stability in the archipelago and at the same time give an earnest to the rest of Asia that we mean business. Here are some of the things that can be done:

1. The United States Congress should immediately make a further and final amendment to the War Damage Claims Act, appropriating the necessary $100,000,000 to bring the scale of payment up to the 75-percent level that was implicit in the original legislation. This is a matter of good faith, but it can be made also a matter of substantial economic gain for the Philippines by making some simple provisos. It can be stipulated, for example, that the additional payments to those whose claims have already been met in part must be used in projects designed to further rehabilitation and economic improvement in the Philippines. This would assure the channeling of the funds into productive enterprises.

2. The United States should extend to the Philippines, now, a currency stabilization credit similar to that which was extended to Mexico. An amount of about $100,000,000 should be adequate. This is imperative, since adverse trade balances have drained away too much of the country's gold reserve. The peso is not now as stable as it should be and there is a black market.

3. The United States should dispatch, immediately, a small, really top-level and nongovernmental mission to examine and report on the possibility of private investment of the sort envisaged in the point-four program. Such a mission, and it should be good enough to inspire complete confidence, should advise the Philippine Government on the steps necessary to encourage investment. It should also advise Americans as to where and how investment could be made profitably. There are opportunities in abundance. In this category could be placed certain public operations that could be funded with private capital, such as the rebuilding of the water supply for Manila and Baguio, the construction of some key roads, and the development of dam projects that would be a source of both irrigation and power.

4. The United States should quickly resolve any further dispute about our military commitments by strengthening its Philippine establishments. If we are to hold Clark Field there ought to be a ground force to defend it and its fuel sources should be made independent of the haul from Manila. If Subic Bay is to be our major naval station its fueling capacity should be made adequate. If we have other and wider programs for a solid establishment in the archipelago they should be started now.

The Philippines is at the moment in a shaky economic position. It is in a vulnerable miltary position. It can be turned into a bastion of great strength, economically, politically, and militarily by prompt action. We and the Filipinos are in basic accord and we need not fear that we will be misinterpreted. We can act jointly. The important thing is to act now.

Long Island Railroad Debacle

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. LATHAM. Mr. Speaker, under leave to extend my remarks, I wish to set forth the telegram I have this date sent to the Chairman of the Interstate Commerce Commission:

MARCH 23, 1950.

Mr. J. MONROE JOHNSON,
Chairman, Interstate Commerce Commission, Washington, D. C.:

Request immediate action toward directing installation of automatic tripping safety devices on Long Island Railroad to insure

UNIVERSITY OF MICHIGAN LIBRARIES

safety of Long Island commuters and prevent repetition of recent catastrophe costing many lives. This matter is urgent and will not wait for lengthy investigations or red tape. This railroad is floundering in a confusion of bankruptcy, investigations, lawsuits, low-employee morale, and poor management. The public must be given this minimum protection at once.

Congressman HENRY J. LATHAM,
Third District, New York.

Address of Hon. Joseph M. Duffy, Chairman of the Clinton (Mass.) Board of Selectmen

---

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of my address at the centennial banquet March 14 commemorating the one hundredth anniversary of my home town of Clinton, Mass., and the address of welcome delivered by the Honorable Joseph M. Duffy, chairman of the Clinton Board of Selectmen, both of which appeared in a recent issue of the Clinton Daily Item:

Chairman Joseph M. Duffy, of the board of selectmen, in extending the welcome to the audience, said:

"Mr. Chairman, honored and distinguished guests, fellow townspeople, it is indeed a rare pleasure for the board of selectmen to extend to each and every one of you a hearty welcome, as we join in celebrating this one hundredth anniversary of the incorporation of our town.

"This welcome, from the board of selectmen, extends to those assembled here tonight and to the great family of Clintonians, and friends of Clinton, wherever they might be.

"To our visiting dignitaries, the Governor and Lieutenant Governor of the Commonwealth, and to the many visitors from our neighboring cities and towns, who will be with us on this memorable anniversary, we extend our warmest greetings.

"As I stand here this evening, I am aware of the deep feeling, intense love, and tender memories that are part of our Clinton heritage, nor am I unaware of the many trials and hardships our townspeople endured down through the years in the growth of our splendid town.

"And so it is with profound respect for the passing of the past 100 years, and with abiding faith in the future, that we gather here tonight to memorialize this centennial year.

"And as we look into the uncertain future, with its inevitable changes, we ask Almighty God for His loving guidance for this, our town, which we so deeply cherish. Thank you."

In responding to the toast, Clinton and the United States, Congressman PHILBIN said:

"Judge Kittredge, Reverend Clergy, Your Excellency Governor Dever, Your Honor Lieutenant Governor Sullivan, my friend Matt Connelly, distinguished guests at the head table, fellow Clintonians, and friends, I am exceedingly thankful to Judge Kittredge for his very kind personal allusions but fear they are far more generous than I could possibly deserve.

"Let me say of him, however, at the very threshold of this program that our town is deeply indebted to Judge Kittredge for most able leadership in arranging such an impressive, interesting, entertaining, and epoch-making program. To him and all his assistants I am happy to make earnest acknowledgment and render the warm thanks of our fellow townspeople for a difficult job magnificently done.

"Let me also express my genuine appreciation for the honor which the committee has conferred upon me this evening in selecting me to preside over the speaking program and to respond to the toast, 'Clinton and the United States.'

"Within the bounds of propriety applicable to an event which mingles solemnity and festive joy and to be sure in keeping with the dispositions of the several very eminent men who will address you whom it is not my desire or intention to inhibit in any respect, I will endeavor, so far as I am concerned, to carry out the program expeditiously enough to satisfy even an impatient listener.

"If, as the poet once said, 'brevity is the soul of wit,' I shall hope to leave the wit to John Redmond and, insofar as is possible and seemly, strive for brevity.

"Reflection, reminiscence, contemplation, and rededication must be ours tonight. Surely we cannot hope to face and conquer the grave problems of this atomic, mechanized age without recourse to the great fountainhead of tradition and heritage and inspiration which nourishes and guides us from our honored past. No more than we can solve these problems without actively adapting ourselves to the new needs, new demands, and new techniques which are so much a part of our current life and the contemporary world. Thus, if we are wise, we would seek to adjust our thinking and our acting so as best to utilize at once the sound invaluable lessons of the past and to modulate to the swift motion of our dynamic progress in this rapidly changing, constantly shifting, and very uncertain, confused, and bewildered cycle of human history.

"It comes as somewhat of a redundancy for any of its native sons to praise the town of Clinton and the magnificent achievements of its people during the century we observe. The fame of Clinton has spread far and wide to the far corners of the earth. From distant Australia whose one-time Premier was a person with Clinton blood in his veins to the magnificence of the Hotel Savoy in London, where talented Carroll Gibbons holds sway, yet and leaving Congress out of it, to the innermost sanctum sanctorum of the White House itself where our own Matt Connelly so ably serves as the right arm of the great President of the United States, the name and fame, good deeds, accomplishments, and humanities of Clinton boys and girls are known and felt in many places. This has given a universal and global quality to the town which is reflected in the essentially rare and distinctive atmosphere in which Clinton lives.

"On this memorable anniversary we must recall that Clinton is part of an area settled by pioneer colonists in very earliest American days. Its tradition, its history, its lofty psychological approach, its high moral tone, its burning patriotism date back to the days of John Prescott whose courageous band of undaunted men and women literally carved a civilization out of a wilderness and established the basic institutions of government, religion, economics, and sociology by which in steadily and greatly expanded and enriched form since that very time we have lived as a municipal and social organism.

"It is to this strain of early American blood, 'Yankee' if you will, which in fierce struggle and bitter sacrifices forged the early history of this community that we owe so much that we express our profound gratitude here tonight. We of the present as well as our posterity can note with benefit and profit their faith, their dedication to freedom, their attachment to fundamental values.

"As the history of the Nation unfolded, as we grew in population, in strength and in the development and implementation of our democratic institutions, may races and many peoples, often the victims of cruel persecution in foreign lands, seeking the opportunities of free activity which America afforded came to our shores and settled here. These peoples were of different national origins and racial stock and embraced practically every people of Europe. The rich infusion of their blood, the happy admixture of their ancient cultures, their passionate love of liberty; their devotion to religious and moral law has proved an incredible boon and a momentous contribution to the progress of our town and Nation.

"To a degree almost unbelievable these various strains of peoples of entirely diverse and dissimilar national and cultural backgrounds in the course of time and with relatively negligible friction and discord merged into a compact, friendly, cooperating political and social unit characterized by the zeal, industry, thrift, and loyalty of its members and were able to forge here the splendid, free, prosperous, healthy and patriotic community to which and for which we pay our most heartfelt tribute of glory and gratitude here this evening. They kept their eyes fixed on the stars but their feet on the ground and trusting God they built wisely and soundly upon the solid rock of a government and a community based upon the rights of the individual.

"This is a one hundredth anniversary and the people we most honor and thank on this occasion are not alone those of the present generation but for the most part those of past generations to which I have alluded whose steadfast fidelity, indomitable will and tenacious purpose overcame the great obstacles of distance, political dissension and almost every conceivable economic and social deficiency to establish and preserve the dynamic, progressive and colorful town of which we are all so proud.

"Theirs was no easy lot. They grappled and struggled with the stark, bleak facts of mere existence. They clung tenaciously to their ideals of freedom and morality. Their service was not for themselves alone, although they fully recognized and practiced the democratic American doctrine of self-help. But they sought in their very thought, word, and deed to serve the community, the State, and the Nation with unselfish and zealous devotion.

"Their labors and efforts were not confined to times of peace. Perhaps their more glorious contributions, excepting those in the spiritual realm, took place in time of conflict and war. It should be noted that the men of this political subdivision of which Clinton is a part, sons of who were born and raised within a stone's throw of this very hall, fought in the Revolutionary War, in the War of 1812, in the Indian wars, in the great struggle to preserve the Union and to establish the principle, once and, I hope, forever, that all men are equal; that all men are first class American citizens regardless of their race, their color, their national origin, or their condition in life.

"Men of Clinton fought in the Spanish-American War, and while the line is drawn thin now many of those heroes still remain with us and are among our finest citizens. Clintonians fought for the Nation in World War I. Their deeds of heroism and gallantry resounded around the earth at the Marne, at Chateau Thierry, at Belleau Woods, at Verdun, and on the high seas and in the air. In 1941, when the Nation called once again to its citizenry to rally to its defense, there was a spontaneous response from the boys and girls of Clinton and again they fought in every corner of the world to protect our free institutions, and in every branch of the

service they achieved a record second to none.

"Yes, my friends, in the defense and service of the United States of America and the ideals which it represents, the men and women of Clinton have ever offered themselves willingly and conducted themselves courageously and achieved gloriously in the preservation of our cherished freedoms. Their blood saturates every battlefield of our Nation since the time of the struggle for independence. It drenches and enriches the fields of Europe, the South Pacific and Asia. The lives of Clinton heroes were sacrificed in almost every clime, on every sea, in every airway of the world to keep alive the great and immortal spark of human liberty which has been so zealously guarded in this community.

"I cannot possibly recite in this brief time the sum total of Clinton's contributions to the United States. It has been emphasized time and time again in civil, professional, and business life. Thousands of Clinton boys here and elsewhere have risen to positions of great importance, influence and power in the affairs of the Nation and have reflected undying glory upon our town—outstanding lawyers and judges, some of them adorning this gathering tonight, doctors, scientists, writers, composers, captains of industry, teachers, journalists and distinguished churchmen and many others.

"We have sent outstanding representatives to the National Capital, boys who were born, educated, and brought up in this town or to whom Clinton was their real home. We have had several Members of Congress, the Honorable Edward Kenny, of late and lamented memory, a Clinton boy who served with great distinction for many years in Congress from the State of New Jersey, my own brilliant predecessor and distinguished friend and colleague, our neighbor, and an outstanding son of Clinton, the Honorable Joseph E. Casey, whose record in Congress and reputation as a lawyer has given luster to our town.

"I have already mentioned the superlative service of Matt Connelly, one of Clinton's greatest sons. We are all proud of him.

"As the crowning glory to all these contributions of our sons in the public service at Washington stands those of the distinguished and unforgettable Senator David I. Walsh, of revered memory, one of the Nation's truly great statesmen, a man fired by birth and nature with unsurpassed patriotism, motivated by noblest principles, gifted with great eloquence, and extraordinary talents and ability. The principles he courageously fought for, the vision and foresight he displayed, the lessons in fundamental Americanism he proclaimed will long exert powerful influence in this land. He was Clinton's most illustrious son, Massachusetts' outstanding statesman and one of the great national figures of our times and generation.

"Clinton can feel proud, indeed, of these great men it has given to the Nation and of the faithful service of its sons and daughters and mothers and fathers in war and in peace.

"In this same spot in the old town hall 50 years ago on a similar occasion our people gathered to celebrate their fiftieth anniversary and to express rededication to the purposes of our free Government and in the aspirations of our people. In the same devout spirit, with strengthened will to meet every test of our Americanism that may come, it is fitting tonight that we, too, as the living embodiment of the Clinton of the present should pause to hail and thank those of the past to whom we owe so much. Let us resolve that, inspired by their example and sacrifice, their patriotism and their willingness to give and serve, yes, inspired by their determination to cling to the paths of righteousness, of virtue, of freedom, we, too, will face the future with fortitude and confidence that this community will continue, God willing, to grow and develop and give of itself unselfishly to the great cause of preserving our heritage and building a greater, stronger, more prosperous, happy, and peaceful Nation.

"In these fateful days we shall need something more than passive citizenship. We shall need a united and determined Nation—a people free from the fetters of provincialism and intolerance, a people keenly aware of our responsibilities to the Nation and mankind, a people aroused to the urgency of preserving their liberties in a world tattered and torn with dissension and hostility to democracy.

"The future is in the hands of unsurpassed and splendid youth who must and will, I know, courageously take up the burdens and responsibilities of conducting and advancing our town and our Nation. They have a precious legacy. We all have a precious legacy. If we heed its lessons, those gathered here on the hundred and fiftieth anniversary of Clinton will be able to proclaim to the world that we of this generation have faithfully and successfully achieved our great mission and that Clinton and the United States having overcome and solved the problems of the present are walking humbly, but majestically, in the sacred pathways of freedom, tolerance, security and peace."

Mr. Lie Oversteps Bounds of His UN Office

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the correspondence columns of the Washington Star for March 14, 1950:

To the EDITOR:

The United Nations Secretary General, Trygve Lie, seems to put his own interpretation on the extent of his duties. The result brings discredit to the very important office that he holds. Through the issuance of private memoranda and public utterances, he deliberately uses his influence to unseat the delegates of a member nation, the Nationalist Government of China.

Mr. Lie indicates the direction of his efforts through attempts to shape our thinking with respect to the repeated Soviet walkouts from almost every Council and Committee of the UN. Moreover, he has no inhibitions in bypassing the proper UN organs when he speaks as the sole authority about what should be done concerning the "A" and "H" bombs or the methods the member nations should follow to reduce the production of conventional armaments. High lighting all of Mr. Lie's words and actions is a theme that has a familiar ring: In order for the UN to carry on its work, the Soviet Union must be persuaded to return to the council tables, and to do this we must set aside our silly moral principles.

Mr. Lie is the UN's chief administrative officer and is supposed to act in that capacity and nothing more. He is not supposed to take over the functions of the various Councils, but to keep a record of their findings and report to the General Assembly. He is not supposed to express his own political opinions nor act like a party politician in lining up one power or group of powers against another as he now tries to do.

As an individual, Mr. Lie has all the rights and privileges of self-expression. However, his position, as Secretary-General of the UN, is so important that anything he says may mislead the American public immediately and influence the opinion and even the policy of other governments in a manner that could prove detrimental to the best interests of the United States and the UN members in general.

In this critical period of world relations, the Secretary-General should be made aware that his present actions contribute in no small way to a rising dissatisfaction over the bald-faced attempts by the Soviet Union to use the UN as a forum.

HAROLD J. THOMPSON.

One Hundredth Anniversary of University of Utah

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, March 28 (legislative day of Wednesday, March 8), 1950

Mr. THOMAS of Utah. Mr. President, on February 28, 1950, the University of Utah celebrated its centennial. Alumni gatherings all over the United States were held and on the campus a series of meetings, lectures, and various types of gatherings took place.

The University of Utah, established as it was in the first year of our Territorial government, reflects one of the American ideals in regard to education. That is, that the State and its educational institutions should grow up together. The fact that this has occurred especially in many of our Western States, is responsible for America's basic belief that democracy can only properly function where there is a trained citizenry. Utah has never been without trained leaders as a result of her university. The university, in very deed, has been a light that shineth on a hill and has been the sun to the youth of Utah throughout the hundred years of our State's and Territory's existence.

During one of the meetings of the centennial, Dr. H. L. Marshall, dean of the medical college, an alumnus of the class of 1908, and a nationally recognized leader in his field of study and endeavor, on behalf of the faculty saluted the university on its one hundredth anniversary. Because of the State-wide and national interest in Utah's centennial, I ask unanimous consent that Dr. Marshall's remarks be inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Governor Lee, Mr. President, and friends, the faculty salutes the university on its one hundredth anniversary.

While affirming its own youth and vigor, this faculty in frankness acknowledges that it is almost as old as the university. But not quite so old, however. The institution was framed and fashioned 100 years ago today.

UNIVERSITY OF MICHIGAN LIBRARIES

But the snow of the following November had whitened the Wasatch before we the faculty was born. The "we" is used in the editorial sense, for this was a single, not a multiple birth. During the first semester there was only one of us; he was listed under the rather confusing academic title of Dr. Cyrus W. Collins, M. A. Have no misgivings, however; this faculty of one was directed and carefully supervised—as we are now—by 13 solicitous regents.

By the end of the fourth semester, we the faculty had multiplied to three. And then we did an unusual thing—for a faculty, a most astonishing thing—we disappeared. When the legislature cut $5,000 from the university's annual appropriation—i. e., changed the appropriation from $5,000 a year to zero—sensitive and naturally reticent, we vanished from shock.

It took 15 years before there were any signs of quickening, and 2 years later, with John R. Park, M. D., officiating, we were born again. More durable and resistant this time, we grew steadily, but slowly, for 60 years. Lately, of course, we have expanded like an umbrella. According to current count, we number about 500.

It is my personal good fortune to have been associated with the university as a student and as a teacher during one-half of its existence. Possibly my selection here today is due to realization that this situation will not likely be duplicated at the next centennial celebration.

In defense of my own youth, however, let me explain that half a century ago the university was a very small college and also a sizable high school as well. Some of us were admitted in those days at a very tender age. I taught my first class in 1905, became a professor during my twenties, and have served under five presidents. Except during various leaves of absence, I have known all members of the faculty intimately—until the last few years. Now it is necessary for us to wear labels at our infrequent meetings.

While the faculty has lost much of its intimacy and perhaps some of its solidarity, it is now less provincial, and a more restless and competitive scholarship is evident—particularly in the area of investigation and research. The high tempo of the new college of medicine and the graduate school has added candlepower to the night lights of the laboratories.

In days when the faculty was small and intimate, questions both trivial and grave were debated in faculty meetings with eloquence and oratory suggestive of the late Daniel Webster. One of the graver questions, as I remember, was whether to wear or not to wear the cap and gown on ceremonial occasions like this. As sure as the buttercups blossomed each springtime, that subject was debated.

Spearhead for the affirmative was George M. Marshall, professor of English, who pointed out that the academic robe and tasseled hat would bring to our callow halls an echo of the solemnity and dignity of the English cathedrals. For the negative, George Q. Coray and Joshua Paul denounced the garb as monkish—smacking of popery and monasticism.

Through many years this issue raged, until practical William G. Roylance calmly pointed out that the academic robe is inexpensive and also concealing. Adopting it, therefore, could easily save the price of a new suit or a new dress at every commencement.

Our attire here today attests the persuasiveness of the Roylance logic.

Mr. President and friends of the university, this occasion calls for more than levity, or repetition of that which now seems humorous. In attempting to represent the faculty of today, may I also presume, in some measure, to represent the faculty of yesterday—Joseph T. Kingsbury, James E. Talmadge, Joseph B. Toronto, Joshua R. Paul, George Q. Coray, William G. Roylance, William M. Stewart, George M. Marshall, Robert Lindsay McGhie, Benjamin Rogers Howell, Jacob Bolin, J. L. Gibson, Frederick W. Reynolds, and many many others whom I knew.

In their name and in the name of the faculty of today, we salute our 100-year-old university, and we pledge to it anew our loyalty and our effort.

Fraternal Order of Eagles Resolutions

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 28 (legislative day of Wednesday, March 8), 1950

Mr. WILEY. Mr. President, I have previously commented on the Senate floor on the outstanding organization of which we in Wisconsin are particularly proud—the Fraternal Order of Eagles. I discussed the great record of civic contributions of the FOE particularly in connection with emblem-day legislation which we in the Senate passed last year on May 23, and which has since been pending before the House Judiciary Committee. I had been glad to introduce the emblem day bill, Senate Joint Resolution 62, to honor on June 20 of each year the American Bald Eagle—symbol of the FOE and symbol of our American Republic. In the House of Representatives, my colleague, the Honorable FRANK KEEFE, of Oshkosh, who has had a long and distinguished record of service in the fraternal order, sponsored a companion measure.

We are all familiar with the fact that the Fraternal Order of Eagles has literally been in the vanguard of sponsoring a tremendous amount of social legislation. Its magazine, Eagle, whose editorial offices I am proud to say are located in Milwaukee, has constantly brought to the attention of its devoted readership the frontiers still existing for social pioneering. It is fitting that the home of this editorial pioneering should be Milwaukee, which possesses the largest aerie in the world and which has as its headquarters a magnificent building with wonderful facilities.

I have in my hand a copy of the January 1950 issue of Eagle. On its very last page is a brief statement of belief and policy excerpted from the official committee reports and resolutions adopted at recent Grand Aerie conventions. These excerpts indicate that the great pioneering crusade which led to workmen's compensation, widows' pensions, old-age security, and other safeguards, particularly for the low-income American wage-earner, continues. While there might be differences of opinion in some quarters on some of the elements of the Eagle program, there has never been, and undoubtedly never will be, any difference of opinion on the patriotic zeal, the humanitarian sympathy, the stirring enterprise of the FOE.

We are proud of the Aeries of Wisconsin and of their members, and I ask unanimous consent now that the excerpts of their position, as stated in resolutions and reports, be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

IN THIS WE BELIEVE

We believe in the democratic way of life, where all can live and work and worship in freedom and security as befits the God-given dignity of man; that we best protect that way of life by positively presenting its advantages and by buttressing the home and family as the bulwark of society against destructive forces.

We believe that there is no substitute for the protective guidance and influence of true, religious homes; that handicaps faced by parents and children in large- and low-income families should be lessened; that the challenging task of guiding boys and girls toward good citizenship is everybody's job.

We believe that full employment, with jobs for all who are willing and able to work, should be the goal of industry, labor, agriculture, and Government; that the annual wage is a practical and attainable economic objective; that out of a just division of the profits of industry will come a new recognition of the role that management and labor must play in our society.

We believe that social security must be extended to include all employed workers not now protected by an adequate retirement system; that all self-employed persons should have the opportunity to participate on a voluntary basis; that social-security benefits must be adequate to provide a decent standard of living, adjusted to meet violent fluctuations in living costs.

We believe that handicapped persons are a good labor investment; that disabled war veterans are entitled to assistance and employment; that victims of industrial accidents should be given training and guidance to help them help themselves.

We believe that the threat of decreased income and increased expenses during periods of ill health should be met by disability benefits similar to those provided for workers during time of unemployment; that wage earners be reimbursed for major medical, surgical, and hospital expenses on a schedule basis for the family unit; that the relationship of doctor and patient should be untouched, and no new relationship of Government and medical practitioner created.

We believe that people-to-people understanding must be the basis for national progress and international cooperation; that our military defenses must be adequate to back up our foreign policy and safeguard our national security; that citizen interest in world affairs and support for the principles of liberty, truth, justice, and equality must be the foundation for enduring peace.

We believe in democracy as a way of life, where rights and responsibility walk hand in hand, where the least well off among us shall find some measure of opportunity and security; where men are free to live as friends and neighbors and to work as partners for the common good.

Unfair Legislation

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I

include the following editorial entitled "Unfair Legislation" from the Shreveport Times of March 15, 1950:

UNFAIR LEGISLATION

In an effort to offset Post Office Department deficits created annually in large part through creaky, tangled, political and outmoded operational structure dating back to the ox team days, the House of Representatives has passed a bill including hikes in the postage rates for large newspapers and most nationally circulated magazines.

The bill now is pending in the Senate where it seems to be the intent to bring it to floor consideration without further committee hearings on the ground that the Senate, after committee hearings, previously passed a postal rate increase bill and that committee hearings would be mere repetition.

That is incorrect. Committee hearings certainly should be held on this measure, which is quite different in several major factors from the original Senate bill. The House bill is filled with discrimination in its provisions on second class postal rates for newspapers and magazines. The ultimate effect of this discrimination will be to increase the cost of circulation of large daily papers and most national magazines in rural areas. Thus the cost of distributing large newspapers with full coverage of news, entertainment, educational and/or other features to rural residents will be hiked by a special postal assessment from which smaller publications, lacking both the quantity and the quality of the larger publications, will be exempted. In addition to exemptions on smaller weekly and daily publications, the bill would exempt farm publications and also publications with a small proportion of advertising no matter how big they might be.

Here are examples of the thoroughly unfair and needless discrimination in the House postal-rate bill as it affects second-class rates on publications:

A weekly newspaper of 5,000 or less circulation is exempt from the rate increases but a weekly of 5,100 circulation must accept the hikes, while the very prosperous Country Gentleman and the Farm Journal, each with more than 1,000,000 circulation, also are exempt. So is the great Reader's Digest, with its tremendous circulation—because less than 5 percent of its content is advertising.

The effect of these exemptions is to exclude from postal-rate increases 975 of the Nation's 1,776 dailies, and 8,000 of the Nation's 8,700 weeklies.

In other words, the whole thing is comparable to selling cosmetics at one price for blondes and another for brunettes.

The larger publications of the Nation are not objecting to an increase in postal rates. But, they do believe that any rate increase should be equitable all along the line and not set up in a manner to provide what amounts to a tax-paid subsidy for one group and special assessments for others.

Under the present system, the larger daily newspapers do most of the work involved in distributing their issues by mail. In most instances, they deliver the publications, at their own expense, to rural post offices in their circulatory territory and the post office has only the job of redelivery along established rural routes. The cost of transportation from city to city and of sorting at both ends of the journey does not fall under the Post Office Department, as with most other mail, but is carried by the publisher.

The remedy for Post Office Department deficits does not rest with discriminatory postal-rate assessment of one group while granting special favors to another group.

It rests, according to the Hoover Commission task-force reports, in complete rejuvenation and regeneration of operation of the Department, which now has virtually the same operational structure that was established in 1836—nearly 115 years ago.

According to the Hoover Commission task-force reports, the Post Office Department has had no basic organizational change in that time, although just about every other organizational form in either Government or private business has changed completely. The reports state that 80 percent of the mail-sorting operations could be performed more quickly with the help of mechanical devices—that it costs the Department (meaning us the taxpayers) 2½ cents for every post card delivered—that 1,000,600,000 pieces of mail are carried free each year (including political documents for Congressmen now planning discriminatory rates on publications)—that the Post Office Department is so loosely organized that it takes 58 separate congressional appropriations each year to operate it, ranging from $500 to $500,000,000 each—that the Department actually subsidizes certain types of mail for far more than its books show and that no one actually knows how much tax money is paid out in subsidies to air lines, steamship lines, and other carriers.

None of these things are attributed to operational personnel of the Department—from Postmaster General Donaldson on down. Their causes lie in the weak and toppling organizational structure. It is there that Congress—and Congress alone—can act. It is there it should act—not in setting up special penalties for one group of users of postal facilities and special favors for other groups. Under the House bill—as usual—the poor farmer will get it in the neck through higher rural mail increases or complete discontinuance of delivery by publications. En passant, who is going to pay for the recent coal miner increases? The mine companies or the consuming public? You guess.

Address by Thomas R. Callahan, Member of Speakers' Bureau, Archdiocesan Union of Holy Name Societies

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very enlightening address delivered by Thomas R. Callahan, of Somerville, Mass., member of the speakers' bureau of the Archdiocesan Union of Holy Name Societies, to the members of the Holy Name Society of St. Pius' Roman Catholic Church, Lynn, Mass., on Sunday, March 12, 1950:

Why are we here?

Why is it necessary for you and me to discuss the question of separation of church and state?

Why are we, as a group of Catholic laymen, discussing a controversial issue which directly concerns the Catholic Church?

The answer to these questions lies in the circumstance that the issue has been publicly raised by Protestant laymen, and it should be publicly answered by Catholic laymen.

You and I know, as Catholics, that many questions concerning the relationship of our church to our Government are propounded to us in our daily association with those who are not members of our faith. We know too, that while some of these questions are asked in a spirit of honest inquiry, many times they are prompted by motives far less worthy.

We know also that some of the people who ask those questions have no direct contact with Catholic priests, and that many of them do not want such contact. Can you conceive of a more dangerous weapon, to be placed in the hands of those who are antagonistic to the Catholic Church, than the admission that, as individual Catholics, we are unable, without first obtaining the advice of a priest, to answer a simple question concerning the relationship between the Catholic Church, as such, and that organization of our fellow citizens which we know as our Government?

A current book, which is critical of the Catholic Church, is receiving considerable notoriety. This book, which I will not further advertise by announcing its title, was the subject of a recent debate between a Catholic priest and the author of the book, which unfortunately, is now going into its twelfth printing. In this book we find this statement:

"Every Catholic is forbidden, in general, to explain or defend the truths of his faith publicly."

That was the man whom a consecrated Catholic priest was obliged to answer in a public forum while you and I and other indolent Catholics sat comfortably in our homes watching the wrestling matches on the television. If you shall say to me that the priest did not have to debate with the author, then I shall ask you are we, as intelligent Catholic laymen, going to permit these published attacks on our holy church, to remain unchallenged while there is now pending in the Legislature of this Commonwealth, and in our national Congress, legislation the consideration, and the disposition, of which cannot help but be affected by such distorted concepts of the responsibilities of Catholic laymen in our State and national Government.

We are assembled here with the consent and approbation of the brilliant and militant archbishop of this diocese because one of the constitutional precepts of the founders of this country, which was originally intended as a shield for the protection of all religions, is now, through the forces of bigotry and political expediency, being converted into a sword, which is aimed directly at the heart of the Catholic Church.

Reference to our history books will show that one of the results of the Revolutionary War was a wave of bitter resentment against the Church of England, the Episcopal Church, the official church of our enemy during the war.

A member of that church, James Madison by name, in order to defeat the possibility of that church, or any other one religious denomination, being recognized and maintained as the official church of this country, presented to a constitutional convention, the first amendment to the Constitution of the United States; the first amendment provides, and I quote:

"Congress shall make no law respecting the establishment of religion, or prohibiting the free exercise thereof."

There, my friends, is the only time the word "religion" appears in the Constitution of the United States. Let me repeat that for emphasis, there is the only time the word "religion" appears in the Constitution of the United States.

The fourteenth amendment which had for its purpose the extension to the several States of the provisions of the first amendment which applied only to the Federal Government, reads in its pertinent part as follows, and I quote:

UNIVERSITY OF MICHIGAN LIBRARIES

"No State shall make or enforce any law which shall abridge the privileges or the immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws."

There you have before you the two constitutional provisions which we so often hear cited as the enunciation of the doctrine of the separation of the church and state.

Can anyone show you where, in those quotations from the Constitution of these United States, it says that a child going to attend a parochial school may not ride in a school bus going in the same direction and carrying children who attend a public school? Can anyone show you in those portions of our National Constitution any prohibition that a parochial school which relieves the State of the tremendous financial burden of providing education for children shall have no right to look to that State, or to the Federal Government, for financial assistance in its efforts to discharge what is legally the obligation of each of the States and of the Federal Government?

In order that we may know that we have grave reason to be concerned and that we are not just crying "wolf" because of imaginary dangers, let me read to you please, from the Boston Pilot, issue of February 12, 1950:

"MASSACHUSETTS COMMISSION UPHOLDS LEGALITY OF BUS PETITION

"Legality of an initiative petition aimed at repealing a State law which allows parochial and private school pupils to ride on State-financed busses was upheld here by the Massachusetts State ballot law commission.

"In rejecting a protest by Chairman John C. Carr of the State Democratic committee, the commission held unanimously that at least the required 20,000 of 21,183 signatures on the petition were valid.

"Carr said an appeal to the State supreme judicial court against the commission ruling would be considered. Unless the court reverses the decision, Massachusetts voters will find the issue on the ballot in the November elections."

And on the reverse side of that news item we find the following item with a Washington date line, reading as follows:

"'NOT ONE PENNY' FOR CHURCH SCHOOLS, SAYS NEW BARDEN PROPOSAL

"WASHINGTON, February 9.—Representative GRAHAM A. BARDEN, of North Carolina, took the occasion of the annual meeting here of Protestants and other Americans united for separation of church and state to unveil partly the 1950 model of his Federal aid-to-education bill. * * *

"But Representative BARDEN, whose 1949 measure aroused Nation-wide protest from Catholics, also avowed that 'not one penny' of Federal funds would go to parochial and other private school pupils under the provisions of his bill."

And in the Boston Globe issue of February 14, 1950 we find the following:

"In a tense atmosphere that flared with denunciation at times, some Protestant spokesmen yesterday demanded the legislature permit voters to decide whether parochial school pupils should continue to ride on publicly supported busses.

"Catholic doctrines and tactics of * * * leaders in seeking to invalidate the proposed referendum both came under fire during an all-day hearing on the issue at the State house. * * *

"A committee member, Representative Maurice A. Donahue, Democrat, of Holyoke, demanded that one speaker declare whether he was implying that parochial schools were 'un-American' when the individual referred to the Catholic Church's doctrines as 'authoritarian.'

"I say that what they teach is un-American replied the speaker, Carl Haartz, of Andover."

Before we go any further, let us see just how un-American the instruction that parochial school children receive really is.

(Mentions local boys from St. Pius.)

Would Mr. Haartz and his playmates care to challenge the Americanism of those boys.

Let us look a little closer at the un-American activities of boys who attended parochial schools in the city of Lynn.

The honor roll of St. Mary's boys high school, Lynn, Mass., shows:

John Perkins, class of 1935, killed in action.

Myles Hannify, class of 1938, killed in action.

Hugh Noonan, class of 1938, killed in action.

Ralph Cormier, class of 1939, killed in action.

Joseph Flynn, class of 1939, killed in action.

Robert Riley, class of 1940, killed in action.

In the class of 1935 there were 38 graduates, 26 went into service.

In the class of 1936 there were 40 graduates, 22 went into service.

In the class of 1937 there were 38 graduates, 19 went into service.

In the class of 1938 there were 41 graduates, 3C went into service.

In the class of 1939 there were 46 graduates, 32 went into service.

At this point we have 203 parochial school graduates of which number, 135, or 66.5 percent, went to the defense of our Nation.

Let us continue this analysis of the un-Americanism taught in parochial schools:

In the class of 1940 there were 48 graduates, 36 went into service.

In the class of 1941 there were 62 graduates, 48 went into service.

In the class of 1942 there were 68 graduates, 56 went into service.

In the class of 1943 there were 87 graduates, 57 went into service.

In the class of 1944 there were 82 graduates, 61 went into service.

At this point we have 347 more graduates of parochial schools of which number 258, or 74.3 percent, went to the defense of our Nation.

Hurling facts such as these back into the teeth of those who calumniate our parochial school system is not a job for the priest alone. It is your job and the job of every intelligent Catholic layman.

In the Boston Post issue of January 31, 1950, we find the following:

"Attorney Thomas W. Vinson, of Winchester, a former Republican Member of the House and a supporter of the Batcheller petition which would bar parochial school children from riding free on school busses. * * * said: 'The issue * * * is whether public money shall be used for the benefit of private institutions. It is going further than anybody ever dreamed of. It opens the door not only to free transportation, but to supplying rubbers to youngsters so they won't get their feet wet, free textbooks, lunches, and for everything else parochial-school officials want the public to pay for.'"

So the boys want to play on a dollars-and-cents basis. O. K. Let's play it their way:

Suppose tomorrow morning Father O'Kane should say to Sister Mercita, "Take the 295 pupils from our parochial school down to the school committee for the city of Lynn and tell them that I have found another use for the school building and that, since the parents of all of these children are paying taxes in the city of Lynn, it is up to the school committee to arrange for their education in the Lynn public schools, as they are legally bound to do." Then the pastor of St. Jean Baptiste should send down to the school committee the 362 pupils of his elementary school and the 157 pupils in his high school and the pastor of St. Joseph's should send down his 773 pupils in his elementary school, and the pastor of St. Mary's should send down the 1,000 pupils in his high school and the 996 pupils in his elementary school, and the pastor of St. Michael's should send down his 328 pupils and the pastor of the Sacred Heart Parish should send down his 400 pupils. Add up the cost of educating these 4,563 children in the public schools, Mr. Vinson, and see how many pairs of rubbers that sum will buy.

In the year 1949 it cost the cities and towns of Massachusetts for public schools $113,300,662, toward this sum the State paid to the cities and towns, in reimbursement, $17,293,603.59, of which the sum of $1,485,070.86 represented reimbursement for bus transportation provided school children. That same bus transportation on which it now appears likely you will be called upon to vote in the next general election in this State.

In the Commonwealth of Massachusetts the number of children attending parochial schools during the year 1948 was 162,741. The Massachusetts Department of Education has set the cost of educating a child in the public schools as $191.46 per pupil. That is what the State is willing to pay for a State ward.

Multiplying the number of pupils attending parochial schools by the per capita figure provided by the State we find that in this Commonwealth alone during 1 year there was saved to the taxpayers through the maintenance of parochial schools the sum of $33,069,162.66. I wish you would try to keep that figure in mind when someone asks you how or why they should vote on the bus referendum which, so far as we know now, will appear on the ballot at the next State election.

Remember that figure, $33,069,162.66.

And now let us bring that figuring a little closer to home: I am informed that the estimated annual cost of educating a child in the public schools of the city of Lynn is as follows: Elementary $178 and high school $312.

In this parish 295 pupils attend St. Pius' Elementary School. If we multiply the number of those pupils by the per capita figure of $178. We arrive at a figure of $52,510.

If we engage in the same multiplication with regard to the 3,409 pupils enrolled in the seven elementary parochial schools in Lynn and the 1,153 pupils enrolled in the parochial high schools in this city, the mathematical result will be elementary schools $606,802 and high schools $359,736.

These two figures combined will show that the Catholic Church in this city is saving the city of Lynn, and in turn the taxpayers of the State of Massachusetts, the sum of $1,019,983 every year by maintaining parochial schools at the personal expense of the members of the several parishes.

It has been suggested to me that my figures may be inflated. In a spirit of fairness let us consider their argument in that regard: In general it goes substantially like this:

In Lynn we have some classrooms which could take care of additional pupils and in other instances we have empty classrooms and all that is necessary is a teacher. The increase in numbers of students in a school does not necessarily increase the cost to the city by $178 because there may be vacant seats in certain rooms to which these additions may be assigned.

In other words, the cost per pupil does not increase by $178 unless there is no vacancy in any room assigned to a certain grade. If, however, a new room has to be newly opened, then $178 may be the proper

cost, but as soon as it is 50-percent filled this cost does not increase because any additional pupil uses the same teacher, room and supplies.

Conceding for purposes of this discussion, that there may be some merit in this argument, would it stand up if tomorrow morning the city of Lynn was required to provide school buildings, teachers and equipment for the 4,563 pupils now attending parochial schools in this city?

On a national scale the sum so saved by the maintenance of parochial schools is in excess of $200,000,000,000 and the capital outlay for buildings and equipment is in excess of $100,000,000,000.

The Catholic Church has at no time in the past, and does not now, insist that parochial schools be supported by the Federal Government. The Catholic parents in this country stand willing, as always, to contribute by the payment of taxes, to the support and maintenance of public schools, while at the same time they are paying additional money out of their own pockets, in order that they may continue to exercise their God-given privilege, their constitutional prerogative, and their inalienable legal right, to send their children to a school of their own choosing.

The Federal aid which it is expected shall be extended by our Federal Government to all school chilren of America may be set out in a few simple sentences:

First. Bus transportation to and from whatever school they may be attending.

Second. Periodic medical examinations.

Third. Text books.

The Barden bill as originally presented to the Congress contemplated that $300,000,000 should be paid to the several States for Federal aid to education.

As we have seen from recent newspaper items, opponents of the Barden bill insist that it should contain a proviso that not one dollar should be spent for bus transportation, medical examinations, or textbooks for those children who are attending parochial schools, because such a payment, so they say, would be an indirect contribution to the support and maintenance of the Catholic Church, as such, and would therefore be in violation of the first amendment to the Constitution of the United States.

We are told that a child who attends a parochial school may not ride in a school bus because, under Federal aid, the bus would be maintained in part by Federal funds, and that if such bus should bring a child to a parochial school the Federal Government would thereby be helping the Catholic Church, which action, so they say, would be unconstitutional and in violation of the so-called principle of separation of church and state.

If that same child walks to a parochial school he must use the sidewalk. Is there, in any city or town of any State in these United States, a sidewalk on any one of the principal streets of any community which has not been paid for in whole or in part by Federal funds made available under the ERA or the WPA programs? Have you ever seen a policeman order a parochial-school child to get off a sidewalk?

In the decision by the Supreme Court of the United States in the *Everson case* (67 Sup. Ct. 604, Feb. 15, 1947) Mr. Justice Jackson admitted that if a parochial school should catch fire, a fireman, paid from public funds, could save those children from the burning building which is, admittedly, owned and maintained by, and for, the Catholic Church. Common sense will tell us that the fireman, under those circumstances, would not be helping the Catholic Church, as such. He would be performing a humane act, in the interest of the public welfare, for the common good of all school children, and that is precisely what the proponents of Federal aid to parochial-school children are asking the Federal Government to do. That is, to make available to all school children, public and parochial, whatever money is appropriated as Federal aid for the health and welfare of all of the school children of America.

There is abundant proof that those who would deprive a school child of such aid, simply because the child attends a parochial school, do not want to approach this question in a sane, logical, sympathetic manner.

If they would stop imitating the ostrich and would withdraw their eyes, and their minds, from beneath the sands of bigotry and prejudice, they would see that the Federal Government, on many occasions, has actually paid money to Catholic schools and colleges.

Ever since the inception of our Government, and more particularly during time of war, the Federal Government has provided chaplains to care for the spiritual needs of the men in the Army and Navy. The Government has not only provided these chaplains with food, lodging, and transportation, but in addition they have paid each one of them a salary as a commissioned officer in the armed forces. Do you doubt, for one moment, that those people who now so vigorously challenge the proposed Federal aid to little school children are not fully aware that the money so paid to Catholic chaplains found its way into the treasury of the Catholic Church, and that they also know, in the case of those priests who are members of religious orders, and who have taken a vow of poverty, that the entire sum so paid, after deducting their ordinary personal expenses, was turned over, by them, to the head of their particular religious order.

Have you ever heard anyone challenge the constitutionality of a chaplain in the armed forces?

When, in 1935, there was widespread unemployment and restlessness and our Nation found itself with 3,000,000 young people between the ages of 16 and 25 on the relief rolls, did not the Federal Government pay to more than 600,000 of those young people, enroll yourself in the National Youth Administration, go to any school you choose, obtain part-time employment in that school, and we will pay your tuition whether the school you may select is Protestant, or Catholic, or nonsectarian.

Have you ever heard anyone challenge the constitutionality of the National Youth Administration?

And now let us see if we can make the comparison a little more direct. The Federal Legislative Reorganization Act of 1946 provided in section 243–a that the Secretary of the Senate and the Clerk of the House of Representatives should arrange with the board of education in the District of Columbia for the education of the young boys who act as pages, messengers, in both of the Houses of Congress. Let me read, please, and I quote:

"Notwithstanding the provisions of subsections (a) and (b) said page or pages may elect to attend a private or parochial school of their own choice: *Provided, however,* That such private or parochial school shall be reimburned by the Senate and the House of Representatives only in the same amount as would be paid if the page or pages were attending a public school under the provisions of paragraphs (a) and (b) of this section."

Can anyone show you a more direct contribution to the support and maintenance of a parochial school? No one has ever questioned the constitutionality of the Federal Legislative Reorganization Act.

And today tens of thousands of veterans of World War II are being educated at the expense of the Federal Government under the so-called GI bill of rights, in schools of their very own choosing, Protestant and Catholic, including those conducted by Catholic religious teaching orders. Have you ever heard of anyone challenging the constitutionality of the GI bill?

Perhaps some of our Protestant brethren are not wholly convinced of the adequacy of the education which is made available in parochial schools. Let me submit to you, please, the opinions of a leading American figure concerning the relative merits of the public schools, and also the inherent character of parochial schools:

In a message to the National Conference of Church-Related Colleges, an interdenominational association, the then President Franklin Delano Roosevelt had this to say, and I quote:

"If the Catholic schools prepare youth for better citizenship; if our country will be immensely benefited by a character formation built on the eternal principles of religion and morality, then they are rendering a public service, and since these schools are not operated for profit, they are in reality public schools."

My friends, I believe, as you do, that Christ told Peter that He had founded his church upon a rock, and that the gates of hell should not prevail against it.

I also believe, as you do, that the juggernaut of religious prejudice has been grinding against that rock for more than 1,500 years.

I also know, as you do, that the process of the friction of the metal of prejudice against the rock of eternal truth causes the sparks of controversy to shoot forth. In today's discussion I have attempted to capture one of those sparks. Through intelligent discussion that spark of prejudice can be converted into a flame with which we can bring the light of our own faith to those who are still lost in the darkness of misunderstanding and intolerance, until ultimately there will shine forth the eternal truth of God's justice and of his plans for the welfare of all mankind.

If each one of you will try, as I have tried, by reading Catholic books and magazines, to equip yourself for the battle that lies ahead, the battle against bigotry and misunderstanding, we will then be able to answer questions concerning the manner in which, and the purpose for which, we devote our efforts to the betterment of our Nation and the glory of our God. If each one of us will make a sincere effort to do this, then we will indeed be paying homage to Him in whose holy name we have banded ourselves together.

Unification, Not Duplication

EXTENSION OF REMARKS

OF

HON. EDWARD T. MILLER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. MILLER of Maryland. Mr. Speaker, there seems to be a misconception in some quarters with respect to the role assigned to the Coast Guard in time of war.

One of the most important missions of the Coast Guard, under present plans, has to do with harbor protection, and is in no sense a duplication of any job given to the Navy. It would indeed be unfortunate were this mistaken idea to result in curtailing appropriations for the program for training Coast Guard Reserves. In the hurried expansion that would be incident to any real emergency the Coast Guard would have immediate

UNIVERSITY OF MICHIGAN LIBRARIES

need of trained Reserves, just as would the other armed services.

Mr. Speaker, I include herewith part of an illuminating article on this subject by John G. Norris that appeared in today's Washington Post:

Several military experts recently have warned against the danger of a Communist tramp slipping atomic bombs into United States harbors, or of subversive forces destroying ships and piers by setting fires or other sabotage activity.

The Government agency charged with port security is the Coast Guard—a Treasury Department force which becomes part of the Navy in wartime. But active Coast Guard personnel and boats assigned to such work are barely adequate for normal peacetime harbor control.

To answer emergency needs and give some protection against the tramp steamer-sabotage threat, the Nation's war plans rely on having a trained Coast Guard Reserve ready. But though Federal law provides for such a Reserve, and some 4,000 officers and 500 enlisted men are on the rolls, the force has never received any funds for training.

The President's budget calls for spending $4,100,000 for initiating a Coast Guard Reserve training program. Training of 1,900 officers and 6,000 men is planned, the bulk of whom would be assigned to port security duty. Ultimately an Organized Reserve of 2,469 officers and 26,645 men is desired.

Despite strong support of the proposal from the Department of Defense, however, the money was knocked out by the House Appropriations Committee. The movement to restore the funds will be backed by some members of the group, as well as members of the House Armed Services Committee.

"The proposed reactivation of the Coast Guard Reserves is a matter of strong concern to the Department of Defense," states Secretary Louis Johnson.

"It is vital to national defense that a modest but highly trained force be in being to detect sabotage, supervise explosives loading, prevent water-front fires and explosions, control the identity of water-front personnel, etc."

Admiral Forrest P. Sherman, Chief of Naval Operations, in a recent letter to Senator HARRY P. CAIN, Republican, of Washington, emphasized that the Coast Guard Reserve training program did not duplicate training now being given to the Naval Reserve.

While the Navy and its Reserve have a harbor-defense function, as reported in the Washington Post yesterday, under a division of effort the Navy handles antisubmarine nets, electronic devices, etc., to prevent enemy craft from sneaking into harbors, and the Coast Guard the job of protection against subversive activity of ships and persons lawfully permitted to enter.

Another Industry Protests

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which I made on March 27, 1950, and an editorial from the Bridgeport Telegram of Bridgeport, Conn., dated March 27, 1950:

STATEMENT OF THE HONORABLE JOHN DAVIS LODGE, MEMBER OF CONGRESS, FOURTH DISTRICT, FAIRFIELD COUNTY, CONN., ON MARCH 27, 1950, WITH RESPECT TO THE IMPORTATION OF HATS AND HAT BODIES FROM ABROAD

Once again the policies of the Democrat administration are resulting in dire economic distress in New England.

A short time ago, the administration sponsored the move of the Chance Vought Aircraft plant at Stratford to Dallas, Tex. This has resulted in widespread unemployment and displacement of Connecticut workers.

Now, the welfare of our hat makers in Danbury and in Norwalk is being seriously threatened by the import of hats and hat bodies from abroad.

This matter demands immediate attention on the part of responsible officials in the Department of State. The Committee for Reciprocity Information, as well as the Tariff Commission, should take action without delay.

It is impossible for American industry and labor to compete in a market flooded with goods manufactured in iron curtain countries with slave labor. Moreover it is not in our national interest.

The situation facing our domestic hat industry is cause for grave alarm. In the light of these conditions it is particularly to be regretted that the Eighty-first Congress eliminated the peril-point clause in the Reciprocal Trade Agreements Act.

There is no excuse for prejudicing American industry and the working men and women of our country in order to provide dollars for iron-curtain countries. We cannot base a successful foreign policy upon any proposition which calls for helping our self-styled enemies in the great east-west conflict in which we are involved. Surely there is no obligation to provide dollars to those who are seeking to destroy us. This is a self-defeating policy which we can ill afford.

If we are to continue aid to Europe, a strong and healthy American economy is an essential pillar not only of our national security but of world peace.

An immediate solution is necessary if Connecticut workers are to be protected and employment opportunities continued.

I shall continue my efforts to expedite action on this matter. I shall insist that appropriate officials of the Department of State and of the Tariff Commission take the steps which are necessary to protect our own citizens from such cut-throat competition.

[From the Bridgeport Telegram March 27, 1950]

ANOTHER INDUSTRY PROTESTS

The domestic hat industry, following a tremendous increase in importations from the Communist satellite, Czechoslovakia, has entered a vigorous protest with the Government against the effects of reciprocal-trade agreements. The Federal Tariff Commission has promised an inquiry into the situation, although some Government spokesmen have been credited with giving the absurd advice that Norwalk and Danbury hatters "should learn another trade."

The hat industry is not the only industry affected by imports from the iron-curtain country. The New England Shoe and Leather Association has asked the Treasury Department to investigate the importation of cheap shoes from Czechoslovakia, estimating that a million pairs may be imported this year, to the detriment of American manufacturers and workers.

In January alone, 58,000 pairs of women's shoes, equal to more than half the importations of 1949, came into the United States. The lowest price of a Czech shoe, compared with similar American-made footwear, the Treasury has been informed, is a sandal priced at $1.20, to retail at $1.95 to $2 a pair. The comparable American-made shoe would sell at $4 the pair.

It is obvious that United States manufacturers and shoe workers cannot compete with such products. It is equally obvious that something must be done to remedy a situation which is so detrimental to American industry. It will not solve any part of the problem either, if administration officials tell the shoe workers to go and learn another trade. New England shoe workers, like the hatters in Danbury and Norwalk, have been employed in their industries too long to start looking for different occupations.

Shirt makers are also beginning to worry about imports. They say they are not yet alarmed, but they don't like the prospects. While only 1,000 dozen Japanese shirts have come in, which can be sold for between 88 and 98 cents apiece, United States manufacturers fear the effects of a deluge of such cheaply made products in the domestic market.

The situation is serious and cannot be brushed off by Washington officialdom. "Go learn a new trade" is by no means the answer to the import problem.

Extension of Borrowing Power of Commodity Credit Corporation

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. HESELTON. Mr. Speaker, I am very glad to have the opportunity of inserting an excellent editorial from the Olean (N. Y.) Times-Herald of March 24, referring to the unanswerable arguments made by our colleague, the Honorable KENNETH B. KEATING, on the floor of the House during the consideration of the extension of borrowing power by the Commodity Credit Corporation. This editorial emphasizes the indefensible situation in which the House found itself when it approved a conference report containing provisions identical with the measures introduced by Mr. KEATING, Mr. CORBETT, Mr. HUGH D. SCOTT, JR., and myself, and then reversed its position within a few short hours upon the specious and untenable argument that these bills were loosely drawn and badly worded. Coming, as it did, from the gentleman whose committee had framed the conference report and who had supported vigorously the identical language taken from section 416 of the Agriculture Act of 1949, it had a most hollow ring. It is regrettable indeed that so many of our colleagues seem to have forgotten the action they took earlier that afternoon and permitted themselves to be maneuvered into this illogical position.

Our colleague from New York has been consistently urging prompt remedial action and I am sure that his logical and common sense arguments will eventually prevail in this body. It is gratifying indeed that a newspaper in New York should clearly recognize the mess in which we find ourselves and come to the support of a solution which cannot be ignored indefinitely. The appalling waste, not only of the taxpayers' hard-earned money, but of wholesome food,

will sooner or later become apparent to the people of America. This is particularly so since many more newspapers have analyzed this situation and have written strong editorials demanding action. There have been a series of striking cartoons published throughout the country which should have excellent effect. I only hope that more and more newspapers will lend their support to a solution of this matter and will join in creating an overwhelming public demand for action. I suggest that if the readers of these newspapers would take it upon themselves to send messages to the President at Key West, insisting upon his action under existing law, he could not continue to ignore the situation or resist the overwhelming public demand for action.

The editorial follows:

STILL ANOTHER PHASE

We'd hate to spoil your evening completely; but while we are on the subect of surplus farm crops you might just as well absorb another phase of the matter, which was described in detail to the House Agriculture Committee this week by Representative KENNETH B. KEATING, of Rochester, N. Y.

We all recognize, of course, that the surplus foods bought by the Government have cost not only millions but billions of the public's money, and have also had the effect of compelling the public to pay more for their eats than otherwise would have been the case.

What most of us may have never even thought of, but on which Representative KEATING dwelt most effectively, is the fact that the carrying charges on these surplus foods purchased by the Government, and which are now in storage, are costing the American taxpayers $400 each minute of every 24 hours.

"These charges," the Rochester legislator declared to his colleagues, "include storage, insurance, transportation, and handling, and they constitute a staggering percentage of our present outlay for supporting agricultural prices.

"They amount to $105,000,000 for just the first 6 months of this fiscal year—the period from July 1 last to December 31, 1949.

"That means $25,000 an hour, or $400 a minute; and I understand that these carrying charges are running at an even higher rate now."

Representative KEATING happened to be speaking in support of identical bills introduced by himself and Representatives JOHN W. HESELTON, of Massachusetts, and ROBERT J. CORBETT and HUGH D. SCOTT, JR., both of Pennsylvania.

These measures would authorize the Government to pay transportation costs for all surplus foods delivered to welfare agencies.

Mr. KEATING pointed out that the conference report on cotton-peanut acreage included a provision authorizing such payments on surplus potatoes. The new package appropriations bill, he added, also authorizes transportation to public agencies.

And he contended that the provision should be extended to apply to private and international agencies and to nonprofit hospitals.

We cordially agree with him.

Every effort should be made to unload these surplus foods to the best possible advantage, and thus save storage charges on the one hand or dumping on the other.

In the meantime, it won't do any of us any harm to realize just how costly this whole, inefficient set-up is—and why it is that Federal taxation, direct and hidden, is so high and so burdensome to the rank and file of American citizens.

Socialized Medicine: What It Means

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Tuesday, March 28 (legislative day of Wednesday, March 8), 1950

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I have prepared for broadcast on the subject Socialized Medicine—What It Means.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SOCIALIZED MEDICINE—WHAT IT MEANS

SOCIALIZED MEDICINE FOR YOU

Socialized medicine may be a term of uncertain meaning to some of my Idaho constituents. Briefly, under socialized medicine, doctors, dentists, nurses, and hospitals would be employed or managed by the Government. You, as a citizen, would obtain all of your medical and dental service from the Government and you would pay for that service in some way whether you need it or not. Right now you select your own doctor or hospital and you pay for services rendered.

That complete choice of doctors would not continue under socialized medicine. Every citizen or patient would tend to lose his identity and become a number. The doctor would work more for the Government and less for the patient. Red tape and delays would increase. Doctors would tend to lose that personal interest in patients. They would work by the hour instead of for the patient, and, under socialized medicine, the incentive for research and improved medical service would greatly diminish. The Fair Dealers advocate socialized medicine mainly as a means of providing them more control over the people. They are concerned only with obtaining control of the people by means of socialized medicine, and, to me, such deceit and intent are not a new deal or a fair deal, but a raw deal.

But let us look into the history of socialized medicine. Where did the idea come from and why is it advocated at all? Why is the present administration of your Government so anxious to thrust socialized medicine upon the American people? I shall give you some information about this problem and let you decide for yourself whether or not you want socialized medicine in Idaho.

WHERE IT CAME FROM

Following the Russian Revolution of 1917, Lenin, the father and founder of modern communism, set up in Russia a welfare scheme to which he gave the name socialized medicine. He considered this program of such great importance that he called it the keystone of the Socialist state.

Perhaps it may be somewhat confusing to find that the father of communism claimed his political schemes were socialistic, but communism and socialism have always had similar aims and purposes. The Socialists and the Communists both want government ownership and complete control of all means of production, distribution, and communication. The Socialists seek to gain these ends by a so-called process of nationalization based on elections and ballots, while the Communists take the more direct method of bullets and bayonets in order to carry out the communization of any country. In either system the citizen ends up as the property and the slave of the state.

Both Socialists and Communists conceal their real purposes by talking in terms of "public welfare," "planned economy," and "social security." These words do not have the unpleasant meanings that are attached to socialism and communism. But no one need be deceived about any scheme which looks to Federal ownership or Federal control of the resources, industries, farms, homes, and lives of the people in any State of our Union. Such a scheme inevitably involves either socialism or communism.

Having in mind the common aims and purposes of these two political systems, you can see why Lenin considered himself a Socialist, why he named his most important scheme socialized medicine, why the Russian Communists call themselves Socialists, and why Russia itself is officially named the "Union of Soviet Socialist Republics."

Returning to the subject of socialized medicine, I want to point out that as long ago as 1930 one of the present Communist leaders, named Dmitri Manuilsky, said to the Communist Congress of Moscow:

"In the United States, for instance, the Communists must launch a powerful movement for social insurance. They must place themselves at the head of this movement and lead it to victory."

HOW IT SPREAD

Since 1930 the red tide of communism has swept over Europe, then into Britain, and finally across the Atlantic to North and South America. Five years ago the Communists allied themselves with British Socialists and Laborites to defeat Winston Churchill and win political control of the United Kingdom. Since then Britain has been ruled by the Communist Socialist-Labor Government of Prime Minister Clement Attlee. Between 1945 and 1950 the British Empire has been liquidated and nearly everything for which millions of Englishmen spent billions of dollars in the last 350 years has been destroyed. The national economy of Great Britain is now dangerously near complete ruin; but what is worse, informed British opinion predicts that the people may accept complete communization, including pure paganism in place of Christianity.

Long ago in one country after another the Communists and their fellow travelers launched a powerful movement for socialized medicine, or compulsory health insurance. In July 1948 the process of socialization by an act to nationalize medicine became effective in Great Britain; and here in America we now have a bill pending in Congress which closely follows the British socialistic pattern. This bill is named for Senator MURRAY, of Montana, and Representative DINGELL, of Michigan, as they are two of its sponsors. So when you hear of the Murray-Dingell bill, you will know that it provides for socialized medicine, or compulsory health insurance.

POWER OVER PEOPLE

There is an old saying that the human hunger for power is like a cannibal whose appetite is never satisfied. It is a sober fact that our bureaucrats in Washington are always reaching for more and more power over the industry, the business, the agriculture, the resources, and the people of the United States. If the Murray-Dingell bill becomes a law, the Federal Security Administration will carry out its provisions, and in so doing this agency of our Federal Government will inevitably exert a large measure of control over your home, your occupation, your life, your living, and the lives of those you love.

The socialized-medicine program will compel practically all salary and wage earners to allow deductions from their pay checks and wages; and employers will also have to contribute their share to the support of another army of Federal workers who will be put on the pay roll. No official figures as to the cost

UNIVERSITY OF MICHIGAN LIBRARIES

of this latest socialistic scheme are available, although unofficial estimates fix the figure at $15,000,000,000 a year. Pay-roll deductions and employer contributions may, possibly, produce about $6,000,000,000 of the required amount; but this leaves an estimated annual deficit of some $9,000,000,000 to be made up by boosting our taxes again. Those who think they are going to get something for nothing in socialized medicine are going to have an expensive experience.

WHAT IT COSTS

The socialized medicine or compulsory health insurance program in Great Britain has cost twice the amount of money estimated for it, and it has been a fraud and a failure. Hundreds of bald-headed men have been able to get wigs for nothing; thousands of old folks have obtained ill-fitting sets of false teeth, as well as spectacles, supposedly free. Then, too, more thousands of people with minor ailments or imaginary ills have been given medical attention and pounds of free pills they probably did not need. But those who have been injured or who have been seriously sick have been unable to obtain prompt or adequate surgical, hospital, and other services.

American reporters who visited Britain and surveyed the situation found that injured and dangerously ill persons, as well as those who needed surgery, have had to wait for weeks, or even as long as 15 months for medical care. British doctors, nurses, and dentists are so overworked that they attempt to serve each office patient in 4 or 5 minutes and each home call in 10. The human body, however, is far too complicated to be repaired by such crude or careless efforts. The tragic increase in British deaths has therefore been the result of neglect, and the inferior medical care given to the sick and suffering.

SOMETHING FOR NOTHING?

Many British doctors, dentists, and specialists refused to join in the socialization of medicine, and some hospitals made the same decision. A like condition will occur here if the Murray-Dingell bill ever becomes law; and if your doctor, dentist, or hospital is one of those who are wise enough to stay out of this program, you will probably not be able to obtain their services under the socialized-medicine scheme. You may still have the free choice of a doctor, dentist, or hospital that the Murray-Dingell bill promises you, but you will pay double for medical, hospital, and dental services, because the regular deductions will continue to be made from your salary or wages, even though you pay your own privately employed doctor, dentist, or hospital. This is just what is being done in England by all who can afford good medical services. The British now know that they cannot obtain high-quality care at bargain-basement prices.

Our leading doctors have warned us, just as the doctors in Britain warned the people there, that schemes of compulsory health insurance, or socialized medicine, will ruin the standards and the quality of medical and dental care. The predictions of the British doctors have already come true; and a like disaster for us can be seen in the similarity of the provisions contained in the British act and our Murray-Dingell bill.

WE HAVE BEST MEDICAL CARE

We now have the best system of medical care in the world. There are some 56,000,000 American citizens who have voluntarily provided themselves with prepaid hospitalization. About 28,000,000 have surgical benefits in advance of any actual need, and 13,000,000 have obtained extra medical care beyond hospitalization and surgery. Group insurance and other plans give health insurance protection to more than 62,000,000 of us and this number is constantly increasing.

In the industrial field medical care is provided for more than 30,000,000 American workers, and this service includes doctors, nurses, and other experts in some 18,000 factories. We have State, county, and city hospitals that are staffed with doctors, nurses, and other personnel. Church and nonprofit hospitals, as well as those operated for profit, must be added to the available hospital facilities. We have more than 170,000 physicians, 45,000 specialists, 93,000 dentists, and 400,000 nurses.

This information does not give a complete picture of our resources and facilities for medical care, but I offer them in response to the propaganda of falsehoods and half-truths with which the Communists, Socialists, radicals, and others have flooded the country.

American medicine is based on freedom and private enterprise, and so possesses all the vigor and vitality that competition, ambition, and human hope give to human affairs. The slavery of socialized medicine has not produced in Russia a system that can compare with ours; but in less than 2 years, socialism has wrecked and ruined the practice of medicine, surgery, and dentistry in Great Britain.

THINK IT OVER

Your future health and freedom, and even your life, will eventually depend upon the quality of medical care available to you. I am most anxious that you decide whether you want a free system of medicine, such as we now have, or socialized medicine with its destroyed freedoms and its medical monopoly in the hands of the Federal bureaucrats.

That is the picture of socialized medicine. But perhaps there is another side to the problem. I have heard much of it. Before New Zealand and Australia threw their socialistic governments overboard, we heard lavish praise of socialized medicine in those countries. But the fact that the citizens of these countries have tried and discarded these schemes should make us think carefully before accepting the socialized-medicine program now being advocated for our Nation. Think it over, my friends. Decide for yourselves what you want. This is the American way, and I am anxious that we continue this American way. It is what has made our Nation great and strong. Let's continue it so.

Should Communists Be Denied Federal Appointments?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 28 (legislative day of Wednesday, March 8), 1950

Mr. MUNDT. Mr. President, at the request of the editor of the Daily Compass, which is published in New York City, I prepared an 800-word statement delineating the true scope and purpose of the subversive activities control bill of 1950, S. 2311, which has been introduced by the Senator from Michigan [Mr. FERGUSON], the Senator from South Carolina [Mr. JOHNSTON], and myself, and which has been approved by the Committee on the Judiciary by a 12-to-1 vote. I ask unanimous consent to have the statement printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHOULD THE MUNDT BILL BECOME LAW?

(By Senator KARL E. MUNDT, sponsor of the subversive activities control bill)

The so-called Mundt bill (S. 2311, subversive activities control bill of 1950) is not the result of any sudden impulse nor is it the product of hasty or careless consideration. It has been slowly but steadily evolving into its present form for approximately 3 years.

As a Member of the House of Representatives, I first introduced a bill about 3 years ago to control subversive activities in this country by processes of registration, identification, and exposure rather than by punitive measures such as outlawing the Communist Party by name or denying it use of the ballot, the mails, and the radio. That legislation was known as the Mundt-Nixon bill; it passed the House by a 319 to 58 roll call vote. Before a subcommittee of the Senate Judiciary Committee could approve it, that session of Congress expired. Now Senators FERGUSON of Michigan and JOHNSTON of South Carolina have joined with me in sponsoring a modified and more clear-cut version of this legislation. This new measure about 2 weeks ago was approved by the Senate Judiciary Committee by the highly significant vote of 12 to 1. Only Senator LANGER, of North Dakota, voted against it.

In their frantic efforts to discredit this Mundt bill and to recruit support against it the spokesmen for the Communist Party in this country have determined upon the strategy of charging everything against it in the desperate hope everybody will believe something and that by one device or another opposition to the bill may be aroused, organized, and be made articulate. The Communists have called it a thought-control bill—an antilabor bill—a bill of attainder and they have hurled equally false and misleading charges against it. They have made full use of the stock Communist formula of trying to smear those who oppose it; they have even called it an antipeace bill but they have stubbornly and sullenly refused to print its full text, to analyze the printed provisions of the bill, or to base their criticisms upon its actual contents.

Such totalitarian tactics may make sense to Communists and some of their willing and witless dupes, but they have little influence in Washington and add even less to the general level of public information. The end result of these Communist-inspired and directed tirades are sometimes ludicrous in the extreme. Last week for example a New York lady wrote me, "I am violently opposed to the Mundt thought-control bill. It is very bad legislation. Please send me a copy of the bill so that I can read what is in it." Naturally such artless and artificial opposition is something less than influential.

Here, in brief, is what the so-called Mundt bill would actually do: In section 4 it would make it unlawful "knowingly to combine, conspire, or agree with any other persons to perform an act which would substantially contribute to the establishment within the United States of a totalitarian dictatorship, the direction and control of which is to be vested in, or exercised by or under the domination or control of any foreign government, foreign organization, or foreign individual."

Only that, and nothing more. Just a clear-cut statement making it illegal to "substantially contribute" to the destruction of our cherished American freedoms here by subjecting the United States to the dictatorship of a foreign ruler. Judging from the manner in which the Communists clamor that "this would outlaw communism," they are suffering from a guilt complex or a bad case of jitters. The words "communism" or "the Communist Party" are not even mentioned

in that prohibitive provision. Apparently the Communists by their frantic cries of alarm now admit what they have long tried to keep secret—that their efforts and their program are determined and dictated by men in Moscow. If that is established in the courts and if the Communist Party does not cut the umbilical cord by which it is force-fed from Russia, the provision will of course apply to it. Otherwise, it will not. However, it would have applied equally to the German-American Bund in 1938 and to the Japanese Black Dragon Society. Informed students of totalitarian movements realize that communism and fascism have much in common; they are in fact the Siamese Twins of human slavery.

Not by the wildest stretch of imagination by an orderly mind could such groups as labor unions, so-called liberal (sic) groups, the Socialist Party of Norman Thomas, or other organizations advocating change by American methods ever be affected by this provision.

Additionally, the Mundt bill makes peacetime espionage a crime; it denies Communists two privileges accorded loyal citizens by barring them from Federal appointive positions and from securing Government passports; it requires the Communists to label and identify their printed propaganda and radio programs, much as the Republican and Democratic Parties must; it requires them to make an annual public financial report; and it makes them identify their false fronts—organizations operated by them but concealing their true identity.

None of these are police-state methods, but all of them are necessary to protect this free Republic against the alien agents who by stealth and conspiratorial tactics would destroy our American freedoms by delivering us to the police-state dictators of Fascist-Communist regimes. In this era of the cold war to do less than this would be a policy of appeasement of treachery which by comparison would make Chamberlain at Munich look like Horatius at the bridge.

Happenings in Washington

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 28 (legislative day of Wednesday, March 8), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the RECORD a radio broadcast by me on March 27, 1950, entitled "Happenings in Washington." I may say it is program No. 21 of a series.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON

(Program No. 21)

This is ED MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of happenings in Washington.

In this broadcast I want to tell you about recent developments in Congress that have a direct bearing on the principles for which I have been fighting since I came to Washington a little more than 3 years ago.

You know I have battled every step of the way for less Government spending to put an end to deficit financing, and to cut down the mountain of debt which is a tremendous burden on the back of every taxpayer.

I have fought against the growing centralization of power in the Federal bureaucracy at Washington which robs local and State governments of their rightful functions and authority.

I have opposed Federal controls and regimentation by which big government attempts to regulate the lives of the people and destroys freedom of the individual.

Those of us in Congress who have fought for these principles believe they are the only course by which the United States can be saved from national bankruptcy and a socialistic form of government.

Because you pay the bill out of your earnings, recent events in Congress have been extremely important to you, the people, both financially and spiritually.

Singly these things may not mean very much. But collectively they add up to the beginnings, just the faint beginnings, of a turning aside from the helter-skelter drive down the road to economic collapse and socialism. Not a revolt, mind you, but just a step or two in the right direction.

Ten days ago the House Committee on Education and Labor finally rejected the highly controversial Federal aid to education program, at least for the remainder of the session.

You will remember that I opposed this program for two reasons:

First, because it would have injected increasing Federal control into the operation of State boards of education and the local school districts.

Second, because the $300,000,000 price tag for the first year of the bill was only a drop in the bucket compared to its vastly increased cost when in full swing.

Even supporters of the bill told me frankly that within a very few years the annual appropriations from Washington would have to climb well above a billion dollars annually.

What interested me especially was the comment of one committee member. From the very beginning he had strongly and eloquently favored the Federal aid-to-education plan. He had fought for it and voted for it and worked hard to influence his fellow Members of Congress in its behalf.

But as he gave the proposal more intense study and heard the arguments presented by supporters and opponents, his mind filled with doubt. Then his views changed.

Finally, the other day, this Congressman admitted—and it was not an easy admission for him to make—that he had been wrong.

This is what he said, and I quote him:

"I am now convinced that we can't have Federal funds without Federal control. Children are the greatest collateral that the United States has. Politics must be kept out of the school system if we are to preserve the future of the Republic.

"We are dealing here with human minds, not public roads. This is in many ways the most serious issue before the Congress. Once we take the step down the road to Federal control, we can never retreat."

The Congressman who made that statement is a former teacher and former superintendent of schools in his home community.

That action and those words, my fellow Pennsylvanians, constitute the first straw in the wind to which I want to call your attention.

A few days earlier the House voted down a new project which would have cost $56,400,000 the first year and increasing millions in subsequent years. Under it the Federal Government would have gone into the business of financing a rural-library service for the States.

This was a second action in which economy was achieved despite determined administration pressure.

The third happened last week in the Senate. There the administration forces turned on the heat to force through Mr. Truman's so-called middle-income-housing plan.

This was a scheme under which the Government would lend up to $1,000,000,000 of your money at interest rates of 3 or 3¼ percent to provide housing for those earning from $2,700 to $4,400 a year. They would be able to borrow this money, to be repaid in 50 to 60 years, by forming housing cooperatives.

That was highly discriminatory. It would benefit only a small group at the expense of every taxpayer. It would put the individual home owner who did not join a cooperative at a competitive disadvantage. He would have to pay a higher rate of interest and amortize his mortgage in 20 to 25 years. And in addition he would be taxed to support the gravy-train group.

If a man happened to make $4,500 a year instead of $4,400 a year, he would be unable to benefit from the plan. Yet, part of the money he pays in taxes would be used to support the scheme.

And, of course, the easy credit provided would be highly inflationary.

Well, despite all the heat and all the whip-cracking the administration forces could command, the Senate, under the leadership of the able Senator from Ohio, JOHN W. BRICKER, defeated the scheme.

I find that a third straw in the wind.

These, my friends, may be relatively small things. But there is a fourth in the making. Together with this beginning of a curb on spending, there seems to be the beginning of a curb on taxing.

In the last 20 years the American people have seen their taxes go up and up—becoming a heavier and heavier burden. Only once in all that time did the people get a tax reduction. Do you know who gave it to them? It was the Republican Eightieth Congress.

Yes, in an entire generation the only tax relief the American people have gotten came from the Eightieth Congress which has been denounced and ridiculed by President Truman and his cohorts.

Well, this year, there may be another break—a reduction in excise taxes. The economy-minded Members of Congress are fighting to wipe out or reduce the heavy war-time excises.

We battled for this cut all during 1949, the first year of the Eighty-first Congress. Finally, this year, the demands of the people became so strong that the administration is being forced to do something about it.

Most of these taxes were imposed during the war, not to raise revenue but to curb as far as possible the use of critical materials and services.

Today the people are demanding elimination of these taxes. You are going to get some relief—though not all the relief I believe you should have. Because the administration insists that for every dollar of excise tax it lifts, it must get another dollar through another form of taxation. So, while they plan to put some of this excise-tax money back in one of your pockets, they will be reaching into another pocket to take it away from you again.

You know, Mr. Truman asked Congress last January for a number of brand new spending programs which he said would help the people. The cost of his proposals would have been $875,000,000 for the first year and progressively more in subsequent years.

But now the administration makes it clear that you can't have these things unless Congress will levy new taxes to pay for them.

That should convince you that there is no such thing as "Government money." The only way the Government gets money is to tax every worker, every farmer, and every businessman.

Unlike a lot of these deep thinkers here in Washington, I don't believe the Government should tax all your earnings away from you so that it can spend it for you.

I believe in the kind of government which permits the people to keep most of their own

UNIVERSITY OF MICHIGAN LIBRARIES

money, to spend, to save, or invest in any way that they see fit.

I am sure that nearly all of my fellow Americans believe in that, too.

I have been attacked many times and criticized because of my fight against the insidious, crawling socialism which has been spreading in our land. But I shall keep on fighting.

There have been dark days. However, I know now that it can be a winning fight if you keep up your fighting spirit and let your Congressman know you mean business.

More and more the American people—yes, and the American Congress—are becoming aroused about the danger of a government which wants to take care of everybody from the cradle to the grave.

We are having some success, but it does not mean that victory has been attained. It simply means that we must fight harder.

Let me quote some great truths from a recent writing about Abraham Lincoln. See if you don't agree with me about them. I quote:

"The unused hand withers.

"The unused brain ceases to function.

"The unused heart hardens.

"Where there are no calls for courage, for sacrifice, these do not come forth.

"The chief thought, even of those sincerely seeking a better social order today, seems to be that of putting props under people. A state which becomes the universal provider, policeman, and employer necessarily becomes also the breeding ground of weaklings and of slaves."

Those, my fellow Pennsylvanians, are great words. I ask you to give them some thought.

If we permit a central government to do everything for us, we shall become weaklings. Our unused hands shall wither and lose their skill and our unused brains shall cease to function.

If we permit the all-powerful central Government to step in and take over all the functions of charity and welfare, then, as the writer has so well declared, our unused hearts shall harden.

Through history, from the very beginning, wherever this has happened, the people, their nation and their government have gone down to destruction.

Under the American system of Government, our people have enjoyed more of the good things of life than any other people in the history of the world. It has given every citizen equal opportunity to improve his station in life.

Under our system the American people have achieved the highest living standards and the highest cultural and spiritual attainments.

This system has been our pride. It has become known to the whole world as the American way of life. It has been the envy of the rest of the globe.

I don't want it to be transformed and swallowed up by a creeping socialism.

I don't want our people to be robbed of their courage, their initiative, their self-reliance.

There has been a great deal of discussion as to the policies of the two opposing political parties.

I am proud to be a member of the group fighting to preserve the solvency of our Republic.

That is the paramount issue confronting the people of the United States. An insolvent nation cannot long retain its freedom.

Government spending must be reduced. We must halt deficit financing. We must not assume obligations that we cannot afford. We must return to a pay-as-you-go basis. In prosperous times we should cut down the national debt.

In the long run, this will make our country stronger and keep it stronger. The heritage of freedom and opportunity we pass on to our children and grandchildren will be as sound and as solid as that handed down to us.

This is ED MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

REA and Public Power Record of Hon. Elmer Thomas, of Oklahoma

---

EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 28 (legislative day of Wednesday, March 8), 1950

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a personal statement prepared by me covering my REA and public-power record.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

REA AND PUBLIC POWER RECORD OF HON. ELMER THOMAS, UNITED STATES SENATOR FROM OKLAHOMA

When I first entered the Senate in 1927 due to the fact that Oklahoma is a farm State, I requested assignment to the Committee on Agriculture and Forestry.

After more than 20 years' service on the committee, I gravitated to the top and now am its chairman.

The jurisdiction of my committee extends to all matters pertaining to farms and farming.

JURISDICTION OVER FARM POWER

Under the law, the distribution of power to farms and rural areas comes under the jurisdiction of my Committee on Agriculture.

In the Congress, where appropriations are involved, it requires two laws to get the job done.

With respect to the development of hydroelectric power from flood-control dams, and this is the only kind we have in Oklahoma, the first law that must be passed is one approving and authorizing the construction of the project.

Such legislation is handled by the Committee on Public Works, of which Committee my colleague, Senator ROBERT S. KERR, is a member.

APPROPRIATIONS NECESSARY

After the project is approved and authorized, it requires an appropriation to construct the dam and reservoir.

On the Appropriations Committee of 21 Senators, I am second from the top.

MY ACCOMPLISHMENTS FOR OKLAHOMA

My high position on this committee has given me the opportunity of securing funds to build the many flood-control and power dams in Oklahoma.

The question naturally arises, what have I been able to accomplish by reason of my being Chairman of the Senate Committee on Agriculture and being second from the top of the Senate Committee on Appropriations?

In 1933, as a member of the Committee on Agriculture, I helped develop and pass the law creating the Tennessee Valley Authority.

Since 1933, as a member of the Committee on Appropriations, I have supported liberal appropriations to develop the said TVA.

In 1938, as a member of the Agriculture Committee, I helped develop and pass the law creating the Rural Electrification Administration and, as a member of the Committee on Appropriations, I have supported liberal appropriations to develop and expand the REA system.

I am now a member of the Cotton Electric Cooperative with headquarters at Walters, Okla.

In 1935, in cooperation with Congressman W. E. Disney, I introduced a bill in the Senate and thereby secured funds for the construction of the Grand River Dam and hydroelectric power plant located in northeastern Oklahoma.

This dam and its connected hydroelectric works, together with the steam power plant at the Choteau-Pryor Ordnance Works, form the basis of the Oklahoma State public power development.

As a supporter of the REA and as a co-op member, I want plenty of firm power at the lowest possible rates consistent with sound business principles.

As a member of the Committee on Appropriations, I am securing all the funds possible to construct flood-control projects and where water is available I am demanding the development of hydroelectric power.

We now have plans for the development of hydroelectric power in Oklahoma and Arkansas to the extent of doubling the amount of power that is now being produced by all existing power plants in the two States.

I want our farmers and rural citizens to have all of this power that they can use at low rates and at the same time I want such power produced as cheaply as possible to the end that the surplus may be used to attract industries to Oklahoma and the Southwest.

OKLAHOMA HAS CHEAP ELECTRICITY

Electric rates are based upon the cost of the production and distribution of the energy or power; hence, to secure cheap electricity we must keep costs down.

Under the Oklahoma-Arkansas plan only that part of the cost of any dam assigned to the production of power is charged to power.

To date a relatively small amount of money has been used for the building of transmission lines; hence, we now have the second lowest electric or power rates to be found in the entire United States.

Only in the Columbia River Valley, where the flow of water is fairly constant, do we find a lower power rate.

FLOOD CONTROL COMES FIRST

The plan for the control of floods by contour farming, terracing, and farm ponds upon the headwaters of streams and then by large dams and reservoirs on the main stems of the streams and rivers was placed in operation in Oklahoma by Congressman PHIL FERGUSON and myself.

At that time, 1935, Congressman FERGUSON, from the Eighth District, was a member of the House Committee on Flood Control and thereby he was able to secure approval and authorization of the first flood-control projects in Oklahoma.

Of the flood-control projects authorized to date, with the help of our Oklahoma House Members I have been able to get funds to construct the following:

FLOOD-CONTROL PROJECTS COMPLETED OR UNDER CONSTRUCTION

Fort Supply, on the North Canadian River in northwestern Oklahoma.

Great Salt Plains on Salt Fork River in northern Oklahoma.

Lake Texoma, on Red River between Oklahoma and Texas.

Grand Lake, on Grand River in northeast Oklahoma.

Wister, on Poteau River in southeastern Oklahoma.

Hulah, on Caney River in northern Oklahoma.

Canton, on North Canadian River in western Oklahoma.

W. C. Austin, on North Fork River in southwestern Oklahoma.

Fort Gibson, on Grand River in eastern Oklahoma.

Tenkiller Ferry, on Illinois River in eastern Oklahoma.

Heyburn, on Polecat Creek at Sapulpa.

The following flood-control projects have been authorized and some funds have been appropriated to start construction:

PROJECTS READY FOR CONSTRUCTION

Oologah, on Verdigris River in northeastern Oklahoma.

Boswell, on Clear Boggy River in southeastern Oklahoma.

Optima, on Canadian River in Panhandle of Oklahoma.

Eufaula, on South Canadian River in eastern Oklahoma.

Additional projects are being surveyed and made ready for approval and authorization:

PROJECTS UNDER CONSIDERATION

Keystone, on Arkansas River in central Oklahoma.

Hugo, on Kiamichi River in southeastern Oklahoma.

Mustang-Union City, on North Canadian River in southwestern Oklahoma.

Markham's Ferry, on Grand River in eastern Oklahoma.

Short Mountain, on the Arkansas River in eastern Oklahoma.

Webbers Falls, on the Arkansas River in eastern Oklahoma.

It is the policy of the Government to build flood-control projects only where the residents in the area are favorable to such public improvements.
